"The standardization of grades and the ability to maintain a high quality egg that is superior to any raised in the eastern sections is the main reason why our western poultrymen can find a ready market and a premium of from 2 1-2 to 5 cents a dozen after being en route at least 30 days," said Harry Beernink, manager of the Lynden branch of the Washington Co-operative Egg and Poultry association. "The flocks in the northwest are able to maintain a steadier production of high-quality eggs throughout the winter months. This is not true with the central and eastern sections of the United States, and the New York market is glad to get our eggs even at a premium.

"If we could produce double the amount of eggs we are today producing the poultryman of the west would be much better off, for when the reputation is once established there is always a greater quantity demanded. There is always, however, an over production of poor-quality eggs."

Mr. Beernink says the industry has increased from year to year until the Lynden plant is now putting out an average from 1000 to 1200 cases of eggs a week. For the last six weeks these eggs all have been shipped to the New York trade except for a very small quantity which are handled at home.

Processing.

For all long-distance shipping at this time of year the eggs are first processed before packing. By this is meant an emersion in a hot oil bath of 265 degrees for seven seconds. This is called a storage pack, and most of them will remain in storage until next winter when they will sell for perhaps 5 cents a dozen more than the common storage eggs.

Processed eggs will candle almost as well as fresh eggs, and many of them are sold as sterilized eggs. There is a call for such a brand in some of the larger hospitals and restaurants since the process kills all germs on the shell as well as avoiding any chance of incubation. The intense heat has no effect on the white of the egg except to toughten the membrane inside the shell and prevent deterioration.

"This processing is being adopted by most of the larger egg associations for the purpose of holding the quality of eggs that are put into storage," said Mr. Beernink. "The oil is a very thin petroleum product. After 36 hours the oil is thoroughly absorbed and evaporated and the egg can hardly be distinguished from the new laid one. The process is considered a precaution much similar to that of the pasteurization of milk."

Where the Cockerels Go.

In addition to the marketing of eggs the Lynden plant is feeding and dressing an average of from 700 to 800 broilers daily during the early summer. The young birds are purchased from the producers at one pound each, or over. The birds are kept in crates and fed for 14 days on a buttermilk, cornmeal and ground oats mash, which is given in a soupy form, and no water is given. The birds added approximately 20 per cent to their weight in 14 days. After killing and picking the birds are first chilled and then stored over night until they are thoroughly frozen, when their heads are wrapped and packed in boxes of one dozen each. These boxes weigh from 14 to 20 pounds net each.

Last year this plant fattened and sold 65,000 broilers during the entire season, and Mr. Beernink expects to handle 100,000 this year. In order to show the capacity of the place it should be noted that one car of egg case shooks are needed every 30 days. All egg cases are made in the plant. One car of excelsior is used every week for the entire association, for placing under the bottom and top layers of each case. The Lynden plant uses one car of egg fillers every six weeks. There are 450 members who are producing eggs in the vicinity of Lynden and shipping through this plant.

More room will be available, however, when the new feed building is completed. It is being built near the main building, and 1000 tons of grain can be stored in eight perpendicular bins with hopper bottoms which hold 64 tons each. Shipments of corn, wheat, oats and mixed feed can be loaded into these bins by means of an elevator, while all mixing is done on the second floor, where the shoots from the bins extend to the mixing machinery. The mixed feeds, which, by the way, include all feeds necessary in poultry production, are then conveyed to the bottom floor, where they are put into sacks. The new building is being erected at a cost of $7000, which does not include machinery, and is being paid for by the savings from last year's surplus over cost of operation.

The Bellingham Plant.

The Bellingham plant of the same association is also erecting a new building to handle poultry and eggs alone. It will have a capacity of 10,000 cases of eggs and four cars of dressed poultry. The new building will mean more room for the feed mixing, and will allow the complete isolation of this department and afford much more room for the packing of eggs and dressed poultry. The building is to be two stories high, with basement and will measure 55x125 feet. All cold storage equipment will be housed in the basement, which will also contain equipment for feeding and dressing the poultry. An average of 2500 birds a day can be handled when this plant begins to operate at full capacity. Such an output, however, can not be realized this year, but next year that number will probably be put out. Twelve men are needed in this part of the plant.

H. G. Smith, manager of this plant, says that they will handle 1600 cases of eggs each week, and is always sold short. The feed department is handling from four to five cars of feed each week. The retail sales from the Lynden plant on poultry feeds alone average better than a car a day for the first three months of this year. The old building will handle nothing but grain and poultry feeds when the new building is completed.

There seems to be very little, if any, dissatisfaction among the poultry producers with the results obtained through their own recently formed association. It is largely because a more definite standard can be established and a surer market obtained by shipping in large quantities. It is also very convenient for each producer to obtain his feeds from his own association, since he feels more confident that he is getting what he wants, and that the quality can be depended upon.

The upper picture shows a general view of the Lynden poultry and egg plant. Below is shown a carload of 480 cases of eggs ready for a trip to New York. Manager Beernink is shown beside the car.

The Name "Grange" Belongs to Patrons of Husbandry

In the case of The Washington State Grange, a corporation, plaintiff, vs. William Bouck, et al, defendants, Judge J. T. Ronald of the King county superior court has rendered a decision that the name "Grange" belongs to the Order of the Patrons of Husbandry and has enjoined the further use of the name "Grange" by the "Western Progressive Grange." The opinion by Judge Ronald is herewith given in full, as readers of The Washington Farmer are entitled to full information on this important decision.

The following is the opinion of the court rendered by Judge Ronald in the case of Washington State Grange vs. William Bouck et al.

It is not necessary to make any finding, but my experience has been that if I don't do it I am always asked to do it and really have to do it before the case goes up.

The court ought never to enjoin anybody or any party of men from doing any act unless they are injuring somebody or doing something that they have no right to do. Now, here are the facts in this case: The whole thing depends upon whether the use of the word "grange" can be enjoined. In so far as the supplemental complaint is concerned, I have no reason to change my opinion that I entertained when I announced a written opinion on a preliminary hearing enjoining the defendants from exercising any authority or function at all as the Washington State Grange. I think that injunction will have to be made permanent. This amended complaint goes further and asks that they be enjoined from using the word Western Progressive "Grange," and the whole question hinges upon the significance to be attached to the word "Grange."

Courts take judicial notice, of course, of the ordinary signification and meaning of the words. In the Universities Dictionary the word "Grange" is said to be a farm with its dwelling houses or appurtenances or a local lodge of the patrons of husbandry for agricultural association in the United States. Now, it appears that away back in 1867 a party of seven men organized the National Grange in Washington City. There isn't any question but what a man can call his farm a grange if he wants to. A farm is not functioning as a secret organization. I suppose a man could call his farm if he wanted to a Masonic lodge or Masonic home, I don't know; it is not functioning as a secret organization. But the first time that the evidence shows here that the word "Grange" has been used in any sense excepting as a designation of some farm and home is by these founders in 1866 or 1867 when they called it a grange of the patrons of husbandry, and they adopted a constitution, and that constitution provided for state granges and for district or pomona granges consisting of more than one local grange and also for local granges; that is the function as a voluntary association, granges of patrons of husbandry, national grange of patrons of husbandry, state grange of patrons of husbandry, district or pomona and local granges of patrons of husbandry.

Now, the word "grange of patrons of husbandry" was the only significant thing in the whole matter. The national Grange meant nothing except that it was a national order. The Ohio State Grange of Patrons of Industry simply meant a grange of Ohio state. Minnesota Grange meant Grange of Minnesota state and Washington State Grange meant Grange of Washington state. So that, so far as the words "Washington State" or "Montana State" or "Idaho State" or "Iowa State" Grange, that is just simply the words used to designate what grange it was. "Grange" being the principal thing. And "Grange" being the peculiar name chosen by a voluntary association of patrons of husbandry; and when it was not used to mean some farm, it meant but one thing up till 1876, and that was a voluntary—in other words an association of patrons of husbandry. That is all the word "Grange" meant. That is the significance that it had. Now, in 1876 it was incorporated by statute as a body corporate or politic by the name of "National Grange of the Patrons of Husbandry" and provided that it should be the controlling body of the order known as Patrons of Husbandry and that the constitution of the order Patrons of Husbandry as it then stood should be and constitute the constitution of the incorporated body. The word "Grange" plainly stands for the organization or corporation of Patrons of Husbandry just as much as the world "Masonic" stands as a society known as Masons, just as much as "I. O. O. F." stands for the society known as "Odd Fellows," has a constitution and by-laws and well defined principles, just as much as "Knights of Pythias" stands for a certain raternity or brotherhood, or "Eagles." That is just what "Grange" meant. A "lodge" don't mean anything except a general designation. There may be a thousand kinds of lodges. There is a Masonic lodge, an Odd Fellows lodge, an Elks lodge and various other kinds of lodges. "Lodges" don't mean anything definite. But an "Odd Fellows Lodge" does. "Masonic Lodge" means something definite. An "Elks Lodge" means something definite. But different from the word "Lodge" is the word

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseasee in stock sold through these columns.

What Water Will Do

It may at first thought appear to be a far-fetched idea to connect a high school graduating class with an irrigation ditch, and yet in some cases there is a very close relationship. The other day there was graduated from the Sunnyside high school a class of about three dozen young men and young women. For that class the state and federal reclamation services may take much credit.

Not many years ago the land in the district where Sunnyside now stands was little less than a barren waste. But water was stored and irrigation canals and ditches built, with the result that it became a heavily producing area, with prosperous farms and prosperous towns and cities dotting it. But for the irrigation ditch there would be no Sunnyside, no Sunnyside high school, no Sunnyside graduating class.

There are hundreds of parallel cases in the Pacific northwest and other parts of the United States. Dollars and cents can not measure the value of such products as these, as distinctively the products of reclaimed land as are apples and alfalfa. There are yet in this state many thousands of acres of land, both within and without the famous Columbia basin project, that may be changed from desert places to prosperous settlements. Where only the sturdy pioneer eks out an existence today, tomorrow, with well directed land reclamation and development, should find countryside and town filled with contented and prosperous people.

The "Keepability" of Apples

J. S. Crutchfield of Pittsburgh, head of the American Fruit Growers and its western subsidiary, the Northwestern Fruit Exchange, gave a bit of sound advice to the apple growers of the Pacific northwest in a recent interview. Mr. Crutchfield says the northwestern fruit is closely inspected as to color and grade, but not as to quality as it pertains to "keepability." "Under present methods the northwestern apples often lie around the orchards or in sheds or warehouses 30 days before they get on the car." In his own orchards, Mr. Crutchfield allows only from 24 to 48 hours between the orchard and the car. In the Imperial valley only four hours is allowed between field and car in the picking and packing of cantaloupes.

The importance of speedy movement of apples from the orchard to the car or cold storage becomes more evident when the fact is considered that the best marketing period of the northwestern boxed apple crop is from March 1 to July. During the late autumn and winter, up to the first of March, the eastern markets are saturated with barrel apples and common storage fruit. That is not the economic period for the marketing of the northwestern crop. After March 1, eastern competitive stocks have been pretty well absorbed, and then the time comes for the northwestern product to have its inning. A long-keeping quality is therefore a paramount requirement. Boxed apples that are hurried from the orchard to the car or to local cold storage have that long-keeping quality and are in condition to go on the market after March 1 without disappointing results to consumers, distributors or growers.

State Grange Enters New Era

When the Washington State grange meets in annual convention at Yakima next week it will assemble under the most auspicious circumstances that have surrounded any of its gatherings for several years.

Since its convention of a year ago, held at Colville, the order has passed through a series of trials that might easily have destroyed an organization less firmly grounded on sound and enduring principles.

It is as well that we pass over in few words the unfortunate records of the last few years, during which a most sinister influence all but undermined the great farm order in this state. The victory that has been won, not the battle that has been fought, is the matter of present interest.

The Washingon State grange finds itself today freed of a leadership that attempted to betray it. It finds itself sustained by the national organization, which, in convention last winter, unanimously affirmed the action of the national master in removing from office one who attempted to turn the order over to a radicalism whose principles would, if adopted, destroy the institutions of American government. It finds itself sustained by the courts, which declare that it and it alone is "the grange" and that no group which refuses to abide by the fundamental principles of the order can parade under its name.

The Washington State grange stands at the door of a new era. It has placed itself again squarely on the constructive, conservative platform that has enabled the national order and its subordinates to render noble service to the farming people for more than half a century. As in the past, this platform is safe upon which to build for the future, and the present leaders and the loyal membership that have stood behind them in their fight for right during these trying years deserve unstinted commendation.

Better Live Stock Campaign

The whole of western Washington will be roused to the necessity of improving live stock, and will be shown the improvement which has already been made as a result of the "Better Live Stock" campaign, on a purebred live stock tour which will start at Vancouver July 24 and end at Bellingham August 4.

The affair is sponsored by the state college extension service, and Don Magruder, dairy specialist, and C. M. Hubbard, live stock specialist, will assist in preparing for it and will accompany the tourists.

In Clarke county arrangements are in the hands of M. J. Newhouse, formerly county agent and now manager of the cooperative fruitgrowers' association, and Dr. A. C. Brown, a local veterinarian. In other counties, agricultural agents have charge.

Landscape Gardening for Women

More and more women are taking up landscape gardening, says A. M. Doerner, in charge of that department of work at the state college at Pullman.

During the spring vacation a student from Yakima was sent by the extension department of the state college to Zillah to advise regarding the improvement of a new park and automobile camp.

State Farm News

A conservative estimate of this season's fruit crop for Yakima and Kittitas counties by the district horticultural department places the 1922 crop at 14,675 carlots. This is 513 cars more than a like estimate for the 1921 crop, made a year ago. The department estimates the crop in detail at 10,000 cars of apples, 2500 cars of pears, 1500 cars of peaches, 150 cars of prunes and plums, 140 cars of cherries, 65 cars of grapes and 300 cars of melons.

Compared with the 1921 estimate, the apple crop is placed at 500 cars less, while the soft fruit crop shows considerable gain. Less bloom than in 1921 is given as the reason for the estimate of a lesser tonnage of apples than last year. Melons will show an increase above 1921. The potato crop is placed at 7000 carlots, a big increase, due to better seed.

* * *

B. J. Vroman of Methow is experimenting with goats as a source of milk supply.

* * *

The cantaloupe acreage in the Yakima valley this season will be about the same as last year, according to Ira Cleveland, northwest field manager for the North American Fruit exchange, who has looked into the situation closely. While information relative to watermelon acreage is not definite, it appears that there will be an increase this year, he states. H. A. Glen of the Northern Pacific, making an estimate for Yakima and Benton counties, places the melon crop of this season at 480 cars. The production in 1921 was 250 cars of cantaloupes and 100 cars of watermelons.

* * *

Elbertson's 30th annual pioneers' picnic will be held June 21, 22 and 23. The following committee, appointed by the council, will have charge:

J. Bellach, W. N. Divine, J. E. Gray, J. L. Mentzheimer and H. C. Eitel.

* * *

Work on the Tieton dam at Rimrock is being rushed, with 500 men employed, moving 4000 to 4500 yards daily.

* * *

The Washington Cranberry association will abandon the work of marketing cranberries. This action provides for the abrogation of all contracts binding members to the selling and marketing service of the association.

* * *

Actual count of Quinault salmon coming into Lake Quinault through the weir show that 17,153 have passed on to the spawning grounds, according to John R. Russell of Seattle, field superintendent of the department of commerce, bureau of fisheries.

It was noted also that but 52 steelhead had passed in during the same period. This caused Mr. Russell to make the offer to the county game commission by which the government would rear steelhead until they were ready to place and would do this without charge if the commission would supply the eggs.

* * *

The butter output of the Winlock creamery for the month of May is expected to exceed by many hundred pounds that of May, 1921. In April a total of 32,000 pounds were manufactured, an increase of 5000 pounds over the corresponding month of last year. Butterfat is shipped to the Winlock plant from as far south as Kalama.

* * *

Radio receiving paraphernalia is being installed at the Polson railroad camp, northeast of Hoquiam, with a view to ascertaining if concert programs and other features broadcast by newspapers can be heard here, according to Robert Polson, manager of the company. If the plan proves feasible it is said other camps of the company, of which there are 10, will install outfits.

* * *

The Clarke county Pomona grange voted down a proposition to hold a Clarke county fair this fall. It was decided that the expense would be too great to bear just now.

* * *

J. L. Hughes is planting an orchard on 27 acres of Tieton land that till date he has had in alfalfa. He is putting out 20 acres of apples and seven acres of Concord grapes with peach, pear and apricot fillers. His apples are Delicious and Red Rome Beauties, and he has 300 of the former and 200 of the latter. Bartlett pears, Tilton apricots and J. H. Hale peaches make up the fillers. Mr. Hughes is confident that his place is well located for fruit growing and that he has selected varieties that will bring top prices in the market.

* * *

In keeping with the promotion of Bellingham as Tulip town, local men have organized the Holland-American Bulb company, with Bellingham as headquarters and a capitalization of $60,000.

* * *

The Western Washington Fair association hereafter will retain its officials on a salary basis. The board of directors at a recent meeting reelected W. H. Paulhamus as president and voted him a salary for the coming year. This is the first time that the president of the association has received a salary since it was organized 22 years ago.

The salary of the secretary also was fixed for the coming year. The secretary has been the only paid official for several years.

The fair dates for this year are set for October 2 to 3, inclusive. The following officers were reelected unanimously: W. H. Paulhamus, president; J. M. Jones, vice president; W. A. Miller, treasurer, and George D. Osborne, secretary.

Mr. Paulhamus was authorized to appoint the head of the various departments.

* * *

Farmers of Burbank, Two Rivers and Attalia have agreed to grow cantaloupes and asparagus to supply Spokane and Coast markets.

Coming Events of Interest

June 1—County grange picnic, Kettle Falls.
June 2-3—Stampede and celebration, Loomis.
June 3—Grant co. pioneer picnic, Soap Lake.
June 4-5—Salmon celebration, Keller.
June 5—Northwest Guernsey breeders' sale, Portland.
June 5-10—National Holstein meet, Kansas City.
June 7—Guernsey consignment sale, Chehalis.
June 6-9—State grange convention, Yakima.
June 8—Columbia co. pioneer meet, Dayton.
June 14—Flag day.
June 20-22—Lincoln-Adams pioneer picnic, Keystone.
June 21-23—30th annual pioneer picnic, Elberton.
July 24-Aug. 5—Live stock tour, Vancouver to Bellingham.
July 26-27—International apple shippers, Seattle.
July 27-28—Whatcom Guernsey gallop, Bellingham.

FARM BUSINESS AND MARKETS OUTLOOK

Mild Improvement to Continue

A boom is not in sight, but the business cycle forecasters expect at least mild improvement to continue. Summer usually is a dull period, but trade becomes active in the fall. The general trend will be affected to some extent by these seasonal changes.

The failure at Genoa has been largely ignored in business affairs. Sterling exchange reaches a new high after each setback and there has been a good demand in the United States for foreign bonds. European conditions include many rough spots, however, and are the most menacing feature in the present situation. Germany has not yet deflated and there still are fears of a collapse in that country.

The effect of our tremendous gold reserve is arousing conjectures. We have over $3,000,000,000, or nearly 40 per cent of the world's known stock of gold and double the quantity in this country in 1917. As a result interest rates are easing. Time loans are being made on gilt edge collateral in the east at 3 3-4 to 4 per cent for the first time since 1917. Member banks can carry most of their paper without rediscounting with the federal reserve system. Rediscounts with all federal reserve banks which at the peak were close to $3,500,000,000 are now down to $468,000,000. For the same reason it has been easy to float new securities, bonds have been advancing and farm loans are becoming welcome.

Both manufacturing and mining capacity were increased in this country so that but little plant expansion is going on in those fields. Residence construction and railroad equipment were not maintained during recent years, however, and these lines are most active bidders for capital for long time investment. Public utility development is another field which is expanding at present and absorbing capital as well as broadening the market for materials.

With so large a hoard of gold there will be a strong impetus toward reinflation. The discount policy of the federal reserve banks will determine how far it will go. If an effort were to be made to stabilize prices in this country at 50 to 60 per cent higher than the prewar level in order to make it more easy to pay off our national debt represented by Liberty and Victory bonds, financial conditions are highly favorable for success.

Cattle at Year's High Mark

Although the top of the steer market has failed to pass $9.25 at Chicago, average prices have advanced above the previous peak reached in March.

On the whole, cattle trade is in a healthy state. Supply at seven markets has contracted nearly 10 per cent in two weeks, but is still above the average of recent years for this season, with a probability that any change will be a further decrease.

Finished steers predominate, so that the yield of beef is high, but there has been but little surplus above current demand.

Dressed beef prices dragged a little last week, but were stronger than pork, lamb or mutton.

Exporters and eastern shippers were buying steers in the middle west.

And, finally, the hide market is rising.

Seasonal scarcity of plain steers and butcher cows and heifers has been accented by the absence of early Texas grass beef and the small stock of frozen beef. Prices on these classes still are and are likely to remain high compared with finished steers for the next four to six weeks, by which time more or less grass beef will be available.

Veal calf prices have shown weakness in sympathy with the lamb market, but are higher than a week ago.

Most of the buying of stockers and feeders stimulated by the rise of grass has been satisfied. The movement of steers from the southwest to Kansas and Okanogan pastures will be practically complete by the first week in June. Missouri feeders and graziers are nearly all supplied. In the northwest the movement will continue a few weeks longer. The movement to the country from 12 markets has persisted at around 50,000 head weekly, which is larger than in either of the two preceding years, but it can be expected to dwindle materially in the next 30 days and the margin between feeders and fat cattle prices should widen.

June Hog Run at Hand

Receipts of hogs declined slightly for two weeks, but remained equal to the 10-year average. In the last few days there has been an increase again of approximately 20 per cent, which appears to be the vanguard of the June run knocking at the market gates. Thus far prices have held up well and the June break looks much less serious than it did several weeks ago.

Consumers are less greedy for fresh pork than a few weeks ago, but demand for smoked meats has dilated. Stocks of the latter are comparatively light. Combined storage holdings of frozen pork, pickled pork and dry salt pork in the United States on May 1 were 593,337,000 pounds, compared with a six-year average of 825,403,000 pounds on that date. On the average, holdings of these meats have decreased 23,000,000 pounds during April, but only a negligible decrease occurred this year.

Even lard is not piling up so ominously as it appeared to be when only the holdings at the six leading packing points were known. Total stocks on May 1 were 95,882,000 pounds, compared with a six-year average of 113,400,000 pounds. The April increase was only 10,000,000 pounds, whereas the average increase for that month is 9,000,000. The earlier report, based on the six leading packing cities, showed relatively a much greater increase.

Packers report that the foreign outlet for hog meats has widened and the weekly clearances remain respectably large.

Slump in Lambs Halted

The slump in sheep and lamb prices, which have declined $2 to $3 from the high point early in May, was checked, at least temporarily, within the last week. Total receipts normally do not increase much above the prevailing level until toward the first of July, so that the market may not sag a great deal further in that time. Later on, when range lambs begin to come forward freely, a lower level of values may be established. But few California lambs are left for eastern shipment, while corn belt and the southeastern lambs are not yet abundant.

Consumers appear more indifferent to mutton and lamb than a few weeks ago and prices on the hoof in eastern cities last week were $1 to $5 lower. Heavy ewes have dropped most. Arrival of another cargo of frozen lamb and mutton from New Zealand augmented the depression.

Reports of serious losses of spring lambs in the range states have been officially confirmed. Total lamb production in Washington, Oregon, Idaho, Montana, Wyoming and Nevada is estimated at only 70 per cent of normal. Owing to the backward season, the crop is not expected to be ready for market until the last of July or early in August.

With lamb and wool prices much higher than a year ago and more money available, speculators and western feeders are contracting freely for both thin and fat lambs. Many sales have been made at 9 to 10 cents a pound, although these offers have been generally refused in Idaho, Oregon and Washington. A year ago the ruling price was 5 to 7 cents.

In view of range conditions, feeding lambs are apt to be scarce on the open market this fall and breeding ewes will not be available unless at prices quite attractive to range sheepmen.

The diminutive size of the horse trade is shown by the fact that receipts at public stockyards in April amounted to only 29,000 head, compared with a seven-year average of 62,000 head during that month. A marked decrease compared with March of this year is shown, receipts in that month totaling 47,000 head. Prices were a shade lower last week.

New Wool Sold Rapidly

Practically all sections of the west report that the new clip of wool is changing hands at a rapid rate. In the fleece wool states it is moving into pools from which it will be merchandised later. Wool prices were maintained last week, although seaboard markets report a less active demand. Manufacturers are endeavoring to check the upward trend, but have been unable to force a decline. The demand for worsted goods improved slightly, helping the market for fine combing wool, otherwise there is but little change in the manufacturing outlook. The advance in cotton prices has had a slight sympathetic influence upon wool.

The Boston market is quoted as follows: Wisconsin, Missouri and average New England—1-2 blood, 38@40c; 3-8 blood, 37@39c; 1-4 blood, 35@37c. Scoured basis: Oregon—Eastern No. 1 staple, $1.20@1.25; fine and fine medium combing $1.15@1.20; eastern clothing, $1@1.10; valley No. 1, $1.05@1.08. Territory—Fine staple, choice, $1.23@1.28; 1-2 blood combing, $1.05@1.15; 3-8 blood combing, 80@83c; 1-4 blood combing, 68@70c.

May Wheat Deal About Over

Owing to the situation in May contracts at Chicago the wheat market has been decidedly unsettled. The major trend has been downward. Deliveries on May contracts total 8,067,000 bushels thus far, but the "longs" have taken it without attempting to redeliver and profess to believe in higher prices for cash wheat during June.

On the other hand, domestic mills and export buyers remain inactive, partly in the belief that an effort was being made to force prices up artificially and that the ultimate outcome would be a collapse. As this is being written it is rumored that the leading "short" has filled his contracts and still has some wheat left. Whatever the final result, the uncertainty will be over before long.

Shipments to Chicago from Omaha and Kansas City have been heavy. If they continue the rest of May the bulk of the available wheat in the central west, with the exception of fancy grades at Kansas City, will be at Chicago and it may be necessary to ship some of this wheat back again before harvest in order to supply milling needs. The movement from farms remains surprisingly large, raising doubt as to the accuracy of the March 1 report on farm reserves. Apparently producers are ready to take advantage of the premium on cash wheat over prices for July and September delivery and are making a cleanup.

Germany is estimated to have bought anywhere from 10,000,000 to 25,000,000 bushels of new crop wheat for shipment after harvest, but such buying has subsided recently. A little old crop wheat is being sold abroad, most of it durum and Pacific coast wheat. Reports from the latter section forecast the most complete cleanup before the end of the season that has been seen in years. Hard winter wheat at Chicago is above a parity with Liverpool.

Estimates of the remaining export surplus range from 30,000,000 to 65,000,000 bushels in Argentina, 15,000,000 to 12,000,000 bushels in Australia and 75,000,000 to 90,000,000 bushels in the United States and Canada or a total of 120,000,000 to 185,000,000 bushels. Requirements of importing countries before August 1, when the new European crop year begins, will be around 135,000,000 bushels if the rate of disappearance thus far in the crop year is maintained. The world's surplus of old wheat will not be more than 25,000,000 to 50,000,000 bushels on that date, which is a small reserve.

New wheat from the United States can be shipped to reach Europe in July. India may be in a position to export a little by August, but her wheat requires a long voyage.

There appears to be enough wheat to keep the demand satisfied, but the adjustment is close and the outlook for the coming crop year does not indicate a low level of wheat prices.

Russia, instead of becoming an exporter, is not expected to raise enough for her own requirements again this year.

The acreage seeded to spring wheat, according to scattered reports, is less than last year as a result of a late season. The same cause is expected to reduce the Canadian crop by 2,000,000 acres.

Winter wheat is progressing favorably, with ample moisture in the central west and eastern states, but from Kansas, Nebraska, Oklahoma and Texas reports are not so rosy. Growth is rank and watery over a large area as a result of wet weather, which is favorable to rust and will accentuate the effects of any dry weather occurring later.

Less than half of the Kansas corn acreage has been planted, according to the state's report at the middle of May. The late planted crop will be in danger from dry, hot weather at a critical stage of growth. The central west also is behind hand.

All reports point to a reduced oats acreage. The crop is doing only fairly well in most sections.

Coarse Grains Markets Dull

Coarse grains have been dull in spite of erratic wheat prices. Corn producers have been selling more grain for early shipment and the after-planting movement will show up at primaries in a week or 10 days. Exporters are buying moderate quantities and elevator interests are accumulating again. The high hog market is a sustaining influence under corn prices. Corn producers are not selling the grain on the breaks, as there is a good local demand from hog and cattle feeders in many sections.

Oats prices have been creeping upward, but the total advance has been small.

Cash Grain Markets

The cash grain prices for May 24 were: Chicago—Wheat, No. 2 red, $1.33 1-4@1.45; No. 3, $1.28 1-2@1.40; No. 2 hard, $1.33 3-4@1.45 1-4; No. 3, $1.37@1.38. Corn: No. 2 mixed, 61 1-2@62 1-2c; No. 3, 60@61 3-4c; No. 4, 60@61c; No. 2 yellow, 61 1-2@62 3-4c; No. 3, 60 1-2@62 1-4c; No. 4, 60@61 3-4c; No. 2 white, 61 3-4@62 3-4c; No. 3, 60 3-4@61 3-4c. Oats—No. 2 white, 38 3-4@43c; No. 3, 37 1-4@42c; No. 4, 36@41 3-4c. Rye—$1.04@1.10. Barley—62@72c.

Feed Demand Improves Temporarily

Country demand for feeds has broadened slightly in the last few days and prices have become firm at the recent decline. With pastures coming on in good shape, however, the improvement is not expected to last. Linseed and cottonseed meal, as well as corn feeds, are in a stronger position than wheat feeds.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $23; standard middlings, $23.50; flour middlings, $27.50; cottonseed meal, 36 per cent, $49; 43 per cent, $53; hominy feed, $23.50; gluten feed, $32.85; old process oil meal, $52.50; tankage, $55.

New Hay Coming

Offers of new crop alfalfa from the southwest and availability of good pastures are cutting into the demand for dairy alfalfa. Clover and prairie hay markets also are weak, but timothy has held firm under light receipts. Stocks of hay are light, but demand is quite limited.

Prices per ton in carlots: Chicago—No. 1 timothy, $25@27; No. 2, $23@25; No. 3, $17@20; No. 1 light clover mixed, $24@25; No. 1 clover, $20@21; No. 1 clover mixed, $21@23.50; alfalfa, $17@28; upland prairie, $17@19; midland prairie, $14@17; rye straw, $16@17; oat and wheat straw, $14@16.

Egg Consumption Shows Increase

The records for New York city alone show that approximately 10 per cent more eggs have disappeared into consumptive channels since January 1 than in the same period in the preceding year. For the four cities, New York, Chicago, Boston and Philadelphia, the rate of disappearance shows an increase of 7 per cent. Receipts of eggs at the leading cities are holding at a level above either of the last three years and cold storage holdings are in a fair way to get a new altitude record before accumulation ceases. Prices have sagged a little recently under the burden of heavy receipts, but no pronounced break is anticipated.

Butter Prices Near Bottom

Although the process of storing butter has begun, the surplus above current consumptive requirements has been small and but little butter of suitable quality for long time storage has arrived. Prices, also, are slightly higher than the majority of dealers are willing to risk. As production expands and the surplus for storage increases it is logical to expect a slight further decline, although the market is not far from the bottom. Receipts will probably increase around 25 per cent before reaching flood tide. As soon as the supply begins to show full grass flavor a steady market is expected, as consumptive demand for butter is broad and cold storage operators will be ready to accumulate large quantities.

Prices for 92-score fresh butter on May 24 were: Chicago, 34 1-2c; New York, 37c; Boston, 37c; Philadelphia, 37 1-2c; San Francisco exchange quotation, 39 1-2c.

(Continued on page sixteen.)

Head Lettuce Industry Shows Growth

According to government figures, the lettuce crop of this country more than doubled in the five-year period, 1917-1920. Shipments of lettuce for the year ended in April, 1922, amounted to 12,266 cars, compared with 11,288 cars to the end of the 1920-21 season.

The 1921-22 season was featured by rapid growth of the lettuce-growing industry in Colorado and Idaho, the car lot movement from these states having gained tremendously compared with 1920. From 125 cars in 1920 Colorado shipments jumped to 244 cars in the autumn of 1921, and Idaho increased its shipments from 26 cars in 1920 to 182 cars in 1921.

Most of the increased acreage in Colorado is located in the high altitudes where the crop is known as "mountain" head lettuce. This lettuce comes on the market when supplies from other sections are light, August and September being the months when heaviest shipments are made. It is very probable that the 1922 acreage in Colorado will be considerably larger than that planted in 1921.

Idaho lettuce moves to market in October and November, following the Colorado stock and preceding any large movement from other sections. Local estimates are to the effect that the Idaho acreage for 1922 will be three times as large as in 1921. The Iceberg variety is grown.

California, the only state to ship lettuce the year round, leads all other states in the volume of shipments. New York state is second in the number of shipments and Florida is third.

The active movement of lettuce to consuming markets extends from August to the last of April. June ordinarily is the month of lightest shipments, and the months of heaviest shipments are January, February, March and April. Nearly all of the shipments during these four months are from California, Florida, South Carolina and North Carolina, although light shipments are made from Arizona. In addition supplies of northern hothouse lettuce are received.

As the season progresses movement begins from regions in the north. The markets during June and July are supplied mostly from California, New York, Washington, New Jersey and Michigan. In August and September the markets are supplied chiefly from California, Colorado, Minnesota and New York. In October and November shipments come mostly from California, Idaho, New Jersey and New York, and in December the markets draw receipts mainly from California and Florida.

Western Washington Production.

W. H. Paulhamus, president of the Puyallup and Sumner Fruit Growers' association, brings out the interesting facts that about five years ago all of the head lettuce consumed in the state of Washington was imported from the state of California. During the last few years the farmers of the valley between Seattle and Tacoma have learned that they can not only grow a profitable crop of head lettuce, but that it is an industry that can be greatly developed. Mr. Paulhamus goes on to say that during the year 1921 a total of 673 cars of head lettuce were shipped out of the district mentioned and marketed at a satisfactory price to the grower. Mr. Paulhamus said he has just had the opportunity of talking with three men who have more to do with the marketing of fruit and vegetable products of the northwest than any other three men in the United States. Taking up with them the development of the head lettuce industry, they tell him that the best head lettuce that reaches the market is produced at Lewiston, Idaho; the second best head lettuce that is availale is produced in the Imperial valley of California; third in quality is produced tributary to Los Angeles, in southern Idaho, and in western Washington.

One of the outstanding strong features in favor of this industry is that the Idaho-grown head lettuce is ready for the market during the months of November, December, January and February. The Imperial valley head lettuce is ready for the market in January, February, March and April; the southern California head lettuce is ready for the market in April, May and June; the Washington head lettuce is ready during July, August, September and October.

The method of marketing head lettuce is also brought out by Mr. Paulhamus. Head lettuce is marketed in crates holding from three to four dozen heads. The bottom of the crate is covered with heads of lettuce with the stem up. In other words, heads of lettuce are placed in crates upside down. After the bottom of the crate is entirely covered with lettuce a scoopshovel of cracked ice is distributed carefully over the top of the lettuce. Then the second row of lettuce is put in, top down. Then another coating of cracked ice, and this procedure is continued until the crate is full and when finished will consist of a layer of head lettuce and a layer of cracked ice. This product is shipped in refrigerator cars, which are also thoroughly iced in the customary way.

"The question that arises in my mind is, can the farmer of Washington produce a quality of head lettuce equal to what is now being produced in Lewiston, Idaho? I am convinced this can be done by the right kind of work on the part of the grower."

Mr. Paulhamus adds:

"It should be our pleasure to help to the extent of our ability the development of the head lettuce industry so that the farmer who has an acre or a half acre or any other plot of ground can produce head lettuce successfully and find a market at a fair price for his product, just as the berry grower is now able to do.

"Here is an industry that will grow to 5000 cars inside of five years if stimulated. Suppose three or four of our leading chambers of commerce should jointly employ for a year a capable man to make a study of the growing and marketing possbilties of head lettuce; this would be real boosting of a constructive kind."

Fruit Growers

Will Meet the Middle of August

Plants for the next summer meeting of the Washington State Horticultural association August 15 to 19 are announced by Secretary-Treasurer M. L. Dean. In connection with this meeting there will be a session of the Pacific Northwest Association of Entomologists, Plant Pathologists and Horticulturists.

The joint meeting will convene in Yakima August 14 and will spend two days in that city, the time being divided between indoor discussions of various topics and visits to typical orchards where the subjects discussed in the meetings will be demonstrated.

On August 17 the entire party will then go to Wenatchee over Blewett pass to spend two days in that city and valley.

A similar program has been adopted for the two days spent in the Wenatchee valley.

The idea of holding the meeting in both places grew out of the fact that the Yakima and Wenatchee valleys are the most favorable places to study horticultural conditions. The last two summer meetings held in Wenatchee and Yakima, respectively, proved to be very successful and profitable.

The proceedings of the regular annual meeting of the state horticultural association in Spokane and the summer meeting in Yakima have been published in book form and will be distributed to members.

These two meetings were among the most important ever held in the 17 years of the association's history. Notable contributions were those of C. A. Newcomer of Yakima on "Codling Moth Control," Roy Larsen of Wenatchee on "Orchard Fertilization" and D. F. Fisher, United States pathologist, on "Life Insurance for Apples."

Willard Standards of Service Protect Batteries of All Makes

The same principles of battery care apply to all makes of batteries, just as the same principles of fairness, courtesy and helpfulness apply in dealing with the owners of these batteries.

No matter what make your battery may be it must have water put in—it must be kept charged—and it must be given prompt attention at the very first sign of trouble.

The ability of the Willard Battery Station to provide this care for the Willard Battery, qualifies it to render similar service on all other batteries, regardless of make.

There is a Willard Battery Station near you. It will pay you to go there *now* to make sure your battery—whether it is a Willard or not—is in good condition to keep on serving you to the limit of its ability.

Fighting Smut

New Seed Treatment With Copper Carbonate Dust

"A dry treatment of seed wheat with copper carbonate dust, with which the experimental department has been working, promises great improvements in the present methods of fighting smut," said R. M. Turner, assistant county agent leader, at the recent meeting of county agents in Spokane.

"The treatment by formaldehyde and blue stone has, as every farmer knows, resulted in seed being impaired 20 to 60 per cent, with an average of about 45 per cent. This impairment has been clearly shown by samples taken from seed after it had been treated and germinated on more than 50 farms in Whitman county. Similar tests have been made in other counties, all under supervision of George Zundel, state college extension pathologist.

"Under Mr. Zundel's direction county agents in the different wheat counties put out last fall the new seed treatment of cooper carbonate dust, covering 8000 acres. This new dust treatment has resulted in from 25 to 50 per cent better stand, and the crop has gone through the hard winter in fine shape, while some seeding of the old treatment has had to be resown, as shown by reports of county agents to S. B. Nelson, state college extension director.

"These same county agents will check up on the smut control in this 8000 acres, as compared with sowings with the old method of seed treatment.

"Should this experiment prove as successful as it gives every promise of being it will be the greatest boost the wheat industry has had since the college put out the hybrid wheats. If this treatment proves successful it also means less seed per acre. It will also enable more successful seeding in dry ground. About two ounces of the dust is required to the bushel, and the cost of treating is about the same as the present method."

Wool Rates Reduced

Reductions in wool rates from the Inland Empire, Yakima valley and the Lewiston country have been announced by Vice President H. M. Adams of the Union Pacific system.

The new rates will permit the railroad to compete with water rates offered wool growers of the Pacific northwest by steamship lines operating out of Portland.

"Sheepmen can now move their clip east as cheaply by rail as by water," President Adams declared.

The reduction in rates extends east into Montana and southern Idaho. The cut has been authorized to permit the railroad to meet competition developed by warehouses which have sprung up in Portland, where efforts have been made to control the bulk of the northwestern clip for shipment by water to Boston. The rates become effective June 6.

Under the new tariff Inland Empire wool growers will enjoy a rate of $2.35 a hundred pounds from Spokane to Boston. The new rate from Lewiston to Boston is $2.39 and from Yakima $2.05.

Reductions announced represent a cut of 80 cents a hundred on wool from Spokane to the east since January, 1922. The rate was reduced 10 per cent at the first of the year. That carried a drop of 30 cents a hundred; the new reduction represents a further cut of 50 cents a hundred from inland points of eastern Oregon and Washington, southern Idaho and central Montana.

Old rates and new from Spokane, Yakima and Lewiston are given in the following table:

	1920.	Jan., 1922.	June 6.
Spokane	$3.02	$2.72	$2.35
Lewiston	3.12	2.81	2.39
Yakima	2.72	2.45	2.05

Out for Better Sires

A purebred live stock tour to cover the entire length of western Washington is the latest development in the purebred sire campaign which is being conducted by the live stock farmers and the extension service of the state college of Washington.

This western Washington better sires tour will be held from July 24 to August 5, and will begin at Vancouver, Clarke county, and end in Whatcom county at Bellingham. Arrangements are being made between the county agents of Cowlitz, Lewis, Grays Harbor, Thurston, Pierce, King, Snohomish, Skagit and Whatcom to visit dairy and live stock raisers all along the route. The tour will include all types of live stock and the different breeds.

Don Magruder, dairy specialist, and C. M. Hubbard, live stock specialist of the extension service, will have charge of the entire tour and accompany the party from place to place.

It is the purpose of the better sires tour to show the value of the use of a high-class purebred sire. Examples will be shown where herds are being bred up by the use of a high-class purebred sire upon grade stock, showing the early stages of the breeding up process, while in other cases it will show the effect after the process has been far advanced.

A tentative schedule shows that the party, which will travel by auto, and include farmers and live stock men from the entire west side of the state, will spend the first night at Castle Rock. The next night stop will be made at Chehalis, after which will follow Aberdeen, Olympia, Tacoma, Seattle, Monroe, Mt. Vernon and finishing with Bellingham.

Rabid Animals

Seven Counties Are Quarantined

An increase in the number of rabid animals in eastern Washington, the division of dairy and live stock of the state department of agriculture has found it necessary to issue quarantine No. 29, which affects Kittitas, Yakima, Klickitat and Benton counties. It will be remembered that a previous quarantine called for the muzzling of all dogs in Franklin, Adams and Grant counties as well as part of Benton county, in order to prevent the spread of the disease among dogs.

Coyotes have been found in a number of sections of these counties to be affected with rabies and in a number of cases have infected live stock with their bite. A few instances have been reported where coyotes have attacked men and have been killed either with a gun or club.

The quarantine order, which is signed by E. L. French, director of agriculture, and P. W. Turner, chairman of the state board of health, requires every dog running at large within the boundaries of the above counties to be properly and securely muzzled to prevent its biting dogs, animals or persons. No dog shall be transported or moved from the quarantined area to any point outside unless permission is granted.

THURSTON GUERNSEY BREEDERS.

Members of the Thurston County Guernsey Breeders' association plan to meet at the Guernsey sale at Chehalis June 7. It is their plan to see how the animals sell, buy what suits them and then make a trip to Oregon herds, where they will buy what other stock they need. This plan was suggested in preference to making a trip to the middle west to purchase breeding stock, which was the original plan.

MRS. WILLIAM ROSLER, Friday Harbor Wash.—I wouldn't miss one single copy of The Washington Farmer, as it is one of the best little papers on the market. The stories are so thrilling we like them all.

LIVESTOCK AND DAIRY

Milk Production

Was Not So Profitable Last Year

The total value of dairy products produced on farms during the calendar year 1921 was $2,409,600,000, according to the estimate recently made by the United States department of agriculture. This amount compares with the estimated value of $3,025,400,000 in 1920 and $2,969,600,000 in 1919, the decline from 1920 to 1921 being approximately 20 per cent.

The rise in value from 1919 to 1920—a period during which the values of nearly all other important farm products, including animals, declined—was due to the higher prices paid for milk, butter and cheese during the latter year compared with the prices prevailing during 1919.

The production of milk during the three years under consideration was estimated at 10,535,000,000 gallons in 1919, 10,425,000,000 gallons in 1920 and 11,710,000,000 gallons in 1921.

Sales and farm consumption of whole milk at farmers' wholesale prices had an estimated value of $1,787,400,000 in 1919, of $1,836,400,000 in 1920 and of $1,579,500,000 in 1921. These values are based on estimates of 6,113,000,000 gallons of milk in 1919, 6,101,000,000 gallons in 1920 and 7,118,000,000 gallons in 1921, at the average price of 29.24 cents per gallon in 1919, of 30.1 cents in 1920 and of 22.19 cents in 1921. These average milk prices were computed from extensive information with regard to milk prices derived from all parts of the country, weighted by the relative monthly production of milk.

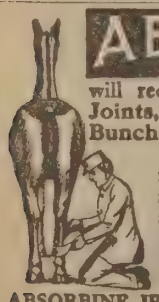
For butter made on farms a value of $344,900,000 is estimated for 1919, of $366,200,000 for 1920 and of $241,600,000 for 1921, the estimated production of butter falling from 685,000,000 pounds in 1919 to 650,000,000 pounds in 1921 and the average price from 50.35 cents per pound in 1919 and 54.25 cents in 1920 to 37.16 cents in 1921.

Heretofore no estimates of the values of buttermilk, skimmed milk and whey on farms have been included in the total value of dairy products. Based on feeding value, these products had a value of $260,600,000 in 1919, of $230,000,000 in 1920 and of $99,700,000 in 1921.

Stringy Milk

By A. B. NYSTROM.

I would like to know about stringy, ropy milk. Is the milk good to use? How can I find out which cow gives this milk? Should the cream be sent to a creamery?
Toppenish, Wash. MRS. H. B.



Stringy or ropy milk is not fit for food. It is liable to cause digestive disorders, especially in children. Set away a pint of milk from each cow in a clean, well scalded bottle, and let it stand for 48 hours at a temperature of 75 to 80 degrees F. This will tell you which cow gives the abnormal milk. However, it is probable that all the milk is contaminated from the same source. It may be the water, especially if the vessels and strainer cloth are rinsed in cold rather than boiling hot water. Frequently it is the strainer. The only way to get rid of this trouble is to boil for 15 minutes every day for 5 days, every milk utensil and strainer cloth and then let them dry without wiping, and setting them in the sun.

The cream should not be sent to the creamery, for should the trouble start there the creamery would have to go through the same operations of sterilizing to get rid of it. Stringy cream makes butter of very poor quality.

Alfalfa Hay

Should Not Be Harvested Too Soon

Delaying the cutting of alfalfa until it is nearly in full bloom has been found a better practice than mowing it soon after blooming starts. Trials made by the United States department of agriculture and state experiment stations indicate that the yields are larger over a period of years, and that the life of the stand is prolonged by delaying harvesting until the plants are nearly in full bloom.

Hay made when the plants are nearly in full bloom possibly is not quite so palatable, but this is offset by the gain in quantity of hay. The fields that were cut prior to or at the beginning of blooming showed a tendency to die out sooner. Cutting a crop late in the fall so that not enough growth was left for protection in the winter also had much to do with thinning stands. The department recommends that alfalfa be given time to reach a height of 6 to 8 inches before cold weather shuts off the sap flow.

In the past the growing of alfalfa in rows in dry regions has been recommended, but experimental evidence gathered by the department in the last few years shows that, with the exception of a few rare varieties the seed of which sells for a high price, this method is seldom practical. Where the rainfall is not sufficient to grow alfalfa in broadcast stands it can not usually be grown profitably in rows. A slightly larger yield may be produced, but not enough to pay for the added expense. Also the hay harvested on this cultivated ground is apt to be dirty and it is hard to cut and load.

Accumulating experience also has exploded some old notions about the value of cultivation of broadcast stands. It has been found that harrowing a field of alfalfa ordinarily does not increase the yield; neither does it prolong the life of the stand to any noticeable extent. The modified spring-tooth harrow does not injure the plants, but the disk often kills many and reduces the stand. Some sort of cultivation appears advisable in irrigated regions where the water carries a great deal of silt or where the soil has been compacted by the tramping of cattle pastured on the alfalfa. The department believes there is usually little to be gained by cultivating broadcast fields when the stand is good. If weeds and grass work in and reduce the stand it is better to plow up the field and put in another crop for a year or two. It is hard to thicken a thin stand buy cultivating it and sowing more seed; in fact, it is a waste of time, the department believes.

VETERINARY

By DR. S. B. NELSON.

Tuberculosis—Our cow has symptoms of tuberculosis. Can you tell me who to communicate with to have her examined?
Newport, Wash. H. B.

Write to Dr. L. C. Pelton, chief division, dairy and live stock, department of agriculture, Olympia, Wash.

Rheumatism—I have an 8-year-old cow that freshened a few days ago. Her joints all seem to be stiff and her hip joints are the worst. She has been this way for about a year and a half. Can anything be done for her? C. W. P.
Dixie, Wash.

Your cow may possibly have rheumatism. Give her one tablespoonful of sodium salicylate in a pint of water morning, noon and night for two days. Rest her two days and then repeat.

Try Neck Cradle—I have a young cow that has been fresh a week and she has been taking her own milk. Is there any way to break her of this habit?
Blaine, Wash. J. E. H.

Put a neck cradle on your cow. This is made of about ⅛ or ¾ by 1-inch strips, fastened together with strips of leather and a buckle so that it can be put on and taken off. It should fit snugly from the shoulders to the ears. This will prevent her from turning her neck to one side and sucking herself.

Bitter Milk—I have a cow that has been giving milk for 18 months. At irregular intervals the milk becomes bitter for a few days. At these times the cow seems restless and gives less milk. The cow is in good condition, in fact, almost too fat for a good milch cow. I feed alfalfa hay and about three quarts of mill run and oats twice a day. S. W. W.
Gig Harbor, Wash.

Try giving your cow 1½ pounds of epsom salts in three qharts of water. Following this give her a tablespoonful of fluid extract of phytolacca in a little water once daily.

Udder Is Caked—I bought a cow that freshened in February, but one side of her udder is caked. Can I do anything to bring her back to her milk again?
Okanogan, Wash. F. F. F.

The application of heat by means of a poultice or washing with hot water will tend to relieve the inflammation of the caked udder. It is well to give her a purge of 1½ pounds of epsom salts and cut down on her feed and milk her five or six times a day for a little while. Later the use of iodine may be employed to soften the udder. The iodine might be used in this way. Two ounces of iodine and six ounces of soap liniment, mix and massage the affected parts with it after each milking.

Tonic—I have a cow that is run down. She seems to get poorer all the time and does not have a very good appetite. There seems to be an itching all over her body and she licks herself until the hair comes off. She gives nearly her usual amount of milk. W. K.
Hubbard, Ore.

Give your cow a tonic of one tablespoonful of compound tincture of gentian daily for two weeks. It may be given in one-half pint of water.

Indigestion.—I have a 2-year-old heifer that had a calf 2 months ago. She gave three gallons of milk until three days ago when she gave only one pint. Can anything be done for her? C. H. W.
Oakland, Ore.

The symptoms you mention are rather indefinite, but it is possible that the heifer is suffering from indigestion, and I would recommend that you give her one and one-half pounds of epsom salts in three quarts of water; 24 hours later give her one quart of raw linseed oil.

Fed Too Much Corn

Pigs with a potential value of $50,000,000 died this spring from diseases resulting from insufficient vitamines in their food, J. S. Hughes and H. B. Winchester of the Kansas State Agricultural college reported to the American Chemical society at its recent meeting in Birmingham, Ala.

"The opinion is quite generally held," the report said, "that this great loss to hog raisers is due to feeding too much corn."

Mr. Hughes and Mr. Winchester now have an experiment running at Manhattan to test this theory. Four lots of gilts have been on feed in dry lots since weaning more than a year ago. Two lots are getting grain without any alfalfa or other green feed. In other words, their ration lacks sufficient vitamines. Out of four sows in one lot, only one is left alive. In the other lot two sows remain; one is down and the other is twisted out of shape due to the insufficient ration. It had been hoped to produce pigs from these two lots to see what effect the imperfect ration would have on the offspring, but this will be impossible.

In the two other lots, where alfalfa is being fed, the sows are gaining normally and apparently are about to farrow in a normal way.

Unique Calf Club

Something entirely new and unique in the way of a calf club has been organized in Lewis county, Washington. Ordinarily dairy calf clubs are formed with heifer calves, but this one is composed entirely of bull calves.

The idea was evolved by N. C. Sears of Winlock, Washington, who sold one of the calves for half its appraised value to one of the members. County Agent Fowler of Chehalis has given the idea his hearty indorsement, and the club is now well under way, with six members.

Mrs. Sears has agreed to act as club leader and already has had one meeting with the boys, besides the one at which the club was organized. The fair association has offered five prizes, totaling $25, besides a free trip to the state fair, and the Lewis County Jersey Cattle club will present the first prize winner with a Jersey heifer.

The winning will be made on the improvement made in the calf from the time the club was organized until the fair is held and on the kind of a report that is made. Members of the club are Roland Randt, William Rinta, Charles Rinke, Eino Laakso, Archie Laakso and Floyd Morton, all of Winlock, Wash.

You pay for a
De Laval
whether you buy one or not

If you are using a worn-out, inferior cream separator, or skimming cream by hand, you are surely wasting enough cream to pay for a De Laval in a short time.

The selection of a cream separator is more important than that of any other machine on the farm, for none other can either save or waste so much, twice a day, 365 days a year.

A De Laval Separator will:

—Skim cleaner for many more years than any other;

—Skim milk clean at lower temperature than any other separator;

—Deliver a higher testing cream, which is more acceptable to the creamery, and easier and less costly to ship;

—And deliver a cream which will make better butter.

Mechanically a De Laval Separator is the best that fine materials and skilled workmanship can make.

—It lasts longer than any other separator, many giving good service for 15 to 20 years.

—It is easier to turn.

—It is easier to clean.

—It is so simple that one tool will set it up or take it down.

—It has the most perfect lubricating system.

Do not be deceived by separators which are claimed to be "just as good and cost less." When you consider its greater savings, greater reliability, longer life, the extra time it saves, and the greater satisfaction it gives, the De Laval is, in the end, by far the most economical cream separator made.

Even if you have only two cows it will pay you to have a De Laval. One can be bought on such easy terms that it will pay for itself in less than a year. Why not see your De Laval agent at once or write us for full information?

Put Efficiency into the Rush Work on the Farm

By CARL W. ART

The expression, "The last straw that broke the camel's back," has been repeated so many times by ourselves as well as our forefathers that we accept it without thought. But it's true of the busy farmer.

All winter long you have been willing to put up with inefficiencies of different sorts. You had lots of time. One more trip to the barn more or less; extra hauls to town; slower methods of doing things, didn't irritate you because the rush of

Power machinery operating on a large wheat farm.

fall and harvest was a memory and such duties took away monotony.

But it's all action now! Spring is here! In the tedious work of plowing, which has had to start late in many regions of the northwest because Old Man Winter refused to watch the calendar and break his grip, antequated methods begin to irritate. It's slow work and there's so much else to do. A few days longer than you figured on one particular piece of ground, a good man who leaves you without warning, or a poor grade of work for the wages you have to pay—these are the irritations that "break the farmer's back!"—that make him look around and diagnose the new term: Power farming and its application to his particular ranch!

Harrowing! Making the ground fit! Seeding! All these operations take valuable time, and if inefficiency slows them up—you are piling up costs against every sack of wheat and every pound of crop produced next fall.

From 1915 to 1920 you were in the same position as any manufacturer. Getting quantities produced at almost any cost represented your chief problem. Because prices were on the up-grade. Whatever it cost, you were assured of a profitable price in the end. But now—

You're again in the same position of the manufacturer, and you find prices at low ebb, and costs too high. Low prices can have only one message to the farmer who intends to stay in business: Get rid of wasteful methods and inefficiency! Make every acre either produce more or, on a smaller per-acre cost, produce the same. Get more out of every man's day of work by furnishing him more efficient machinery to do with. In other words, don't let inefficiency "break your back." Your profit or your loss will depend on your net cost to produce. You can't control the selling price very much as yet, though cooperation is making progress in that direction, so you must control the cost!

The Inland Empire and the northwest generally are waking up to the possibilities of power on the farm, especially in the use of tractors. While more than half the tractors owned today are located in the states of Illinois, Iowa, Kansas, Minnesota, California, North Dakota, South Dakota and Nebraska, our states are rapidly coming to the front in tractor owning. tractor efficiency is bringing this about!

A Large Farm Experience.

Large ranch owners will be interested in the following test reported by H. J. Dana, tractor instructor at the State College of Washington, operating a 75-horse power tractor near Ione, Ore., last season:

During the rush of the plowing season it was used night and day, 22 hours of the 24, being equipped with a lighting system and stopping only an hour each morning and an hour at night for adjustments, fuel and lubrication! It plowed 1700 acres and seeded 2800 acres during the season, in addition to similarly heavy harvest work and hauling. It pulled 15 1-2 feet of plows in the light soil of that section; 30 acres a shift, or 60 acres a day of 24 hours.

When harrowing it pulled 70 feet of drag-harrows, covering 120 acres a shift. It drew four 20-hoe drills, followed by an equal width of harrows. The average daily operating cost was:

Engineer	$10.00
Plow tender	2.50
Distillate, 50 gallons, at 15c	7.50
Lubricating oil, 1½ gallons, at 80c	1.20
Cup grease and track oil	1.50
Total	$22.70

In the foregoing, depreciation and repairs were not figured, but were not considered excessive.

In the Palouse hills the daily acreage is not as great because the soil is heavier, the grades steeper, and less plows must, therefore, be used. The six-plow tractor, which seems most popular there, plows on an average of 12 to 15 acres in a 10-hour day.

How about the small farm or orchard? The efficiency is the same, and the size of tractor can be determined absolutely according to the amount of work the farmer has for it to do! In connection with spring work, especially, the smaller models lay particular stress on their lightness or their "track-laying" mechanism, which makes it possible to rest lightly on the soft spring soil when the ground could not be worked till possibly two weeks later by teams of horses or mules.

Must Have the Horse Also.

Right here mention should be made of the horse question. Horses have a place on every farm and ranch. A certain number are needed and the man who attempted to farm without them would be foolhardy indeed. But it is obviously most inefficient to carry twice as many head of horses on the board bill for the entire year as are needed continuously, simply to anticipate the six months period when work is heaviest.

Since the invention and perfection of power farming, by which tractors can take care of the "peak load," the farmer today may own exactly the number of horses he needs—using horse and tractor during all busy seasons—and does not have a penny of extra expense for his tractor when it is not earning money for him!

The small farmer of today is proving this also. Even with low prevailing prices of feed for horses, orchardists and truck farmers are sticking to their small tractors because of their efficiency in plowing, cultivating and power uses. While some of

Your advantage—and the dealer's—in Dry Sox Shoes

There is no secret why your dealer likes to sell Dry Sox Shoes. They are the most economical and profitable shoe investment you can make. The reason it this: He can carry a complete stock on a small investment. Near at hand is our factory and stock rooms. He can operate—take care of all shoe demands in fine fashion with a minimum stock—for broken lines can be filled in on short notice. He can telephone or telegraph us and receive the shoes almost at once. Thus he avoids the usual heavy investment—on which customers would have to pay interest. Further, he can afford to sell on a much smaller margin of profit—which means a lower price—because his stock is turned oftener. Dry Sox Shoes last an amazingly long time and require minimum care and repairs. Your first pair will make you an enthusiastic friend of them. Make note of the name, Dry Sox Shoes, so you can obtain them next time you purchase shoes. NOTE: Dry Sox Shoes are sold only through dealers, but, if the dealer you inquire of hasn't them, address us, and we'll see that your demands are given attention.

POULTRY AND RABBITS

Truck Gardening and Poultry

An interesting combination of a truck garden and a poultry farm is being carried out by Clarence Glenn of Montesano. Mr. Glenn has five acres in cultivation, but uses hotbeds for the growing of his young plants, part of which are sold and the rest transplanted into the field.

"I beleve head lettuce is one of the best paying crops for this district," said Mr. Glenn. "Last year I had three acres which would have paid me well if it had not been such a damp season and allowed blight to get a start. I am trying it out again this year and will plant from four to five acre. I have had best results from shipping the crated lettuce to the harbor cities, where there is a strong demand for it. The Los Angeles variety of head lettuce seems to do best here. The seed is planted in the ground and is later thinned to 14 inches, while the rows are 18 inches apart.

There is lots of work to a lettuce crop, but it is not as much work as celery. It comes off earlier than celery and is easier to crate. I have had good luck in selling to the commission houses, and believe that it is more profitable to pay them their small commission than to attempt a small retail selling plan."

In addition to lettuce Mr. Glenn raises cabbage and tomato plants for the local market and finds that there is a good demand for healthy plants. These, of course, are raised in hotbeds, whence they are transplanted and sold in plats.

Mr. Glenn has 1000 White Leghorn chickens, which are kept in a Shope house and fed for commercial egg production. While most of their feed is purchased, he finds that he can utilize much of the waste garden produce from his fields. He is restocking his flock with 600 young pullets, which he has raised from baby chicks.

An unusually heavy loss is reported from the baby chicks this year, which can hardly be accounted for unless it is the unusually backward season. After the birds once got started they developed so fast that the developing mash had to be discontinued. They are now getting scratch and millrun and allowed to run in a patch of winter oats.

"I am a strong booster for the Grays Harbor Egg association," continued Mr. Glenn. "We now have 50 members, with a total of 40,000 hens. The headquarters of the association are at Aberdeen. We are making an endeavor to maintain a certain standard, and we are supplying the market with well-graded eggs. We are storing a few eggs at Aberdeen during the heavy egg production this spring.

"Most of the members are in the eastern part of the county, some of them being as far east as Oakville. Practically three-fourths of the members are in the poultry business alone, and there are only a small percentage who raise their own grain. We expect to develop the poultry industry along with our dairying in this county."

Poultrymen to Organize

Permanent organization of the Willapa Valley Poultrymen's association will be effected at a meeting at Raymond June 5, when a constitution and by-laws will be offered for adoption and permanent officers elected. At a meeting May 2 V. L. Swartz was chosen temporary president, C. E. Lambert vice president, Z. B. Shay secretary-treasurer, and Frank Griffith and Antone Christen trustees. A committee consisting of Messrs. Swartz and Lambert and J. M. Dubla, which had been appointed by County Agriculturist J. R. Beck to canvass the poultry situation, reported, and poultry raisers present indicated that they will have a total of 7000 birds by October 1. Those at the meeting included Charles Gehrman, Antone Christen, Frances; Mr. and Mrs. Frank Griffith, Mr. and Mrs. A. G. Dundas, Lebam; Z. B. Shay, Lou Langer, V. L. Swartz, Gus Bues, Mrs. A. G. Butz, L. Gregg, Menlo; W. G. Wentworth, South Bend; J. M. Dubla, Raymond; A. Kennedy, A. P. Evavold, Willapa, and Mat and Christ Moe, East Raymond.

Fakers Work Culling Poultry

Warning has been received by the extension service of the State College of Washington to the effect that fake poultry cullers are swindling farmers in western Kansas, and working their way westward. The extension service of Colorado has issued the warning and Washington is passing it on to the farmers in the state.

The method used in Kansas is for a faker to go to a farmer and offer to cull his flock for 1 cent a bird, provided he will sell them the culls at the market price. If the farmer agrees, the fakers, who seem to know poultry culling practices, make it a point to take the best layers and leave the culls.

One woman in Kansas lost 80 of her best hens as a result of the swindle and the hens she has left are not laying. One of her neighbors, more observant, saw the fakers pick his best layers and put them into the cull crate, so he stopped the game. Farmers are advised to consult their county agents or poultry specialists if they see or hear of any such fakers.

Cause of Leg Weakness

What ails our baby chicks? They eat heartily, but seems to have a leg weakness. When startled they seem to have convulsions, but get over it quickly. They are kept on a board floor covered with one and one-half inches of wheat chaff. Is this caused by some deficiency in green food or chilling? A. H.
Tekoa, Wash.

The trouble with your chicks is probably leg weakness, due to the fact that your chicks have not had an opportunity to get out upon the ground. I believe that if you force the chicks to get outdoors, or bring in some good green sod into the brooder house that you will not have further trouble. Leg weakness is sometimes caused by overheating and chilling and may be brought on by forcing the chicks with too high a percentage of animal matter, such as meat scrap or fish meal. For little chicks not over 10% of the dry mash should be composed of animal matter. Green feed will, I believe, be a great help in remedying the trouble which you have.

Makes His Own Brooder

Would you beat the high cost of brooding chickens? Follow the example of Hugh Corp, a young poultryman of Lewis county, Wash., who invented and manufactured a brooder at about one-quarter of the usual cost of such devices. Using a barrel as a water supply and expansion tank and an old "airtight" stove with 24 feet of one-half inch coil in it for a heater, he carried hot water in an inch pipe to a wooden hover, turned the pipe four times underneath and brought it back to the top of the barrel. With very ordinary attention he was able to hold the temperature beneath the hover to a variation of two degrees.

GENERAL ADVERTISING.

MINERALIZED WATER ROUTS CHICKEN LICE

Tablets Dropped Into Drinking Founts Banish Vermin, Make Fowls Grow Faster and Increase Egg Yield.

Any poultry raiser can easily rid his flock of lice and mites, make chickens grow faster and increase their egg yield by simply adding minerals to the fowls' drinking water. This does away with all bother, such as dusting, greasing, dipping and spraying. The necessary minerals can now be obtained in convenient tablets, known as Paratabs. Soon after the fowls drink the mineralized water, all lice

and mites leave them. The tablets also act as a tonic conditioner. The health of the fowls quickly improves, they grow faster and the egg yield frequently is doubled. Little chicks that drink freely of the water never will be bothered by mites or lice.

The method is especially recommended for raisers of purebred stock, as there is no risk of soiling the plumage. The tablets are warranted to impart no flavor or odor to the eggs and meat. This remarkable conditioner, egg tonic and lice remedy costs only a trifle and is sold under an absolute guarantee. The tablets are scientifically prepared, perfectly safe, and dissolve readily in water.

Any reader of this paper may try them without risk. The laboratories producing Paratabs are so confident of good results that to introduce them to every poultry raiser they offer two big $1 packages for only $1. Send no money, just your name and address—a card will do—to the Paratab Laboratories, Dept. 578, 1100 Coca Cola Bldg., Kansas City, Mo., and the two $1 packages, enough for 100 gallons of water, will be mailed. Pay the postman $1 and postage on delivery, and if you are not delighted with results in 10 days—if your chickens are not healthier, laying more eggs and entirely free from lice and mites—your money will be promptly refunded. Don't hesitate to accept this trial offer as you are fully protected by this guarantee.—Adv.

The Rumely Ideal Increases Crop Profits

By having a Rumely Ideal Separator you will be able to thresh when you are ready; save the time and expense of stacking; save thresherman's fees; clear your land for early plowing; save the weeks of exchange work with your neighbors; use this time profitably on your own farm; take advantage of the market; get better prices.

Early threshing usually means a better grade and a bigger yield. Weather exposure is reduced and much spoiled and sprouted grain is avoided. This increases your profits.

Rumely Ideal Separator

The Rumely Ideal operates on a tried and proved principle that "saves all the grain." An even flow of straw is maintained through the machine. Winding, clogging and bunching are overcome. You get unusual speed, capacity and thoroughness, at least cost for operation and upkeep. Thousands of farmers know this.

WRITE FOR CATALOG

There are two sizes of the Ideal Rumely Separator adapted for individual use. The 22x36, easily operated by the 12x20 OILPULL TRACTOR, threshes up to 900 bushels of wheat daily. The 28x44, operated by the 16x30 OILPULL TRACTOR, threshes up to 1500 bushels of wheat daily. Write to nearest point listed below for complete catalog. In the meantime, see the local Advance-Rumely dealer.

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

ORCHARD AND GARDEN

Not Yet Too Late

To Put Out Certain Garden Crops

In view of the coldness of April and the recent May frosts, a representative of THE FARMER asked the other day of a prominent Spokane nurseryman, "What vegetable is it not too late to plant by the first of June?"

The answer was given as applying to the general run of seasons in that region and confined itself, therefore, to those plants and seeds which are usually set or sown late. Of the vegetables that we transplant in the seedling stage, instead of sowing in the open, the late group included, of course, tomatoes, eggplant, celery, peppers, cauliflower, late cabbage, cucumbers, melon seedlings and ground cherries, all of which it is as well not to put out before June 1 in the average location and some of which may better be set even later. There are also available from nurseries, of course, stocks of young onion plants and some others of the hardier vegetables for those who have been belated in sowing at the desirable season.

At the particular nursery in question, which happened to be the Kelly gardens, the writer was introduced to the system of "individuals," an alternative to the flat system of producing seedlings, whereby the latest safe transplanting date is considerably set forward. The individuals, as handled by this nursery in large numbers, were seedlings grown each in its tiny spruce veneer "pot," constructed much as a strawberry box is, and of diameter suited to the seedling and ranging from one and one-half to four inches. The advantage of the spruce boxlet lies in the ease of removing the bottom, so that, without soil disturbance or setback, the plant takes its place in its new environment. Where cutworms are prevalent the little box has another mission to fill. By having the cube of soil around the seedling at the right degree of moisture one may safely raise, just slightly, the walls of the box after removing the bottom. The cutworm, who works from the surface of the ground, does not find in spruce veneer anything to satisfy his springtime appetite, and so is turned away by the "fence" around the seedling.

As concerns rhubarb and asparagus roots, they are far better planted in early spring, while dormant, it was stated, though either could be set even now. Of the asparagus, which is slow in becoming established, one would not be safe in cutting from 2-year-old settings until two years after they were planted. Rhubarb is much more quickly established.

A safe general rule would be that what is perishable by frost should not be set afield before May 20 in the eastern tier of Washington counties, and then covered nights, said Mr. Kelly, and may be set June 15 if so transplanted as to guard against setback. What is not sensitive to frost should be transplanted early in spring, while dormant.

As concerns seeding, all the root vegetables for winter storing—turnips, rutabagas, carrots, beets, etc., are best seeded not before June 1, and the rapidly grown radish or lettuce may be sown at this time or later for renewing the supply.

Half Million Dollars

Fruits and fruit products produced on the farms of the United States during the calendar year 1921 had a total value of slightly more than $525,000,000, according to the estimate made by the United States department of agriculture. This amount was $229,600,000 less than the estimated value of these products in 1919 and $218,700,000 less than the estimated value for 1920.

The sharp decline in the total value for 1921 is accounted for chiefly by the short crop of orchard fruits in 1921. The greatly reduced prices paid for raisins during 1921 was also among the important contributing factors.

Orchard fruits—chiefly apples, apricots, peaches, pears, plums and prunes—dominated all other classes of fruits in value. The estimated value of this class of fruits and their products in 1921 was $271,000,000, or 52 per cent of the value of all fruits and fruit products.

The subtropical fruits, chiefly oranges, followed, with a 1921 valuation of $87,000,000, or 17 per cent of the fruit total. Next came the small fruits, mostly strawberries and cranberries, with an estimated value for 1921 of $74,500,000, or 14 per cent of the fruit total. Grapes and grape products had an estimated value in 1921 of $68,500,000, or 13 per cent of the fruit total.

For the three years of 1919, 1920 and 1921 the estimated values of orchard were $463,400,000, $441,900,000 and $270,000,000, respectively. For subtropical fruits these values were $84,200,000, $88,600,000 and $87,200,000; for small fruits, $63,300,000, $68,90,000, $105,000,000 and $68,500,000. The fruit products of farms for which valuation estimates are made are grape juice, raisins, apple cider, apple-cider vinegar and dried fruits. The total values of these products fell from $102,500,000 in 1919 to $66,000,000 in 1920, a decrease of 34 per cent.

The apple, "the king of fruits," is by far the leading single fruit in value. The fresh apple crop of 1921, a poor year for apples and many other orchard fruits, had an estimated value of $163,200,000. Far below this amount came oranges, with an estimated value of $64,300,000. In declining order came peaches, with a valuation of $52,200,000; strawberries, $40,900,000; grapes, exclusive of grapes used for raisins and grape juice, $29,500,000; plums and prunes, $19,900,000; pears, $18,300,000; cranberries, $6,400,000; apricots, $5,400,000; figs, $1,400,000, and at the foot of the list of individual fruits for which estimates are made came olives, with a valuation of $80,000.

Native Shrubs and Flowers

A landscape plan is being carried out at the home of Robert Taylor, son of J. H. Taylor, a Jersey breeder of Montesano. Robert is in partnership with his father and he has built a small house near the original Taylor home.

The plan will include as many native shrubs and flowers as possible, to obtain a natural effect about the yard. Sword ferns and Evergreen huckleberries have been planted near the house and front porch, while rhododendrons, laurel and pine are set along the edge of the lawn. A few wild currants will be planted next season in order to secure an early blooming shrub. A steep terrace between the lawn and the adjoining field has been planted to salal and Oregon grapes. Most of these plants were set out in February and all are coming through in fine shape. The rhododendrons are making an exceptionally fine growth, an interesting point, since they are considered a hard shrub to transplant.

Mr. Taylor expects to have a very attractive yard in the course of a few years. He has followed a plan given him by A. M. Doerner, landscape architect of the state college.

Here's to your Health—
Running Water
in your home

HERE is a private pumping station that gives you plenty of fresh running water, UNDER PRESSURE, for kitchen sink; for modern bathtub; wash bowl and toilet; for wash tubs; for stock; for washing motor cars, trucks, etc.; in the dairy house; for fire protection.

POST CARDS BRING BIG RETURN

Many of our advertisers offer free booklets and information which is very much worth your while to send for. A postal will bring them. Why not place a dime or so in your rural mail box with a note requesting the carrier to leave you some cards? Then use the cards in writing advertisers. When you do so be sure to mention THE WASHINGTON FARMER.

Time to Re-tire?
(Buy Fisk)
TRADE MARK REG U S. PAT OFF

FISK
RED-TOP
EXTRA PLY OF FABRIC
HEAVY TREAD

How a Fisk Red-Top outwore three other tires of another make *and still has a lot of mileage in it*

WHAT a country dealer said to our Memphis Manager:

"There is my car with a 30x3½ Red-Top on the left rear wheel. It was sold to me at the old price; at the same time I bought a cheap tire, and put it on the opposite wheel. I have since purchased three of those cheap tires for that right wheel. I have paid for them in all nearly twice the price of that Red-Top which is not yet more than half worn out. I don't want anything but Fisk Red-Tops after this."

It's the extra heavy, tough red tread and the extra ply of fabric that make this tire a sure success.

There's a Fisk Tire of extra value in every size, for car, truck or speed wagon

The Name "Grange"

(Continued from page three.)

"Grange." That means something definite. A "Grange" means an association or organization, secret organization of Patrons of Husbandry. That is just what "Grange" means. Now, in one of the encyclopedias here it is used as distinguishing the official acts of the Grange from efforts and purposes of farmers generally came to designate the whole class as "Grangers" and their legislative acts and all efforts of farm organization as "grange movements." That is where the word "Grangers" came in. Farmers generally got to be known as "grangers." But "Grange" has always stood for something right up to the beginning of this case, so far as I can find from the Encyclopedia evidence "Grange" has a peculiar and well defined meaning. When "Grange" was used it meant a body of patrons of husbandry under the control of the parent corporation. That is what "Grange" meant. It don't mean a lodge; it simply means a body of patrons of husbandry. Now, when the defendants in this case commenced preparing for the organization of the present lodge they very evidently recognized the fact. I hold here Plaintiff's Exhibit G, being a circular put out by Mr. Bouck and Mr. Cottrell and their associates, in which they say that the courts have ruled that the P of H, being the Patrons of Husbandry, have a prior right to the use of the name "Washington State Grange." Now "Washington State" don't mean anything except just like the word "lodge" or "number" in a local; it means "grange of Washington state," and "Grange" has a well defined meaning. In other words, had a prior right to the use of the word, the name, of "Grange" as characterizing patrons of husbandry in Washington state. Then at the close they say: "Pass a resolution in your Grange to cease affiliation with the Washington State Grange and to affiliate with what? The Western Progressive Grange, Washington Unit." That word "Washington Unit" makes it worse than if it wasn't in there. Western Progressive Grange, Washington Unit. In other words, "we can't use the 'Washington State Grange,' but we will use the 'Washington State Unit of the Washington State Grange'."

Now, Mr. Cottrell in his document, put forth before the suit however, shows their understanding of it. He says it was signed by the executive committee of the State Grange of P. of H. I see all the way through here they recognize that "Grange" means an organization of the P. of H. An organization of the P. of H.—not like a "lodge" which might mean an organization of anything or anybody, but "P. of H." Then at the close he uses the significant language: "Compare the declaration of the purposes of the patrons of husbandry with that of the new organization" showing plainly that the declaration of purposes of the patrons of husbandry was entirely different from the declaration of purposes of the new organization. Now "Grange" means patrons of husbandry and nothing else. And the declaration of purposes of the patrons of husbandry is entirely different from the declaration of the purposes of the new organization, and yet they use—while they have a right to use "Western Progressive" as a part of their name, they use the balance of it, the word "Grange," which is the only designating, peculiarly designating part of the patrons of husbandry. Admitting that the purposes of the new organization are entirely different from the purposes of the patrons of husbandry, so different that they can not affiliate with them and therefore secede, as they have a right to do, because the declaration of purposes, of the patrons of husbandry are so different from our own, we will secede, and they took from the patrons of husbandry the only thing that could be used to designate "patrons of husbandry," that was the "Grange." Now, it is fair to the defendants to find in this case, as I do find, that if there has been any damages resulting to the patrons of the Washington State Grange it has been practically nil; it don't amount to much, and there is not liable to be any damages resulting to the Washington State Grange by reason of money which should come to it being diverted to the new organization, or vice versa. I cannot find that there has been confusion confounded either, but I cannot shut my eyes, and neither can anyone in this case shut his eyes, to the fact that there is likely to be some confusion. Now, if they have no right to use the word "Grange" and they haven't any right if that is the only word significant specifically to characterize the patrons of husbandry, then they have no right to use "White River Grange" if the old organization uses it, or "Edgewood Grange" or "North Side Grange." Now, the testimony shows here that the seceding members of Edgewood Grange have organized a local known as "Edgewood Grange." They can't do that, even if they had a right to use the word "Grange" they wouldn't have it. This new organization as a state organization wouldn't have any right to do that; they can't take that old local's name. Now, I believe what Mr. Cottrell says, that the name of this one in the north, the 86th street, is not "North Side Grange" but that it is "North End." Now, the local of the subordinate of the Washington State Grange is "North Side"; this new one that was organized is the "North End." There is bound to be some confusion. Suppose that a granger came here from Illinois or California or some state and wasn't familiar with the local disputes of these people here, and he wanted to visit a local, he is just as liable to get into a local of the Western Progressive as he is of the Washington State, unless the pass word was different, then they wouldn't let him in, but at the same time there was an opportunity of being confused. You can't help but concede that there is a tendency to some confusion there, though I am going to find that there isn't much liability of any financial damage.

Now Mr. Cottrell's testimony is enough to enable me to decide this case. Mr. Cottrell states frankly that they discussed whether they should use the name "Grange." They had some doubt about their rights, so they telegraphed to Washington City and found out it was not copyrighted. Why did they want the use of the word "Grange"? Why was "Grange" any more popular than "Farmers' Union" or "Farmers' Alliance" or "Farmers' Association" or "Farmers' Cooperative Society"? Because the word "Grange" stood for something; the word "Grange" meant something, and Mr. Cottrell and his associates wanted that name if they could get it. Now, if it meant something then they had no right to use it, if it was the exclusive property of the other parties. Here is where the harm is being done, and serious injury could be done. "Grange" stands for patrons of husbandry and nothing else. Mr. Bouck and Mr. Cottrell are going under the name and the only name that characterizes patrons of husbandry, that means patrons of husbandry. Mr. Nelson and his associates are going under a name that means patrons of husbandry. Patrons of husbandry stands for a certain thing according to the declaration of purposes. Here is another organization going under the name of patrons of husbandry and stands for something absolutely opposite, so opposite that they cannot work together. Now then the people that have the right to the use of that name, in other words the patrons of husbandry that have the right to use that name, cannot be put in a position of standing for something that is obnoxious to them, and yet that is what they are doing. And they have a right to use the name "Grange," and if "Grange" means patrons of husbandry, then the patrons of husbandry are standing, some of them—in other words patrons of husbandry endorse the principles that you must respond to your government and fight whenever the government calls on you, the patrons of husbandry stand for the principle that we won't fight, we won't permit any fighting except when we are invaded by a foreign foe. Now, you can't reconcile the two, patrons of husbandry have no right to be put in the attitude of stand-

(Continued on page eighteen.)

Efficiency in Spring Work

(Continued from page nine.)

these smaller types are of comparatively recent development, they fill a long-felt want and complete the tractor cycle.

Some of the advantages claimed for the tractor in the orchard are these:

It will get closer to the trees without injury to them.

It will not bite the end of the limbs or knock off fruit.

It will turn in a short radius.

It can be guided with exactness.

It will pull heavier tools and cut deeper.

It will readily pull a subsoiler to break the plowpan caused by shallow tillage or the hardpan laid down by nature.

It will get over the ground faster.

It can be worked longer hours, in emergency.

An Orchard Experience.

Read these excerpts from a recent letter from Claude H. Stevenson of the Eden Orchards, Inc., of Salem, Ore., concerning his experience last season:

"* * * I have had my machine one year, have cultivated about 2800 acres, using double disc and nine-foot spring tooth harrow. We know our conditions are unusual, as all of our ground is steep, one orchard has a 40 per cent grade, and the tractor worked it two ways with a five-foot double disc. Am now working an orchard with 30 per cent grade, with a seven-foot disc and we never stop.

"We overhauled the engine last winter, and after such a strenuous season could not take up a single bearing in the motor, gears in perfect condition, practically nothing to do but oil up and go."

This spring the wide-awake farmer has still another reason beyond general efficiency for considering the tractor question. Price reductions have been most drastic. Whether or not they will remain as low as they are today is problematical, to say the least, just as problematical as whether farm products will remain too low, in the farmer's eyes, and in the opinion of those who have studied the problem.

One of the northwest's biggest implement houses, in the words of its president, sees it this way:

"During the last five years there has been no time when the market was so much a buyer's market as at the present time. This necessarily means lower prices for implements and makes it possible for the man who is in the market to buy nearer to his own price and terms than heretofore.

"A great many buyers of agricultural implements think perhaps the market will be lower. The chances are, in time, it will be, although with the present high taxes (and we understand it takes about 46 cents of each dollar spent to carry on expensive tax payments) it doesn't look as if prices would go very much lower."

The probability being, therefore, that prices may eventually be even higher, with labor, metals and taxes at a high mark and manufactured products comparatively low—this would seem to be a good time to buy for the man who has work for the tractor to do. As for efficiency, the tractor, the truck and the innumerable power machines and attachments have come to stay! It is simply a question of choosing the right one for each purpose, considering carefully size, capacity and adaptability.—Copyright, 1922.

An unbroken record in the hands of the American farmer since 1864

SLOWLY circling lower and lower, all of a sudden Mr. Chicken-Hawk swoops swiftly downward, but—

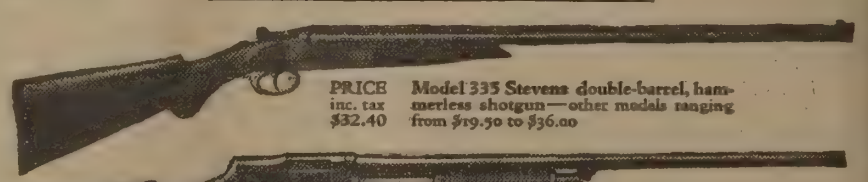
Bang! Caught in mid-air. That accurate, hard-hitting Stevens was too quick for him.

For 58 years Stevens has built for the American farmer shotguns of unsurpassed accuracy and endurance.

It's easy to prove the accuracy of a Stevens

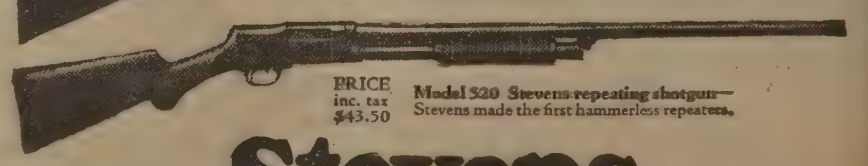
Here's the test for a full choke: on a piece of paper draw a circle 30 inches in diameter; measure off 40 yards and fire into it. Your Stevens will throw an even pattern of 70% of the pellets into that circle.

A Stevens modified choke will throw an even pattern of 50%. And a Stevens cylinder bore will throw an even pattern of 40%. Try it. Only a perfectly bored gun will meet this test.



Remember this: when you buy a Stevens you get the last word in accuracy; you get a gun that will last a lifetime; and you get that gun at an exceptionally low price.

Stevens manufactures a complete line of small bore rifles and shotguns of every description. Ask at your dealer's or write for the interesting catalog describing in detail the complete Stevens line. Address:



J. STEVENS ARMS COMPANY
Department K333, Chicopee Falls, Mass.
Owned and operated by the Savage Arms Corporation
Executive and Export Offices: 50 Church Street, New York

The famous Stevens Guarantee

Every firearm turned out by the J. Stevens Arms Co. has attached a tag on which is printed the Stevens guarantee. This tag is your insurance for Stevens quality and workmanship. Read carefully this guarantee.

PRICE inc. tax $32.40 — Model 335 Stevens double-barrel, hammerless shotgun—other models ranging from $19.50 to $36.00

PRICE inc. tax $43.50 — Model 320 Stevens repeating shotgun—Stevens made the first hammerless repeaters.

FOR SALE OR EXCHANGE—201 ACRES GOOD soil; 30 acres improved; good house, stable, hen house; timber to pay for place. Write owner, Benjamin Healey, Molson, Wash.

CHAPTER XXI.

The Rifled Cache.

The cold of February, intense, searching, deadly, tightened its grip upon the wilderness, sapping the life of the three struggling human derelicts—for derelicts Shad Trowbridge felt himself and his two companions to be—as they fought their way, now hopefully, now despondently, but ever with slower pace, as strength ebbed, toward the precious cache on the shores of the Great lake, and with the slower progress that growing weakness demanded it was quickly found necessary to reduce by half the already minute portion of dried caribou meat allotted to each.

Everything in the world save only themselves seemed to have been frozen into oblivion. There was no sound save the monotonous swish, swish of their own snowshoes to disturb the silence—a silence otherwise as absolute and vast as the uttermost depths of the grave.

Storms overtook them, but they mercifully were storms of short duration and seldom interfered with hours of travel Staggering, but ever struggling forward they forced their way painfully on and on, over pitiless wind-swept ridges, across life-sapping, desolate barrens, through scarcely less inhospitable forests. Exerting their waning strength to its utmost, they never stopped, save when exhausted nature compelled them to halt for brief intervals of sleep and rest, to recuperate their wasted energies.

Shad Trowbridge came finally to wonder vaguely if he were not dead, this another existence, and he doomed to keep going and going through endless ages over endless reaches of snow. To his numbed intellect it seemed that he had been thus going for months and years.

Like a vague, pleasant dream of something experienced in previous life, he remembered Bob and the tilts, Wolf Light farther back, and the dear old college. What would the fellows say now, if they were to see him—the fellows who had known him in that former, happier life?

At other times he fancied he heard Ungava Bob and the others hallooing in the distance, and he would answer in glad, expectant shouts. But there never came a reply.

The first time this occurred Manikawan turned and looked inquiringly at him, through eyes sunk deep in their sockets. When it was repeated later—and he came to hear the voices and to shout to the empty snow wastes at least once every day—she would step to his side, solicitously touch his shoulder and say:

"The friend of White Brother of the Snow hears the voices of the Matchi Manitu of Hunger. Let him close his ears and be deaf, for the Matchi Manitu is mocking him."

Mookoomahn's face was not pleasant to see now; it was horrible—the dark skin was drawn tight over the high cheek bones, the lips shrunken to the gums, and the eyes fallen far back into the skull. His face resembled more than anything else the smoked and dried skull of a mummy.

Shad laughed sometimes when he looked at Mookoomahn's ghastly face, framed in a mass of long, straggling black hair; at other times he was overcome with a heart-rending pity for Mookoomahn that brought tears to his eyes. But tears froze and were annoying and painful.

Manikawan, too, had changed woefully. The lean, gaunt figure stalking along uncomplainingly with Shad and Mookoomahn had small resemblance to the beautiful, commanding Manikawan that bade Bob and Shad be patient in their imprisonment on the island until she returned to relieve them; or the glowing, happy Manikawan that accompanied Shad and the other to the river tilt after she had accomplished the rescue. Though there still burned within her an unquenchable fire of energy, and she never lagged on the trail, she was no longer the Manikawan of old.

In spite of all the hardships and all the pain, and slowly starving as she was, she never ceased her attention to Shad, and she never once lost her patience with him.

When Shad laughed hysterically and derisively at his fate, as he did sometimes, Manikawan would step to his side, touch him lightly with her hand and say in the same old voice, lower than of old, but even more musical and sweet:

"The Friend of White Brother of the Snow is brave. He is not a coward. He is not afraid to die."

This always had a magical, soothing effect upon Shad. Though he never learned to interpret her language, the touch of the hand, the human note of encouragement in her voice, the light in the eyes that looked into his, never failed to recall him to his manhood and to himself, and to the remembrance of his vow that as a white man he must by mere force of will prove his superiority.

All record of time was lost. But the days were visibly lengthening with each sunrise and sunset, and when the wind did not blow to freeze them, and the snow did not drift to blind them, the sunshine gave forth a hint—just a hint—of warmth.

One day the dead silence was suddenly startled by the long-drawn-out howl of a wolf. It was a blood-curdling and almost human cry, and Shad likened it to the agonized cry of a lost soul in the depths of eternal torment. Again and again it sounded, then suddenly ceasing, Shad discovered the animal itself trotting leisurely after them far in the rear, and a feeling of fellowship—of pity—welled up in his bosom.

But when he discovered the creature still following them the next day, now so near that he could see its lolling red tongue, its lean sides and ugly fangs, he became possessed with a feeling of revulsion toward it. Then he fancied it the embodied Spirit of Starvation stalking them and awaiting an opportunity to destroy them. This fancy gave birth to a consuming, intense hatred of the thing. Finally it attained the proportions of a mocking, tantalizing demon.

Cunningly he watched for a moment when it was well within rifle shot, and drawing his rifle from the toboggan he dropped upon a knee, aimed carefully and pulled the trigger. The frost-clogged firing pin did not respond, and the wolf, seeming to understand its peril, slunk away unharmed.

Shad had seen it plainly—its repulsive gray sides so lank that they seemed almost to meet, its red, hungry tongue lolling from its ugly mouth, its cruel white fangs, and its malevolent, gleaming eyes. His hatred for the creature became an obsession, for it appeared again presently, persistently following, but now keeping at a respectful distance.

On the third day, however, the wolf had forgotten its temporary timidity, and with increased boldness stole steadily upon their heels. With a patience quite foreign to him Shad waited, glancing behind constantly, but making no demonstration until the wolf, apparently satisfied that it had little to fear from the hunger-stricken plodders, trotted boldly up and took a place behind them, so near that if the rifle failed at the first snap there would be opportunity for a second attempt before the beast could pass out of range.

Shad again stopped, and seizing the rifle discovered that the beast had also stopped and stood glaring at him, mocking and unafraid. As though knowing their weakness, it had lost respect for their power to injure it.

A mighty rage took possession of Shad. He fell to his knee again, aimed carefully, and again pulled the trigger. This time there was a report, and in an insane frenzy of delight he beheld the carcass of the tantalizing creature stretched upon the snow.

Mookoomahn and Manikawan had halted and stood in breathless silence watching the result of Shad's shot. Now with an exclamation of pleasure from Mookoomahn the two rushed forward, knives in hand, and in an incredibly short time the carcass of the wolf was quartered, a fire lighted and some of the meat cooking.

It was a lean, scrawny wolf, and the meat tough and stringy, but to the famished travelers it meant life, and Shad thought the half-cooked piece which Mookoomahn doled to him as his share the sweetest morsel he had ever eaten.

The wolf meat, carefully husbanded, supplied food until one morning Mookoomahn by a series of signs conveyed the information to Shad that they were within a day's march of the cache. Then they ate the last of it, that it might give them strength for the final effort.

It was evening, but not yet dark, when familiar landmarks told Shad that they were nearing the goal, and a little later they halted where the poles of Sishetakushin's lodge stood in the edge of the woods above the lake shore.

With furious haste Shad and Mookoomahn rushed to the cache, but suddenly stopped, aghast and stupefied. The cache had been rifled of its contents, and lying near it, half covered with snow, lay the frozen, emaciated body of an Indian.

CHAPTER XXII.

Manikawan's Sacrifice.

An examination of the surroundings made it plain that a band of eastern Mountaineer or Mingen Indians, in a starving condition, had visited the place; that one of them, already too far exhausted to be revived, had died; that the others, taking the food, had left the body uncared for and fled.

The disappointment was quite beyond expression. Had they been in good physical condition, a short three days' travel would now have carried them to the river tilt and safety. In their present weakened and starved condition at least twice that time would be consumed in the journey, and no food remained to help them on their way.

In deep depression Shad assisted Manikawan to stretch the deerskin covering upon the lodge, while Mookoomahn gathered wood for the fire. Clumsy with weakness, dizzy with disappointment, Shad reached to spread the skin, his snowshoes became entangled, he stumbled and fell. When he attempted to rise he discovered to his dismay that he had wrenched a knee, and when he attempted to walk he was scarcely able to hobble into the lodge.

The last bare chance of life fled, the last thread of flickering hope broken, Shad sank down, little caring for the pain, numb with a certainty of quickly impending death. He could not keep the pace of the Indians. He could not travel at all, and he could neither ask nor expect that they do otherwise than proceed as usual after a period of rest, and leave him to his fate.

They stopped aghast and stupefied.

Very early in the morning Shad heard a movement in the lodge and realized that Mookoomahn and Manikawan were engaged in low and earnest conversation. This meant, he was sure, that they were going.

He vaguely wondered whether they would take the lodge with them and leave him to die the more quickly in the intense cold of the open, or whether they would leave it behind them as a weight now too great to be hauled farther upon their toboggan.

He did not care much. He was resigned to his fate. He suffered now no pain of body, save an occasional twitch of the knee when he moved. The hunger pain had gone. It would be sweet and restful, after all, to lie there and die peacefully. It would end the struggle for existence. There would be no more weary plodding over boundless snow wastes. The end of hope was the end of trouble and pain.

With his acceptance of the inevitable, and resignation to his fate, a great lassitude fell upon him. He was overcome with a drowsiness, and as the swish, swish of retreating snowshoes fell upon his ears he dropped into a heavy sleep.

It must have been hours later when Shad opened his eyes to behold sitting opposite him, across the fire, Manikawan. She smiled when she saw that he was awake, and he thought how thin and worn she looked, a mere shadow of the Manikawan he had first known.

Then there dawned upon his slowly-waking brain a realization of the situation. She had resigned her chance of life to remain with him. He could not permit this. It was a useless waste of life. There was still hope that she might reach the tilts and safety. By remaining with him she was deliberately rejecting a possible opportunity to preserve herself. Much perturbed by this discovery, Shad sat up.

"Mookoomahn?" he asked, pointing toward the south.

"Mookoomahn," she answered, pointing in the same direction. "Manikawan," pointing at the fire, to indicate that Mookoomahn had gone but she had remained.

He protested by signs that she should follow Mookomahn. He passed around the fire to where she sat, and grasped her arm in his bony fingers, in an attempt to compel her to do so, but she stubbornly shook her head, and forced to submit, he resumed his seat. Both sorry and glad that he should not be left alone, he reached over and pressed her hand as an indication of his appreciation of her self-sacrifice.

Then she dipped from a kettle by the fire a cup of liquid, which she handed him. He sipped it, and, discovering that it was a weak broth, drank it. He looked at her inquiringly.

Turning again to the pail, she draw forth half a boiled ptarmigan, which she passed him.

"Let the friend of White Brother of the Snow eat. It is little, and it will not drive away the Spirit of Hunger, but it will help to keep away the evil Spirit of Starvation until White Brother of the Snow brings food to his friend."

He accepted it and ate, not ravenously, for his hunger now was not consuming, but with delicious relish. Manikawan did not eat, but he presumed that she had already had a like portion.

Shad was able to hobble, though with considerable pain, in and out of the lodge, and to assist in getting wood for the fire, and so far as she would permit him to do so he relieved her of the task.

The following morning and for four successive mornings the cup of broth and the portion of ptarmigan awaited him when he awoke. It was evident Manikawan had killed them with bow and arrow.

He never saw her eat. It was quite natural that she should have done so before he awoke of mornings, for he made no attempt at early rising.

But he noted with alarm that Manikawan was daily growing weaker. She staggered woefully at times when she walked, like one intoxicated. She was weaker than he, but this he ascribed to his stronger mentality.

By sheer force of will he put aside the insistent weakness, which he know would get the better of him were he to resign himself to it. By the same force of will he injected into his being a degree of physical energy. But he was a white man, she only an Indian, and this could not be expected of her.

Then there came a day when he awoke to find her gone, and no broth or ptarmigan awaiting him. Later she tottered into the lodge, and empty-handed laid her bow and arrow aside.

The next morning she was lying prone, and the fire was nearly out, for the wood was gone.

"Poor girl," he said, "she is tired and has overslept"; and stealthily, that he might not disturb her, he stole out for the needed wood.

She was awake when he returned, and she tried to rise, but fell helplessly back upon her bed of boughs.

"Manikawan is weak like a little child," she said, in a low, uncertain voice. "But White Brother of the Snow will soon come. The suns are rising and setting. He will soon come. Let the friend of White Brother of the Snow have courage."

Shad brewed her some strong tea—a little still remaining. She drank it, and the hot stimulant presently gave her renewed strength.

But Shad was not deceived. Manikawan's words had sounded to him a prophecy of the impending end. Her voice and her rapidly failing strength told him that the Spirit of Hunger—the Gaunt Gray Wolf—was conquering; that the spirit most dreaded of all the spirits, Death, stood at last at the portal of the lodge, waiting to enter.

(To be continued.)

Good Stores Are the Foundation Upon Which Thriving Towns Are Built

Trade is the magnet which draws many other advantages to the community. Given a healthy nucleus of good stores, and we are pretty sure to find good roads radiating in all directions, prosperous churches, thriving schools, satisfactory railway service and many other economic or social advantages.

Since the farmer and his family benefit from these things, it is to their advantage to take a hand in building up the home town; especially to give the local merchants just consideration when placing business. If you can conscientiously buy from the local establishment after considering price and service you will be helping to build up that nucleus of good stores which inevitably results in the other advantages mentioned above.

Not Ever.

Rastus (to Sambo in an undertone)—I ain't the man I uster wuz. Time wuz when I could whip the ol' woman in a fair, stan'-up fight.

The old woman (overhearing)—You's a black liar, Rastus Johnsing. Time wuzn't, time ain't, an' time ain't going to wuz.—Nashville Tennessean.

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I get much help from the Circle and will give out a bit for it. To any troubled with moles eating sweet corn after planting, try soaking the seed in coal oil for about an hour before planting. This has been tried with success. MRS. E. P.

Dear Mrs. E. P.: You ask about cleaning silk. You will find a method said to be good in a May issue of the paper. Had you given name and address I would have written you.

Give address, sisters; please do this. I can not take space to explain, but it will make it very much easier for me to serve you if you will do so. I will never print addresses or names if you object.
ALICE W. BARLAND.

Dear Mrs. Barland: I will tell how I have removed the letters from flour sacks: Grease all the letters and coloring with lard and let stand over night; in the morning wash in the usual way. (This should be done before the sacks are wet.—A. W. B.) This method will also remove tar. In blacking stoves where the iron has become red with the heat apply vinegar first to the iron before blacking.
Idaho. "CONNIE."

Dear Mrs. Barland: I removed the letters from flour sacks by soaking them from one wash day to another in a very strong soap suds with a little lye in it. The sacks shouldn't be wet before soaking. Out of a 100-pound sack I made a very pretty pair of rompers for my year-old son. I finished the neck and sleeves in buttonhole stitch and for the pockets I designed a sort of a duck. I have learned many ways to economize since I came west. MRS. G. W. J.

Dear Mrs. Barland: I have found that one can make a nice, smooth mayonnaise dressing by using melted shortening or butter instead of oil. It must be allowed to cool before using, but not to get hard.

Cottage cheese makes a good substitute for American cheese in macaroni and I always add an egg also.
Idaho, MRS. THOMAS W. COLE.

Dear Mrs. Barland: I find that to get plenty of nice blooms from narcissus and tulips they should be allowed to remain in the ground about three years. I find when I dig them up and put away to dry I never get more than one bloom to five bulbs. Bulbs forced in the house need a year or two of growing outside before forcing again.

Four 100-pound flour sacks make good tablecloths with a pretty design worked in the corners. They are also useful for bed quilt linings and take dye well. I piece small scraps on to old worn blankets and lining with sacks I can save buying cotton or wool for filling.

One can use many scraps too small for common piecing by using in "crazy" patchwork. Piece the scraps on paper, then tear out the paper.

One can have a pansy bed on the same ground with bulbs, for the bulbs will force their way up through anything growing among them. MRS. PEARL GAESTEL.
Carrolls, Wash.

Dear Mrs. Barland: In answer to the request of Mrs. J. E. H., Grangeville, Idaho, will give my way of getting rid of the pests which destroy cabbage, turnips and radish plants.

I punch holes in the bottom of an old can or pan and sift wood ashes over the plants as soon as they appear above the ground. I have had good success, but have to go over the plants several times.

For the green worms that come later on cabbage plants I use a little salt in hot water and put on the plants with my sprinkling can. This will do for a small patch near the house, but would not be practical, I amagine, for a large field, as it would be hard to keep water hot.
MRS. MATTIE M'CLURE.
St. Maries, Idaho.

Home Recipes

White cake: One and one-half cups of sugar, one-half cup of butter, four egg whites, three-fourths cup of sweet milk, two and one-half cups of sifted flour, two teaspoons of baking powder, one-half teaspoon of vanilla or almond flavor, a pinch of salt.

Process of making: Cream butter and sugar thoroughly, add all but the eggs, beating well, then lastly add the eggs beaten to a stiff froth. This makes three nice layers. MRS. G. F. T.

Oatmeal cookies: One cup of shortening, two cups of flour, two cups of rolled oats, one cup of sugar, one teaspoon each of cinnamon and nutmeg, one-half teaspoon of soda, one-half cup of milk, two eggs, one cup of chopped raisins. Mix the butter and sugar ,add milk and eggs well beaten, add dry ingredients sifted first, then the raisins chopped and dredged with flour, and bake in a moderate oven 15 minutes. MRS. G. H.
Boring, Ore.

Meat loaf: One-half pound each of veal, pork and beef, ground fine, one cup of bread crumbs, one egg, one chopped onion, salt, pepper, sage to taste. Mix all together and if too thick add a little milk and if too thin add a little flour or more bread crumbs. Mold into a loaf and bake in a medium hot oven one hour.
MRS. G. H.

Dried cherries: Nine pounds of seeded cherries, one quart of sugar, one cup of water; boil until it threads, set off and let cool; pour over the cherries, put on the stove and allow to boil for a while slowly, take off the stove and allow to stand overnight, then bring to a boil again. Drain off the juice and dry in the sun. When dry roll in sugar and pack in jars. One can dry them on windowglass. These will melt in your mouth and beat candy.
MRS. F. L. THOMAS.
Illahe, Curry county, Ore.

Soap from cracklings and rinds: If rinds are salty put in warm water for 24 hours. To each five and a half pounds of rinds and cracklings use one can of lye in one quart of water and be sure to let it cool, then add it to the rinds with two and one-half or three quarts more of cold water. Let this mixture stand 10 days or three weeks will not matter, but stir occasionally. Place in a kettle and boil from one to two hours until it drops like sirup from the paddle.

Ten minutes before removing from the fire add three tablespoons of kerosene; this will make the soap lather, and four tablespoons of salt will make the residue sink to the bottom; one and one-half tablespoons of soda makes soap whiter. In 24 hours cut into desired pieces and lay out to dry, being sure to cut away the settlings from the bottom.

If the soap isn't to your satisfaction when finished add more water and reboil. MRS. C. L. S.
Oregon.

A different way to cook eggs: Break into a well-buttered pan as many eggs as required without breaking the yolks, season with pepper and salt, then sprinkle over the top a hin layer of grated cheese and bake in the oven just long enough to cook the white of the eggs, about 10 minutes in a moderate oven.
Washington. MRS. W. C. H.

Carrot salad: Clean and scrape and chop very fine six good sized carrots and add one-half pound of English walnuts, also chopped fine; add a very little salt and serve with mayonnaise dressing.
MRS. G. A. H.

Mayonnaise dressing: Break two egg yolks into a soup plate, add a pinch of salt and a dash of red pepper and beat with a rotary motion till it begins to thicken; add two tablespoons of lemon juice slowly and beat continually, then add olive oil, dropping slowly until very thick and creamy. There is little danger of curdling if the eggs are perfectly fresh and the oil is added slowly. MRS. G. A. H.
Oregon.
(Any other salad oil may be used instead of olive oil.—A. W. B.)

Just Folks

The evening shadows are quieting. The faint shimmer of the departing sun is restful. Growing old gracefully compensates for the loneliness of age.

Probably no one in the great valley of the Mississippi grew old more happily or found more satisfaction as the years increased than "Johnny Appleseed." His was the vision of the future. To his mind's eye apple trees and apple orchards would dot the fat lands of the valley. Children, as they would eat the fruit, would rise up to call him blessed, as the story of his wanderings, scattering the seeds, was told at the firesides. Johnny Appleseed lived in the future and not in the past, as much as any boy or girl of his time.

Smiling age seeks out the cooperation of youth far more than does youth seek out the cooperation of age, and it is better so.

If older folks appear young it is because their thoughts are with the young. They enter into the promises of youth far more than does youth itself. They see opportunities for others and rejoice in those opportunities even with more sincere appreciation than when similar opportunities open to themselves. They are venturous for others, as their own days of venturing are passing.

He who grows old gracefully may enjoy the ambitious of youth more than youth itself. Age realizes that failures are stepping stones in the path of ambition, while to youth itself these failures shut out the sun for a season.

Hope for the young folks may prove the most enduring and satisfactory of the hopes of age, and happy childhood is the last consolation of the eventide of life. E A S

Bark and Enamel

WHEN you cultivate a young orchard, you take particular care not to scrape the bark off the trees. For when the bark is scratched or broken insects and plant diseases can enter to destroy or decay the tender tissue beneath.

The enamel of your teeth—the outer covering—protects the soft part in much the same way as bark protects the tree. Care should be taken not to damage the enamel by "scratching" or "scouring" it with a harsh, gritty tooth paste. The U. S. Public Health Service recommends using a dentifrice which is free from harsh grit.

COLGATE'S

Cleans Teeth the Right Way

"Washes" and Polishes—
Doesn't Scratch or Scour

Colgate's contains a specially prepared fine chalk. It has no harsh grit, no strong drugs or chemicals. The refreshing, delicious flavor makes tooth brushing a pleasure after each meal.

More dentists recommend Colgate's Ribbon Dental Cream than any other dentifrice. Since 1806 Colgate has made reliable products which every farm family likes.

High Points in News of the Week

As THE FARMER has stood aggressively for a reduction in war-time freight rates, it is pleased, though not satisfied, with the order of the interstate commerce commission of May 24, directing the railroads to put into application by July 1 rate reductions that would average about 10 per cent in the total railway traffic of the United States.

For instance, we said in a recent issue that "there should be an all-round reduction of freight rates and that reduction should be applied to the interior communities as well as to the Coast cities." We have held to the view that it would profit the railroads voluntarily to make such reductions and thus start industry and commerce on the high road of prosperity. The interstate commerce commission takes that view in its order, wherein it says:

"A general reduction in the rate level as substantial as the conditions of the carriers will permit will tend to stabilize the conditions under which commerce and industry are carried on, with consequent fuller assurance to the carriers of realizing a fair return."

The commission estimates that the ordered reductions, if put into effect by the railroads, will mean a yearly saving to the American people of about $400,000,000.

Our disappointment with this decision springs from the fact that the commission's order does not apply to agricultural products, live stock and fruit except in New England. The commission held that the reductions that were made in agricultural products earlier in the year are as far as the railroads should be required to go at this time.

Nevertheless, Pacific northwest farmers will benefit from the proposed reduction, for it will mean lower freight rates on everything the farmer buys, particularly on fuel, building materials, automobiles and tractors, farm machinery and other heavy commodities.

Mr. Calderhead, rate expert for the Washington state department of public works, says: "The mountain-Pacific group of states will benefit most by this reduction on a horizontal basis because the heavy percentage of the traffic of this group moves to the eastern consuming territory and the charges per 100 pounds are relatively high." That benefit, however, applies to such commodities as products of the forests, fisheries and mines, and not to farm products and live stock.

Before the commission made its order President Harding attempted, in a conference at the White House with the heads of the large railroad systems, to induce them to make a voluntary reduction. When the president failed in that effort he passed the question back to the interstate commerce commission, and that body promptly dealt with it in the sweeping order of May 24.

The railway labor board last week ordered a reduction in rail wages affecting about 400,000 employees and totaling about $48,000,000 a year. The greater portion of the reduction hits the maintenance of way men, whose pay is cut an average of about five cents an hour.

* * *

The military committee of the house of representatives has virtually rejected all offers for purchase or lease of the Muscle Shoals property of the government in Alabama, including that of Henry Ford. The rejection takes the form of a counter-proposal by the committee of terms that would be acceptable. It is apparent that the offer made by Mr. Ford came most nearly meeting the requirements of the government, since it is made the basis for the modification in the counter-proposal. Among the prominent points in the proposal made by the military committee is that one of the plants at Muscle Shoals shall be eliminated altogether from the purchase or lease; that the company entering into the contract shall have a paid-up capital of $10,000,000 or more for operation and development; that such concern shall guarantee to produce fertilizers containing at least 40,000 tons of fixed nitrogen each year; that such lease run for 100 years, as provided in the Ford proposal, and that the sale of fertilizers be made at a profit of not to exceed 8 per cent of the cost of production.

* * *

The farm block in the house of representatives has succeeded in its efforts to insure the appointment of a representative of the farming interests on the federal reserve bank board. The bill that will make this possible provides that the board shall consist of eight instead of seven members, as at the present time, and that the president shall be required to appoint as one member a person qualified to represent agriculture. A strong fight has been made on the bill on the charge that it was class legislation. Representative Burton of Ohio, a vigorous opponent of the bill, declared that its passage would lead to demands that congress pass other legislation providing for special representatives of labor, lumber, mining and, finally, even women on the board.

* * *

Two of the prominent labor leaders of Chicago, arrested some time ago on a charge of complicity in a bombing demonstration in that city, were released last week on bonds of $75,000 each.

* * *

Vigorous protest has gone to Washington, D. C., from all parts of the west against the attempted blocking of the Smith-McNary bill for the reclamation of the nation's undeveloped lands. Representative Mondell, majority leader in the house of representatives, has been charged with standing in the way of action on the bill at this session of congress. Representative Mondell has suggested that the measure be connected with the soldiers' bonus bill in such way as to constitute the land settlement feature of the bonus measure. Considerable opposition has been expressed to this plan. Strong pressure is being brought to bear to secure the enactment of the measure at this session of congress.

* * *

The United States circuit court of appeals at San Francisco last week declared the Californian alien land law to be constitutional. Under this law aliens that are not eligible to citizenship, which notably are the Japanese and Chinese, can not acquire title to land in that state.

* * *

Dwight Davis of St. Louis has been reappointed a member of the war finance corporation and his appointment confirmed by the senate.

Two British officers have started an aviation trip around the world, on which it is estimated they will fly 30,000 miles.

Farm Business and Markets Outlook

(Continued from page five.)

CHEESE MARKET ADVANCES.

Prices on the Wisconsin cheese board have advanced in the last two weeks and a small upturn in distributing markets followed.

Prices for held cheese are unchanged, with twins selling at Chicago around 24 to 25 cents and cheddars for 26 cents.

FRUITS AND VEGETABLES.

The potato market has felt the pressure of excessive supplies during the last few weeks and prices are lower than the level which prevailed during the winter. Idaho sacked Russets are quoted at $1.85 per 100 pounds and Rurals at $1.75 in the Chicago market. Receipts of new potatoes are mounting steadily, the total up to May 22 being 7536 cars, compared with 5247 cars to the same date last year. About 50 per cent of the supply at present is from the new crop.

Practically all kinds of fresh fruits and vegetables from the southern states are more abundant than last year. Strawberries, onions, new potatoes and lettuce all show increases.

Cold storage holdings of apples on May 1 comprised 259,154 barrels and 2,079,997 boxes, compared with 560,721 barrels and 4,106,863 boxes on April 1. Total holdings in terms of barrels were 958,844, compared with 1,929,675 a month before. The decrease during April was nearly 1,000,000 barrels, which is about the same as the disappearance during March.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, May 27.—Cattle—Choice steers, $8.75@9; good to medium steers, $8@8.50; common to fair steers, $6.50@7; common feeders, $6@6.25; fair to good feeders, $4.75@5.25; choice cows and heifers, $6.75@7.25; medium to good cows and heifers, $5.75@6.75; fair to medium cows and heifers, $5@5.75; common cows, $4@5; canners, $2.25@4; bulls, $3.75@5.25; choice dairy calves, $8.50@9; prime light calves, $8@8.50; medium light calves, $7@8; heavy calves, $4.50@7.

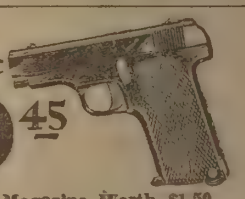
FAMOUS WINDOWS

—THE BLAINE MANSION

THE home of Maine's greatest son and beloved statesman, James G. Blaine, is now the Governor's Mansion, at Augusta, Me.

And such a home! How classic an example it is of the true Colonial, how fascinating its rich simplicity!



Only highest quality appointments could keep company with this colonial treasure—which accounts for the fact that Hartshorn Shade Rollers and Shade Fabrics are in use throughout; their dignified appearance and their absolute reliability made them *necessary*.

In hotel and club, college and home, the name "Hartshorn" associated with Shades and Shade Rollers is a guarantee of the elimination of all shade troubles.

Bits of Fun for Everyone

Fisherman's Luck.

The morning faded into afternoon, which in turn was shadowed by the coming of the night. It was cold and gray. But the angler moved not, save to readjust his bait. A friend chanced to stroll along the river bank.

"Hallo, George!" he cried. "How many have you got?"

George looked up rather vacantly and replied: "When I get the one I'm after and four more I shall have five."—Pittsburg Chronicle-Telegraph.

Room for One More.

Harold ran back from the lion in the museum. "Don't be afraid, dear," grandmother said; "that lion is stuffed."

"Yes," said Harold, "but mebbe he isn't stuffed so full that he couldn't find room for a little boy like me."—Our Dumb Animals.

Checking Up.

One morning a negro sauntered into the office of a white friend. "Good mawnin', Mr. Withrow. Kin I use yo' phone a minute?" he asked.

"Why, certainly, Sam."

Sam called his number, and after a few minutes' wait said, "Is this Mrs. Whiteside? Well, I seen in de papeh where you-all wanted a good culled man. Is you still wantin' one? Then the man youse got is puffectly satisfactory, and you doesn't connemplate makin' no change soon? All right, ma'am. Goodby."

Mr. Withrow called to Sam as he left the phone, "Now, that's too bad, Sam, that the place is filled."

"Oh, dat's all right, Mr. Withrow. Ise de nigger what's got de job, but I'se just a wantin' to check up."—Judge.

Correct.

Teacher—Willie, can you tell me what steam is?"

Willie—It's water gone crazy with the heat.—Kind Words.

Long-Distance Shooting.

The new night watchman at the observatory was watching some one using the big telescope. Just then a star fell. "Begorra," he said to himself, "that felly sure is a crack shot."—Toronto Goblin.

At Reduced Rates.

Sploshkins wanted to sell his horse, so he prevailed on the local dealer to come and see the animal.

"That's a good horse, Mr. Taylor," Sploshkins said to the dealer. "He cost me 500 pounds, but you shall have him for 50 pounds."

The dealer gasped.

"That's rather a big reduction, Mr. Sploshkins, isn't it?" he asked.

"Well," the vender admitted, "the fact is he ran away one day and killed my poor wife, and now I've got no further use for him."—The Winning Post Winter Annual.

Careless of Her.

Magistrate—So you broke an umbrella over your husband's head. What have you to say?

Defendant—It was a haccident, sir.

Magistrate—How could it be an accident?

Defendant—Well, I 'ad no intention of breaking the umbrella.—The Passing Show.

A Word for Father.

"Dear God," prayed golden-haired little Willie, "please watch over my mamma."

And then he added as an afterthought.

"And I dunno as it would do any harm to keep an eye on dad, too."—The Leatherneck (Washington).

Going Up.

Son—Papa, give me a nickel.

Papa—Why, son, you're too big to be begging for nickels.

Son—I guess you're right, papa, make it a dime.—The Leatherneck (Washington).

Few and Small.

"I understand your cook has left."

"Yes," answered the housewife, who was taking account of broken china, "but not much."—Washington Star.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3989: Misses' dress—Cut in 3 sizes: 16, 18 and 20 years. A 16-year size requires 5 yards of 36-inch material. The width of the skirt at the foot is about 2 yards. Price 10 cents.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Toothache is just as bad in the summer as it is in cold weather. The food you eat in summer is more likely to affect your teeth than the food you eat in winter, and you are more inclined to neglect your mouth.

Dr. Copeland.

Prepare yourself for the summer season by getting your teeth in fine condition.

If the teeth of the school child are properly cared for, he is likely to have pretty good teeth the rest of his life. But no matter what your age may be, don't neglect your teeth.

You need regular examinations of your teeth and gums. Your dentist will make sure there are no cavities. He will see if there are deposits on your teeth. He will look at your gums to make certain they are healthy.

Never take for granted that your teeth are sound. Almost before you are aware of trouble there may be a great, big cavity. It may be hidden by the adjoining tooth, or it may undermine the gum. The dentist will use good light and his little mirror to get a perfect view of every surface of every tooth.

The minerals we take into our mouths, acted upon by the saliva, become deposited upon the teeth, especially upon the sides and backs of the teeth. This accumulation can not be brushed off or removed by the toothbrush alone. This must be done by the use of the clever little instruments of the dental office.

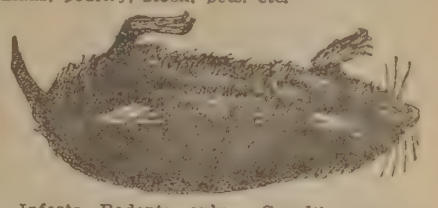
Smokers are apt to have the insoluble carbon of the smoke deposit on the teeth, producing staining. There is more or less discoloration of the teeth of smokers even though there may not be gross deposits upon them.

There is no greater comfort and satisfaction than in the feeling of smoothness and cleanliness of the teeth after a thorough cleansing in the dental office.

The removal of the tartar permits the gums to snuggle up against the tooth and to guard its base.

Go to your dentist and have him clean your teeth, fill any cavities he may find, and in this way insure your safety from disease of the teeth and gums during the long summer.

If you can not afford to pay a private dentist, seek out a dental clinic where such service is given free or for a nominal charge. You can not afford to neglect your teeth. Your health and your length of life depend on good teeth.



I always feel sorry for middle-aged persons who are suffering from toothache, nervousness, headache, rheumatism and a lot of other disabilities which may be traced to dental defects. These can be avoided if regular attention is given the mouth, especially in early life. So you'd better make an appointment soon for a thorough overhauling of your teeth.

GENERAL ADVERTISING.

Wipe Out Every Rat and Gopher

Amazing New Discovery Quickly Kills Them All—Not a Poison.

Rats, Mice, Gophers—in fact all Rodents can now be wiped out easily and quickly. Imperial Virus will do it. This new discovery is a fluid, true Virus. Entirely harmless to humans, poultry, stock, pets, etc.

Infects Rodents only. Greedily eaten on bait. Sets up burning fever. The pests communicate it to others, and all die outside, hunting air and water. Imperial Virus is put up in sealed bottles, thus insuring full strength and potency. Only safe, sanitary method to overcome these pests. Protect your Poultry, especially Baby Chicks and Egg Hatches.

YOU CAN GET YOURS FREE

Here's how! Send $1.00 today (currency, M. O., Checks, etc.) and we will give you by return mail, postpaid, two regular, full sized (double strength) $1.00 bottles of Imperial Virus. Use one to rid your place of these pests, and sell the other to a neighbor, thus getting yours free. Special inducements to represent us.

If more convenient, send no money, just your name and address to Imperial Laboratories, Dept. 498, 2110 Grand Ave., Kansas City, Mo. Pay postman $1.00 and few cents postage when two bottles arrive. Guaranteed to do the work to your entire satisfaction within 30 days or your $1.00 will be cheerfully refunded.—Adv.

BEDTIME STORIES

By THORNTON W. BURGESS.

SPOTTY COMES TO THE RESCUE.

Greed's a dreadful thing to see,
As everybody will agree.

At first Little Joe Otter, sitting on the bank of the Smiling Pool, laughed himself almost sick as he watched Grandfather Frog trying to swallow a fish almost as big as himself when his white and yellow waistcoat was already stuffed so full of foolish green flies that there wasn't room for anything more. Such greed would have been disgusting if it had not been so very, very funny. At least it was funny at first.

You see, the fish had gone down Grandfather Frog's big throat head first until it reached his stomach, but then it couldn't go a bit further because his stomach was already full. Right there the fish had stuck, the tail still sticking out of Grandfather Frog's big mouth. Grandfather Frog hitched this way and that way on his big green lily pad, trying his best to swallow. Twice he tumbled off with a plash into the Smiling Pool. Each time he scrambled back again and rolled his great goggly eyes in silent appeal to Little Joe Otter to come to his aid.

Spotty the Turtle settled back and pulled and Grandfather Frog, as fast as he could, pulled, too.

But Little Joe was laughing so that he had to hold his sides, and he didn't understand that Grandfather Frog really was in trouble. Billy Mink and Jerry Muskrat came along, and as soon as they saw Grandfather Frog they began to laugh. They just laughed and laughed and laughed until the tears came. They rolled over and over on the bank and kicked their heels from sheer enjoyment. It was the funniest thing they had seen for a lang, long time.

"Did you ever see such greed?"

"Why don't you pull it out and start over again?" shouted Little Joe Otter.

Now this is just what Grandfather Frog was trying to do. At least, he was trying to pull the fish out. He hadn't the least desire in the world to try swallowing it again. In fact, he felt just then as if he never, never wanted to see another fish so long as he lived. But Grandfather Frog's hands are not made for grasping slippery things, and the tail of a fish is very slippery, indeed. He tried first with one hand, then with the other, and at last with both. It was of no use at all. He just couldn't budge that fish. He couldn't cought it up because it had gone too far down for that. The more he clawed at that waving tail with his hands the funnier he looked and the harder Little Joe Otter and Billy Mink and Jerry Muskrat laughed. They made such a noise that Spotty the Turtle, who had been taking a sun bath on the end of an old log, slipped into the water and started to see what it was all about.

"What's the joke?" he asked.

Little Joe Otter simply pointed at Grandfather Frog. Little Joe had laughed so much that he couldn't even speak. Spotty looked over to the big green lily pad and started to laugh, too. Then he saw great tears rolling down from Grandfather Frog's eyes and heard little choky sounds. He stopped laughing and started for Grandfather Frog as fast as he could swim. He climbed right up on the big green lily pad and, reaching out, grabbed the end of the fish tail in his beaklike mouth. Then Spotty the Turtle settled back and pulled and Grandfather Frog, as fast as he could, pulled. Splash! Grandfather Frog had fallen backward into the Smiling Pool on one side of the big green lily pad. Splash! Spotty the Turtle had fallen backward into the Smiling Pool on the opposite side of the green lily pad. And the fish which had caused all the trouble lay floating on the water.

"Thank you! Thank you!" gasped Grandfather Frog, as he feebly crawled back on the lily pad. "A minute more and I would have choked to death."

"Don't mention it," replied Spotty the Turtle. "And—don't be so greedy again."

"I never, never will," promised Grandfather Frog.

(Copyright by J. G. Lloyd.)

The Name "Grange"

(Continued from page twelve.)

ing for something which they don't stand for, and Mr. Cottrell and Mr. Bouck, if they don't stand for the purposes and principles as announced by the Grange of the Patrons of Husbandry, they have a right to go by themselves and organize, but they can't take with them the flag and the only flag that marks the patrons of husbandry. And so there is the injury.

As I stated, gentlemen, I dislike very much to enjoin any body of men. Great harm has not yet been done and can't be done. The patrons of husbandry, the grange of patrons of husbandry have and it is undisputed here, ten thousand members, over three hundred local lodges. The new organization have some thirty local lodges and not to exceed three thousand members. I don't believe in law that they have a right to the use of the word "Grange." It is not a question of similarity of names. It is not a question as laid town in the authorities cited by Mr. Coudon whether the names are so similar that the public can be deceived. In this case it is a question whether they have a right to use the name and the only name that the patrons of husbandry have. I don't believe they have. I think they will have to be enjoined. If they have, then the Farmers' Cooperative Society of Illinois and the Farmers' Union of Kansas and the Farmers' Alliance of North Dakota can call themselves a Grange, and I don't believe they can do it.

You may prepare your orders and I will allow you an exception, gentlemen.

Club Champions of Chemung

Ready Replies for Secretary Wallace at Washington

Boys and girls' club work has made remarkable progress in the Pacific northwest. There is so much interest taken in this great movement among our people that they like to read not only what is done in their own state, but in other parts of the country as well.

The "club champions of Chemung" visited Washington, D. C., recently as a reward for their excellence in boys and girls' club work. This capable group of boys and girls from Chemung, a New York county, of which Elmira is the center, was composed of Fred and Ralph Bush, potato growers; Margaret Mills, adept at canning; Leo Looman, a coming poultryman; Alton Edsall, owner of a small but growing dairy herd; Gretchen Howland, who made $90.10 worth of raw material into $185.85 worth of cooked food, and Carol Kendal, who was awarded this trip for her ability as a leader. She is 16 years old, but for four years has been elected by the other boys and girls of her community to be the assistant to the county club agent in supervising club work in her county. By giving demonstrations she has also taught others how to cook and can.

This is the 17th trip of club champions from Chemung county to Washington, yet not a single girl or boy in the party was ever here before. In all, 124 have made the pilgrimage. The one person who has made all the 17 trips is Rufus Stanley, county club agent, employed by the United States department of agriculture in cooperation with the New York State College of Agriculture and Chemung county. The group he brings each year is made up of the boys and girls who have done four years' work in the club and are the best in their respective lines of work, including poultry, potatoes, dairying, cooking and canning.

On April 17 these seven boys and girls filed into the office of the secretary of agriculture and told the story of their club work to Secretary Wallace.

"What did you do, Leo?" asked Mr. Wallace.

"I raised some chickens."

"Tell me something about them."

"I have raised them for four years. The first year I raised 15 birds. The best pair I took to the fair. They won me first prize. The next year I raised 30. That year I won prizes at the fair, which gave me a trip to Cornell university. I worked a little harder the next year. I raised 70 chickens. I sold all the old ones. That year my birds won first, but a girl beat me a few dollars on production. Last year a poultry specialist came and taught some of us boys how to tell a good hen from a bad one. I learned quite a few things about poultry that I didn't know. In the fall I exhibited my best fowls and won this trip to Washington."

"And now what do you intend to do?" asked the secretary.

"I am going to have 100 chickens next year." I am going into the chickens business."

"How much do you think you have made?"

"I figure that after deducting expenses I have made $740 in all."

"What Leo did not tell," added the county club agent, "was that he has developed a fine egg-laying strain of White Leghorns, with a record of 250 eggs a hen a year."

Fred and Ralph Bush, two bashful boys, had profited by club training, one of the aims of which is to give boys and girls confidence, for they told their story very well.

"Who raised the potatoes?" asked Mr. Wallace.

"We did," said Fred and Ralph.

"Tell me about it."

"We joined the club the first year we could," said Fred.

"When was that?"

"About five years ago. Ralph was about 7 then."

"How many bushels have you raised?"

"The first year we raised 30 bushels. We had half an acre. The next year we did better, we raised 50. The next two years we got 160 bushels each year."

"How much ground did you have then?"

"An acre. We are going to plant two next year."

"And what did you do?" asked the secretary addressing addressing Margaret Mills.

"Last year I made 40 cakes, 9 puddings, 60 loaves of bread, canned 350 jars of fruit and vegetables and cooked 30 meals."

"And who raised the calves," inquired Mr. Wallace.

"I did," answered Alton Edsall.

"Tell me about them," requested the secretary.

"Father gave me my first calf. That is how I got my start. That calf was not good enough, so I sold it. I bought a better one. Now I have two cows and a calf, worth $700."

"What breed are they?"

"Guernseys."

"Have you ever had the cows tested for milk production?"

"I have not."

"Why don't you do that next?"

"I think I will."

The secretary then commended them for their work, and the boys and girls left to see the sights of Washington.

News for Breeders

BREWER HERD CUT DOWN.

The E. L. Brewer herd of registered Jerseys at Satsop, Grays Harbor county, Wash., which was once a large commercial herd, has been cut down to 11 head. The two boys at the Brewer farm are looking after the herd and expect to show some of their best animals at the fair this fall.

Olympia Fen's Gamma is one of the cows retained in the herd. She is now a 3-year-old and is a daughter of Olympia Fern, who held the 4-year-old championship for a year with a production of 937 pounds of fat. She made 441 pounds as a 2-year-old.

"We have only 40 acres on the present farm," said Mr. Brewer, "and it is large enough for our purpose. We have had the best results from vetch and white winter oats for a hay, or it can be used as a silage crop. It will make part of its growth during the winter. It is also a good crop to put fertility back into the soil and is not hard to get started. Peas and oats make a good grade of hay if they can be properly cured, but it is hard to get both grains to ripen at the same time. Wheat, rye and vetch will also make a good combination for a hay crop and it is better for yields than any of the others."

Mr. Brewer prefers mangels for feeding milch cows, but says it is difficult to get them started because of the root maggot. It is for this reason that he prefers to raise silage crops for his winter supply of succulent feed.

A pasture scene on the Brewer farm.

GUERNSEY COMBINATION SALE.

The return home of President H. E. Angel and Secretary R. N. West of the Yakima Valley (Wash.) Guernsey Breeders' association from a trip to Minnesota and Wisconsin in search of Guernseys for Yakima county calf club members was followed by the announcement that the association will hold a combination sale during the week of the Washington state fair at Yakima this fall. While in the east they obtained assurance from Wisconsin breeders that they will withhold from local sales this summer and ship to Washington this fall enough stock so that with one or two animals each from a number of Yakima herds, the sale will be worth while.

Two years ago the association sponsored a sale of about 40 head assembled from several eastern states by J. N. Price, then county agent. Since then the demand for Guernseys has been growing rapidly and 28 head brought out from Wisconsin this spring by A. L. Wallace and E. T. Hearron were taken at good prices, 20 of them remaining in the valley. Messrs. Angel and West obtained 28 young animals for club work, and the very fact that these are distributed throughout the valley is expected to stimulate the demand still more.

The latter group consisted of 12 junior yearlings, 11 senior yearlings, four junior 2-year-olds and one 3-year-old. Most of them are bred and several are milking, one of them having produced 200 pounds of butterfat in four months.

WAIKIKI COWS PRODUCE HEAVILY.

During the month of April 15 cows on Waikiki Jersey farm, near Spokane, produced 50 pounds of butterfat or more, the highest production of the month being 82.57 pounds of fat by Poet's Matilda. G. T. Duchess, a gold medal cow in the herd, finished her year's test with 17,131 pounds of milk and 888.9 pounds of fat. Her highest month yielded 1971.6 pounds of milk and 94.05 pounds of fat. She will freshen again in season to qualify for another gold medal. In two years she has produced 30,519 pounds of milk and 653.4 pounds of butterfat. A full sister, G. T. Morocco Duchess, in January finished a year's record of 16,125 pounds of milk and 813 pounds of butterfat, making her champion of her class in Washington. She held a like honor last year.

DAUGHTERS PROVE WORTHY.

The real test of a bull is his daughters, asserts J. H. Quick of Castle Rock, Wash., and it will tell even more quickly on grades than on purebreds, because he has not such a long line of breeding to overcome and his potency is more powerful. Mr. Quick has a most satisfactory lot of daughters from his herd sire, St. Mawes Rosaire Boy. This bull was purchased from Ed Cary and is by Poppy's St. Mawes and out of Naparia Rosaire, a granddaughter of Cowslip's Ashley and Rosaire's Olga Lad. One daughter produced 415 pounds of fat with first calf. Two others, with ordinary herd care and only two milkings a day, produced 406.67 and 401.1 pounds of fat, respectively. Both are class AA records.

These free booklets on Farm Sanitation

tell you how to prevent disease among livestock and poultry and describe in detail the many uses of

Scappoose, Oregon, Wednesday, June 14, 1922

Fifty head, mostly young cows, a number of bred heifers and heifer calves and a few select young bulls.

BLOOD LINES—The best of the breed are represented. A number are sired by a full brother of the world record milk producer, Segis Pietertje Prospect, 37,381.4 lbs. milk and 1448.68 lbs. butter in a year.

CONFIRMATION—Many of the offerings are eligible for the show ring. Straight top lines, well balanced udders, nicely marked—the kind that you will be justified in buying. Many of the cows are capable of producing 100 lbs. of milk or more per day. The catalog tells all about it. Write for one.

Jersey Herd for Sale

Holger and Golden Glow's Chief Breeding

14 Head, Only $1800, With Terms

Nine cows in milk, 2 bred heifers, 3 heifer calves. 8 of them sired by Judge Benedict, son of the great Holger, a silver medal bull and will be gold medal bull in June, with six gold medal daughters this year. Judge Benedict's daughters are bred to a strongly bred Golden Glow's Chief bull, and the others are in calf to Judge Benedict.

Circumstances requiring me to sell cause me to offer the entire herd for $1800, to turn them quick. They are good individuals, with good udders and are heavy producers. Part terms will be given, if desired. Inspection of the cows and milk checks is invited.

F. E. YERGEN
HUBBARD, OREGON.

Meadow View Jersey Farms

W--O--N

At the State fair, Salem, Ore., Sept. 27, 1921: 1, 2, 3, aged cow; 2, 3, three-year-old. 1st, senior yearling; 2d, senior heifer calf. 1st, senior bull calf. 2d, junior bull calf. 1st, dairy herd. 1st and 2d, get of sire. 1st, produce of cow. We entered 12 head. Grand champion cow. 129 Jerseys competing. Nuf said.

Mr. and Mrs. J. B. Neal
TURNER, ORE.

Wild Cherry Farm Jerseys

All tested 2 and 3 year olds, average over 400 lbs. fat. Young bulls close to 5 gold medal sires.
D. G. LILLY. Forest Grove, Ore.

Lynden Jersey Farm

offers young bulls of the famous St. Mawes and Golden Glow's Chief breeding. Prices reasonable.
P. MEENDERINCK. Lynden, Wash.

ASHBURN FARM Premier breeders of medal winning cows for 1920. Write for our illustrated folder and further information.
J. M. DICKSON & SON, Box T, Shedd, Ore.

Jersey Bulls at Bargain Prices

Send today for our special sale list of registered Jersey bulls from R. of M. dams. Easy terms, liberal credit.
WARREN GRAY, Box T. Jefferson, Ore.

Fourth Gold Medal Jersey Bull

now in use in my herd. No other herd ever had so many. Young stock for sale.
ED CARY, Carlton, Ore.

Ruby Dell Guernsey Farm

Our herd has been in the winning wherever shown.

Senior herd sire, Francis May King (A. R.) he by Langwater Hambro (A. R.)

Junior herd sire, Rex of Willow Brook, he by Langwater Sunderland (A. R.)

Our herd matrons are cows with A. R. records from such noted sires as Langwater Hambro, Langwater Emigrant and first 5 daughters of Francis May King, to freshen with average records of 480.14 butterfat, at average age of two years and ten months; most of them double letter class.

Some splendid bull calves for sale of above breeding.

H. E. ANGEL, Mabton, Wash.

Brown Swiss Stock Farm

Breeders of Brown Swiss cattle, the farmers' dairy cow. Young stock for sale.
THEO BRUGGER, Route 3, Gresham, Ore.

220 HEREFORD BULLS, COWS, HEIFERS

all registered, high class animals, from the most famous blood of England and America, many of them from imported stock, at private sale at prices so low you can not afford to buy or keep grades. Cows, 3 to 5 years old; heifers and bulls, from 12 to 20 months old. Many cows have calves at side and are rebred. Many of the heifers bred to our grand herd sires, BEAU GALLATIN 15TH, and CARLOS 85TH. Satisfactory guarantee with each animal sold. Write to

L. L. YOUNG & SONS, Nampa, Idaho.

Six Registered Shorthorn Bulls For Sale

One 14 months old. Three 18 months old. Bred from Scotch bulls. All strong, vigorous animals. Will also sell a limited number of pure bred Shorthorn heifers. Prices right.
SMALLEY BROTHERS, Sprague, Wash.

Holstein Bulls at Farmer Prices

Sired by son of former world's champion and out of cows that make good at the pail.
S. D. CORNELL. Grandview, Wash.

A.R.O. Holsteins Accredited herd headed by proven grandson of King of Pontiacs; 4 daughters ave 421.2 lbs. butter, 20,016 lbs. milk, official 7-day tests at 2 yrs. 3 mos. MAPLEROSE LANE HOMESTEAD
A. BENSON, PROP. LYNDEN, WASH.

Ohio Improved Chester White

Swine of highest quality. Quick growth; strictly big type; large, smooth; large litters; easily fattened at all ages. Carry blood of best individuals to be found anywhere. Choice weaned pigs at reasonable prices; registered free in purchase's name; sent on approval. If you want good stuff, write us.
RINGGOLD FARM.
J. H. WEST, Rt. 1, Box 176, Centralia, Wn.

Royal Ranch Durocs

We are breeding fall gilts to farrow in Sept. that are sired by Royal Marker, a son of Pathmarker, the 1920 National Swine Show grand champion, and they will be bred to Sensation Supreme, a son of Great Orion Sensation, the 1919 and 1921 National Swine Show grand champion. Write for prices.
ROY SHUTWELL, Boise, R. 3. Phone 77R3.

Ioka Farm Durocs Home of champions.

Choice weanling pigs, priced reasonable, shipped anywhere without a cent down. If they don't suit, return at my expense.
A. N. DOERFLER, Silverton, Ore.

REGISTERED DUROC JERSEY HOGS of quality. Booking orders for spring pigs, sired by Sensation Great Orion, grandson of world's twice champion boar, Great Orion Sensation. Write for prices.
F. D. GANO. Sunnyside, Wash.

CHOICE DUROC SPRING BOARS sired by some of the greatest boars of breed; High Orion Sensation, Pathmaster, First Consul and Unique Sensation, world's junior champion, 1921. Prices reasonable, satisfaction guaranteed.
L. S. BERRY. Gaston, Oregon.

Indian City Berkshires

We are collecting one of the best herds on the Pacific coast, headed by the undefeated Matchless Lee's Royal. Address your desires to
DR. W. J. KEYES,
202 Fernwell Bldg., Spokane, Wash.
B. F. WATSON, Herdsman, Rockford, Wash.

River Banks Better Berkshires

Long, smooth, deep fall pigs. Either boars, gilts or trios.
RIVER BANKS FARMS, Grants Pass, Ore.

Pay for Berkshires in Pork

Improve your stock. You get the breeding hog now; pay when you get the pork. Write for plan.
F. M. CURTISS. Fruitland, Wash.

Big Type Polands

Weaned pig time is here. Buy now and save on express. No boars after July first.
BUCK & McDONALD. Yamhill, Ore.

Maple Lane Stock Farm

Poland China spring pigs and bred sows shipped anywhere on approval.
HERBERT WILLARD. Dayton, Ore.

Big Type Poland Weaned pigs, 10 weeks old, $15 each. A few sows bred for summer litters; best of breeding.
B. F. KAMMERZELL & SONS, Colfax, Wash.
ROUTE 5.

BIG TYPE POLAND CHINAS.
Weaned pigs sired by state fair winner. Also young boars at express prepaid prices. My pigs make good from California to Alaska.
H. J. STILLINGS, Hermiston, Ore.

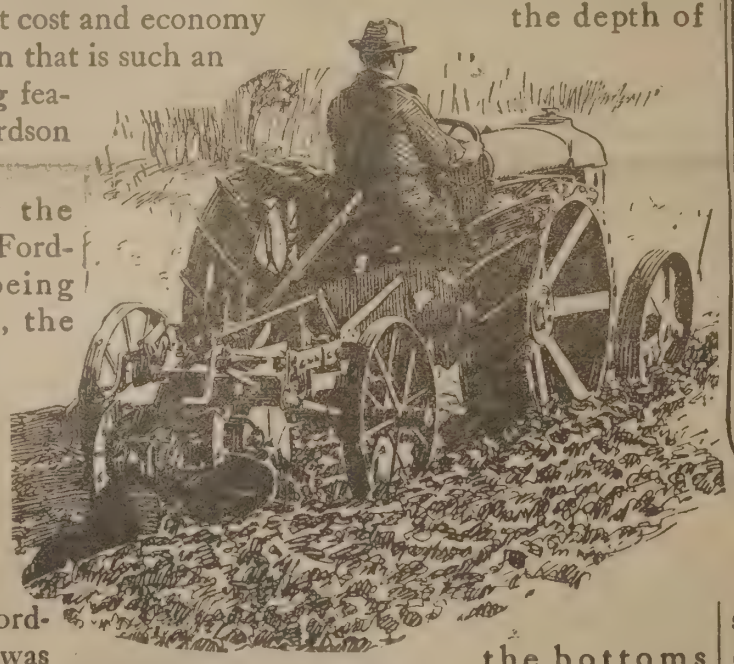
And Now, Profit in Farming Without the Drudgery

A century ago our grandfathers replaced oxen with horses. Today, a far greater change is taking place. Mechanical power now supersedes the horse!

THE power-farmer of today presents a striking figure, a living symbol of the new agricultural era—the era of Fordson Farming. Now, with mechanical power he accomplishes in *days* what formerly required weeks—sometimes months of labor. His crops are bigger, his profits greater, his time for pleasure doubled. And, what is perhaps the greatest reward, the toil, the slavery, the drudgery of old-fashioned farming is rapidly passing.

This remarkable advance in farming methods is made possible by the perfect combination of the Fordson and the Standard Equipment specially designed to be used with it.

In developing this line of Standard Equipment, the manufacturers have provided economy of first cost and economy of operation that is such an outstanding feature in Fordson Farming.



During the time the Fordson was being perfected, the Oliver No. 7 Plow was undergoing its exacting tests. So, when the Fordson tractor was completed the Oliver No. 7 became its plowing partner.

The plow is so constructed that the center line of draft is in perfect alignment with the center line of draft on the tractor. This scientific alignment avoids side draft, and the plow turns a clean furrow. Nor is there any loss of power.

The Oliver No. 7 is so light running that there is no stress on the tractor. No effort is required by the operator to do the most thorough plowing.

Every unnecessary part has been eliminated. Strength that means long life is built in every detail. Steel parts are heat treated and castings are of tested strength.

To adjust the depth of plowing is merely a matter of working a lever to operate a jack. This jack arrangement—which is an exclusive Oliver feature—gives such a purchase on the lift that it is extremely easy to change the depth of the bottoms without stopping or without even slowing down.

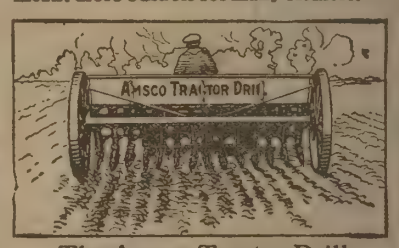
Oliver No. 7—the plowing partner of the Fordson

The power lift is tripped by simply touching a lever that is so conveniently placed that the operator need not turn his head.

Sixty-five years of plowbuilding experience is one good reason why the No. 7 is built so well that it has been known from the beginning as Standard Plow Equipment with the Fordson. The long, profitable service built into the plow as a result of that experience is your assurance of plowing satisfaction the Fordson way.

Oliver Single Bottom Sulky
For deep mouldboard plowing in trashy conditions with the Fordson. Similar in construction to world famous No. 7 gang.

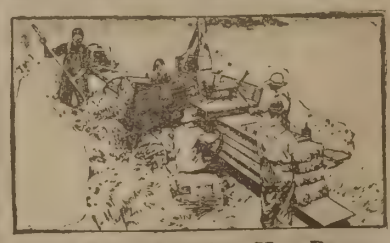
Fordson Disc Plowing
Oliver Fordson special disc plows have set a new standard. They penetrate the toughest soils, yet are light running.



Roderick Lean Automatic Harrow
Fitting the seed bed the Fordson way with the Roderick Lean Automatic Tractor Disc—a special Fordson Harrow.

Good Work With Roller Pulverizer
Final Fitting of the seed bed with Fordson power and the roller pulverizer has meant more bushels for many farmers.

Roderick Lean "Cutmore" Mower
Attaches without changes to the Fordson. Power taken direct from drive worm. Makes a one-man outfit with Fordson.



The Amsco Tractor Drill
Tractor speed and accuracy utilized by the Fordson owner with the Amsco special drill. Force feed makes positive planting.

The Amsco Two-Row Cultivator
Cultivating corn is easy for the Fordson farmer with the Amsco Cultivator—special for the Fordson. Made for hard work.

Money-Maker Ensilage Cutter
Fordson silo filling with the Money-Maker done quickly and cheaply. Strength and scientific design give perfect work.

The Money-Maker Hay Press
Baling hay with the Fordson and Money Maker baler is an important operation to the farmer with large hay acreage.

Wood Bros. Individual Thresher
The Wood Individual Humming Bird Thresher and Fordson make short work of threshing. All grain is saved.

Organization Pays in Whatcom County

By RALPH ERSKINE

"Milk, milk, milk, by the truck load, and when they unload, they go back and get more milk."

So spoke an astonished bystander, as he watched 15 heavily loaded trucks unload their cargo before the Whatcom County Dairy association plant at Lynden. This, he learned, is little more than a third of the daily milk routes which bring in a total of 140,000 pounds, which is manufactured into butter, cheese, condensed milk and powdered skimmed milk.

The outlook for the future is very encouraging since many of the smaller dairymen are watching for a chance to buy an additional milch cow and even some of the larger producers are picking up new animals when the opportunity affords. There are at present 11,500 cows owned by 1665 members who ship either to the Lynden or the Bellingham plant. In the last 10 months the association has made net sales amounting to $1,060,000.

Milk trucks waiting to be unloaded at the Lynden plant

A daily average of 7000 pounds of butter and approximately 2500 pounds of cheese are produced, which necessitates the manufacture of over three tons of skimmed milk powder. The most encouraging feature is that there is a greater demand for all three of the above products than the plants can turn out. There is a total investment of over $400,000 in the two plants, which have recently been remodeled at a cost of $20,000, which was necessary to take care of the increase in business. The two plants have a monthly expenditure of $15,000 for labor and supplies.

The Bellingham plant is more for the purpose of supplying the city milk trade than for the manufacture of by-products, as is the case with the Lynden plant. Butter, ice cream and cheese are manufactured at Bellingham and the cheese supplies 95 per cent of the local cheese consumption.

This organization is a branch of the United Dairy Association of Washington, which owns similar plants and condensaries in other counties of western Washington, all of which have achieved similar results. C. C. Davis, manager of the Bellingham and Lynden plants, shows where the association has put at least $250,000 more into the pockets of the producers in a year's time than under previous conditions through better prices for milk than were formerly obtainable.

As is the case with all holdings in the United Dairy association, the capital stock is owned entirely by the dairymen, which means that every member is a stockholder and is vitally interested in its success. Each member on joining the association pays a fee of $5 per cow in his herd. There has been much good will and satisfaction among the members because each one realizes that the association is being operated by a manager who was elected partly by his own vote. The operating expense of the plant is the only item that comes out of the sales of butter and by-products of the plant and the returns have been very satisfactory to all members.

While the main product of the Bellingham and Lynden plants is butter, a large amount of the milk is made into cheese, which is becoming well known to the people of western Washington because of its excellent quality and the realization that they are getting a product that is made at home. The manufacture of powdered milk is a new industry that has sprung up within the last few years and is a means of disposing of the skimmed milk that accumulates from the manufacture of butter. It is used largely for the manufacture of ice cream and in bakeries. In California, where the housewives find it hard to keep milk because of hot weather, they are making use of the powdered milk, which is put up in one-pound cans especially for use in the home.

"We find that there is a larger consumption of all dairy products within the last few months," remarked Mr. Davis. "The campaigns which have shown the value of milk and its products have not been in vain and we should, therefore, continue the work by every possible means."

Chehalis Holstein Sale

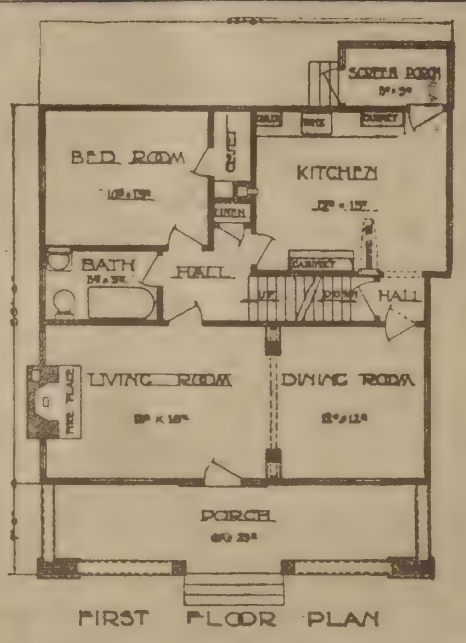
Notwithstanding the fact that it came toward the end of a series of sales of about the same class in Washington, and notwithstanding also the stringency in money matters, the first annual sale of purebred Holsteins held at the Southwest Washington fairgrounds May 24 under the auspices of the Lewis County Holstein-Friesian club averaged close to $180 for the females and left the breeders who consigned to it feeling that they had been justified in the somewhat hazardous undertaking of putting selections from their own herds under the hammer. Of the 22 buyers, all are Washington breeders. Twenty out of the 51 head sold went out of the county, a Clarke county buyer taking 12 of them, two Jefferson county breeders taking six more, and a father and son from Thurston taking two. Several of the purchasers, including the one from Clarke county, were founding new herds; one Lewis county buyer added an entire family to his herd, and there were two purchases for club purposes, so that even though the hoped-for average was not realized, some valuable distribution was effected. A significant and unexpected feature of the settlement was that 75 per cent of them were for cash.

The Nathan Hamilton dispersal of 19 females and a young bull was the backbone of the sale. M. P. Frame of Ceres, the second heaviest buyer, obtained five of these, including a heifer that topped the sale at $315, and the group cost $1250. Thomas Autzen, formerly of Portland, who has just purchased a large farm on the lower Columbia near Ridgefield, paid $1915 for 12 head and was heaviest buyer. Most of them are mature cows in milk, and they included several at bargain prices.

A feature of the sale was the conversion of a calf club heifer into $230 cash by David Nisbet of Chehalis, a son of Tom Nisbet and formerly a Jefferson County Calf club member. County Club Agent W. A. Dunham of Thurston county helped Heinie Gehrke of the Rainier Calf club select a well-bred heifer, for which he paid $135, and another youthful purchaser was Reuben Eldridge, a Chimacum boy, who planked down $80 in cash for a Hendrichsen heifer. G. W. Literal of route 3, Chehalis, a comparatively new breeder in the county, obtained two nice yearling heifers to add to his four or five head of purebreds, and a January son of The King of Chimacum for a future herd sire. D. L. Crane of Castle Rock, who has handled grades all his life, took the leap into the purebred business by paying $415 for two Nisbet heifers. Albert Ammeter and Tom Yarr of Chimacum were the only other outside buyers, the Lewis county list including, in addition to those mentioned, Jacob Malnerich and C. A. Ives of Centralia, Harvey Shoultes, E. A. Donaldson and L. L. Goff of Adna, Phillip Aust of Klaber, A. M. Moses of route 3, Henry Huber of route 2, Tom Nisbet and W. J. Dempsey, all of Chehalis, W. I. Rector of Bucoda and Harry Hamilton and W. M. Elston of Forest.

The consignors included Nathan Hamilton, J. C. Chamberlain, E. A. Donaldson, Mrs. E. Dunston, A. O. Hamilton, Harry Hamilton, W. A. Hamilton, Chris Hendrichsen, A. C. Mills, A. M. Moses, W. A. Root, Tom Nisbet and Glen O. Roundtree. The total received for 51 head was $8245, 43 females averaging $178. Nathan Hamilton, E. A. Donaldson and H. R. Shoultes comprised the sale committee and George A. Gue and C. E. Payne were auctioneers.

The sale list of females follows:



Consigned by A. C. Mills, Curtis:
Otsego Highlands Butterfly, b. Feb. 21, 1910, C. A. Ives, Centralia $170

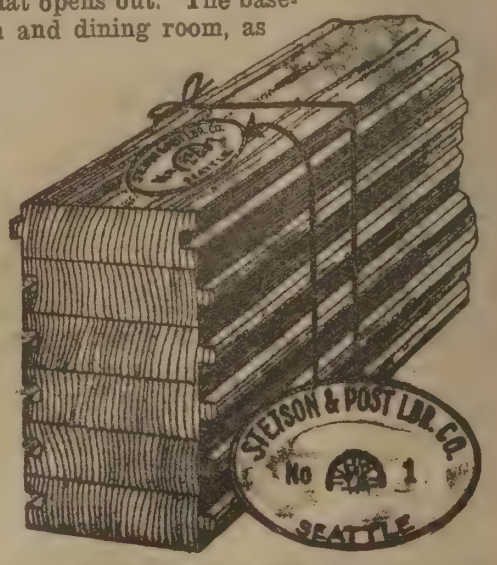
Stetson & Post Lumber Co.

Build With *Up-to-Grade* Lumber

FIRST FLOOR PLAN

$1265.36

Buys All the Lumber



All the Millwork, Finish Hardware and Exterior Paint

(Double Construction)

THIS charming home is the "MADISON," one of our twenty-nine practical house designs. The large living room is separated from the dining room by a colonnade with built-in bookcases on each side. The kitchen is very large and provides for built-in cabinets, cooler and ironing board which fold up into a cabinet. Off the hall is a roomy linen closet. There are three large bedrooms, one downstairs and two upstairs, each having a big, roomy closet with window that opens out. The basement is entered from the inside of the hall, between kitchen and dining room, as well as from the outside.

What We Furnish--

We furnish two complete sets of plans, every stick of lumber and millwork, except lath, which means all inside and outside finishing lumber and all sills, joists, studs, flooring, moulding, siding, sheathing, shiplap, shingles, all windows and window frames, doors and door frames, drawers, flour bins, cupboard doors, bookcase doors, ironing board and cabinet, medicine cabinet (with plate glass mirror), all finish hardware, such as locks, hinges, catches, etc. (all knobs being of glass); also a very high quality of exterior paint for two coats on the body, as well as putty and varnish for doors, porch paint, sash paint, roof and gable stain, and the necessary brushes

Quality You Can Depend On

We control every detail of the material we furnish from the standing forest to the finished product. No middle men enter into your transactions with us. That is why we are able to control the quality of our lumber and millwork, and can afford to sell at the reasonable prices we do.

¶ It is not necessary to build one of our homes to secure our high quality. The house designs we furnish are merely an extra accommodation to those desiring to use them. If you are thinking of building, ask for our new price lists on lumber and stock millwork.

¶ All of our upper grades are stamped with our name and the grade. Wherever you see this brand, you know it is the very highest quality of the grade under which it is inspected. To insure yourself of this high quality, embody in your contract "Stetson & Post quality material to be used throughout."

If you are thinking of building a home this spring or summer, you should have our new plan book. This we will gladly send you upon receipt of 10 cents to cover cost of mailing.

THE WASHINGTON FARMER

SUCCESSOR TO

Vol. 46. No. 23 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF June 8, 1922

For Good Farming, Attractive Country Homes and Happy Country People

What Story Will the Thresher Tell This Fall?

By J. E. NESSLY

"What will the harvest be?"

This question, the opening words of the old Sunday school hymn we sang in our youth, is on the lips of every farmer, merchant and citizen of eastern Washington where agriculture is the principal industry and the wheat crop is the leading wealth-producing element. This question is asked every year, many times, but it is really a "burning" question this year because of the unfavorable spring, with the continued cold weather and generally unfavorable conditions. Upon the wheat crop more than upon any single element depends the prosperity of the Palouse, the Walla Walla and the Big Bend districts, for wheat brings in more money than all other products of the soil in these rich farming sections.

A representative of The Washington Farmer last week drove through Asotin, Garfield, Columbia, Walla Walla, Whitman and Spokane counties, taking several days to make the trip, stopping at farms, making personal inspection of grain fields, asking questions of farmers, merchants, bankers and other citizens and getting a "line" on conditions generally.

While conditions do not appear good, and, to one unacquainted with the wonderful fertility and never failing qualities of the farming sections visited, would appear gloomy, yet very few were seen and questioned who were not optimistic in the extreme and no one who is really discouraged was found on the trip. Conditions have been much worse at this season in bygone years, and good crops were harvested in those seasons. Standing out among all of the more than 35 years since wheat growing became the leading industy is the year 1897, when conditions up to June 10 were the worst in the history of the country, both before and since that time, and yet 1897 is pointed to by old-timers as "the year of the big crop, the turning point of farming in the Palouse country."

"There is an abundance of moisture in the ground and only warm weather is needed to make the grain grow." This statement was made by a number of farmers, grain dealers and others who have been keeping in close touch with conditions. And the warm weather came while THE FARMER representative was on this trip. It has continued and marked improvement was noticed in the condition of grain during the five days THE FARMER man was making the drive through the wheat belt.

"I have been driving through the country every day for the last week and you would hardly believe the improvement that is shown in the condition of crops since the warm weather began," said a business man of Colfax, whose business takes him into the farming sections of the country during this season of the year. Continuing, he said: "We need warm weather more than anything else. There is lots of moisture beneath the surface and 10 days of warm weather, followed by a good rain, will mean a good crop of grain. Spring wheat is late, but it is coming up evenly, is strong and has a good color. Warm weather and one or two good rains within the next six weeks will work wonders in crop conditions." The same opinion was expressed in different words by at least a score of farmers, grain dealers and others interviewed.

Coming from eastern Oregon THE FARMER representative entered the wheat belt of eastern Washington at Anatone, in Asotin county. Following the splendidly-built state highway from Anatone to Asotin careful note was taken of the wheat fields on Anatone flats, one of the richest wheat sections as well as one of the beauty spots of eastern Washington. Fall wheat is raised extensively and almost exclusively here. General conditions were found to be good. There is a lot of Jim Hill mustard in some of the fields, but the mustard is not of the rank growth, so detrimental to grain, but the stalks are small and, while they are in blossom and now stand higher than the wheat, there is a good stand of the latter, it has a good color and in a couple of weeks will be taller than the mustard, which has reached its extreme height. While the mustard may affect the yield to some extent, Anatone flat will have a good crop, for there are scores of immense fields where there is no mustard and the wheat crop is practically assured. These fields that are free from mustard promise more than an average yield.

From the foot of the grade at Asotin until one is well past Clarkston there is no wheat, but between Clarkston and Pomeroy there are some splendid flieds of both fall and spring wheat that will make an average crop with favorable weather conditions from now until harvest. Around Pomeroy and between that town and Dayton there are some of the finest fields of wheat seen on the 600-mile drive. Great fields of fall wheat standing more than knee high, a rich, deep green color, free from weeds and foul growth, are far enough advanced to insure a good yield with one or two timely rains.

Between Dayton and Walla Walla, going via Waitsburg, detouring to the west on the road to Walla Walla and returning via Dixie, THE FARMER man saw many fields of as good wheat as he has ever seen in 33 years in the northwest. There are some fields of wheat in that section that are already "made" and will yield 40 bushels or more without more rains, but these, of course, are in the minority.

An extensive drive through Walla Walla county showed thousands of acres of splendid wheat, many acres not so good and still fewer acres that must have rain soon to save the grain from damage. Walla Walla county fruit has been hurt by the frost, but there will be a lot of fruit. Vegetables of all kinds are late, but promise about an average yield. Corn, of which there is an unusually large acreage, is exceptionally good. Alfalfa, of which the acreage has increased much in the last few years, is also unusually good.

Returning north via Dixie, Waitsburg, Dayton, Central Ferry to Dusty and LaCrosse, in Whitman county, some splendid fields of wheat were seen. In fact the writer believes the best average conditions of wheat were found between Central Ferry and LaCrosse of the entire trip. There is but little spring wheat in that district and fall wheat generally looks well, stands thick on the ground, has a healthy color, is free from weeds and with reasonable weather conditions will make better than an average crop. About LaCrosse and down to Jay and Canyon there are many good fields of grain.

Around Winona conditions are also good. The acreage is up to normal and conditions are better than normal in most fields. There are many spotted fields about Endicott and Diamond. On north hill sides, where the snow was deep and laid until late this spring, much of the wheat was smothered out and weeds are very bad. But there are many good fields and the good farmers—those who cultivated their land carefully—will be well paid for their labor. In fact it takes an unfavorable season to show how well it pays to farm right and in a season like this the work of the good farmer stands out strikingly.

Between Diamond and Colfax are many good fields, some just an average and some below the average. Weeds are bad in many fields and north slopes have suffered from the deep snow. Seldom have there been as many bare spots in the fields of this section as at present. It will require unusually favorable weather conditions to produce an average yield in some of the fields about Colfax, Diamond and Endicott. William Sutherland, a pioneer grain buyer of Colfax, said: "I place the yield for this section at 75 per cent of normal. I believe that is a conservative estimate, but it may be too low. That will depend upon the weather during the next two weeks. A good rain will make a lot of difference." Colonel Leonard Stroble, another pioneer, said: "I have spent much time in driving in the country and have noticed the crop conditions carefully. I do not believe we will have more than 65 per cent of a normal yield. Of course good weather from now on will make a big difference, but it is going to take lots of rain and lots of warmth to bring the yield above two-thirds of an average crop."

From Colfax to Steptoe, through the very heart of the Palouse country, the district that nearly always produces splendid crops of grain, various conditions were seen. Some crops are above average, some about average, but the majority are below the average. "In more than 40 years that I have lived in the Palouse country I have never seen the weeds so bad as they are this year. We have had other seasons when crop conditions were no better than they are today during the last week in May and first of June, and yet had a good crop, due to rains in June and July," said George McCroskey, whose father settled on Tennessee flat, near the present site of Steptoe (the town, not the butte, which preceded the McCroskey family by a few years), and who is one of the best farmers of Whitman county. Mr. McCroskey is not optimistic about a big yield, but thinks the Palouse country will have as good a crop as any section of Washington this season.

Between Steptoe and St. John there are many splendid fields, some that are just about average and some that are below average. "I look for at least a normal crop in this section," said L. W. Lanning, grain buyer of St. John, who has lived in the Palouse country for 31 years and has bought grain for more than half of that time. Mr. Lanning has made a careful study of conditions and is regarded as an expert on grain and on crop conditions. He says there is plenty of moisture, that the spring grain is coming up evenly and well, and that two weeks of warm weather will make such a change in conditions that one passing through the country now would not recognize it then.

From St. John to Thornton, through Sunset, one finds some great fields of splendid grain, both fall and spring sowing. Conditions are really quite good through this section. At Thornton THE FARMER man talked with Ralph Comegys, banker, farmer and "native son," for he was born on the homestead his father took near Thornton 44 years ago, and he knows the Palouse country as few men know it. Mr. Comegys is quite optimistic. He sees nothing in present conditions to cause alarm. He said: "The last two weeks before harvest are more important than any period during the growing of a crop. I have never seen a crop failure in the Palouse country and I have never seen a poor crop because conditions were not ideal in May and the fore part of June. If we have warm weather and one or two rains in June we will have a better crop than if we had had a fine showing now and the weather turn hot just as the grain is filling. I am not at all alarmed. To a stranger conditions might look bad, but to the Palouser, who has lived here from a quarter to a third of a century and never seen a crop failure, it will take more than present conditions to cause uneasiness."

Between Thornton and Rosalia conditions are about an average for the rest of Whitman county. Some very good crops are seen, others are not quite so good and there are fields that will not produce much grain except with very favorable conditions.

Passing into Spokane county between Rosalia and Plaza one sees some very good crops of all kinds of grain. In southern Spokane county conditions are as good as in any section visited, and probably slightly above the average for the entire trip. About Spangle are some splendid fields, not a few, but many. The fall grain there is practically made. If it does not make at least an average yield it will be due to unprecedented conditions and there will be little grain anywhere, for, outside of a few fields in Asotin county, a few in Garfield and a few in Walla Walla, nothing on the road was seen to compare with the general average of conditions near Spangle, in Spokane county.

Taking the trip as a whole, it is more inclined to inspire optimism than pessimism, taken with the interviews with the men who know conditions, the farmers who have seen such conditions before, and those who have watched the growing crops for 25 to 30 or 40 years, and are optimistic and unhesitatingly declare: "There is nothing in present conditions to cause alarm."

Interest Rate Falls

Land Bank Does Greater Business

The federal land bank, which serves the Pacific northwest through the branch bank at Spokane, last week announced a reduction in its interest rates from 6 per cent to 5 1-2 per cent. This reduction does not affect loans that have already been made at other rates of interest, but all loans made to farmers hereafter will bear the lower rate of interest.

The reduction is the direct result of sale a few weeks ago of $117,000,000 worth of federal farm land bank bonds that will bear 4 1-2 per cent interest. Better financial conditions generally are responsible for the good sale of the bonds and for the corresponding reduction in the interest rates on land bank loans. The land bank law provides that not to exceed 1 per cent more shall be charged the borrower than the interest that the land bank bonds bear, this 1 per cent being necessary to conduct the affairs of the nationwide institution.

The Spokane branch of the land bank did a record month's business during May, closing 467 new loans for a total of $1,,732,800. The large amount of business that the land bank is being called upon to do is indicated by the fact that during the month 1426 applications for loans were received in an aggregate amount of $5,580,000. Many of these applications are still to be acted upon, though some are rejected or revised because of conditions surrounding the proposed loan.

Since the land bank was opened at Spokane in May five years ago 46,297 applications have been received for loans that would have aggregated $151,565,000. During these five years the bank has made 22,386 loans on farms in the four northwestern states in a total amount of over $64,000,000.

"There are now 20 regular appraisers at work, and they are all busy," said president D. G. O'Shea of the Spokane bank. "The volume of new business continues to come in constantly in increasing amounts."

LINCOLN SHORTHORN BREEDERS.

The Lincoln County Shorthorn association will visit eight Shorthorn herds on Monday June 19. They will leave Davenport at 7 a. m., visiting Charles Level's ranch, George Heid's ranch, Cathcart Brothers' pasture, Samuel Squire's ranch, Baring Brothers' ranch and Blenz Brothers, arriving at noon. A basket lunch will be served at the Blenz ranch.

The party will visit the J. H. McCroskey ranch near Sprague and the Day & Rothrock Hercules ranch in the afternoon.

State Crop Report

Indicates Reduced 1922 Production

The government crop report for the state of Washington shows that conditions on May 1 indicated a winter wheat crop somewhat smaller than that produced last year, but still above the average for the last 10 years. The report, as issued by G. S. Ray of the Federal Bureau of Markets and Crop Estimates, states further that rye and hay production give promise of being less than in 1921.

Winter wheat: The winter wheat acreage in Washington on May 1 was placed at 1,202,000 acres, as compared with 1,333,000 acres harvested last year, and 974,000 acres, the average harvested for the last 10 years. it is estimated that 7 per cent of the acreage sown for grain last fall will not be harvested. Abandonment last year was 2 per cent of the acreage sown, while the average abandonment for the five years, 1916-1920, is 16 per cent.

The average condition of winter wheat on May 1 was 85, compared with 85 on April 1; 99 on May 1 of last year, and 92, the average condition for the last 10 years on May 1. The month of April was too cool for the best development of winter wheat and at present it is quite backward in many localities.

The condition of 85 on May 1 is indicative of a yield per acre of 23.6 bushels and a total production of 28,403,000 bushels, assuming that average conditions prevail during the season. The 1921 winter wheat crop was placed at 37,457,000 bushels, while the average for the last 10 years is 25,032,000 bushels.

Rye: The rye acreage in Washington is placed at 19,000 acres, or 92 per cent of the acreage harvested last year. The average condition of rye on May 1 was 93, forecasting a yield of 13.9 bushels per acre and a total production of 265,000 bushels. The rye crops of 1921 and 1920 were, respectively, 294,000 bushels and 190,000 bushels.

Hay: Tame hay, with 968,000 acres, shows a decrease of 4 per cent, as compared with the 1,008,000 acres last year, while wild hay has but 29,000 acres, against 30,000 acres last year. The average condition of all hay on May 1 was 87, indicating a total production of 2,015,000 tons, as compared with 2,666,000 tons in 1921. The late, cool spring has retarded the growth of hay crops.

Stocks of hay on farms May 1 are estimated as 187,000 tons (7 per cent of crop), as compared with 199,000 tons (10 per cent of crop) on May 1, 1921.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseasee in stock sold through these columns.

Vacant Public Lands

Following the issue of recent publicity concerning those vacant lands still available in counties of eastern Washington, some inquiries were made by THE FARMER at the federal land office at Spokane. The lands as yet open are chiefly of timbered, mineral, irrigable or grazing character, or lie in small or broken cultivable areas in generally mountainous regions or arid belts.

In Stevens and Ferry counties the entegable lands total the largest acreages. Those of Adams county's unfiled arid acreage do not include, as a rule, the better bottoms.

The state of Washington as a whole includes 1,038,410 acres of vacant lands, a statement that might be misleading to one unaware of the character of much of this land.

The American farmer is not yet called upon to imitate the Asiatic, who laboriously covers the jutting rocks of his hillslope with soil, that no foot of his holdings may be uncultivable, nor the European who rejoicingly tills the small available benches of his homeland.

Time and demand must be largely depended upon to bring worth to the some day prizeable sloping and bench lands yet open in our beautiful northeastern counties.

Milk, a Child Builder

Miss Inez Arnquist, Spokane county home demonstration agent, reports from Fairfield a striking testimony to the value of the movement to bring to standard weight the child who is dangerously below the normal weight for his age and size.

A seven weeks' campaign was conducted there, during which interval milk was served the children during morning and afternoon recesses. At the end of the period these children had averaged three times the normal rate of gain. In the eighth week the furnishing of milk was discontinued, and at the end of the week the score cards uniformly showed losses in weight at the time of the weekly weighing.

These pronounced results led to the immediate restoration of milk to the daily school program, and it was furnished throughout the remaining five weeks of school. "Usually we find the closing week, with examinations, drill for entertainments, and so forth, affect our weight score cards," stated Miss Arnquist, "but at Fairfield after milk was reintroduced, the average gain for the remaining five-week period was steady and mounted again to twice the normal rate of gain for these children."

The nutrition campaign at Fairfield has been possible through the hearty cooperation of the Women's Improvement Club of Fairfield, under community leadership of Mrs. Otto Adams and of Miss Della Prell, the local home economics teacher. A hot dish was also served the children at lunch time at the school.

A Difference of Opinion

While there has been a marked difference of opinion as to the merits of some of the details in the marketing plan of the United States Grain Growers, Inc., only the blind can fail to see in that organization a notable advance in grain marketing, from the viewpoint of the producer.

Most of us remember that about a year ago the National Grain Dealers' association undertook to raise a quarter of a million dollars with which to conduct a campaign against the United States Grain Growers, Inc. In a public address October 3, 1921, R. I. Mansfield of the grain dealers' association said: "We have successfully met the crisis. The United States Grain Growers is ready for the undertaker."

On that date the United States Grain Growers had a membership of 13,653 producers, with an estimated annual production of 26,500,000 bushels of grain.

On May 9, 1922, only a few weeks ago, Mr. Mansfield, again in a public address, said: "The United States Grain Growers, Inc., is dead."

On the following day, May 10, the United States Grain Growers, Inc., reported a membership of 59,000, or a gain of nearly 400 per cent, with an estimated annual production of at least 118,000,000 bushels of grain, or an increase of over 90,000,000 bushels.

If the United States Grain Growers is dead, as Mr. Mansfield would have us believe, the organization should be buried deep and beneath a massive monument. A corpse as lively as that should not be allowed to run at large.

Credit for Agriculture

The Pacific northwest has good representation on the special committee of the senate agricultural bloc that will hold hearings on legislation designed to provide long term personal credit for farmers. It has two of the seven members—Senator McNary of Oregon and Senator Jones of Washington.

The appointment of this special committee presents a new procedure in congressional action. Heretofore all matters of legislation introduced in congress were referred to regularly designated committees of the senate or the house. In this instance the committee has been selected by a bipartisan group without grant of congress. This action became necessary, in the judgment of the agricultural bloc, because there were too many bills sponsored by interested legislators and too many ideas as to the forms the legislation should take. It is hoped by the members of the bloc that as a result of the hearings before the committee an agreement will be reached on a bill which will be free from points that may be criticized as radical.

Until the passage of the federal farm loan act the government had given no consideration to the special credit needs of agriculture. The federal reserve system was constructed for the benefit of the mercantile and manufacturing interests, who could be served with loans for periods not exceeding 90 days. But the farmers and stock growers needed longer credits, and the purpose of this investigation is to provide separate care for farm needs and live stock requirements.

No date has been fixed for hearings before the committee, but invitations will soon be issued to various officials of the government, including members of the war finance corporation, federal reserve board, federal farm loan board, the secretary of the treasury and the secretary of agriculture and representatives of the farm organizations and of the banks. We hope that as a result of this hearing a bill will be reported out that will be satisfactory to the agricultural interests

State Farm News

Almost simultaneously with the announcement that Manager M. J. Newhouse of the Washington Growers' Packing corporation would leave to join the Oregon growers as assistant manager, the Clarke county organization made the third and final payment on its members' 1921 crops of prunes, the gross receipts from which were $316,235. More than 2,500,000 pounds were marketed, and the average price was better than 11 cents, a figure which in spite of the fact that the crop was only about 25 per cent normal in volume, left the producer much better off financially than he was after selling the 1920 crop. It ran unusually high (87 per cent) in proportion of 30-40s (standard size) or larger. Packing and marketing expense averaged only two cents per pound, which is said to be the lowest of any marketing agency on the Coast.

About 600 Clarke county growers of prunes, strawberries and potatoes are members of the corporation, and important questions relative to handling the 1922 strawberry crop, which will be heavy, were discussed by members interested in small fruits, at a general meeting at Vancouver, May 22.

It is announced that a branch of the new Oregon-Washington joint stock land bank recently established at Portland will be started at Walla Walla to serve Umatilla county in Oregon, and Walla Walla, Whitman, Columbia, Garfield and Asotin counties in Washington.

* * *

Destruction of all black currant bushes in areas reported infected with white pine blister rust has been accomplished, according to information reaching Supervisor Charles L. Robinson of the state department of agriculture at Olympia. The work was done by federal and state agents in conformity with the recent quarantine established by the department.

The plantings cleaned out were in the vicinity of Sumas, Mount Vernon, Laconner, Port Townsend and Beverly park, near Everett. In the latter section a patch of white pine was also destroyed as a preventive measure, although no evidence of disease was discovered. The authorities are making further investigations.

* * *

A record in speedy freight movement of live stock is claimed by the Northern Pacific railroad in transporting 3000 ewes and 2000 lambs for Howard Nye of Prosser from Kiona to Trout Creek, Mont., 303 miles, over three divisions in about 17 hours. Such a journey has often taken 48 hours, it is said.

* * *

After many years of absence from the county agent column, Skagit county now has an agricultural agent in the person of C. H. Bergstrom, formerly Thurston county agent and more recently a Guernsey breeder of near Olympia. Mr. Bergstrom is already at work in the county and attended his first conference since going to Mt. Vernon, at Puyallup, late in May. Skagit county is regarded as one of the richest fields for extension work in the state. Some work of this character was carried on there in conjunction with horticultural inspection work several years ago, but this was found unsatisfactory.

* * *

Members of the Clallam County Cow Testing association held their annual meeting and elected R. A. Schmuck, C. A. Robinson, Ben H. Ridgway, C. S. Mantle and Bert Sinders as directors for the coming year. E. A. Schmuck was selected president and C. A. Robinson, secretary, with K. B. Cushman tester for the year.

* * *

The Creas Island Guernsey bull club, block No. 2, with 10 members, was organized at East Sound, San Juan county, by County Agent Will Henry. Harry Donohue was elected president, Jake Cramer, vice president, and Walter Sutherland, secretary-treasurer. They purchased one of the sires of the county, "Sammish Trooper," a half-brother of "Sammish Topsy." His dam has a record of 520 pounds butterfat and is a 4-year-old. The bull has been in the county for several years and has several fine daughters.

* * *

The Whatcom County Berry Growers' association has been organized and will establish a receiving station in Bellingham. A. Buettner was elected president; Frank Mittelstadt, secretary and treasurer, and H. R. Clark, F. J. Hill and Alec Beverly, trustees.

* * *

Those interested in the production of milk will be glad to note the decision reached by the National Mothers' Conference and Parent-Teacher association, which was recently held at Tacoma. A resolution was passed indorsing the Voight bill, which will prohibit the shipment of filled milk or substitutes of any kind. The women have declared that filled milk is a menace to infants and children and have thereby voiced their opinion that pure milk is best for all purposes in the home.

* * *

A. G. Woodward is on the job as secretary and manager of the Oakesdale Live Stock and Produce Fair association. The date of the fair will be announced soon.

* * *

The past year, 1,156,857 pounds of arsenate of lead were used in combating the codling moth in the Yakima valley. This cost on an average 20 cents a pound, making the total cost $231,371.40. About 21,000 pounds of calcium arsenate, also a poison, was used. The average cost per pound was 23 cents, making it cost $4830. These are only an item in the entire list of spraying materials used here during the growing season, but are the poisons used in greatest quantity.

* * *

Whatcom county commissioners have pledged the county to pay one-third of the cost of the Mount Baker highway extension to be built by the federal government this summer and to meet the annual maintenance cost of $3000. The road will cost $165,000, it is estimated. The extension will run to Austin pass and assurances have been given that a hotel will be built at the pass for tourist travel.

Aug. 15-29—Skagit county fair, Burlington.
Aug. 28-Sept. 2—Southwest Washington fair, Chehalis.

FARM BUSINESS AND MARKETS OUTLOOK

May Wheat and Price Stabilization

Trading in May wheat began on August 24, 1921, the range on the opening day being from $1.22 1-4 to $1.24 1-4. From this point it advanced rather steadily to $1.42 3-4 on September 10. Then a long slump followed, marked by a couple of minor upturns of 8 to 10 cents each, to $1.03 1-4 on November 4. Another advance to $1.19 on December 1 followed. By December 15 it was back to $1.10 3-8. On December 29 it reached $1.17 1-2 and on January 3, 1922, touched $1.07 1-2 once more.

From this point a long advance began which culminated at $1.49 7-8 on February 27. By March 15 it had dropped to $1.29 1-2, bounced up to $1.39 3-4 on March 18, then dropped off again to $1.28 1-2 on March 27. After swinging over a 5 or 6 cent range several times it advanced from $1.30 1-2 to $1.45 in four days, nearly 9 cents of it in one day, reaching the latter on April 17, and $1.49 1-8 on April 22. After breaking to $1.39 3-4 on April 27, it rallied to $1.46 on May 3, broke to $1.34 1-2 on May 8, advanced to $1.47 1-2 on May 17, then nose-dived to $1.16 on May 31, having a range of 10 1-4 cents on one market day. The closing trades were at a range of $1.16 to $1.17.

A lot of speculators, who are schooled in erratic action, were made dizzy, sick at the stomach, and all were extremely glad when the ride was over.

What percentage of this action was due to speculative maneuvers and attempted manipulation, it is impossible to say, but this influence undoubtedly has been dominant in the last two months. That a "deal" was on has been common talk for weeks.

Cash wheat prices paralleled closely all of these gyrations of May wherein arises a just cause for complaint on the part of the producer.

Now that it is all over, will the defenders of board of trade speculation please come forward and explain how the institution stabilizes prices? Or is this the exception that proves the rule?

Part of the trouble arises through the fact that so many contracts center in a given month. If conditions do not develop as rapidly as expected by those who have taken a stand on one side or the other, the delivery month may arrive before those conditions become operative. Nevertheless, it is necessary to close all these contracts to shift them to a later delivery date, all of which tends to disrupt the market and makes for erratic prices.

Steer Market Working Higher

Another small advance featured the cattle market last week, raising average prices at Chicago to $8.60, the highest of the year, and about $1.50 higher than last January. A few yearlings brought $9.50 and a full load reached $9.35, the highest since early April, but below the year's top of $10 paid last January.

The run is freighted with well finished beef as this is the season in which the crop of long-fed steers is harvested. How many are still back is conjectural. The number may be above the average and overload the market eventually, but the supply of cornfeds usually begins to shrink along in June.

In general, the outlook favors steady to higher prices on such steers in the next three months with a strong probability that more than $10 will be paid before the summer is over.

Half fat and medium grades of steers are bringing $8 to $8.50, which is more than their owners expect in most cases. Until grassers are available in larger numbers, a month to six weeks hence, cheap beef will be hard to find. But the spread in prices between high and low grades is sure to widen, probably by an advance on choice steers and a decline on common steers.

Butcher cow and heifer prices have practically reached their limit, no matter what steers may do. Many are already showing grass and the gap between choice and common grades is widening. Cutter and canner prices which have been high weakened in the last few days. Calf prices advanced moderately last week because of a lighter supply and an excellent demand for veal. The spring run from dairy districts generally shrinks decidedly during June, although occasionally it remains heavy until the end of that month.

Grass Cattle Supply Not Excessive

With the season for grass beef only a month or six weeks ahead, a survey of the situation does not point to an excessive supply. The movement into Kansas and Oklahoma pastures was the smallest in four years, according to semi-official observations. How the range states can even equal the small output of last year is not clear as herds are small. Prices on Pacific coast markets now look as high as in the middle west. The corn belt states and the eastern grazing areas are not overburdened with cattle, although their supply may be more nearly normal than in other sections. But few Canadian cattle will get over the tariff wall.

Some revision downward on the lower grades of beef steers is probable whenever grass beef arrives, but the outlook for fair prices is far from unattractive.

June Break in Hogs Not Severe

Combined supply of hogs at 11 markets increased nearly 15 per cent last week, reaching the heaviest total since February. The price list was scaled down slightly, but the loss has not been severe and the evidence is piling up that the June break in prices will not be drastic and that prices should hold above $10 at Chicago right along.

There is always a possibility that the number to be marketed exceeds expectations. For a month receipts have been above average volume and the total last week was nearly 20 per cent above normal for that week as shown by past records. On the other hand, the demand for smoked meats has been quickened by hot weather and exports are taking about 25,000,000 pounds of hog meats and lard out of the country each week. Stocks of hog meats in storage are 30 per cent below normal. The June run may be seized as an opportunity to increase stocks for merchandising later in the summer.

Wide Spread in Lamb Prices

Lamb shipments from all sections include an unusually high percentage of low grades which are selling at a wide discount below well finished loads. Culls and throwouts in some cases are almost unsalable. Feeders aer buying more freely than a month ago, but their orders are entirely too few to take care of all thin lambs arriving.

The lamb market is still on a high level. Texas grass sheep and lambs are scheduled to arrive during June and a big increase in receipts of natives, especially from the southwest, is due during the month. This usually means a moderate break in prices, but the small sheep population of the country and the ability of the market to absorb fairly large runs are reassuring.

Demand for Horses Limited

Only drafters and rugged workers for city use appeal to horse buyers at present. The farm chunk season is over. An occasional individual with weight and quality brings $250 to $400, but such sales are rare. Horses weighing 1400 to 1550 pounds, suitable for ice or coal wagons or for use in excavation work, are bringing $150 to $175 at Chicago.

Wool Swings Up Again

After a brief breathing spell the wool market took another upswing last week. Prices were slightly higher at seaboard markets and considerably higher at interior points. Some Texas wools were sold at prices equivalent to 46 to 52 1-2 cents at Boston and 50 cents was paid in Ohio for delaine clips. Offers in Missouri and Iowa ranged as high as 36 cents. It is estimated that 70 per cent of the range clip with the exception of Texas and New Mexico has been sold.

The world-wide character of the advance in wool is shown by the performance at the three London auctions this year. The January series closed 7 to 15 per cent higher than the auction in December. March was 5 to 15 per cent higher than January and the May series just closed was 5 to 15 per cent higher than March.

The emergency tariff alone has not been responsible for the advance in this country.

Mills are being forced to buy and the American Woolen company has advanced cloth prices in line with the raw wool market. April consumption of wool by mills dropped down to 45,000,000 pounds compared with 62,000,000 pounds in March.

May Wheat Corner Fizzles

The so-called "deal" or corner in May wheat at Chicago finally ended with prices close to the bottom. Heavy deliveries, large receipts at primary markets, a slender demand for cash wheat and favorable growing weather for the new crop were the undoing of the "bulls." Total deliveries, many of them in carlots on tracks instead of in elevators, amounted to more than 12,000,000 bushels, although this amount includes some duplication through deliveries. Large quantities were moved to Chicago and receipts during May at that point were about as large as the combined receipts of the preceding eight months. But little of this wheat has been shipped out, although an impression was given a few weeks ago that a good deal of it had already been sold for export.

Dull Demand for Wheat

Demand for flour broadens spasmodically, but total purchases are moderate. With the exception of choice grades mills are not energetic buyers of wheat. Importing countries have had liberal offers of Canadian, Argentine and Australian wheat recently and Liverpool has been reactionary.

Although buyers have been indifferent, receipts at primary markets for the last 10 days have averaged approximately 1,000,000 bushels per day, the largest on record at this time of the year. Even allowing for duplications due to reshipments to Chicago, the supply has been unusually heavy with farmers, especially in Kansas and Nebraska, cleaning out their bins.

Measured by the receipts at the leading markets since March 1 the movement from farms from that time until the end of May will be about 65,000,000 bushels. Probably 25,000,000 bushels or more were used for spring seeding, making a total farm disappearance of 90,000,000 bushels. Since farm stocks on March 1 were 131,000,000 bushels, the remainder on June 1, if the above estimates are correct, would be 41,000,000 bushels. The 10-year average farm carryover on July 1 is 34,500,000 bushels. If farmers sell at all freely during June, the July 1 farm reserves will be well below the average. However, statistical compilations on wheat have seldom proved out this year.

Price Trend Hinges on Weather

After the drastic decline which has already taken place, further losses should not be severe as both mills and exporters are showing a little more willingness to buy. On the other hand, unfavorable weather for the new crop is about the only factor that can bring a pronounced upturn within the next few weeks. Climatic conditions have been favorable for the most part, but the crop can still be made or marred over a large area, depending upon the turn the weather takes. Harvest will begin within a week in the southern part of Oklahoma and a week or two later in Kansas.

The spring wheat outlook is excellent with ample moisture even in the state swhich have suffered from drought for the last several years. Canada needs dry weather in order to complete seeding. Foreign crop conditions have been more favorable recently.

After Planting Corn Run Is On

Wet weather has made corn planting later than the average and may prevent an increase in acreage. The crop where planted is making favorable growth in most sections.

Receipts of corn at primary markets in the last two weeks have been the largest on record at this season and about twice as large as the average. A further increase may occur before the after-planting run reaches its crest. The market has weakened along with wheat, but the loss has been relatively small. Exporters are buying moderate quantities, but Argentine corn is becoming more suitable for shipment and is being pressed upon the European market, although it is still priced higher than American corn.

The oats crop is less promising than either wheat or corn as the acreage is small and the crop late. Cool weather is needed to bring it through without serious damage. The domestic and export demand for oats has broadened again, but the receipts are about 25 per cent larger than the average for this season of the year and prices remain low.

Cash Grain Markets

The cash grain prices for May 31 were:

Chicago—Wheat—No. 2 red, $1.17 3-4@1.27 1-4; No. 3, $1.14 1-4@1.25; No. 2 hard, $1.17 3-8@1.28; No. 3, $1.15@1.24 3-4; No. 2 northern, $1.52; No. 3, $1.42 1-2@1.46.

Corn—No. 2 mixed, 59 1-2@62c; No. 3, 59@61 1-4c; No. 4, 60 1-2c; No. 2 yellow, 60@62c; No. 3, 59@61 3-4c; No. 4, 58 1-2@61 1-4c; No. 2 white, 60@62c; No. 3, 59@61 1-2c; No. 4, 58 1-4@60 1-2c.

Oats—No. 2 white, 37 3-4@42c; No. 3, 35 1-2@41 1-2c; No. 4, 34 1-2@38 1-2c.

Rye—97 1-2c@$1.00 1-2.

Barley—62@68c.

Feed Demand Extremely Slow

Demand for by-product feeds generally slackens a great deal at this season, but it is even smaller than usual. Wheat feed prices are extremely weak. Only gluten feed and hominy feed are showing much strength, due partly to limited operation of corn industries.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $20.50; standard middlings, $21.50; flour middlings, $27; cottonseed meal, 36 per cent, $48.50; 43 per cent, $52; hominy feed, $25; gluten feed, $32.85; old process oil meal, $52; tankage, $55.

Alfalfa Hay Remains Weak

Alfalfa hay prices remain weak in most markets with some new crop offered. Most of the latter is of poor quality. Prairie also is sagging, but prices upon good quality timothy hay are firm with the old crop well shipped out in many sections.

Prices per ton in carlots—Chicago—No. 1 timothy, $25@27; No. 2, $23@25; No. 3, $17@20; No. 1 light clover mixed, $24@25; No. 1 clover, $20@21; No. 1, clover mixed, $21@23.50; alfalfa, $17@28; upland prairie, $17@19; midland prairie, $14@17; rye straw, $16@17; oat and wheat straw, $14@16.

Egg Market Holds Up

Although receipts of eggs are running above any recent year and storage holdings at the leading markets are 40 per cent larger than the average of the last three years, prices are holding rather steady. The supply usually tapers more or less from this time on through the summer.

The supply of poultry arriving at the leading markets from week to week since the first of January has been above the average, but consumers have bought freely and frozen stocks in storage were reduced by 53,000,000 pounds in the first four months of the year, the largest decrease in that period in at least five years.

Consumers and Storers After Butter

Unusually broad consumptive demand for butter, which has been the chief support of the market for the last two months, is being aided now by an increase in purchases for storage. Prices have eased under the heavy receipts which are increasing rather steadily, but the decline has been small. A slightly lower level will not be surprising within the next two or three weeks when the supply usually reaches peak for the season, but on the whole the market is in excellent shape.

Prices for 92 score fresh butter on May 31 were:

Chicago, 33 1-2c; New York, 34 1-2c; Boston, 35 1-2c; Philadelphia, 35 1-2c; San Francisco, exchange quotation, 39c.

Advance in Cheese Prices

In spite of the approach of the season when large quantities of cheese are available for storage, Chicago prices are about 3 to 3 1-2 cents higher than a month ago. The advancing market has stimulated a small amount of storing, but regular long-time storage in a large way is not expected to begin for another week or two. Receipts at Wisconsin markets have been running less than at this season last year during every week for the last two months. Attractive butter prices apparently have turned some milk away from cheese factories to creameries.

There is some doubt as to the willingness of the speculative trade to store freely at prevailing prices. But with the available supply running lighter than a year ago and

(Continued on page sixteen.)

Reports Sucessful Year

Wenatchee Cooperatives Sell 2500 Cars of 1922 Fruit Crop

By E. H. McPherson.

The Wenatchee District Cooperative association reports a most satisfactory and successful year of business.

Two thousand five hundred cars of fruit was sold and shipped, returning the growers a little over $3,000,000, all of which has been paid out. A series of warehouses at practically every shipping point in the district has been purchased or built, and substantial payments made on them out of the crop. The association will sell its fruit direct to eastern distributors this year, this department being under the direction of General Manager Dwight L. Woodruff. Of the 3 cents to be spent on advertising, 2 cents will be expended on advertising the Jim Hill and Jim Dandy brands, and 1 cent will be turned over to the East Wenatchee apple district fund. Many prominent grower-members of the association have also signed up the district contracts and will pay 2 cents per box additional, or 5 cents per box altogether.

Though the apple trees of the Wenatchee district bore the heaviest bloom in their history, the drop which followed was so severe that the present crop forecast is only 12,000 cars, compared with 15,000 cars shipped last year. However, the June drop may reduce this figure, though the general tendency of the Winesap trees is to produce more heavily than spring indications promise. As a general rule the orchards are in better physical condition than ever before, as fertilization has been carried on under the advice of experts for the last three years.

A crop of 12,000 cars of high grade apples is regarded as preferable this year to a larger output of fruit which might run largely to lower grades. Inspector Darlington states that all conditions are present for a perfect crop, pests being well under control, the water supply more certain than ever before and better methods in vogue among growers generally.

Local buyers are already contracting for cherries at prices ranging from 7 to 12 cents per pound. The short California crop has a tendency to strengthen the prices here. The preliminary estimate is for a yield of 140 to 150 cars in the district, compared to 100 cars last year.

BOOST SHORTHORN CLUBS.

An informal meeting of the Lower Yakima Valley Shorthorn Breeders' association was recently held at Sunnyside, C. M. Hubbard of the state college extension service and A. E. Lawson, Shorthorn field man, meeting with the breeders.

Among other matters of interest it was decided to hold a breed tour about the middle of August; visiting all of the lower valley breeders, several of the Rothrock Shorthorn Baby Beef club members, and finish the tour at the Dunn ranch at Wapato. The breeders also decided to put on a combination exhibit at the state fair and to foster the Shorthorn club work to the greatest possible extent. A committee consisting of County Agent A. E. Lovett, I. L. Jones of Grandview and E. C. Scott, county club agent, was appointed to formulate plans for the tour.

The Experiment Station Service

By DEAN EDWARD C. JOHNSON, State College of Washington, in Current Experiment Station Report.

The state of Washington has a greater diversity of climate and topography than any other state with the possible exception of California. With rainfall varying from six inches a year in the south central part to over 100 in places on the Pacific slope; with soil conditions varying from the rain-leached lands of parts of western Washington to the sun-parched deserts of the dry belt; with soils as different in agricultural possibilities as volcanic ash, glacial gravel, alluvium, residual disintegration, bogs and tide lands; with natural vegetation to be overcome ranging from sagebrush to the densest forests; with temperatures as diverse as the equable climate along the Coast and the marked summers and winters in the inland country; and with marketing problems due to large distances from centers of population, Washington presents to its farmers who already are using 13,274,720 of its 42,775,040 acres, a vast variety of problems, many of them only partially solved and a host not understood at all.

Some Noted Accomplishments.

The Washington state experiment station is now working on some of these problems and has rendered distinguished service in many fields. The development of high-yielding varieties of wheats, notably hybrid 128 from a cross made in 1899, distributed to farmers in 1909, now grown on over 400,000 acres or one-tenth of the wheat area of the state, averaging 6.8 more bushels per acre than wheats ordinarily grown and increasing the yield for the state over 2,700,000 bushels in 1920; the selection of cereal varieties adapted to improvement of tillage methods; the dedemonstration of the value of sulphur as a plant food; the improvement in seed treatment practices for the control of smut in wheat; the working out of the life history of the codling moth for Washington state; the perfection of the lime sulphur spray and the improvements in spraying practices which have helped to place the great horticultural industry of Washington in the first rank among all states; and the demonstrations of the use of iodine in the control of goiter in domestic animals are but a few outstanding examples of this large service.

The list of over 200 publications of the Washington experiment station illustrates the multiplicity of helpful studies and the contributions to knowledge which the station has made and the divisional reports herein show the consistent progress in the many helpful investigations now under way.

Because of the recognition of the value of the work to the station there is now an ever increasing demand for more investigations of the state's many agricultural problems. With new orchards coming into bearing; with farm lands in the older cultivated sections being robbed of their fertility, with new crop pests and diseases appearing; with the need for diversification; with the problems of land reclamation and the development of marginal lands; with the necessity of greater utilization of by-products of the farm and with the ever increasing complexity in marketing farm products, this demand is natural and a recognition of the source from which help is confidently expected.

The Most Essential Industry.

Furthermore, with a valuation of $1,057,429,848 for all the farm property in the state and with a total valuation of $296,660,990 for all farm products produced in 1919, it is increasingly realized that the agricultural industry of Washington is not only its most essential but also the largest of all its industries. Lumbering, the only other industry approaching agriculture in magnitude, had an output valued at $220,512,000 for the same year. The prices existing at the time of taking this census of 1920 from which these figures are derived, were almost at the peak yet they furnish a comparatively fair basis for comparison.

By standing ready to help solve the problems of this great industry, the experiment sttaion is in a position to render service to the state measurable by many times whatever support it receives. Funds appropriated for its work and economically and efficiently used are a capital investment bearing high returns. Opportunity for such investments must not be permitted to pass by even in strenuous times.

Advertising Is Valuable Part of Any Publication

"Let a man imagine his morning paper—which, without advertising, would cost him necessarily very much more than it now does—as containing only the news. Let him think of the absence of the brightness and good cheer of the many posters drawn by well known artists and beautifully executed. Let him imagine the world without that push and go which well done advertising gives to that great, broad profession called business, and he will acknowledge that this recently developed science is a wonderful factor in the world's progress."—Gordon Selfridge in Judicious Advertising.

What is true of the newspaper is even more applicable to a farm periodical like The Washington Farmer, because the advertisements in this magazine contain news and information about farm implements, machinery and improvements which are absolutely essential in running a farm successfully.

Additional interest will be found in the booklets and folders which many advertisers offer to send without cost or obligation. In writing for them, kindly mention the fact that you are replying to an advertisement in the Washington Farmer.

In writing advertisers, be sure to say you saw their advertisement in The Washington Farmer.

Do You Want Duty-Free POTASH?

Recently a United States Senator, who is actively engaged in trying to defeat the "joker" in the Free List which puts a 100 per cent duty on agricultural Potash, asked why the farmers were not represented at the hearings before the Senate Finance Committee when the subject was under consideration. A man, who attended these hearings, called the Senator's attention to the fact that three owners of farms had appeared, representing New Jersey, Missouri and Indiana; that the New Jersey Federation of County Boards of Agriculture, and the Representative of the New Jersey State Grange appeared; that the Representative of the National Grange made a statement; that the National Farm Bureau Federation and the Representative of the National Bureau of Farm Organizations had been actively working for free Potash, and that the Washington Representatives of these Agricultural Organizations represented millions of real farmers, who paid good money to belong to these organizations and to support their representation in Washington, upon whom they depended to look after legislation affecting farmers' interests.

Later on it developed that other Senators had this same thought—that the farmers were not asking that Potash remain on the Free List. There can be no question that all farmers most strongly object to paying two dollars for a dollar's worth of Potash.

Ten people, representing farmers, fertilizer manufacturers, producers of imported potash, and former producers of American potash, appeared before the Senate Finance Committee, or filed briefs on the subject.

Of these, nine asked that Potash remain on the Free List and one asked for the duty.

Why then have the Senators come to believe that farmers are indifferent about the matter?

The explanation is to be found in the fact that the "United States Potash Producers' Association" maintains in Washington an organization which is very active in urging a duty on the farmers' Potash. At the hearing their propagandist shouted: "Where was the American farmer yesterday? Where was the farmer of the South, who uses more Potash than any other farmer in the country? . . . Where was the American Farm Bureau Federation, which has its offices in Washington? Where was the National Bureau of Farm Organizations, representing thousands of farmers?"

This was clear bluff, for these organizations were represented and they have taken their stand squarely for Free Potash.

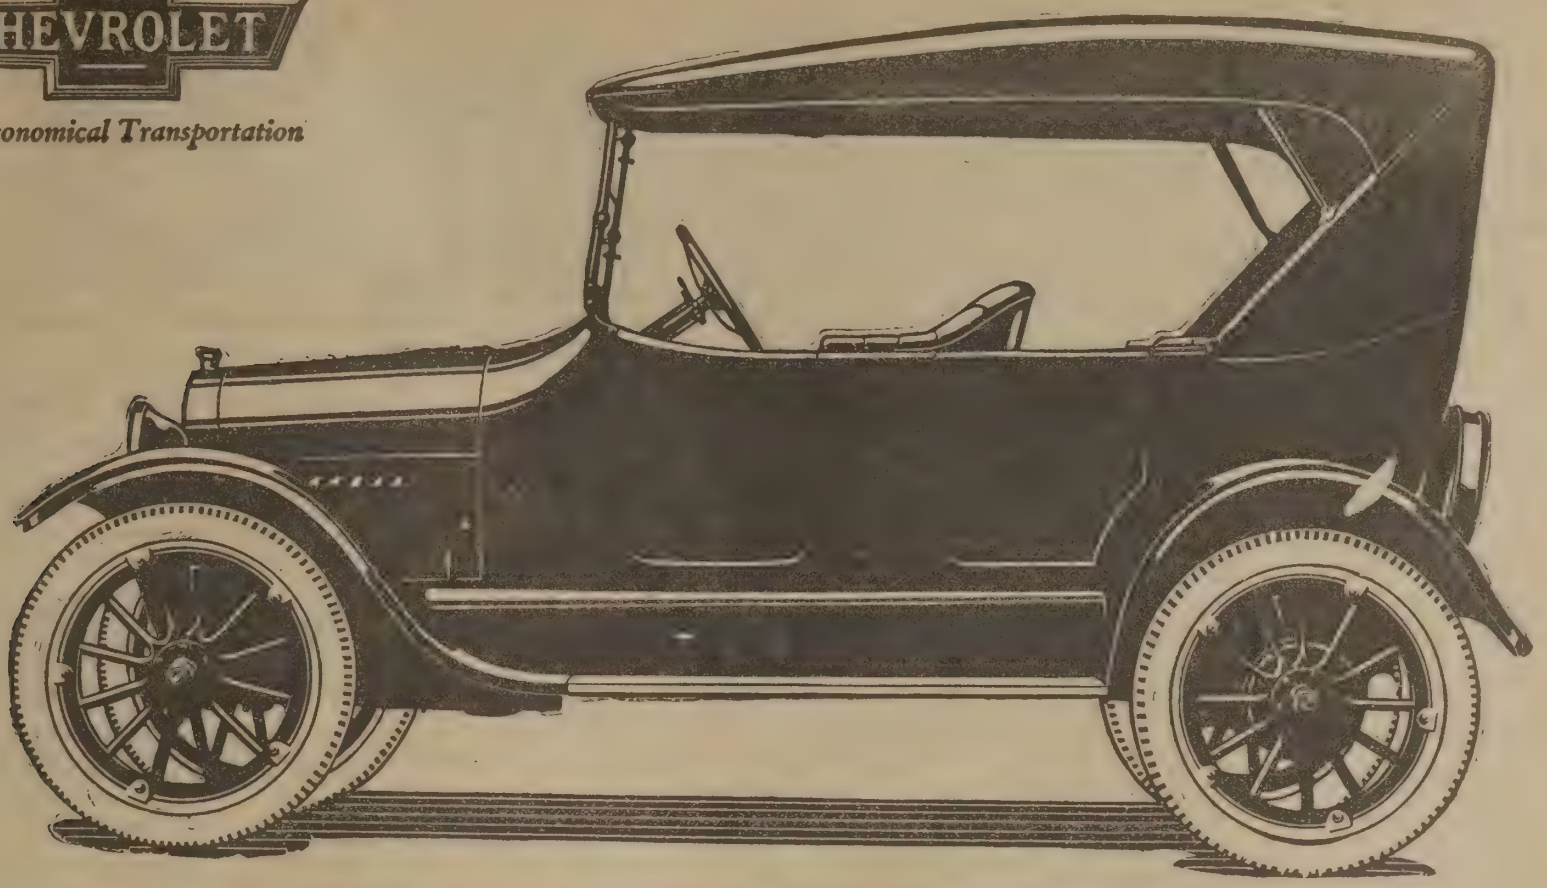
But the bluff, constantly repeated, seems to have made an impression that will be costly to the consumers of Potash, unless immediate steps are taken to show the Senators that farmers are very much in earnest about the matter. The farmers' representatives in Washington must be supported by the farmers at home.

The only effective way to do this is for farmers to write to both of their United States Senators at Washington, urging them to see that the "joker" at the end of Paragraph 1635 be struck out and that Potash used in fertilizers remain on the Free List, where it always has been.

The Senate is now considering the Tariff Bill. *Write your Senators today.*

During the time when foreign Potash could not be obtained, Potash sold at more than ten times the prewar or the present prices. Then the American producers, some of whom are called the "Borax Brigade", had the opportunity of profiteering to the limit, and of selling at very high prices Potash of an inferior, and sometimes injurious kind.

Now they ask for "protection" in the form of one of the most excessive duties in the whole Tariff Act. Unless the farmers act promptly, they are likely to get it.



SOIL AND CROP SERVICE, POTASH SYNDICATE

CHEVROLET

For Economical Transportation

The World's Lowest Priced FULLY EQUIPPED Automobile

$525

f. o. b. Flint, Mich.

New Superior Model Breaking All Sales Records of Standard Fully Equipped Cars

This leadership has come only from sheer superiority in value per dollar of price. Price, operation and maintenance considered, your dollar buys the most transportation in a Chevrolet.

Equipment and accessories considered, Chevrolet is the lowest priced car made.

You buy it all at one time, because Chevrolet is *ALL THERE* as sold—nothing more to buy but the license, gasoline and oil.

Chevrolet Invites Comparison Because Comparisons Sell Chevrolets

Consider What Chevrolet Equipment Means:

Standard Rear Axle Construction. The new Superior Chevrolet has the strong, quiet Spiral Bevel Gear Axle that "stands the gaff" without breaking.

Standard Transmission—three speeds forward and one reverse.

Standard Braking System—foot service brake, hand emergency brake.

Standard Electrical System—Starter, storage battery, Remy ignition, electric lights front and rear, on battery circuit.

Standard Water System—pump circulation, large, honeycomb radiator and fan. This means a cool, efficient engine, saving gasoline and oil and ensuring driving comfort.

Standard Doors—two on roadster and coupe, and light delivery, four on touring and sedan.

Standard Instrument Board—containing speedometer, ammeter, oil pressure gauge, lighting and starting switch, and choke pull.

Standard Type of Carburetor, with exhaust heater—one reason why you get most miles per gallon of gasoline with a Chevrolet.

Powerful, Valve-In-Head Motor—the same type as used in successful cars selling at much higher prices.

Demountable Rims—extra rim on rear. No trouble to change tires on a Chevrolet.

Many Other Advantages which will be noticed on inspection, comparison and demonstration.

No matter what car you own or think of buying, see the New Superior Model Chevrolet.

LIVESTOCK AND DAIRY

Grain and Pasture

By A. B. NYSTROM.

There is a tendency among dairy farmers in general to stop feeding grain while cows are on pasture. This may be a wise practice with dry cows or those giving only a small amount of milk, but with heavy milkers it is not wise.

"It costs too much" is the excuse given. But is this not false economy? Heavy producers must be kept up in flesh and vitality, or they will surely drop off just as soon as pasture is short or as the season advances.

Cows must have a certain amount of the different nutrients to produce milk, and also an additional amount for maintenance. For heavy producers the total required is large and the average sized cow is not capable of eating enough grass to maintain her body and produce the maximum of milk. She must have concentrates to keep up.

Even if the cows on pasture are able to keep up in the milk flow without grain they often lose in weight, and as a consequence dry off earlier than they should.

The amount and kind of grain to use depends on kind and abundance of pasture. Four to six pounds daily of a mixed grain containing some ground oats, ground corn and wheat bran will usually keep the cow in good shape. And while there may be no apparent gain at the pail while the cows are on pasture, there will be a decided gain in the total milk for the season by keeping the cow up at her best for a longer period, even after the pastures are gone.

FINDING THE LOW TESTERS.

The value of getting a complete record of every cow in the herd can not be overestimated. One dairyman in the White River association is now learning that what he thought were his best cows are really among the poorest because they test low.

This particular dairyman took over his father's herd a few years ago. The father was a good dairyman in this respect: he kept close watch of the amount of milk the cows gave, but paid no attention to the test. Perhaps this was not such a poor method from his standpoint, because he sold his milk by the 100 pounds, with little regard to its test.

But of late years the paying for milk has been done strictly on a fat basis and for that reason many low testers proved to be money losers, rather than money makers.

The older dairyman built up a herd of heavy producers by proper selection and breeding. The son took over this herd expecting to continue in the footsteps of his father. Being a progressive dairyman he joined the cow testing association, and to his surprise learned that what he thought were some of his best cows are among the poorest.

This brings out again the point that even the best dairyman can not tell which of his cows are the best and which are the poorest unless he keeps accurate record of them.

Sunflower Silage

Although corn will usually mature a good crop for silage in the Yelm irrigation district, D. R. Hughes prefers to grow sunflowers for this purpose, since the yield is almost double and the cows seem to have little preference for either silage.

Last year a square rod was measured off before the sunflowers were cut and the crop weighed carefully. They were found to measure slightly under 20 1-2 tons to the acre. They were the Mammoth Russian variety and grew to a height of 8 and 10 feet.

For a hay crop Mr. Hughes has found winter oats and vetch to make the best yields to the acre and the growth is often so thick that an extra man is needed to fork the cut hay away from the mower before the next swath can be cut. All of the cultivated crops are planted on land that has been heavily manured and it can be irrigated during the dry weather if necessary.

Fewer Animals Die

Swine on farms that died from disease during the 12 months preceding May 1 numbered 3,082,000, as estimated by the United States department of agriculture. This number is close to the average of the preceding five years, namely 2,944,000. According to the department's records, which extend back to 1888, the highest number of swine on farms that died from disease in any one year was 7,005,000. These deaths occurred in 1914, when the mortality from hog cholera was unusually high. The rate of swine losses from disease during the last 12 months was 54.1 per 1000 head of swine, compared with the average of 54 per 1000 head for the preceding five years.

Cattle losses from disease and exposure on farms and ranges during the last 12 months totaled 2,016,000 animals, or a little less than the average of 2,174,000 animals for the preceding five years. Yearly losses of cattle from disease and exposure have often been greater than the losses for the last year. The rate of losses from disease during the 12 months ended May 1 was 17.8 per 1000 head, or below the five-year average of 18.3 per 1000 head. The rate of losses from exposure was 13 per 1000 head, a rate below the five-year average of 14.3 per 1000 head.

Losses of sheep from disease and exposure during the last 12 months numbered 1,293,000 animals. This number is below the five-year average of 1,512,000 sheep. The rates of losses of sheep from disease and exposure were close to the average. For disease the rate for the last year was 21.5 per 1000 head, the average for the preceding five years being 21.6 per 1000 head, and for exposure the rate of the year was 26.4 per 1000 head, or a little above the five-year average of 25.3 per 1000 head. Lamb losses during the year were at the rate of 62.4 per 1000 a rate almost exactly the same as the five-year average of 62.5 per 1000 head.

Favorable conditions held the mortality of horses and mules from exposure down to 386,000 animals, a number below the five-year average of 410,000. The rate of mortality was 15.7 per 1000 head compared with a five-year average of 16.3 per 1000 head.

Feeding Shed

The feeding shed is unquestionably a success in the Puget sound country.

D. R. Hughes of Yelm has a very convenient shed of this type which joins his dairy barn. The cows can be turned into the feed shed after being milked and they need not go out in the rain except for water. A feed rack extends along one side of the shed and the bull has one shed, which is enclosed, with a door opening into his paddock.

The feed shed measures 20x70 feet and is open on one side. The manure accumulates and is hauled out at times when it is most convenient during the winter. Last year Mr. Hughes cleaned the shed four times, loading the manure direct into the spreader.

The open side has been found to be a disadvantage in stormy weather and Mr. Hughes wants to board this up, leaving only a foot or two of space below the eaves for ventilation, but enough to prevent direct draught on the animals. This will keep out the rain and wind, but will allow an abundance of fresh air at all times. This is the type of shed that is recommended by the western Washington experiment station at Puyallup.

Pasture Mixture

A trial of a pasture mixture, consisting of tall oat grass, clover, orchard grass and blue grass, is being tried by L. G. Nelson of Little Rock, Thurston county. The mixture was recommended by E. B. Stookey, county agent, and has been used at the western Washington experiment station at Puyallup.

The crop was sown early last fall and the ground heavily manured during the winter with both liquid and solid manure.

Warranted to Give Satisfaction.

Gombault's Caustic Balsam

Has Imitators But No Competitors

A Safe, Speedy and Positive Remedy for Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Wind Puffs, Skin Diseases, Parasites and Thrush, and Lameness from Spavin, Ringbone and other Bony Tumors.

Removes Bunches from Horses or Cattle.

For Human Use Caustic Balsam has no equal as a Liniment and Counter-Irritant for Inflamatory and Muscular Rheumatism, Sore Throat and Chest Colds, Growths and Stiff Joints.

A Perfect Antiseptic—Soothing and Healing if applied immediately to Burns, Bruises or Cuts.

Every bottle will give satisfaction. Sold by Druggists or sent by parcel post on receipt of price $1.50 per bottle. Send for descriptive circulars and testimonials.

Preparing and Loading the Charge

1 *Making the Hole*

SLIT the cartridges (unless the ground is wet) and press each one down firmly in the bottom of the hole dug beneath the stump so as to form a compact mass without air spaces between cartridges. Next, prepare the priming cartridge as follows:

Cut fuse of a length sufficient to project six inches from top of hole. Be sure cut is made squarely across fuse, not diagonally. Remove one blasting cap from box with the fingers. (Do not use a wire, stick, or any other hard implement.) Next slip cap on end of fuse and crimp securely with cap crimper.

Punch a hole diagonally in side of cartridge with pointed handle of cap crimper, and insert cap with fuse attached. To keep cap from slipping out, tie a string around fuse and then around cartridge. Then place cartridge in hole on top of charge. Do not slit it. Cap should point toward bottom of bore hole.

The subsequent steps in stump blasting will be described in future issues of this paper.

Pacific Stumping Powder, the new Du Pont Farm Dynamite, is the cheapest explosive for stumping. A 1¼ x 8 inch stick will do the work of a 1⅝ x 8 inch stick of any standard stumping powder—and you get ½ more sticks of Pacific Stumping per dollar.

Order from your local dealer and write us for free copy of 125-page book "Development of Logged-off Lands," giving full instructions as to the use of dynamite for land clearing, ditching and tree planting.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

INFECTIOUS DISEASES—ARTICLE 10.
(Tuberculosis—Continued.)

In cases that are still progressive the lesion may not get solid in the center, but remains soft or cheesy in the inside and

gradually gets larger until it may extend until it quite completely involves an entire organ, as in the case of the lungs for instance. I have seen lesions as large as the lung itself on one side, making the lung practically solid. The size and the consistency of the lesion differs with the stage and progress of the disease in different cases. In many of the cases that are seen only after the animal or bird has been killed for food the lesion is seen as small nodules in various parts of the body, sometimes in the liver or in the intestines, spleen or the lining of the chest or abdoman, but it may be in the skin, bones or any other part of the body.

The greatest danger from tuberculosis is that it may be contracted by eating the raw foods of animal origin and in this connection milk and all milk food products are the most dangerous because they are likely to be taken into the system in the raw state. This is especially true of milk which is taken as food in the raw condition, especially by children, and as the children use great quantities this way their supply should be protected until infection is known to be impossible. Butter and ice cream are able to carry the infection because they are not processed in a way to kill the organism. Meat and all meat food products would be as dangerous as the milk if they were eaten in the raw state as are the milk products, but since we usually cook the meat quite well the danger is somewhat lessened. Milk may be made harmless be pasteurization, but it is much more satisfactory to get the supply from healthy cows and then we know that the product is free and clean and wholesome.

Test for the Disease.

To the end that all dairy animals may be known to be free from tuberculosis the tuberculin test should be made on all animals supplying milk for human beings, and, too, all other animals, so that the diseased ones may be prevented from spreading the disease to the clean ones. It is impossible to have some diseased animals on a place without danger to all the others, unless they are kept in the strictest quarantine, and this is not a practical way of dealing with tuberculosis except in certain special cases.

A great deal has been done by our federal and state governments to eradicate tuberculosis and the work is still being carried on in the interests of the consuming public. Meats that are intended for interstate or international shipment are inspected by specially trained veterinarians, who see every carcass when it is killed and carefully examine the various glands of the body and inspect the different organs for evidence of tuberculosis and other diseases that might be harmful. The public scarcely realizes what a great work is being done to protect human beings from animal diseases, but the veterinarians of the U. S. bureau of animal industry and the veterinarians of the various states are carefully guarding the public at all times against these serious diseases.

Are Stamping It Out.

Tuberculosis is also being eradicated from the dairy and beef herds of the nation by the application of tuberculin tests by government and state officials who do nothing elsce but carry on this work. When reactors are found they are so disposed of that they can not spread the disease to other animals. They are either killed or quarantined so that they are definitely eliminated for all time. Such a system of eradication has had the effect of cleaning up many herds, but there are still many that have not been touched.

This work should have the support of every person in every state, as it is of vital imoprtance to us al and the work should be carried on until every animal should have a clean bill of health signed by a veterinarian. This includes the single cow dairies as well as the big ones as there is too often a feeling that "the other fellow's cow should be tested, but mine is all right." One can never tell whether a single cof is all right unless he has had the tuberculin test applied by a competent veterinarian. It is too late to wish you had, when a dearly loved member of the family has contracted tuberculosis from the family cow, as I have seen.

Think about it now, and insist that the cow from which you get your milk be tuberculin tested, that is the only safe way and there is a lot of satisfaction in knowing that your milk supply is clean and that your children are safe from tuberculosis from this source.

Closed Car Comforts For All Season

No previous closed car standard prepares you for the quality you find in the Essex Coach.

That is what gives such emphasis to its low price. Buyers accustomed to pay far more for like advantages, must see the Coach to gain a fair conception of what is offered.

And These Values Are Lasting

The Coach gives all the utility, protection and comforts of the closed car. By quantity production the essential closed car advantages are made possible at this price.

And remember you get these closed car qualities on the famous Essex chassis, which holds more distinguished contest and service records than any light car in the world.

The Coach stays in condition. It has the lively performance of an open car, and its riding ease makes light of country travel. All season protection, reliability, and a large carrying capacity in the rear locker make it ideal for country service.

See This Important Money-Saving

It gives hundreds the closed car they want at from $500 to $1000 less than they expected to pay.

And those who planned to get an open car find the Coach fills their wants more completely, and at even less cost than any open car of comparable quality. You should see the Coach, too. It may be the very car you want.

Touring, $1095. Cabriolet, $1295. Coach, $1345. Sedan, $1895.

POULTRY AND RABBITS

Poultry Problems

By W. D. BUCHANAN, Extension Poultry Specialist, W. S. C.

We have some sick hens. Their combs and wattles and even the flesh turn a deep purple. Their droppings are sickly, yellowish, greenish, containing jointed, flat, cream-colored worms from 1 1-2 to 2 1-2 inches long. The trouble seems to be spreading. What is it and what is a good remedy? E. E. DeF.
Fairfield, Wash.

The flat jointed worms are tapeworms. They appear to be present in such numbers as to cause the other troubles which you note. No method of treatment is entirely satisfactory. The bureau of animal industry recommends that each foul be given a teaspoonful of castor oil to which has been added 15 drops of American wormseed oil. This medicine should be given after a fast and should be repeated in 10 days. For round worms give one pound of finely-ground tobacco in 25 pounds of mash. This treatment should be followed by a dose of epsom salts, about one ounce to each gallon of water. The latter treatment is sometimes prescribed for tapeworms, but I have never used it. Your best plan would be to consult a veterinarian.

Feeding Goslings.

I would like to know what to feed goslings. MRS. G. A. M'K.
Camas, Wash.

Goslings should be fed a mixture of equal parts, ground corn and middlings, or a good grade of mill run, wet with milk. If milk is not available they may be fed a ration composed of six pounds of corn, six pounds of middlings and one pound of sifted meat scrap, wet with water. They should have plenty of green pasture from the start, but should be kept out of the water unless they are raised with geese.

Fertility of Eggs.

I have kept a trio of geese for several years, and, while there is no doubt of their mating, a very large number of eggs are not hatched. This year the first 10 of the eggs did not hatch. They are fed grain and apples in winter and have free range and some grain and running water in spring and summer. What is the matter? E. V.
Nile, Wash.

If the eggs are fertile and fail to hatch it is doubtless due to a lack of vigor. The gander may be too old, or the geese may not be properly fed. Apples, especially sour apples, are not very good feed. Mangles, turnips or soaked alfalfa leaves and blossoms make good winter feed. In the breeding season they should have light feeds of a mash composed of equal parts ground corn and middlings, to which is added about 5 per cent of sifted beet scrap and an equal portion of medium sand, wet with water. Geese do not readily digest whole grain.

Blackhead in Turkeys.

What are the symptoms of blackhead in turkeys? MRS W. M'K.
Prosser, Wash.

The first symptom of blackhead in turkeys is a tendency to stand around and mope, with the head down and a bump on the back. This is soon followed by a greenish-yellow diarrhea. If the liver is examined it will be found to be covered with yellowish-green spots. Blackhead is supposed to be a contagious disease, but some authorities claim that it is caused by too much or too rich feed while the turks are young.

Rough Egg Shells.

What is the cause of hens laying eggs covered with ridges? One killed had a knotty growth in egg sack. I also get a number with soft shells. They get plenty of shell and granulated bone Is this a disease, and, if so, what is the cause?
Seattle, Wash. J. E R.

Ridgy or bumpy egg shells are an indication that the hens are slightly out of condition. It is not necessarily an indication of disease. I would suggest giving the hens plenty of green feed, exercise and fresh air. The knotty growth in the oviduct might be due to inflamation of the oviduct caused by excessive protein feed, or it might be due to a tumor traceable to the same source.

Incubator Temperatures.

Please tell me what the temperature of an incubator and a brooder should be
Hobarth, Wash. E. J.

An incubator should be operated at 102 degrees the first week and 103 degrees the second and third week, with the bulb of the thermometer at level with top of eggs. The temperature of the brooder, at the point where the chicks sleep should be from 90 to 98 degrees for the first few days and should be gradually reduced as the chicks grow older.

Keep Feet Clean.

My baby chicks have a swelling or growth on their feet that covers their toes. Seems to grow to about the size of a head of a match and in a short time makes them unable to walk or scratch. What is the matter and what is a good cure? MRS. P. W. P.
Aberdeen, Wash.

Chicks sometimes get balls of dirt on their toes from running on damp or muddy ground. It is not clear from your letter whether that is the trouble or whether there is a sore or scab. In any event I would advise cleaning and disinfecting the brooder and runs. Scaly leg, not often found on young chicks, is caused by a mite that works under the scales of the legs and feet. It can be cured by keeping the birds clean and washing the feet with a solution of kerosene and lard.

Form Poultry Association

Poultry keeping is greatly on the increase in Pacific county and as a result marketing difficulties are beginning to appear. In order to be fore-handed in the matter County Agent J. R. Beck called a meeting of all poultry keepers in the Willapa valley for one day in May.

There were 37 poultry keepers present and after reports by a committee that had been working on the matter it was voted unanimously to form a local association that would at an early date affiliate with the state association.

Temporary officers were elected as follows: V. L. Swartz of Menlo, president; C. E. Lambert of Willapa, vice president; Zack Shay of Willapa, secretary and treasurer, and Antone Christen of Frances and Frank Griffin of Lebam, directors.

Fifty-seven hundred hens were signed up at this preliminary meeting.

GOOD EGG PRODUCTION.

Mrs. Walter Kellar's White Leghorn hens at Albany, Ore., are making a record for egg production that is bringing satisfaction and profit to their owner. She has 390 hens and in March they averaged a little over 23 eggs each and in April 23 1-3 eggs each. Fof the first 15 days of May they had averaged 180 eggs a day for the entire number.

Wipe Out Every Rat and Gopher

Amazing New Discovery Quickly Kills Them All—Not a Poison.

Rats, Mice, Gophers—in fact all Rodents can now be wiped out easily and quickly. Imperial Virus will do it. This new discovery is a fluid, true Virus. Entirely harmless to humans, poultry, stock, pets, etc.

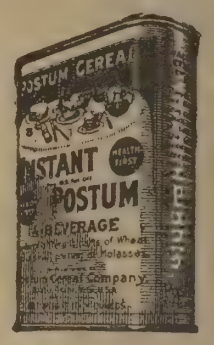
Infects Rodents only. Greedily eaten on bait. Sets up burning fever. The pests communicate it to others, and all die outside, hunting air and water. Imperial Virus is put up in sealed bottles, thus insuring full strength and potency. Only safe, sanitary method to overcome these pests. Protect your Poultry, especially Baby Chicks and Egg Hatches.

YOU CAN GET YOURS FREE

Here's how! Send $1.00 today (currency, M. O., Checks, etc.) and we will give you by return mail, postpaid, two regular, full sized (double strength) $1.00 bottles of Imperial Virus. Use one to rid your place of these pests, and sell the other to a neighbor, thus getting yours free. Special inducements to represent us.

If more convenient, send no money, just your name and address to Imperial Laboratories, Dept. 498, 2110 Grand Ave., Kansas City, Mo. Pay postman $1.00 and few cents postage when two bottles arrive. Guaranteed to do the work to your entire satisfaction within 30 days or your $1.00 will be cheerfully refunded.—Adv.

Let the children share this mealtime beverage



NO NEED to warn the little folks away from the table beverage when Postum is served; every reason to invite every member of the family to join in the enjoyment of this wholesome, satisfying drink.

Postum is made from Nature's best grain—wheat, and contains nothing to harm nerves or digestion.

You'll greatly relish its full-bodied flavor and aroma.

Your grocer has Postum in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for fully 20 minutes.

WESTERN CANADA for Big Wheat Crops

Canada is the world's greatest producer of wheat—second only to the United States—yet only about 12% of the tillable area has been worked. Yields of 40 bushels of wheat per acre are not uncommon. Oats have given as high as 100 bushels per acre, while 40 to 50 bushels per acre are ordinary yields; barley and rye in like proportion. Cattle and horses thrive on the native grasses which grow abundantly and corn and sunflower culture are highly successful.

Stock Raising, Dairying and Mixed Farming

secure for the industrious settler ample returns for his energy. Clearing the cost of one's farm with a single year's crop has an appeal, and has been done by hundreds of Western Canada farmers. Taxes only upon land (not on improvements). Perfect climate, attractive social conditions, good neighbors, churches, schools, telephones, excellent markets and shipping facilities make life happy as well as prosperous.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write

ORCHARD AND GARDEN

Humus and Nitrogen

Humus and nitrogen are two essentials in the soil on which any crop is to be produced, but there is such a thing as too much of either or of both.

Many orchardists are discovering that the use of cover crops for orchard soil improvement may be overdone. To be sure, in many orchards and orchard regions insufficient cover cropping is practiced.

A rotation of tillage methods is being recommended by some of the best horticultural authorities. That is, they favor the growing of cover crops for a period of years, perhaps, to be followed by a period of clean cultivation. Where year after year a cover crop is grown and incorporated into the soil, the humus and nitrogen content may become excessive and result in an overabundant production of foliage and wood. There apparently is a point in leaf and wood production beyond which the fruit itself does not develop and mature satisfactorily. Poor apple coloring is one result of too much humus and nitrogen in the soil.

It is still probable, however, that the majority orchard lands in the Pacific northwest are deficient in humus and nitrogen content rather than oversupplied. It is a question for the individual orchardist, with the advice of expert horticultural authorities, to solve.

Cranberry Selling

Due to the fact that during past seasons, and particularly in that of 1921, many members disposed of their cranberries independently and at prices below that sought by the association, the Washington Cranberry association has decided to abandon the work of marketing and to devote its attention to that of increasing production and securing state and federal aid in combating cranberry diseases. Flagrant lack of support, it was stated, completely undermined the selling service offered by the association and officials decided that under the circumstances the necessary expenditure of time and money was not justified.

Of 33,000 boxes of cranberries that were harvested and sold last season by the Pacific Cranberry exchange, with which the Washington association was affiliated, 28,000 were furnished by Pacific county, Washington, and Clastop county, Oregon Grays Harbor county, Washington, furnished 4000 boxes and Coos county, Oregon, 1000. The more tender varieties were disposed of first, leaving the larger and firmer berries for the Christmas trade and distant markets were selected, while freight charges were kept down by carload shipments. This fixed policy not only helped maintain prices, which ranged from $4.25 to $6 per box and which averaged $5 for the bulk of the berries sold on the Coast, but also left the local market to independent growers, who were greatly aided thereby. An acute shortage of eastern cranberries contributed materially to the success of the selling campaign.

Ants in Bee Hives

By GEORGE W. YORK.

I would like to know what to do about ants in my bee hive. I have moved the hives several times, but they follow up. These ants are about one-fourth inch long and are red and black. They chase the bees and pinch them. They are also beginning to come into the house. What books or papers would be best for me to get to study, being a beginner?

Powell Butte, Ore. P. V. M.

1. Ants sometimes bother bees in the south, but here in the north I think they have never been a serious trouble. They usually seek the bees and the interior of the hive on account of the warmth. If salt or powdered sulphur is put where the ants gather they are usually driven away.

2. There are a number of bee books and bee papers devoted to bee culture. Perhaps if I mention two or three books and papers it will suffice.

"ABC of Bee Culture" is the most complete book on the subject of beekeeping. It is cloth-bound, with over 850 large pages, and is mailed for $3.15. It is really an encyclopedia on the subject.

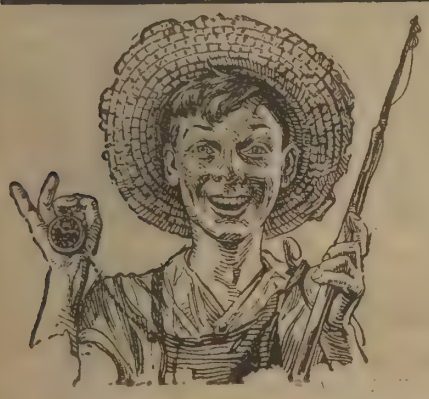
"The Honey-Bee" is another large cloth-bound book, originally written by Rev. L. L. Langstroth, the inventor of the movable frame hive in 1852, which revolutionized beekeeping and placed the business of bee culture upon a profitable basis. This book is mailed for $2.65.

"First Lessons in Beekeeping" is perhaps the best small book for beginners. It has 167 pages, is cloth-bound, and is mailed for $1.10.

As in bee books so in bee papers, there are two leading current editions, and both are published monthly. First is the "American Bee Journal," which is the oldest bee paper in the English language. It was started in 1861. It has usually over 40 pages each issue, and the annual subscription price is $1.50. As the writer edited and published this paper for 20 years, naturally he puts it first in importance as well as in age.

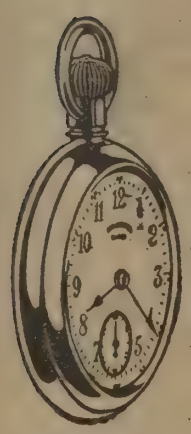
"Gleanings in Bee Culture," is another monthly bee paper which was started in 1873, and is also a very excellent publication on the subject of bees and beekeeping. It is $1 a year.

I will be glad to order either books or papers for any one if it is desired that I do so. Simply address me, Box 84, Spokane, Wash.



Plants Six Acres of Potatoes

H. A. Kellner of Ferndale, Whatcom county, is planting nearly six acres of potatoes, which he expects to have certified by the state seed inspector. He is planting the long white varieties, believing that there is a better sale for potatoes of this type on the local market. Three acres of the Pride of Multnoma have already been planted and the land is ready for 2½ acres of the Improved Burbank. Along the edge of the patch Mr. Kellner will plant a row each of the American Wonder and the White Star mainly for trial purposes.



"There is a good demand for certified seed and there is always a shortage when planting time comes," said Mr. Kellner. "I am going to keep my fields clean and use a sprayer to prevent blight and there should be no cause for losses in any other way. The main trouble in raising certified seed is to keep the patch rogued during the growing season and pull out all plants that are not true to the variety and type planted."

Mr. Kellner has had fair success with the Netted Gem, but considers their yield less than some of the other varieties that sell just as well on the market.

A sprayer was purchased jointly by one of the neighbors and Mr. Kellner, and the machine will be used as needed by either man. It is one of the four-row type that takes its power from the axel and operates the pressure pumps. It is one of the first to be used in the neighborhood.

For Summer Time and All the Time

THERE is a certain steady-going faithfulness about Ingersoll Watches that makes them preferred for time-telling on the farm. A sturdiness and reliability that is all-American in spirit.

More than that, a new Ingersoll is a matter of relatively small expense, in the event of possible loss or breakage.

Your dealer can show you a complete line. The models with Radiolite faces are mighty useful in the dark.

How Many Pigs in the Litter?

By C. M. HUBBARD.

"I am going to dispose of my sow because the size of her litter is decreasing every year; at first she had 22 pigs, then 19 and this litter she only had 17. After a few more litters she won't be having any!" The sow was a splendid individual and she and her litter made a fine picture to a lover of live stock, but here was a farmer who did not know when he had the "real thing."

The standing of any breed of hogs in a community depends, quite largely, on the number of pigs farrowed to the litter. For the farmer to show a profit on his hogs the litter must be reasonably large in order to take care of the overhead expenses and still leave him a reasonable return for his investment in time, feeds and money. The farm sow should be farrowing, on the average, from eight up to, say, 12 pigs, and if any of them fall consistently below this lower limit, they should be put into the pork barrel where they belong. Naturally gilts farrowing at one year of age may have a small first litter. What the breeder or farmer must do is to watch such a sow and if she farrows more small litters consign her and her offspring to the fattening pen. However, one small litter from a sow does not mean that she will continue to farrow small litters. A farmer recently stated to me that one of his sows which had four pigs the first litter, farrowed 14 the next. Such instances are common.

Cause of Small Litters.

The question is, what can we do to insure larger litters? The answer lies partly with the purebred breeder and partly with the farmer. First we must ascertain the factors causing small litters. Among these may be mentioned as hereditary tendency toward farrowing only a few pigs, lack of length of body in the mother animal and the sow being too thin and continuing to lose flesh at and after the breeding date. The type of ration fed may also have an ultimate bearing on prolificacy.

Charles Talmadge, a former Berkshire breeder and one of the best known hog men in the Pacific northwest, recently stated that every breeder should closely watch prolificacy and, no matter how good the sow is, no matter what prizes she may have won, or be capable of winning, where sows are weak in this essential characteristic, dispose of them and their litters to the butcher immediately; that for the good of the breed under no circumstances should they be sold to other breeders or to farmers. This is because a tendency toward small litters is carried on in the blood stream of the animals concerned. There is no doubt that inheritance is the main factor involved in the size of litters, being modified to a certain extent by the age of the sow and her condition at breeding time, as well as whether she is of a "big" or "medium" type, and other factors. A rigid weeding out of sows habitually farrowing the smaller litters and the using of boars and sows from large litters will do much to restore the size of, or increase the size of, the litter.

While there is no experimental data to indicate that length of body has a definite bearing on the number of pigs in the litter, still breeders are of the opinion that, as a rule, the longer-bodied gilts or sows average the larger litters; that short bodied sows, from short dams and sired by chunky boars, may farrow large litters, but such cases are exceptions. Large litters is one of the factors explaining the growing popularity of the larger type of hogs.

Vigorous Condition Essential.

The experience of our better breeders and farmers indcate that sows at breeding time should be in fair condition, vigorous, and putting on some flesh if large litters are desired. Their experience also suggests that too much fat on sows at this time is worse than their being too thin. Undoubtedly half way between the two extremes is one of the practical ways of securing more and stronger pigs. Under ordinary conditions the boar has no effect on the number of pigs, as there are a thousand, or more, sperm cells for each female, or egg, cell. However, a boar may have been overused during the breeding season or be in such a rundown condition that while his sperm cells may fertilize the egg cell, still they may lack the life and strength necessary for full embryonic development of the pigs from this mating.

Naturally the continued feeding from generation to generation of a ration exceptionally heavy in such feeds as corn, barley, or wheat, which are lacking in muscle and bone building material, will shorten the body of the hog and have a tendency toward the production of less pigs to the litter.

Thoughtful breeders, by observing these details of breeding, selection, feeding and management, raise larger litters and popularize their breed with the farmer because other factors being equal, larger litters are more profitable.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

HOT WEATHER CARE OF BABY.

It will not be long before hot days are upon and the mother of a young baby must exercise care to protect the infant against the complaints all too common in summer time.

Dr. Copeland.

There is no brighter page in medical history than that devoted to infant welfare. The last 25 years, the lifetime of the young mother of today, has changed and wonderfully improved the prospect of the newly-born. Twenty - five years ago one baby out of every four died in the first year of life. Now, in New York city, only one out of 14 dies. Isn't this a wonderful record?

This great advance in child welfare is due in large measure to the better milk fed the bottle babies and to the fact that more of them are breast fed. Good milk, pure milk, germ-free milk—this is the secret of health and life for the infant.

I can never resist mention of Mr. Nathan Strauss when I speak about babies. His fight for pure milk, and especially for pasteurized milk, is one of the epoch-making facts of infant history. He is as much entitled to a niche in the hall of fame as is any military hero or literary genius who ever lived.

The bottle-fed baby must be carefully watched from now till cool weather in the fall. Every care must be exercised to keep the bottles, nipples, all the utensils used in preparing the feedings, as well as the milk itself, perfectly clean.

In this connection cleanliness should be surgical cleanliness. By this I mean that everything used in connection with the feeding of the baby must be as free from germs or contamination as are the surgeon's hands, his instruments and all the things which touch the patient who is to be operated on.

The growth of the child is the surest test of his progress in the right direction. The healthy and perfectly normal infant grows amazingly the first half year of his life. In that time he doubles his weight at birth. He adds an equal amount in the next six months. If he weighed seven pounds at birth he should double this in six months, thus weighing 14 pounds. When he is a year old he should weigh 21 pounds.

The modern ways of caring for an infant, and especially the frequent use of the scales, must seem very fussy and unnecessary to old folks. I remember an old uncle of mine said: "Every sucking baby should be given a piece of pork-rind to chew on." Of course, such advise as my relative gave would be considered heresy in this scientific age. But "the test of the pudding is in the eating." The result of these modern methods of caring for infants demonstrate their superiority over the old ways.

The good health of your baby next fall will well repay you for all the trouble you take during the summer.

Just Folks

To be interested is to be alive. Just in proportion as you don't care, you are already dead.

When it comes to living, curiosity is of the essence of the contract.

Thus enthusiasm and even exaggeration is permissible.

America would be a sad place if it waited for the judicial spirit to create.

Mistakes are forgiven if you only do something worth while.

Only today I read of a young man who is occupying a high position on an Atlantic coast daily. Fifteen or 20 years ago he came to me as a raw, overgrown country boy. He persisted in doing things, no matter how crudely.

A few years before another man worked with me who was a finished worker, but he never got anywhere. He became more and more of a hang-around in Washington, D. C., officialdom, until I read of his death a few weeks ago.

You must do things well to succeed, but you have got to do them first, even crudely. Learn to do first; learn to finish secondly. Some spend all their energy in learning to finish.

Fifty years ago there was a minister in New England who was fond of talking of the magnificent enterprises that are carried on in heaven. He was a live wire and I have no doubt that the influence of his enthusiasm is yet radiating throughout the world.

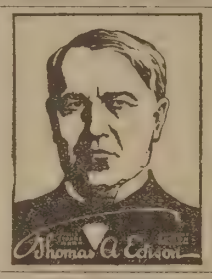
About the same time there was another New England minister who put so much energy into his sermons that he was exhausted on every Monday morning, but he held the partorate of a little country church for 50 years. He christened and married and buried people for almost two generations. I knew him during the last years of his life.

Looking around one sees everywhere resigned people, and satisfied people, and unconcerned people, and retired people, who have lost all youthful interest in their work or in life generally.

I would rather be an energetic doorkeeper in the house of life than one to sit at ease in the master's chair.

If you must choose, choose strenuous and ugly days. Let the other fellow mollycoddle himself to his heart's content.

E A S



POISONED OATS FOR SQUIRRELS.

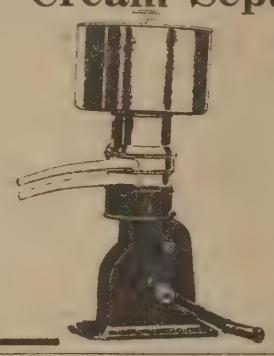
Poisoned oats for poisoning squirrels is again being handled this year by the Spokane county agricultural agent, the mixture being sold for 20 cents per quart, put up in 4-quart, 8-quart, 16-quart and 32-quart sacks. The demand came fast and over two tons were sold in 14 days, many coming back after their second order, which indicated that much more of the poison will be put out by Spokane county farmers than last year. The cost this year is about one-third cheaper than last year.

A summary of the sales made so far shows that 504 farmers farming 113,322 acres have purchased the two tons of poison and in addition have purchased 410 ounces of gopher poison mixture.

NOTHING TO COMPLAIN ABOUT.

Don't cry when you hit your own thumb.

EDISON'S BATTERY AND FARM LIGHT PLANT REDUCED IN PRICE 20 TO 50%



The low cost of operation and the simplicity of running, combined with the durable parts used makes this power plant the most practical and economical one for farm use.

Chas. B. Walker Branch Manager

8 FRONT ST. PORTLAND, OREGON.

Only one-fifth of the buildings owned by the Bell System are shown in this picture.

A Telephone City

Above is an imaginary city, made by grouping together *one-fifth* of the buildings owned by the Bell System, and used in telephone service. Picture to yourself a city *five times* as great and you will have an idea of the amount of real estate owned by the Bell System throughout the country.

If all these buildings were grouped together, they would make a business community with 400 more buildings than the total number of office buildings in New York City, as classified by the Department of Taxes and Assessments.

Next to its investment in modern telephone equipment, the largest investment of the Bell System is in its 1,600 modern buildings, with a value of $144,000,000. Ranging in size from twenty-seven stories down to one-story, they are used principally as executive offices, central offices, storehouses and garages. The modern construction of most of the buildings is indicated by the fact that the investment in buildings is now over three times what it was ten years ago.

Every building owned by the Bell System must be so constructed and so situated as to serve with efficiency the telephone public in each locality, and to be a sound investment for future requirements.

Much Farm Equipment

The United States department of agriculture some time ago prepared a report made up of information from 583 manufacturers, showing the manufacture and sale of farm equipment in the good year of 1920.

The general summary for 1920 showed that 90 manufacturers made 203,207 tractors, sold 162,988 in the United States and exported 29,143.

The development of gas tractors is shown as growing from 29,670 in 1916 up to 203,207 in 1920. The majority, or 107,782, had a maker's rating of from 16 to 18 horsepower.

The report on general items making up the farm equipment line is interesting, for it shows that in 1920 there were made 222,587 cream separators, 48,540 fertilizer distributors, 268,287 gasoline and kerosene engines, 103,036 manure spreaders, 500,690 pumps, 24,052 silos, 75,736 windmills, etc.

LARGER STRAWBERRY PRODUCTION.

The United States bureau of markets estimates that there will be a 17 per cent increase in production from an acreage 20 per cent greater of strawberries this season over last year. The forecast of production of strawberries shows Tennessee leading with 2837 cars; Louisiana follows with 1892; Missouri, 1181; Maryland, 1176. Then comes California with 780; Kentucky, 710; North Carolina, 607.

B. F. VASSAR, Brush Prairie, Wash.—I want to give a word of praise for The Washington Farmer. I prize it highly. I have never taken any farm journal of its equal. The information published is from men who have had actual experience in what they write, and that's what counts.

A. G. BARBER, North Bend, Wash.—We take several farm papers, but we prize The Washington Farmer above them all. I don't know as it could be improved upon much.

Farmers' Want Ads

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

160-ACRE IRRIGATED FARM; WILL TRADE for sheep and terms, 7 per cent; 90-acre crop. D. C. Hanks, Tetonia, Idaho.

CHAPTER XXIII.

Tumbled Air Castles.

With the strengthening cold that came with January and continued into February, the animals ceased to venture far from their lairs in search of food, and the harvest of the trails was therefore light. With the disappearance of rabbits, the fox and lynx had also disappeared. The rabbit is the chief prey of these animals during the tight midwinter months, and as the wolf follows the caribou, so the fox follows the rabbit.

With the going of the fox the field of operations was not only narrowed, but the work was robbed of much of its zest. When foxes are fairly numerous the trapper is always buoyed with the hope that a black or silver fox, the most valuable of the fur bearing animals, may wander into his traps; and his hope renders less irksome the weary tramping of the trails at seasons when the returns might otherwise seem too small a recompense for the hardships and isolation suffered.

The two preceding years had yielded rich harvests to Dick Blake, and had more than fulfilled his modest expectations. He was, therefore, though certainly disappointed, far from discouraged with the present outlook, and very cheerfully accepted the few marten and mink pelts that fell to his lot as a half loaf by no means to be despised.

While Ungava Bob had looked forward to a successful winter's trapping, his chief object in coming so far into the wilderness had been the establishment of his new trails as a basis for future trading operations; and more particularly, therefore, with a view to the future than to the immediate present. Neither was he, for this reason, in any wise discouraged. His youthful mind, engaged in planning the castles he was to build tomorrow, had no room for the disappointments of today.

Sishetakushin had given Bob the assurance that the Nascaupees would bring him their furs to barter. He was satisfied, also, that he could secure a large share of the trade of the Eastern, or Bay, Mountaineer Indians, for he would pay a fair and reasonable price for their furs, and they would quickly recognize the advantage of trading with him. And he would have another advantage over the coast traders: He would establish a trading station in the very heart of the wilderness, in the midst of the Indian hunting country.

Previous to his coming into his little fortune his father had, as far back as Bob could remember, been struggling under a load of debt. At times the family had been plunged into the very uttermost depths of poverty; and even now a sickening dread stole upon Bob as he recalled some of the winters through which they had passed when the factor at the post had refused them further credit, and the flour barrel at home was empty, and they could scarcely have survived had it not been for the bounty of Douglas Campbell.

This was the condition still with many of the families of the Bay. They were always in debt to the company for advances of provisions, and there was no hope that they could ever emerge from the deplorable condition. It was the policy of the company that they should not.

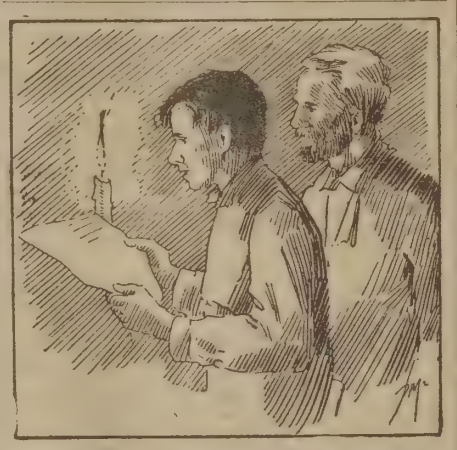
In accepting credit from the company the trapper placed himself under obligation to deliver to the company every product of his labors until the debt was discharged. The company allowed the trapper in return for his pelts such an amount as it saw fit. He had no word in the matter, and of necessity was compelled to accept the company's valuation of his furs, which valuation the company took good care to place so low as to obviate any probability of his release from debt. At a reasonable valuation of their furs, there was seldom a year that most, if not all, the Bay trappers might not have been freed from their serfdom.

Thus when a trapper died his only inheritance to his children was a burden of debt, which sometimes passed down from generation to generation; for the son who refused to assume his father's debt was denied credit or consideration at the company's stores.

The Grays, as we have stated, had felt the heavy hand of this inquisitional system. Now that they were free, Bob's sympathy was poured out to his neighbors, and he was secretly planning how, when he became a trader, he might also compass their release.

As rapidly as his profits would permit, Bob was determined to advance, first to one family, then to another, sufficient cash to discharge their debts and relieve them from their obligation to the company.

Then he would advance them the necessary provisions and supplies to sustain them until they returned from their trails with their hunt. He would buy their pelts at as high a price as he could afford with a reasonable profit. This price would always be certainly double, and often four or five times, that which the company was accustomed to allow.



Bob, thus forming his Utopian plans, forgot the tedium of the trail. No person is so happy as when doing something to make some other person happy. And Bob was happy because he believed he was to be the means of bringing happiness to many. Making a comfortable living for himself, he would make it possible for his neighbors to make a comfortable living also.

It never occurred to him that failure was possible, or that, with the amount of capital which he believed was still at his disposal, the plan was unpractical. Young, highly optimistic, and somewhat visionary, his dreams assumed the status of reality.

Bob's mind was thus pleasantly occupied when at the end of the first week in February he returned to the river tilt to find Ed Matheson and Bill Campbell back from Eskimo bay, and Dick Blake, just in from his trail, drawing off his frost-encrusted adicky.

"An' there's Bob, now!" exclaimed Ed, as Bob appeared in the doorway.

"'Tis grand, now, t' see you back," said Bob, his face beaming welcome as he shook

"Mother's sayin' the bank's broke."

the hands of the returned travelers. "Dick an' me's been missin' you wonderful."

"'Twere grand, now, t' see th' tilt when Bill an' me comes in last evenin'. 'Twere th' hardest pull up from th' bay with our loads we ever has, an' we was tired enough t' drop when we gets here. Where's Shad?"

"Wi' th' Injuns yet, an' I'm worryin' about he not comin' back. They must ha' gone a long ways down north lookin' for deer, or they'd been back before this. How'd you find th' folks at th' bay, Ed?"

"Fine—all of un fine. Your mother's wantin' wonderful bad t' see you. But when I tells she you'm all right she shtops worryin'. I were forgettin' t' say anything about th' trouble wi' th' Mingens, though," and Ed grinned.

"Forgettin' a purpose?" asked Bob smiling.

"Maybe so," admitted Ed. "What's past don't do nobody no good t' know when they's nothin' for un t' make right. 'Twouldn't ha' helped none for she t' know about th' Mingens, so I just naturally forgets un."

"I'm glad o' that. Mother'd 'a' worried an' been thinkin' all sorts o' things happenin' what never would happen," and, greatly relieved, Bob asked, "An' when'd you make th' bay?"

"'Twere just New Year. Bill an' me cruises along fast, bein' light, an' takin' short sleeps. 'Twere night when we gets t' Wolf Bight, an' I says t' Bill, says I: 'Tis near midnight, an' likewise t' th' New Year. They'll be sleepin', an' le's's wake un up shootin' th' New Year in like all creation.'

"Gettin' alongside th' winder, we lets go till our rifles is empty, and then rushin' in th' door yells, "Happy New Year!' They was awake, all right, wonderin' what in time an' creation were turned loose on un, we yellin' like a passel o' Injuns. They was glad t' see us.

"Bill goes home t' Kenemish with daylight, an' your father takes me t' th' post wi' dogs an' komatik, your mother goin along, an' I gets home th' evenin'."

"Where they goin' right back home?"

"No, they 'bides t' th' post with Tom Black's folks till th' end o' th' week, an Bessie goes back with un t' be company with your mother. Oh, I were forgettin'! Here's somethin' your mother were sendin'," and Ed reached under the bunk and drew forth a package.

Upon opening the package Bob discovered a quantity of sweet cakes, a loaf of plum bread and a letter. He passed the cakes around, then drawing up to the candle proceeded at once to read hungrily his mother's letter.

It was a message of love and encouragement, closing with the news of the bank failure and consequent loss of the little fortune with which he had planned to do so many things. Presently, looking up, he said, in a shaking voice:

"Why—Ed—mother's sayin' th' bank's broke—an' all our money's gone."

"Aye," admitted Ed, his voice sympathetic and sorrowful. "'Tis broke, lad—I were hopin' she wouldn't write you that, an' you wouldn't know till you gets home. But don't worry about un, now, lad. 'Twon't do no good. If you hadn't known about un now, you wouldn't be worryin' about un. An' now you knows, 'twon't help none."

"I suppose you're right, Ed. But 'twill be hard not t' worry. I were plannin' so."

"'Tain't so bad as t' have some o' your folks die, now. An' I been noticin' all my life that sometimes things happens t' me I thinks is 'most more'n I can stand, an' I feels like givin' up. Then somethin' comes along that's better'n anything I ever thought o' gettin'. An' then when I thinks un out, I finds th' good couldn't ha' come without me havin' th' trouble first. So don't get feelin' too bad about un, Bob. This may be just openin' th' way for some wonderful good luck better'n all th' money you loses," soothed Ed.

There was a postscript which Bob had overlooked. Now in folding the letter his eye caught it and he read it—a brief line added by Bessie, telling him not to think too much about his loss, for she was sure it would all be well in the end, and not to forget it was the Lord's will or it could not have happened, adding, "Remember, Bob, the Lord is always near you."

Nevertheless, Bob was very quiet at supper. He could not forget his tumbled air castles. He could not forget the fact that the returns from the present year's trapping would be insufficient to buy the next year's outfit.

"They was a band o' Injuns comes t' th' post just before I leaves, pretty nigh on their last legs," remarked Ed, when they had finished eating and he had lighted his pipe. "They was about as nigh starved as any passel o' men I ever seen, an' if they'd been starved much more they'd been dead. I hears some o' th' band did die before they gets out."

"Who were they?" asked Bob.

"Mountaineers," answered Ed. "They was back in th' country huntin', but don't find th' deer. They's camped down't t' th' post now."

"Did you hear where'bouts they was huntin'?" inquired Dick. "In th' nu'th'ard or s'uth'ard?"

"They all comes from th' nu'th'ard and west'ard o' th' post," said Ed. "They tells me they finds it th' worst year for fur an' game up that way they ever seen, an' I tells un 'tis th' same here."

"I wonders' now, how Shad an' th' Injuns he's with is makin' out. They'll be wonderful bad off, an' they don't run on th' deer," suggested Dick.

"They'll be likely t' find un up where they finds un when I was with un," reassured Bob, "but 'tis a long cruise there an' back."

Bob's loss was a keen disappointment to him. For several days it robbed him of ambition, and he tramped along the trails and attended to his traps dully and methodically, with a heavy heart. Then he began to say to himself:

"'Tis th' Lard's way. 'Tweren't right for me to go tradin' or t' have th' money, an' th' Lard knowin' it takes th' money away."

This thought, with his natural buoyancy of temperament, restored again to a large extent his interest and ambition in his work; and when he remembered that he was, after all, the owner of two unencumbered trails, with all their traps, he almost forgot his disappointment—but not altogether; that was impossible.

With the end of February ptarmigans began to reappear among the willows along the river bank. They were welcomed by the trappers, for they supplied a much needed variety to the diet. They offered hope, too, that the period of famine was nearing its end.

Ed Matheson's report of the condition of the Indians appearing at the Eskimo Bay post gave the men food for thought. When they gathered again at the river tilt two weeks later, the chief subject of conversation was Shad's continued absence, and many speculations were put forth as to the probable movements of Shad and their Indian friends. Whether or not they were likely to find caribou, where they would go and what they would be likely to do should they fail, were questions which they discussed at length. And they did not conceal from one another the fact that they were deeply concerned for Shad's safety.

When the trappers gathered again at the rendezvous on Friday, the 6th of March, they fully expected that Shad would be there to greet them, but they were disappointed. His failure to appear at this late date excited alarm, but no course of action that would be in the least likely to lead to results presented itself.

They agreed that the Indians had beyond doubt left a cache at the Great lake, for Sishetakushin had stated to Bob that he would do so; and upon returning to that point it was believed Shad would have sufficient food to proceed to the river tilt. Any search beyond the Great lake would be fruitless, for none could know in what direction to search.

Still there was no Shad on Friday, the 20th of March. They ate their supper and resumed their speculations.

"I'm thinkin', now t' make a cruise t' th' place where th' Injuns was camped when I left un," declared Bob. "If they ain't there, I'll come back, unless I sees signs of un. And, anyway, 'twill make me feel better."

"An' I'll go along," said Ed. "We'll be startin' in th' mornin' early, an' we may's well get our stuff out t'night, ready t' pack."

They had blown out the candle and were lying in their bunks, discussing still Shad's long absence, when the door of the tilt was pushed quietly open and the figure of a man appeared in the moonlight at the entrance.

They sprang from their bunks, and Ed Matheson, striking a match, applied it to a candle. As the light flared up the man entered, and Mookoomahn stood before them.

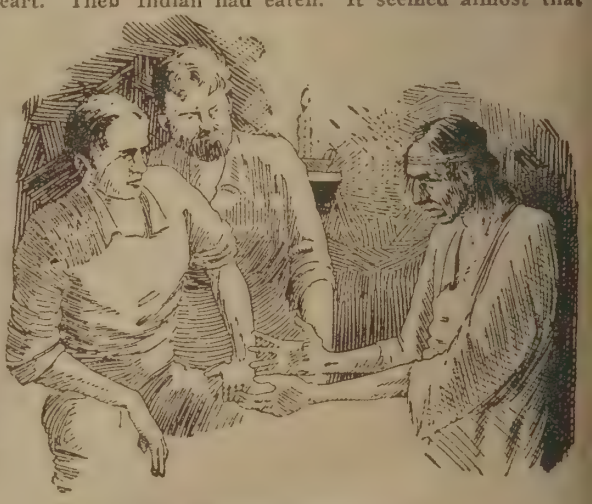
CHAPTER XXIV.

The Messenger.

They looked at the Indian in awed and speechless horror. His tale of suffering was told before he spoke. He had come from a land of tragedy. He had been stalking side by side with death.

This was a mere shadowy caricature of the Mookoonmahn Bob had known. The face was fleshless as that of a skeleton head, with the skin of the former inhabitant stretched and dried upon the bones; the lips so shrunken that they scarcely served to cover the two white lines of teeth; the eyes deep fallen into gaping cavities below the frontal bone.

Drawing his skeleton hands from their mittens, and raising them in an imploring gesture, Mookoomahn looked, as he stood there in the dim candlelight under the low log ceiling, more a spectre—a ghostly phantom visitor—than a living human being.



Then he spoke in a voice low and broken:

"White Brother of the Snow, Mookoomahn has long been tormented by the Spirit of Hunger. When he slept the Spirit of Starvation sat by his side, never sleeping. When he traveled the Spirit of Starvation stalked at his heels, never tiring. For many suns the Spirit of Death has had his cold fingers on Mookoomahn's shoulder."

Gently Bob removed the caribou skin coat from the starving and exhausted traveler, and made him comfortable while the others brewed tea and heated some cold boiled ptarmagan in the pan.

"'Twon't do 't give he much at first," cautioned Dick Blake, setting before Mookoomahn a small portion of the meat and a small piece of bread with a cup of the hot tea. "He's like t' be wonderful sick, anyway, th' carefullest we is. We'll let he have a small bit at a time, an' let he have un often."

No questions were asked until after the Indian had eaten. It seemed almost that

No questions were necessary.

no questions were necessary. The man had come alone. He was in the last stages of starvation. These fact spoke loudly enough. They told the tale of wasting strength, of hopeless struggle, of tragic death that had taken place in the bleak wild wastes above.

The food revived and the tea stimulated Mookoomahn, and when he spoke again, in answer to Bob's urgent request that he tell them of the fate of Shad and the others, his voice was stronger.

He described the journey to the Lake of the Willows, and thence to the camp of starving Indians. He told how the shaman had made medicine to the spirits; how the spirits had revealed to the shaman the things that it was required the Indians do; how the Indians in their starved condi-

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I have been reading THE FARMER for about four years and am interested in the Family Circle and especially in the letters on child training.

I have three fine little youngsters, oldest 7, the next one 5 and third almost 3 years old.

I try my best not to be a scold and I find whipping does very little good. Shutting a child in a dark room or closet may be all right with some children; as yet mine are not afraid of the dark and I do not intend to make them so.

I always try to explain and reason things out with them and when they understand why they are to do certain things it seems easier for them to obey me.

My little 5-year-old is a bright child and will, some day, I hope, be a very fine woman, but she certainly is a trial now; ever since she could creep she has persisted in doing the things she has positively been told not to do and is always "getting into things" when it has been made plain to her she should let them alone. I have whipped her, tied her up, shut her in a dark room, scolded her and have just sat and talked to her by the hour. I have made a special point to praise her when she has been good. I am thankful that she is not quite so troublesome as she was a year ago and I suppose she will grow out of it, but it is certainly nerve-racking now.

I must explain that this little busy-body is very ambitious and quite handy about doing things around the house and if I could find time to arrange work for her so as to keep her busy she wouldn't get into so much mischief. She likes to wash dishes and iron and sew and if I had time I am sure I could teach her to tat and crochet. She is learning to write and can make all the numbers. I find it is much better to say do this and that rather than to be saying don't, don't all the time.

My other two are much alike in disposition and easier to manage.

I would not want a child who never got dirty or into mischief, nor one who never forgot his manners, for such a child wouldn't be normal. Healthy, normal children are bound to do things that are wrong sometimes. MRS. C. R. C.

To mend aluminum ware take the lower half of a white snap fastener, such as is used by dressmakers, the size required, and insert it through the hole to be mended and placing it on an iron surface, hammer it to fit the hole. In about two minutes you have a mend that will stay.
MRS. EMIL DALTON, Wash.

We have used sugar sacks on a cream separator for years, fastening them on with clothes pins. I have learned a new and better way, so will pass it on.

I took an old inner tube and cut it into strips and sewed them together and put it around the strainer to fasten on the bowl. It is much more convenient than the clothes pins. MRS. R. H. A., Wash.

Dear Mrs. Barland: How sour should cream be before it is churned? My butter smells and tastes good, but goes streaked a day or two after churning. What is the cause. A READER, Burley, Idaho.

Dear Reader: Had you given me your name and address I should have answered you long ago. Butter will go streaked when the buttermilk isn't all taken out. For very best results I have found that it is best to salt the butter directly after having washed out all the buttermilk possible, then cover it carefully with a clean cloth wet in cold water. Allow it to stand till the next day, then carefully work it again. The salt will have dissolved and taken out still more buttermilk, even though you may have thought it all out the preceding day. Be careful not to overwork the butter so as to spoil the grain and make it "salvey". Butter just right will show tiny drops of moisture when cut. That is the ideal condition which stands for proper working.

About the sourness of the cream, it is ready to churn when it is all sour clear through, just stirring sweet cream into sour will not do, it should stand till all is what is called "ripened." I think it best to churn cream when it is thoroughly ripened so it will not be too old and become bitter and spoil flavor of butter and buttermilk. A. W. BARLAND.

A little soda cooked in sauer kraut will take out the gas, making it easier to digest. Use only about a quarter of a teaspoonful. Parboiling cabbage with a little soda and draining off the first water after the soda has been added will make it more digestible. MRS. A. J. M., Wash.

A Mason jar lid will clean cooking utensils quicker and make fewer scratches than a knife.

To clean a dish in which rice or any other such sticky food has been cooked, fill with hot water and the steam will loosen all the remaining substance.

For best results in washing clothes with a washing machine put the clothes through a cool water first before putting them into the boiling water in the machine.

I am the mother of five children, the oldest 10 1-2 years, the youngest 20 months, so you will see I appreciate all the helps I can hear of.
MRS. C. G. A., Idaho.

Dear Mrs. Barland: Will you please tell me how to prepare herring for marinading and how to prepare the marinade? What spices are used, how much of each, and does the vinegar and spices have to be boiled? Perhaps some of the women of the Circle can tell how it is done. My wife wants to know. MR. P. C., Wash.

Dear Mrs. Barland: Last fall we were so late in getting our cave completed that we had to put in our fruit and vegetables before the cement was dry. The consequence is that the shelves and rafters are covered with a thick mold. Will some one tell me how to destroy it so it will not come back? I do not want to open it up and allow it to get warm, as it is very cool now. MRS. L. D. M., Wash.

(I fear the only way to kill the mold is to open the cave to sun and air.—Editor.)

Dear Mrs. Barland: I have heard that flowers can be preserved by some process with wax and as I shall graduate in June I would like to keep my flowers as a keepsake. Can some one tell me how to preserve them?
A JUNE GRADUATE, Wash.

Dear June Graduate: Why didn't you give name and address? I have seen paper flowers waxed so that they would keep beautifully for a long time and they looked like natural flowers. I know of no way to preserve natural flowers with hot wax. Perhaps some of the women will know. If it can be done some one will be sure to know how.
A. W. BARLAND.

Home Recipes

Lemon cake pie (has a crust of cake on top and lemon pie underneath): Line a tin with pie crust and put in the following: Two heaping tablespoons of flour, one cup of sugar, butter the size of a walnut, one lemon, juice and rind grated, yolks of two eggs and beat all together, then add one cup of milk and the whipped whites of the eggs, a pinch of salt. Pour it into the pie crust and bake in a rather moderate oven. It will be done when it looks like a layer cake. MRS. THOMAS W. COLE.

Rhubarb Conserve—4 lbs. rhubarb, cut fine; 4 lbs. white sugar, 1 lb. seeded raisins, 4 oranges, grated rind of 2 and the rest chopped fine; 1-2 lb. walnut meats. Mix all and stands on back of stove till sugar's dissolved, then boil till thick and all seems done.
MRS. W. H. GIBSON, Wash.

Ginger cookies: One cup of shortening, two cups of sugar, one cup of molasses, one teaspoon of soda dissolved in a cup of hot black coffee, three eggs, three teaspoons of ginger, one cup of rolled oats, flour enough to make handling easy, and bake in a moderate oven till well done.
Idaho. A READER.

Sour cream cake: One cup of sour cream, one and one-half cups of sugar, three eggs, one teaspoon each of soda and baking powder, a pinch of salt, two cups of flour and vanilla.

Beat the yolks until light, add sugar gradually and stir until creamy, add the cream, then the flour with soda, baking powder and salt sifted in. Add the stiffly-beaten whites and vanilla the last thing and bake in layers. Fill with anything desired. MRS. W. J. T.
Idaho.

Peanut brittle: One cup of white sugar, three-fourths cup of peanuts, crushed if desired. A speck of soda, if desired.

Put the shelled peanuts, chopped, if desired, in a well-buttered pan and set in a hot place. Melt the sugar, stirring constantly with considerable pressure. When the sugar becomes golden brown liquid stir in the nuts very quickly. Remove from stove and pour into a pan, spreading very thin. If a porous result is desired add the speck of soda just before stirring in the nuts.

Delicious Cake Filling—1 cup light brown sugar, 1-2 cup sour cream, yolks of 2 eggs beaten, cook slowly till thick, add chopped nut meats and spread on any light cake.
C. C., Mont.

CARE OF IRONS.

Irons wrapped in waxed paper when set away after the week's ironing is finished will need no polishing the next time they are used.

Preserving time — and a cool kitchen

Make canning time a real pleasure this year by using a good oil cookstove. It concentrates a steady, controlled heat directly under the utensil. Your task is shortened and your kitchen is kept cool, clean and comfortable.

To insure best results, use only Pearl Oil—the clean-burning, uniform kerosene—refined and re-refined by a special process.

Sold by dealers everywhere. Order by name—Pearl Oil.

High Points in News of the Week

Two official actions, previously reported, have perhaps done more than any others in recent months to give American business a start along the road to normalcy. They were the order of the interstate commerce commission for a 10 per cent reduction of freight rates on nearly all commodities except farm products, and the order of the railway labor board for a reduction in the wages of over 400,000 railroad employees, aggregating an estimated $48,000,000 a year.

Neither the reduction in freight rates nor the reduction in wages is large compared with the enormous increases that had been made during the last four or five years. They are, however, a step in the right direction and are sufficient to give courage and stimulus to industry. Exceedingly high freight rates have stood in the way of return to normal conditions more than any other single thing. Exceedingly high wages paid to railroad employees have stood in the way of rate reductions perhaps more than any one thing. Hence this start in the reduction of the two should go far toward bringing about an improved business condition.

It is significant to note, however, that the railroad employees affected by the cut in wages are threatening to strike rather than accept the reductions. Officials of their various organizations have taken the necessary action for a referendum vote on the question of whether or not to declare a walkout. Press reports seem to indicate that the employees at the present time favor a vigorous protest against the reductions.

Indications are that the strike vote will be taken early in August. It is reported that the vote will be taken by organizations having a total membership of about 1,200,000 railroad workers.

Thirty-seven of the railroads affected by the 10 per cent reduction in freight rates notified the interstate commerce commission immediately that they would accept the reduction without protest. A protest is being made by the roads, however, against that portion of the commission's decision which says that 5 3-4 per cent shall be considered a fair return on railroad investments.

It is expected that further reductions in both freight rates and wages will be made from time to time with a view to hastening the return to normal traffic and industrial conditions.

* * *

Notwithstanding previous reports that seemed to indicate that Ireland was in a fair way to solve her own problems and enter upon a reign of peace, much disturbance and a considerable number of deaths and riotings have been reported from Belfast during the last week. The renewal of the disturbances has caused the British government to suspend its movement for the withdrawal of British troops, and on the other hand has caused plants to be laid for the reenforcement of the troops already in Ireland with a view to coping with the situation in a military way if necessary.

* * *

Led by Samuel Gompers, president of the American Federation of Labor, a number of representatives of national associations last week took steps for the forming of an organization the purpose of which shall be to work for the total abolition of child labor in the United States. This action follows a recent decision of the United States supreme court that the so-called child labor law that has been in effect for a number of years is unconstitutional. This law has placed a special excise tax on the products of child labor. At the organization meeting last week a committee was appointed to draft a constitutional amendment designed to prohibit child labor in mines and factories.

* * *

Herbert Hoover, secretary of commerce in President Harding's cabinet, has set $3.50 a ton as the maximum price which shall be charged for coal at the mines during the present coal strike.

The coal mine owners have offered to ask President Harding to arbitrate the questions involved in the present coal strike. The mine workers have expressed a desire that the federal trade commission and the interstate commerce commission be required to make an exhaustive investigation of the entire coal mining problem to form the basis of future settlement of the strike. The mine workers have so far declined to accept the offer to have the president arbitrate the question.

* * *

The senate finance committee last week voted in favor of recommending the enactment of the soldiers' bonus bill in some form at the present session of congress. The measure has already been passed by the house of representatives with no provision made for raising the funds with which to pay the $3,000,000,000 or $4,000,000,000 that it would require. So far as is announced the senate committee has not worked out a satisfactory means of raising this money. Indications are that while the bill has again been placed in the limelight no real change in its status has been effected.

* * *

Liberty bonds last week sold on the New York market at par or better. This is the first time that these bonds have reached par since the date of issue.

* * *

The allied reparations commission has granted Germany a provisional extension of time for payments of reparations that fall due this year. The concession is made on the pledge of Germany to undertake certain definite steps looking toward a rehabilitation of their financial and industrial conditions. The postponement may be revoked and immediate payment of installments due required at any time that the commission is convinced Germany is not carrying out these steps in good faith.

* * *

The senate last week passed the annual army appropriation bill providing for an army of 133,000 men, and appropriating $341,730,000 for its operation.

* * *

President Harding is reported to have recommended to leaders in congress that they make a special effort to enact the ship subsidy bill at the present session of congress. The president is understood to consider the shipping situation too serious to be permitted to continue as it is until congress would meet in its next regular session. Among the other outstanding measures now before congress are the tariff bills, the bonus bill and the Smith-McNary reclamation bill.

* * *

The revised offer by Henry Ford for the 100-year lease of the Muscle Shoals nitrate plants from the government, meeting certain of the additional requirements specified recently by the military affairs committee of the house of representatives, is reported to have been approved by the committee by a vote of 12 to 9. Indications are that the offer will be vigorously debated when it reaches the floor in congress.

* * *

A conference committee between the house of representatives and the senate has agreed on a compromise by which $50,000,000 would be available during the next fiscal year for continuing federal and state cooperation in road development.

* * *

The unusual weather of the present season has hit Alaska as well as the temperate regions of the United States. Dawson City, in Yukon territory, reported last week a temperature of 85 degrees.

Farm Business and Markets Outlook

(Continued from page five.)

a broad demand for immediate consumption, conditions favor a fairly high price level.

Prices for No. 2 American cheese on May 31 were:

Chicago—Twins, 18 1-2@19c; S. Daisies, 18@18 1-2c; D. Daisies, 17 3-4@18 1-4c; Young Americas, 18 1-2@19c; Longhorns, 18 1-2@19c; Square Prints, 19 1-2@20c.

FRUITS AND VEGETABLES.

Lighter shipments of old potatoes permitted prices to recover slightly in the last few days. Northern whites are bringing $1.40 to $1.50 in the Chicago carlot market. About half of the market supply consists of new potatoes which are bringing around 3 or 4 cents per pound.

LATEST QUOTATIONS.

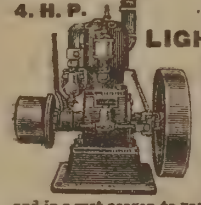
New 1½ H.P. CUSHMAN



For Light Jobs

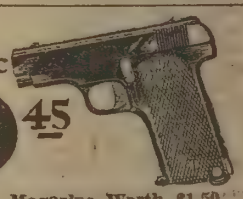
1½ H.P.

A little wonder—regular Cushman quality. Different, better, fewer moving parts. A real no-trouble engine for pumping, etc. Investigate.

4. H. P.

LIGHT WEIGHT 4 H.P.

For all power jobs up to 5 H. P. Improved Throttling Governor insures very steady running and less gasoline used.



Saves a Team on the Binder

Besides doing all regular jobs, this 4 H. P. may be mounted on rear of binder to save a team, and in a wet season to save the crop. We supply attachments. This engine is a necessity on every farm.

Ask for book on Light Weight Engines. If interested in Electric Lighting Plants, write for free book. (12)

Bits of Fun for Everyone

A Full Day's Work.

Lady—Seems to me five cents is an awful price for an egg.

Farmer—Lady, you forget that that represents a whole day's work for a hen.

Bobby Should Say Not!

Father (to Bobby, who had just fallen downstairs)—Why, Bobby, did you miss your step?

Bobby—No, sir; I hit every one of them! —Judge.

Exact Likeness.

First Black Lady: "Dat baby ob yours am de puffec image of his daddy."

Second Black Lady: "He sho am. He's a regular carbon copy."—Union Pacific Magazine.

Food for the Parson.

One Sunday morning Parson Jones encountered Josh, a well-known negro character of the town, vainly trying to hide a fishing rod behind him.

"Josh," said the parson sternly, "don't you know it is sinful to go fishing on the Sabbath?"

"Yassir," said Josh in great distress, "but I jes kain't hep' it dis time, suh. Mandy's preacher sent word he's gwine eat supper at our house, an' dem blame chickens what Mandy's bin feedin' roun' de do' de las' fo' days is done got 'spicious an' went home."

Had to Leave Early.

"Have a good time at Jig Fiddlin's last night?" inquired an acquaintance.

"Only just tollable," replied a resident of Frog Level. "The dance was all right, but I didn't stay for the fighting afterward. Some feller rid up and hollered that my house was afire, and I sorter figgered I'd better go and see about it."—Country Gentleman.

The Gaunt Gray Wolf

(Continued from page fourteen.)

tion were not able to fulfill the requirements laid upon them by the spirits, and how in consequence the wrath of the spirits was not placated.

He described the journey to the cache on the northern lake; Sishetakushin's instructions, and gift of Manikawan to White Brother of the Snow; of the parting from Sishetakushin.

Vividly he detailed the long and tedious return to the Great lake, and how the angry spirits reaching up had seized Shad, cast him into the snow, and lamed him.

"The friend of the White Brother of the Snow could not walk. The Mitchi Manitu had wounded his knee. Manikawan, the sister of Mookoomahn, had promised White Brother of the Snow that she would not leave his friend until he came.

"Mookoomahn told Manikawan White Brother of the Snow would not hold her to her promise. That White Brother of the Snow did not mean that she should die for his friend.

"Manikawan would not listen to Mookoomahn, and she said: 'When White Brother of the Snow comes he will find Manikawan waiting with his friend. She has promised. If the Spirit of Death comes into the lodge, White Brother of the Snow will find Manikawan's body with the body of his friend, and he will know that Manikawan kept her word.'

"Seven suns ago Mookoomahn left the lodge. He traveled slowly, for the spirits clung to his feet and made them heavy. The spirits tripped him and made him fall often. He killed three ptarmigans as he traveled, and the flesh of the ptarmigans made him strong to reach the lodge of White Brother of the Snow.

"For seven suns the friend of White Brother of the Snow and Manikawan have had no food. The Spirit of Death stood very near the lodge when Mookoomahn left it. The Spirit of Death has entered the lodge and destroyed Manikawan and the friend of White Brother of the Snow.'

With this somber prophecy Mookoomahn ceased speaking, and leaned back exhausted. As they looked at him they could appreciate the sufferings of Shad and Manikawan, and no great stretch of the imagination was necessary to picture the grewsome spectacle that they had no doubt awaited them in the lodge on the Great lake.

(To be continued.)

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3612-3984: Ladies' costume—Blouse 3612 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 3984 cut in 6 sizes: 25, 27, 29, 31, 33 and 35 inches waist measure. The width of the skirt at the foot is about 1 7-8 yard. To make the dress for a 38-inch size will require 6 7-8 yards of 36-inch material. For facings of plain material 7-8 yard will be required. Two separate patterns 10 cents for each pattern.

3454: Girls' dress—Cut in 4 sizes: 4, 6, 8 and 10 years. An 8-year size will require 3 1-2 yards of 36-inch material. Price 10 cents.

3779: Ladies' gown—Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require 5 1-2 yards of 40-inch material. Price 10 cents.

4004: Misses' dress—Cut in 3 sizes: 16, 18 and 20 years. A 16-year size requires 4 5-8 yards of 36-inch material. The width at the foot with plaits extended is about 2 1-4 yards. Price 10 cents.

3623: Ladies' apron—Cut in 4 sizes: Small, 34-36; medium, 38-40; large, 42-44, and extra large, 46-48 inches bust measure. A medium size will require 3 3-8 yards of 36-inch material. Price 10 cents.

3997: Girls' dress—Cut in 4 sizes: 8, 10, 12 and 14 years. A 10-year size requires 5 1-4 yards of 32-inch material. Price 10 cents.

4001: Girls' dress—Cut in 4 sizes: 6, 8, 10 and 12 years. A 10-year size requires 2 yards of 27-inch material for the waist and 2 3-8 yards for the skirt. Price 10 cents.

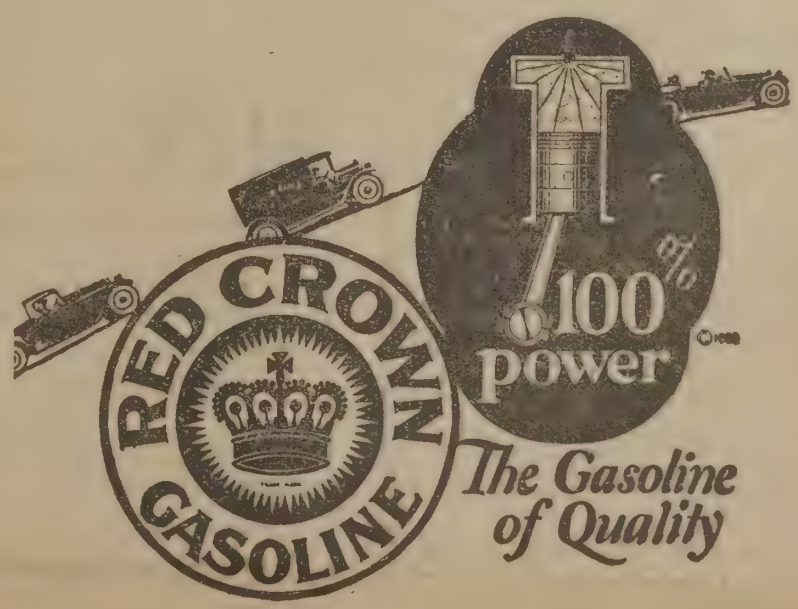
Every atom of "Red Crown" mixes with air



FOR POWER

"The gasoline of quality" is 100% POWER. It is refined to vaporize thoroughly. Every atom of it mixes in the carburetor with from 12 to 16 times its volume of air for POWER. With "Red Crown" you get ready starting—rapid acceleration—greater mileage—a continuous stream of power.

Run your car on "Red Crown" and *nothing else*, and you won't have to bother with carburetor adjustments. It is uniform in quality wherever and whenever you buy it.

Fill at the Red Crown sign—at Service Stations and garages and at other dealers.

STANDARD OIL COMPANY
(California)

About the middle of June Dolly Matson is going with her parents for a trip through California and Oregon. First they are going to camp at Mount Rainier and later commence their journey. We will hear from Dolly when she gets settled again, she says. Dolly lives near the Pacific ocean in Grays Harbor county, Washington. There are six girls in her class at school. Her school closes June 9.

A white cat, a calf and eight white hens are Esther Thieman's pets. Esther is a new cousin and is 9 years old. Her birthday is December 15. She lives near the Puyallup Indian reservation, in western Washington.

Alice M. Rupp, a Spokane county (Wash.) cousin, says she is 4 feet 10 inches tall and has brown hair and blue eyes. She is having a good time picking wild flowers. Alice is 11 years old. July 17 is her birthday. (Aunt Nellie will be glad to get your picture, Alice.)

BEDTIME STORIES

By THORNTON W. BURGESS.

WHITEFOOT GROWS SUSPICIOUS.

Whitefoot the Wood Mouse sat thoughtfully pulling his whiskers. Once or twice he looked behind him uneasily. Very carefully he studied the little wee, wee path that led up to the hollow log where he was making his home at present. Some one had been over that path since he went out for his usual morning walk. He was sure of it. He peeped in at his doorway and sniffed. Some one had been in there, too.

"Hello, Whitefoot!" shouted Striped Chipmunk, coming up behind him on tiptoe.

Whitefoot jumped so that he lost his balance and toppled over on his doorstep.

"Ha, ha, ha!" laughed Striped Chipmunk. "You must have been asleep. Supposing I had been Shadow the Weasel, what would have happened to you then?"

Whitefoot grew pale at the very thought. "You—you don't suppose that Shadow the

Whitefoot sat thoughtfully pulling his whiskers.

Weasel is anywhere around, do you?" he whispered.

"Don't know," replied Striped Chipmunk, and I don't care. No, sir, I don't care, for he doesn't know where my house is. I tell you what it is, Whitefoot, there is nothing like feeling safe. It gives one a good appetite. It certainly does. You take my advice and the next time you build a house you build it where no one will suspect it is. Well, I must skip along, now. Look out for Shadow the Weasel."

Whitefoot was more uneasy than ever. He trotted along the wee, wee path, which he had made just for his own use, and looked for footprints. By and by he found one, and just for a second his heart stopped beating. It was—yes, there could be no mistake, it was the footprint of Shadow the Weasel.

White was sure now that Shadow the Weasel had visited his house, and if he had been there once and found no one at home he certainly would come again. You see, Shadow the Weasel is a robber and worse. He is feared by all the little people of the Green Meadows and Green Forest and hated by all those who are big enough not to fear him. He is so slim and short of legs that he can slip into almost any hole that little people like Striped Chipmunk or Danny Meadow Mouse or Whitefoot can.

Whitefoot was thinking of this as he sat with his hand in his pockets and wondered what he had best do. It certainly wouldn't do to stay there. Shadow the Weasel might catch him asleep. With a sigh Whitefoot arose and went into his house in the hollow log. He filled his pockets with food and then he started out to look for a new home. And as he slowly traveled he kept thinking of Striped Chipmunk's advice. But how could he build a home so that no one would find it? A sudden noise behind him made him stop to listen. Then he ran up to the branches of a pine tree, from which he could look back to his old home. Some one was just coming out of his doorway. It was—yes, it was Shadow the Weasel.

Whitefoot waited to see no more, but ran as fast as his legs would take him.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Senvi Naranen, Margaret Manning, Matt Naranen, Marvin De Gooyer, Helmi Manson, Frances Dirk, Graham Spencer, Pauline Manson, Norine Rinehart, La Vonne Elm, Alvin Cline, Thelma Huck, Nelle Hill, Ethel Strunk, Esther Thieman, Bertha Van Derschelden, Dolly Matson, Helen Staadt, Carol Wolgamot, Blanche Gaurlay, Elmyra Buettner, Eula Buckner, Ward Dull, Frances Thomas, Frances Flanik, Steven Baretich, Anna Van Derschelden, Lillian Dunning, Jennie Vanskiver, Elizabeth Bise, Fred Chase.

Birthday Greetings

THURSDAY, June 8—Stanley Shaw, 10 years old; Hulda Mae Hollingsworth, 11.

FRIDAY, June 9—Evelyn Bishop, 11 years old; Harriet Mathis, 9.

SATURDAY, June 10—Louise Gesler, 10 years old; Carson Lemke, 10; Helen Scheller.

SUNDAY, June 11—Audrey Allen, 11 years old; Dean Jackson, 11; June Sundholm, 11; Winnifred Alice May Reynolds, 11.

MONDAY, June 12—Virgil Byford, 11 years old; Adele Julia Lanier, 11; Mabel Stemn, 10.

TUESDAY, June 13—Lauren Lambert, 11 years old; William C. Smith, 11.

WEDNESDAY, June 14—Gladys McCruchen, 11 years old; Harold A. Stevens, 11.

Helps New Settlers and Farmers Already Established

Consider the new settler on a farm in Washington.

Coming from the East, the Middle West, the South, Canada or some foreign shore, he is confronted by changed conditions everywhere—new soils, new seasons for planting, new systems of crop rotation and cultivation, different varieties of grains and fruits, strange pests and plant diseases, unfamiliar markets, another code of laws. Nothing is the same. Where can he turn for advice, information and counsel? Not to the farm paper which he used to read; for it deals with conditions which he has left behind. Not to the farm paper whose attention is divided among ten or a dozen states; for he wants and must have definite, detailed, reliable and comprehensive information centered upon the one state to which he has come to make his home. It is his state farm weekly which gives him the information which is so necessary in the process of adjustment. It posts him regarding every detail of farming in the new environment, guards him from failure, helps him along the road to success, prosperity and contentment.

What is true of the new settler is equally true of the farmer already established. The state farm weekly supplies a service which no other publication can or does give. This valuable localized service is available at low cost as a result of our cooperative subscription plan. If you know of any one who has recently moved to our state, we trust you will call this paper and this offer to his attention.

Subscription Rates of The Washington Farmer:

$1.00 for Five Years

25 Cents for 1 Year.
50 Cents for 3 Years.

In Canada add 1 cent a copy for extra postage.

June 8, 1922.

Hog-Market Latin

Little Journeys to the Markets

By Gilbert Gusler.

"Singeing," not "singing," hogs or "singers" is the market name for hogs on the bacon order, with rather narrow backs and trim bellies, weighing 150 to 180 pounds, which are suitable for the English and Canadian bacon trade. In making English cuts the hair is removed by singeing off with straw instead of via the scalding vat.

"Fat backs" are extremely fat barrows weighing 325 pounds or over.

"Roughs" are sows which have not yet dried up fully after weaning their pigs, so that they are rather rough or uneven along the underline as well as thin in flesh. Light, extremely thin roughs are called "skips."

"Throwouts" are hogs showing some kind of abnormality, such as bunches, boils, cuts or ruptures, which are thrown out of loads of hogs because of their undesirable character or the possibility that they may be condemned when slaughtered.

"Deads" are the hogs lost in transit or because of accidents at the stockyards. Failure to take proper steps to keep hogs cool en route is the most prolific cause of loss.

"Directs" are hogs bought by a packer in the country or at railroad concentration points and shipped direct to him instead of being offered for sale in the stockyards.

"Public shrinker" is the official who watches the hogs as they pass over the scales and specifies the amount of dockage to be allowed. In most cases it is at the rate of 70 pounds for each stag and 40 pounds for each pregnant sow.

The "top" of the market is the highest price paid on any given day, quotations on pigs and light lights not considered.

"Bulk" prices refer to the preponderance of sales. In the winter when the hogs are uniform a narrow price range will suffice to include 90 per cent of the receipts. In the summer when there are numerous packing sows a wide range is necessary to cover the bulk. Sometimes separate bulk prices on two or more different groups may be quoted.

ADVANCED REGISTER RECORDS.

A study of 28 sales of purebred Guernseys held during 1921 furnishes further proof that in order to obtain the best prices for Guernseys advanced register records are almost indispensable. The following data show that during 1921 advanced register cows brought more than twice as much as females without A. R. records or A. R. dams, and that daughters of A. R. dams sold for $122 more than daughters of untested dams:

Females.	Average price.
117 A. R. females	$617.94
231 females without A. R. records but having A. R. dams	417.66
761 females without A. R. records and without A. R. dams	295.26

Bulls.	Average price.
2 with A. R. progeny	$462.50
62 with A. R. dams	340.08
108 without A. R. dams	205.04

According to these statistics, an A. R. record placed on a foundation cow in the average breeder's herd would increase the value of her progeny about $125 and the cow herself will double in value. Moreover, the average of $295 for females without records and whose dams have no records can be attributed to some extent to A. R. records elsewhere in their pedigrees. It has been estimated that the cost of placing such a record on a cow varies from $50 to $160, depending on the number tested,

Big Buster Polands

For Sale—No. 1, E's Clan No. 461815, farrowed Aug. 27, 1920. Sire, Fox's Clan, sire of grand champion boar at Portland, 1920, and winner of get of sire at Salem and Portland. Dam, Wonder Queen, by a son of Big Bob Wonder, dam, Fox's Smooth Queen, who was grand champion at Portland, 1919, bred by John Miller of Iowa. A "The Clansman—Big Bob Wonder—Giant Buster—old A Wonder" bred boar right in every way. Over 40 inches tall.

No. 2, Big Buster Jones, farrowed March 24, 1921. 36 inches tall, weight 435. Sire, Big Buster, weight 800 at two years. Dam, Miss Jones, granddaughter of King Jones, litter mate to Gerstdale Jones—also a granddaughter of Big Bob Wonder. He combines "Giant Buster—Jumbo—Big Bob Wonder—Giantess" blood to perfection.

We always grow out a few real herd boars. Here are two good enough to drive in any show ring. They are closely related to our sow herd so are for sale. They both are tried breeders and so guaranteed. Have some real litters by them. Both are very smooth, good backs, and the right kind of bone and feet. Price for either, $150. We invite you to inspect them.

Younger boars for less. Write us for full descriptions.

FRED D. ENTERMILLE
BAKER, OREGON.

Big Type Polands

World's Record Holstein Blood
At Auction
Scappoose, Oregon Wednesday, June 16, 1922
Pietertje Beauty Segis

full brother to Segis Pietertje Prospect, is the sire of many of the young stock in this offering. This remarkable cow, the world's greatest milk producer, holds the champion milk record of 37,381.4 lbs of milk and 1448.68 lbs. butter in one year. The sale will include

Fifty Registered Holsteins—Cows, Heifers and Bulls

Many of them are capable of big records. The entire herd of salable cows owned by Wist Bros., comprising the offering. Many of the cows are producing close to 100 lbs. milk per day (one has produced 126 lbs.), and not a cow but what should produce fifty pounds or more under ordinary farm conditions.

They are a grand lot; many of them of show quality and such bulls as King Segis, King of the Pontiacs, Lord Netherland DeKol, King Segis Pontiac, Colantha Johanna Lad and other noted sires are found close up in the pedigree.

Do not overlook this opportunity to secure great Holsteins at a price set by the public.

If you want producers that would be given careful consideration in any show ring—come.

The catalog, now in the hands of the printers, gives details. Send for one.

Sale will be held on the Wist farm, one mile north of Scappoose, Oregon, just off the paved highway. Easily accessible by train, stage or auto.

One year's time will be given to responsible parties. See catalog for details.

SPERRY PRODUCTS
SPERRY FLOUR

ON EVERY bag of Sperry Feed is a tell-tale tag. This tag tells you plain-as-day what's inside. Yet the most important "ingredient" in this sack of feed —the thing that makes all the other ingredients count— is not to be found on this tag. For this all-important ingredient is CONFIDENCE.

—confidence in our practical, hard-pan knowledge of poultry problems.
—confidence in the Sperry formula and the seasoned experience back of it.
—confidence in our daily laboratory tests that make each batch of feed measure up in net feeding value.
—confidence in our ability to produce, at the lowest manufacturing cost, a prime quality feed that does what it's made to do.

You can never go wrong on SURELAY because we make it our business to see that everything goes right in the blending. We take guess-work out of your feeding by keeping it out of the feed.

SURELAY is always the same—always uniform. That's why you should always specify SURELAY in the yellow-striped bag when ordering from your dealer. Then you'll never be in doubt as to how the feed will turn out; for "what's *on* the tag is *in* the bag"—always!

The new edition of our guide-book to poultry profits —"Makes Hens Happy"—tells why Sperry Feeds mean more eggs and more dollars to every poultryman. Send for it today—mail the coupon now!

Northwest Breeders' Sale

Forty-Nine Purebred Guernseys Bring $14,140

Twenty-six Oregon and Washington buyers paid $14,140 for 49 purebred Guernseys at the northwest breeders' sale at Portland June 5, and while the crowd was not large and no very high prices were realized, Manager C. M. Talmadge expressed himself as more than satisfied with the sale average of $290. Females averaged $300 and bulls $228. Foundations were laid for at least six or eight new purebred herds, and other structures were strengthened by the addition of a female or two.

H. M. McGowan of McGowan, Wash., paid $2200 for six females and a bull, becoming thereby heaviest purchaser and owner of the top price female, Olympic Maid, a fine 3-year-old consigned by Olympic farm of Seattle, that brought $530. He gave $430 for her half-sister, Olympic Nancy, a 2-year-old, and two half-sisters consigned by T. C. Gilbert & Sons of Shaw were among his purchases also. Oregon Queen, a 6-year-old consigned by W. A. Goodin of Cornelius, ran the "top" a close second, selling to H. R. Edmunds of Tillamook for $525 after Goodin had offered $400 for a heifer calf from her. She has a record of 544 pounds in class CC, made while carrying twin calves, and she is bred to Langwater Khedive. Edmunds also gave $500 for Sunbeam of Chicona, a 3-year-old daughter of Langwater Traveler, consigned by A. L. Gile of Chinook, Wash. The heifer's dam is a granddaughter of Imp. King of the May and also of King of Medfield. Edmunds' total was $1130 for three head, including a bull. Fred Romtvedt of Toledo paid $1035 for three, including Red Wing Starlight's Walla, a showy 4-year-old of great promise that cost him $500. She was consigned by A. I. and J. Hughes of Oregon City. Two young heifers out of Imp. Vazon Nellie, one of the Clackamas county importations of 1920, brought $535 of Romtvedt's money. W. J. Knutzen of Burlington secured one of the bargains of the sale in Imp. Vallon Winsome Pride, a 3-year-old for whose heifer calf her consignor, Leslie G. Perry of Wendell, Idaho, offered $350. She is sired by an imported bull and her imported dam was at one time one of the best cows on the island. Another bargain was Luster of Chicona, a blue ribbon 2-year-old out of Lucilla of Chicona, champion show cow and producer. Consigned by A. L. Gile, she was first in the ring and went for $420. Romtvedt is among the beginners and "near" beginners who obtained good stock at the sale. Others were Gust Hiem of Scappoose, R. Stadeli of Silverton, D. Cruickstank of Buell, E. W. Ross of Kelso, Wash.; W. De Jong of Brownsmead, Mrs. Kittie David of Portland, and the following members of a Guernsey bull club at Goldendale, Wash.: H. D. Roberts, W. E. Hornbrook, M. O. Dayton and D. Admiral. Each of the latter obtained one female. Mrs. David, who is secretary-treasurer of a jewelry house in Portland, bought the first purebred females and a bull for her Pacific highway farm in Clarke county, Wash., run by J. O. Hoots. The bull was in the Hughes consignment and cost $305. He was junior champion at the state fair last fall and his four dams average 676 pounds of fat. A half-sister to Edna of Mountain View, Wallace & Fordyce's big producer, was procured by Mrs. David for $405. She has made 435 pounds of fat in nine months in class CC.

An intensively bred May Rose bull, and a splendid individual, is Chicona Victor, a Gile offering purchased for $615 by C. L. Hawley for his farm at McCoy. The youngster carries 12 crosses to this famous family. He is by Langwater Traveler and is out of a daughter of Langwater Butter Maker that is expected to make 475 pounds in class GG.

In the following summary of the sale, the purchaser is from Oregon, unless otherwise indicated:

Females.

Consigned by Leslie G. Perry, Wendell, Idaho:

Edyetha of Mountain View, born July 31, 1916; E. L. Scobee, Hood River. $285
Barbara of Mountain View, born April 15, 1917; W. De Jong, Brownsmead 280
Imp. Vallon Winsome Pride, born October 26, 1918; W. J. Knutsen, Burlington, Wash. 330
Imp. Lily of the Cloture, born July 8, 1919; William Ober, Seaside 230
Nona of Mountain View (substitute); K. David, Portland 405

Consigned by Henry Schick, Buhl, Idaho:

NO COST TO RUN

How Simple to Install the Marvelous Colt "Gas Well"!

HERE is a cross-section of a farm house showing how the pipes carrying that wonderful carbide gas are run to every room from the COLT Lighting and Cooking plant.

Even though no provision was made for piping when the house was built it is a simple matter to pipe it now for Carbide Gas.

A good mechanic can set the COLT generator, pipe the average house and attach the handsome polished brass fixtures in about three or four days.

—without cluttering, upsetting and disturbing the whole house.

He works quietly from room to room.

Pipes are usually run between the partitions and under the floor—*always concealed* except in some cases where possibly in a room or two building construction prevents the running of pipe between a partition.

For illuminating the barn and outbuildings a shallow trench is dug from generator to barn, pipe laid and covered. After that, you can have the most brilliant, softest, *whitest* and most-spreading light ever discovered in your home. The *clearest* light to *read* by—the very easiest on the eyesight of the whole family.

And instantaneous flame for cooking at the touch of a finger. Even, sustained heat for a gas iron. With a water heater, piping hot water for washing, shaving and bathing.

And no more lamp-cleaning, filling, trimming or carrying—no insufferably hot coal or wood range in the kitchen during the summer months.

And you'll have a cooking and lighting system that is unequalled for simplicity, economy and little attention. The gas is made automatically by the generator. No expensive parts needing continual replacement—a lifelong investment.

For Good Farming, Attractive Country Homes and Happy Country People

A. S. Goss Elected Master of State Grange

He Has Been Manager of the Associated Grange Warehouse at Seattle for Two Years

By RALPH ERSKINE

ONE of the most satisfactory conventions that the Washington State Grange has had for many years was held at Yakima on the state fairgrounds June 5 to 9. This was the 34th annual session and resulted in the election of A. S. Goss of Seattle as the state master, with one of the closest ballots ever cast in the history of the organization.

A. S. Goss has been a member of the Washington State Grange for the past eight years, having lived in Finley, a town in Benton county near Kennewick. He has been both secretary and master of the Finley Grange No. 414 during his stay in the community where he operated an 80-acre alfalfa farm. At the request of the grange members he left the farm to take entire charge of the warehouse at Kennewick, which he helped to organize. His success with this undertaking resulted in his being chosen as manager of the Associated Grange warehouse at Seattle two years ago.

A man of nearly 40 years, he has done much to put the grange warehouse on its present footing and believes that such a step has been a great incentive to cooperative movements in other lines.

"We must work for harmony and keep the grange on the right track to prosperity," said Mr. Goss. "There are going to be many big problems that we must meet, but they must be taken as they come and worked out for the good of the organization."

Men who have known Mr. Goss as a farmer testify that he is one of the best of neighbors, a man who will perform what duties are before him to the best of his knowledge and ability. He has never been a faction man, but has always taken a middle of the road attitude.

Fred Nelson expressed himself as believing that the delegates had chosen one of the best men that could have been selected for the position and that Mr. Goss has his full-hearted support.

In order to give the delegates an opportunity to know the candidates each nominee was asked to make a five-minute talk to the audience just before the second ballot was cast. There was much enthusiasm when Master Nelson was called to the floor, but he used his time in thanking his supporters and declining to run as a candidate for the office.

The nominations for master placed nine men on the list : E. O. Hyland, Vancouver; A. S. Goss, Seattle; Fred Chamberlain of Puyallup; A. G. Ziebell, Snohomish; Fred Nelson, Renton-Junction; Knute Hill, Benton City; Herman Nelson, Orillia; A. W. Zwigert, Yakima; and L. L. Todd of Kiona. The second ballot eliminated all but Hyland, Goss and Chamberlain, the first two coming out with 121 and 110, respectively. When the final ballot was counted it showed that Goss polled 150 votes with Hyland only 12 votes behind with 138. There were a total of 288 ballots cast.

Mrs. A. W. Swigert of Yakima was elected to the office of chaplain, which office she filled temporarily. Frank Binns of Shelton was chosen to fill the vacancy on the executive committee. C. S. Councilman, who has been acting as gatekeeper, was elected to the position permanently. Knute Hill of Benton City was reelected lecturer.

Bremerton's invitation to hold the 1923 convention of the State Grange at that place was accepted. Both Auburn and Snohomish were bidding for the convention.

HARMONY HAS AT LAST BEEN REALIZED.

The address by Acting Master Fred Nelson was the principle feature of the opening day of the convention. Mr. Nelson commented on the harmony that had at last been realized by the consistent efforts of those who actually have the interests of the grange at heart.

"The grange is now in a healthier condition than it has been of late, said Mr. Nelson, "and if wise deliberations are taken at this session, its future will be even greater than in the past and the proposed slogan of '25,000 members in 1925' may easily become a reality."

A number of recommendations were made and policies outlined relating to different influences that affect the farmers in general. In all cases he advised the grangers to work for further cooperation with other organizations that had for their purpose the betterment of agriculture and the home.

Although the grange has had its ups and downs, it has always been able to come out with flying colors in the end, and, as Mr. Nelson pointed out, it proves that the institution is founded on the soundest of principles and has lasting qualities."

The chief points of the master's address will be found on page 7.

There were approximately 600 grangers who attended the opening session and heard Master Nelson's address. Many came from Yakima and adjoining counties. Before the close of the morning session Mr. Nelson appointed the 34 committees, and their chairmen. In most cases the old members were retained where they were able to serve.

The members were well pleased with the address and some expressed their wish that Mr. Nelson would continue with the office for another year. He had, however, emphatically expressed himself as not being in line for nomination.

An address of welcome was given on the night of the opening day by E. L. French, state director of agriculture. He first invited the grangers to enjoy themselves and to feel at home on the state fair grounds. He then spoke of the grange as one of the soundest organizations of its kind and told how it was flourishing in almost every part of the United States.

KEEP FREE FROM POLITICAL INFLUENCES.

"There have been many such organizations formed within the last half century," said Mr. French, "but their success or failure has depended on their ability to keep free from political influences. This point is emphasized by the fact that the grange has been able to continue its work among the farmers with probably the greatest membership. It has, however, had a great influence upon legislation through advisory means and has been successful in getting some important measures passed during its existence by this means.

"The social aspect of the grange has had a wonderful influence on the home life of our rural population. In fact it was the first influence that tended to break down the isolation that existed in our rural districts. Today the home life of our farms is more pleasant and the women have a better chance to enjoy themselves.

"This only touches the higher lights of the grange," said Mr. French in conclusion. "It is a wonderful institution with splendid purposes and it promises to fulfill them to a greater extent in the future. The Patrons of Husbandry should be only too glad to cooperate with this and other organizations, but they should remember that the old craft has weathered many storms because it is soundly constructed and ably officered and manned. It will bring us into a haven of peace, security and rest which can be realized by no other organization of farmers."

The first day's entertainment was in charge of the Yakima Pomona granges who served an enormous cafeteria lunch to all grangers and visitors, and the tables and lawn in the adjoining grove were used for the lunchers who ate in picnic style.

AUTOMOBILE TOUR TO THE NACHES VALLEY.

In the afternoon the visitors were taken on an automobile tour to the Naches valley by way of the painted rocks and the Naches Heights road. The return trip was made through the Naches valley and Selah. There were nearly 100 autos that made the trip and the visitors were much impressed with the whole affair.

Two of the evening sessions and part of the morning and afternoon periods were taken up with the conferring of degrees on candidates from different parts of the state. These, of course, were closed sessions but were filled with the beauty of the sacred rites that are known only to grangers.

D. G. O'Shea, president of the federal farm loan bank of Spokane, outlined some of the details of the loan system at the meeting Tuesday night and also talked to a gathering Wednesday morning.

WILL A MONEY LOAN ADD TO BURDEN..

"One of the first points to emphasize when making a loan," said Mr. O'Shea, "is to keep people from borrowing unless they actually need a loan. If the loan is going to be an additional burden for him he should never be allowed to take it out. The object of the federal farm loan bank is to provide a means whereby the farmer can pull himself out of debt by means of the low rates of interest. Since all loans are made with other people's money, the transactions should only be made on sound business principles and sentiment should never enter into the deal.

There is also a mistaken idea that the money is furnished by the government. When the bank was first started the federal money did make the loans possible but the capital is now obtained through the sale of bonds to private individuals. The Federal farm loan bank has nothing to give away because it must get its money by the payment of interest. It carries on its business with a low operating cost and it has no object but to give disinterested service. Its cooperative service, however, affords an opportunity to further the cooperative undertakings everywhere, and there are many that have already taken advantage of it.

The secretary's report which was given on the second day of the convention brought out the fact that the grange had lost only a little more than a fourth of its membership as a result of the recent trouble. In some counties the loss was greater than this while in other instances

(Continued on page six.)

A Group of Prominent Members of the Washington State Grange

Front row, reading from left to right: Knute Hill, Benton City; Fred Nelson, Seattle; A. W. Swigert, Yakima; Mrs. A. W. Swigert; Mrs. Flora Hoyer, Castle Rock; Mrs. J. T. Compton, Wenatchee; Mrs. R. N. Miller, Pullman; Herman Nelson, Orillia; Mrs. Ivan Compton, Wenatchee; J. T. LaFollette, Pullman. Back row—Fred Lewis, Tumwater; Ivan Compton, Wenatchee; C. A. Sperber, Vancouver; Fred Chamberlain, Puyallup, and M. C. Hazen, Snohomish.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseasee in stock sold through these columns.

Growing Necessity of Standardizing Farm Products

The joint congressional commission on agricultural inquiry, after weeks of investigation, has rendered a report that throws no new light on the difficult problem of marketing farm products. The only advice that the commission gives the farmers of the United States is just the advice that the Pacific Northwest Farm Trio has been giving its subscribers for years—a general extension of the principle of cooperative marketing of farm products through local associations.

Producers, by assuming through associations the business of "selecting, grading, standardizing and assembling of products," says Chairman Anderson of the commission in his discussion of its findings, "can go far toward improving their own and the public's situation."

"There are certain risks which neither the producer nor the consumer is willing to accept," Mr. Anderson said in outlining the commission's report, "which are now assumed by wholesalers, jobbers and retailers, and these are reflected in the price received by the producer as compared with the price paid by the consumer."

Chairman Anderson added that no single factor in industry or commerce "can be held solely responsible for the spread between producer and consumer." Nor was the congressional commission able to "point out a remedy, legislative or economic, which will reduce this spread."

Inspection at Shipping Point.

The best remedy, so far as there is a remedy, was pointed out by Miles Cannon, Idaho commissioner of agriculture, in an address last Wednesday before the Idaho State Bankers' association on "The Standardization of Farm Products." Mr. Cannon advocates inspection at point of shipment, rather than at eastern terminals, as has been the rule in the past. "When the farmer delivers his product in good order at the point of shipment he is entitled to get his money and have others carry the risks of transport," says Mr. Cannon. "The farmer is the only business man whose wares must stand inspection at the terminal point of the purchaser, and this plan has worked serious injustice in the past. In 1921 we inspected 50,000 cars of farm products at the point of inspection, and few complaints have come because of the standards we established."

Quality Sells Product.

Uncertainty of quality of the product to be delivered has been a prolific cause of the wide spread between the prices paid the producer and the prices paid by the consumer. It is human nature for the buyer to want to know the quality of anything he is buying, and his price will go up or down, according to the certainty or the uncertainty of the quality of a product. Products standardized and sold under a guarantee will command better prices than products put on the market in an unstandardized and haphazard manner.

Now and then an individual grower is strong enough to do his own standardizing and make his own guarantee, but the great majority of producers, as the congressional commission says, should turn to their cooperative marketing associations for the essential work of selecting, grading, standardizing, assembling and marketing their products.

Build Up the Home Market

Europe's gradual agricultural recovery is indicated in the falling off of American grain exports.

In the 10 months ended with April this year total grain exports from the United States aggregated $506,000,000 as compared with $950,000,000 during the preceding 10 months.

In April this year exports of grain aggregated $37,000,000, against $57,000,000 in April a year ago.

A part of this decline is due to falling prices, but much of it is due to decreased volume of exports. For instance, April exports of wheat this year were 4,855,000 bushels, against 17,641,000 bushels in April of last year, while exports of flour were 1,000,000 barrels, against 2,000,000 barrels in April, 1921.

Exports of wheat during the 10 months ended with April aggregated $109,000,000, against $165,000,000 during the corresponding months of 1921, while for the month of April the total was $10,000,000, against $14,000,000 in the same month last year.

It looks as if the American farmer will have to put greater dependence upon the home market hereafter and look less to the foreign markets. We fear that the war-time era of high prices for agricultural products has passed not to return, but with readjustment there is good reason to hope that our farmers will be as prosperous as they were under the feverish war-time inflation. For one thing, costs of production have been lowered and will probably be still further reduced. The trend of freight rates is downward.

There is another reassuring consideration—the increased consumption of farm products that will come with the return of general prosperity and fuller employment of the industrial classes. During the last two years several million wage earners have been out of employment, the estimates running at times as high as 5,000,000. These unemployed wage earners were forced to buy sparingly of food products and cut their tables down to the barest necessaries of life. Moreover, the fear of losing employment caused many others to retrench and not buy as freely as they ordinarily do of the products of our farms, orchards and gardens.

LOOKING INTO OTHER FARM FIELDS

Thirteen counties in Arkansas will plant 853 acres to radishes this year, according to a forecast recently made by the United States department of agriculture.

* * *

The first solid trainload of Georgia peaches of the season passed through Spencer, Ga., on May 17, bound for New York. The crop is estimated at 10,000 cars, or the biggest on record.

* * *

EDMONTON, Alberta.—Returns of crop yields for 1921 from 3114 threshing machines gives a total of all grains for the province of 56,447,972 bushels. Winter wheat averaged 16.98 bushels to the acre, spring 11.76 bushels, oats 30.13 bushels, barley 23.56 bushels, rye 11.07 bushels and flax 4.78 bushels.

* * *

The exports of butter from Denmark in 1920 amounted to 164,904,000 pounds, according to the Danish foreign office journal. This compares with a total export of 210,098,000 pounds during 1914. The production of butter during 1920 amounted to 198,414,000 pounds, compared with 253,529,000 pounds in 1914. The United kingdom provides the chief market for Danish butter exports.

* * *

Investigations by the state highway department of commerce at Greenwich, Conn., have shown that 14.3 per cent of the total volume of goods moved by auto truck on the Boston Post road at that point were agricultural products, which were estimated in value at $10,500,000 annually. The longest haul was in eggs, with 68.21 miles. The average for all agricultural products was 39.5 miles. Poultry was the principal commodity shipped and was valued at $1,320,000.

State Farm News

The prune growers in western Clarke county, where the famous prune belt of this section of the state is the Sara, Felida and Lake Shore districts, south of Ridgefield, are optimistic over the prospects of realizing a bumper crop, now that all danger of damage to the fruit trees is past. It is expected that the biggest crop in years will be harvested.

Officials of the Washington Growers' Packing corporation estimate this year's crop to be about 10,000,000 pounds for Clarke county. The corporation, consisting of fruit growers of this county principally, will handle about 80 per cent of the acreage in the county this year.

The corporation will include a potato branch again this year after making a big success last season.

* * *

A tract of government timber totaling 10,000,000 board feet of fir, cedar and hemlock has been awarded the Klement-Kennedy Lumber company of Forston, Wash. The timber lies on the north fork of the Stillaquamish river, and is being sold at $2.50 a thousand feet for fir and cedar and 70 cents a thousand for hemlock.

* * *

Plans for the construction of a $450,000 Masonic temple in Tacoma, which will far excel any of its kind in the west, were announced May 29.

In addition to a huge auditorium the preliminary plans include the building of a roof garden on the building, which will be so constructed that it can be glassed in during winter months.

The building committee consists of Colonel Coiner, James McCormack, Daniel I. Cornell, S. R. Balkwill and C. J. Backus.

The finance committee consists of Morton Gregory, E. B. King, Edward Tyler, Frank D. Oakley and Wilbur C. Raleigh.

* * *

The eighth annual farmers' excursions to the western Washington experiment station will be held during the week of July 17.

Details for the week's program were worked out at a conference of station officials, county agents, home demonstration agents and club leaders recently at the experiment station.

* * *

C. F. Rau, poultryman of Puyallup, recently stated that from January 10 to May 10 he shipped a total of 135,000 baby chicks of the White Leghorn breed. With a capacity of 45,000 eggs, he used 40 cases a week in seven settings, and had two hatches each week, Mondays and Thursdays, of about 6500 each.

C. F. Rau is the son of H. F. Rau, pioneer poultry expert, who owns a large hatchery at Spanaway and who was the first to introduce the raising of day-old chicks with marked success.

* * *

Over $2000 will be distributed in the various departments included in the premium list of the next annual fair of the Cowlitz County Fair association, which will be held at Woodland September 27-30. Special premiums have been provided for school work, canning clubs and other lines of endeavor in which the children are interested.

* * *

The Skagit County Berry Growers' association met in Burlington recently and established a uniform price for picking, agreeing with that paid by Puyallup and Fidalgo island growers. They will pay 30 cents a crate for strawberries; 40 cents a crate with a 10-cent bonus on each crate, for 2-year-old or over raspberries; 50 cents a crate and a 10-cent bonus for 1-year-old raspberries. The bonus will be paid to pickers who stay until the end of the season.

The North Pacific Berry Growers' association plans to handle the 1922 berry crop from this county and Burlington has been made a receiving station for this section.

* * *

Berry growers in the valleys between Seattle and Tacoma are looking forward to a good season as to crops and prices. A box order amounting to $250,000 has just been placed with the Brewer Manufacturing company of Puyallup by the North Pacific Cooperative Berry Growers' association. It is said that this association expects to spend not less than $1,000,000 for boxes this season.

* * *

The Wool Growers' Service corporation, organized with a capitalization of $200,000 for the purpose of meeting the financial needs of the sheep and cattle industry of this state, began operations June 1 at its main office in Yakima. Several days previous to that stockmen who desired to procure loans were asked for estimates of their needs. Loans running six months or less will bear interest at about 7 per cent, while those for a longer period are expected to bear not more than 7 1-2 per cent.

* * *

Ritzville will hold its thirteenth annual horse show June 16 and 17.

* * *

Secretary Wallace has approved federal expenditures for good roads in Washington state of $575,000, including six projects, totaling 50 miles (serving national forests, one being completion of the last link of the state highway between Sunset and Mount Hope.

* * *

Dr. David Livingstone, prominent Centralia physician, was appointed May 18 to succeed Dr. William N. Keller as superintendent of the western state hospital for the insane at Steilacoom, following acceptance of the resignation of Dr. Keller by W. J. Hays, director of business control. The change was made June 1.

Dr. Keller's resignation was received several months ago, but at the urgent request of Governor Hart and T. E. Skaggs, former director of business control, he remained in the position during the completion of considerable construction work then under way and until certain portions of the program he had instituted had been accomplished. Dr. Keller had been superintendent since November 1, 1914.

Coming Events of Interest

June 16-21—Chautauqua, Pasco.
June 19—Shorthorn tour, Lincoln county.
June 20—Farmers' celebration, Wilbur.
June 20-22—Lincoln-Adams pioneer picnic, Keystone.
June 21-23—30th annual pioneer picnic, Elberton.
June 21-25—Chautauqua, Pullman.
June 26—Pioneer picnic, Woodland.
July 24-Aug. 5—Live stock tour, Vancouver to Bellingham.
July 26-27—International apple shippers, Seattle.
July 27-28—Whatcom Guernsey gallop, Bellingham.

FARM BUSINESS AND MARKETS OUTLOOK

When the rails were used exclusively in moving California and northwestern canned foods to the eastern markets Pacific coast producers were at a disadvantage in competing with eastern packers, who enjoyed a lower freight rate. The opening of Panama canal service at a 50-cent per 100 rate, with regular sailings, has completely altered the situation. Already eastern canners have begun to complain, and seem inclined to seek lower freight rates, which they feel are necessary if they are to continue in the business, as they need some advantage over California, which has a longer growing season. On the present Coast rate by boat the western canner is on an equal footing with New York canners, while those west of the New York border are at a disadvantage. The California rate is only a little above that from Maine. The northwest has strengthened her position as a packer of cherries, pears and of berries of all sorts, and the superior quality of her offerings, combined with a low freight rate, makes her a stronger factor than ever.

Good Market for Good Cattle

Better grades of beef steers are being absorbed without difficulty right along and prices moved up to a new top for the season of $9.50 at Chicago with the average price level about $2 higher than the middle of last January. Receipts were lighter and eastern shipping orders and export buyers both furnished support. Dressed beef trade in all sections is in a healthy state, with prices working higher. The hide market also is moving upward.

At Chicago alone the supply of cattle for May was next to the largest for that month on record and receipts at other points were above the seasonal normal. They have declined in the last 10 days, however, and are practically equal to the average for this season of the year.

Distinct widening of the spread in prices between common and choice cattle other than steers featured the last week. Bulls, canners and cutters, and common and medium butcher cows and heifers trended lower. The supply of common steers remains abnormally small and prices were practically unchanged, but revision downward in that sphere can be expected within a month.

Runs from day to day carry a liberal sprinkling of heavy steers, but discrimination against them is slight. They will be practically cleaned up in a few weeks so that no fear exists of a repetition of last year's history when the liquidation of long-fed steers held back for the market to recover was continued until Christmas. A generous supply of yearlings is reported on the horizon, but if not sold till ripe they will find a warm welcome. Otherwise they will come into competition with grassers a little later on.

Veal calf prices moved higher again last week with the supply light and the dressed veal market sharply higher in the east. Northern markets for calves should show improvement fairly steadily, but southern points can look forward to a heavy supply most of the summer.

Cheaper Stock Cattle Later

Shipments of stocker and feeder cattle countryward are declining, due as much to a limited supply as to lack of buyers. Prices were slightly irregular last week, but are still extremely close to fat cattle values. Better chances to buy can be expected in another month or two and many operators are disposed to wait. Gains in weight on grass in the next month, although it is a good gaining month, may but little more than offset the probable loss in prices.

Prompt Recovery in Hog Market

The June break in the hog market arrived pronto, but the price recovered quickly again, touching $11, the highest since March 11. The average price at Chicago held well above $10 and a dip below that figure is impossible in view of the recent behavior of the market. In the normal year receipts reach the crest of the June run by the third week in the month, so that it is too early to conclude that further breaks will not occur. Whatever the loss, it is almost sure to be put on again in July and August when receipts drop to the lowest level of the year.

The discount on fat sows is widening, but this process is only beginning. Heavy barrows also may meet more discrimination a little later on.

During May the combined stocks of lard at seven leading packing points increased 30,000,000 pounds compared with an average increase during that month in the last eight years of 5,000,000 pounds. Hog meat stocks also increased 19,000,000 pounds, although the usual change during May has been a decrease of 20,000,000 pounds. In spite of the increase, they were only 70 per cent of the average on June 1.

Lamb Market in Slump

Although dressed lamb prices were steady and the combined run at leading middle western markets did not increase materially, hoof prices were scaled down sharply last week. Southeastern lambs are furnishing the annual glut at Louisville, Nashville, Cincinnati and Jersey City. Many of these lambs are forwarded by the larger packers to Chicago, making them independent of other receipts at that point and breaking the market. After this run subsides there may be a brief gap before range lambs begin to move in volume.

Horses weighing under 1500 pounds are extremely poor sellers at prices considerably lower than a month ago. New England buyers and seaboard cities are after good and choice drafters at Chicago, paying $200 to $300. Rugged workers weighing 1500 to 1650 pounds also are relatively easy to move at prices ranging from $165 to $190.

Pace Slackens in Wool Market

Boston reports that the wool market has slowed down in the last few days, although prices have been maintained. Producers and country dealers are extremely optimistic, but manufacturers are endeavoring to make out that the advance is being pushed too far. No one denies, however, that the supply is small and the demand is at least up to normal. The American Woolen company, the leading factor, repriced its goods for the second time since February in line with the higher cost of raw materials. Latest reports from Australia and the Argentine tell of further advances in those markets. Prices abroad are too high to permit imports of any consequence.

The Boston market is quoted as follows:

Wisconsin, Missouri and average New England, one-half blood, 44@45c; three-eighths blood, 43@45c; one-half blood, 41@42c.

Scoured basis:

Oregon—Eastern No. 1 staple, $1.25@1.30; fine and fine medium combing, $1.20@1.25; eastern clothing, $1.10@1.20; valley No. 1, $1.10@1.12.

Demand for Wheat Remains Dull

With prices the lowest in five months and the disturbing influence of May contracts removed, the demand for wheat improved temporarily and about 3,000,000 bushels of grain recently delivered were disposed of, but the betterment was short-lived. Although old gram can be bought at about the same price as the new crop deliveries, millers have no great incentive to buy and the prospect of a fairly liberal new crop to be available soon is preventing any tendency to stock up for future milling needs. The foreign demand has been amply supplied by simultaneous offers of a good deal of Canadian and southern hemisphere wheat. Receipts, which were extremely heavy, have fallen off and the run during June is certain to be far less than that of May.

Wheat Crop Estimates

Unofficial crop reports indicate a yield of about 605,000,000 bushels of winter wheat and 250,000,000 bushels of spring wheat, or a total of 855,000,000 bushels compared with 795,000,000 bushels harvested last year. Condition of the winter wheat crop improved but little in the last month in spite of excellent weather. The average of spring wheat has been reduced about 7 per cent, but the crop has started off well. The Canadian crop is in good shape in most sections with the acreage but little changed from last year.

Dry weather has affected wheat in the Pacific northwest, while wet weather has made a lot of wheat liable to rust and numerous damage claims are being made, especially in the Ohio valley, Kansas, Oklahoma and Texas. Harvest in the last two states has already started and an increasing acreage is passing the danger point each week, although there is some apprehension that crop damage may yet be severe.

European crop reports are both good and bad. Recently European weather has improvtd, but the French wheat crop condition on May 1 was estimated at 58 per cent, the lowest in years; Italy has had drought; the United Kingdom needs dry, warm weather and the German wheat and rye crops are below normal condition. The European acreage also shows a decrease. As a whole, the European crop is not expected to be as large as last year.

In the last 11 months importing countries have absorbed about 56,000,000 bushels of wheat per month. If the same rate is maintained from June 1 until the beginning of the European crop year on August 1, 112,000,000 bushels more will be needed. Using official estimates, the combined surplus in exporting countries foots up to only 110,000,000 bushels. These figures may not be borne out, but at best the world carryover promises to be small. The United States can export new wheat after July 1, so that the stream to Europe can be kept going. With Europe's new crop less than that of last year, as is now indicated, the increase in the crop in the United States offset by a smaller carryover in this country and only small reserves left in Canada and the southern hemisphere, wheat prices should hold up fairly well unless depressed by dumping large quantities immediately after harvest.

Big Rye Crop Coming

The rye crop is estimated unofficially at 83,000,000 bushels. This is several times as much as the domestic requirements for flour and means a large surplus either for export or for feed. The supply of old crop rye is still fairly large, but exports are running heavy and stocks are being depleted.

Corn acreage will be slightly less than last year, according to comprehensive private reports. Owing to wet weather some planting is still to be done and the outcome is still in doubt.

The after-planting run of corn is on without an equivalent broadening in the demand. Receipts are practically the largest ever known for this season of the year. Prices are slightly lower, but the loss has been small. Exports are increasing again, although the movement to Europe from the Argentine also is heavy.

The oats acreage shows a decrease of about 7 per cent, according to unofficial returns. The condition of the crop is lowest at this season in a number of years with the period of greatest deterioration still to be met. The crop is estimated at about 1,250,000,000 bushels compared with 1,060,000,000 bushels harvested last year.

Cash Grain Markets

The range of cash grain prices for the week ending June 7, was:

Chicago—Wheat—No. 2 red, $1.17 1-4@1.23; No. 2 hard, $1.14 1-2@1.21 3-4; No. 3, $1.12@1.19 1-2. Corn—No. 2 mixed, 58 1-2@60 1-2c; No. 3, 57 3-4@59 3-4c; No. 2 yellow, 58 3-4@61c; No. 3, 58 1-4@60 1-2c; No. 2 white, 59@61c; No. 3, 58@60 3-4c. Oats—No. 2 white, 37@42c; No. 3, 35 1-4@39 1-4c; No. 4, 34 3-4@36 3-4c. Rye—94c@$1. Barley—60@69c.

Bran and middlings have declined sharply in the last 10 days, due to an indifferent demand. Production is not above normal for this time of the year. Cottonseed and linseed meals are lower also, although stocks are light. Only corn feeds show firmness.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $19; standard middlings, $20.25; flour middlings, $25.50; cottonseed meal, 36 per cent, $48.50; 43 per cent, $52.50; hominy feed, $23.50; gluten feed, $32.85; old process oil meal, $52; tankage, $55.

Easy Tone in Hay Markets

A large part of the receipts of hay are of poor quality and are not wanted. Prices on the best grades are slightly easy, but the demand is practically equal to the supply.

Prices per ton in carlots—Chicago—No. 1 timothy, $24@26; No. 2, $21@23; No. 3, $16@19; No. 1 light clover, mixed, $22@24; No. 1 clover, $18@19; No. 1 clover, mixed, $19@21; alfalfa, $15@26; upland prairie, $13@17; midland prairie, $13@16; rye straw, $16@17; oat and wheat straw, $13@15.

Egg Holdings Set New Record

Cold storage holdings of case eggs in the United States on June 1, according to the preliminary estimate of the bureau of markets, was the largest ever reported by the bureau at any time of year. The total was 7,936,000 cases compared with 6,844,000 cases a year ago and a five-year verage of 5,701,000 cses.

Receipts of eggs are declining, although they are above the average for this time of the year and the surplus for storage remains large. Storage operators are anxious to buy all of the northern eggs arriving, but art neglecting southern stock. Prices, although slightly lower, have changed but little for a number of weeks.

Butter Storing Starts in Earnest

Although storage of butter in a small way had been going on for two weeks previously, large scale operations did not begin until the first of June and storage holdings on June 1 were only 12,973,000 pounds, compared with 21,682,000 pounds a year ago and a five-year average of 17,328,000 pounds. Since a June stamp on stored butter is preferred and the butter now arriving has been showing full grass flavor suitable for long time storage, buying for this purpose is expected to be brisk for the next few weeks. With a good demand for immediate consumption, heavy demand for storage and a small amount of butter being purchased by speculators for a short turn, the market remains in a rather strong position.

Prices for 92 score fresh butter on June 7 were:

Chicago, 34 1-2c; New York, 35 1-2c; Boston, 36 1-2c; Philadelphia, 36 1-2c; San Francisco, exchange quotation, 40 1-2c.

The cheese market has been fairly active, although most buying has been done in small lots. The quality of cheese arriving is satisfactory for storage and about 20 per cent of the receipts at the leading markets are going for that purpose, but interest is limited by the rather high price level. A little storing is taking place on New York state and Wisconsin markets. Prices at distributing markets have sagged recently following a decline in Wisconsin. Twins, single daisies and longhorns have been the most popular styles.

Prices on No. 1 American cheese on June 7 were:

Chicago—Twins, 18 1-2@18 3-4c; Single Daisies, 18 1-2@18 3-4c; Double Daisies, 18 1-4@18 1-2c; Young Americas, 18 1-2@19c; Square Prints, 19@19 1-2c.

New Potatoes Take Lead

Weekly shipments of new potatoes now exceed the movement of old stock, although the latter is abundant for this season of the year. The total movement has fallen off recently and the market has become firm. Northern sacked round whites are quoted at $2 to $2.40 in the Chicago carlot market.

High prices for onions last year have stimulated production. The commercial late onion acreage estimate shows an increase of 15 per cent over last year.

(Continued on page sixteen.)

Elected Master of State Grange

(Continued from page three.)

the membership has been increased to a greater extent than it was before the split.

Mr. Lewis advised the grangers to adopt a definite policy as to the proper means for the study of politics saying that by taking such matters up in a purely educational way they were within the rights and privileges of the grange. Any other means of action, he said, should be left to such organizations as make such actions their sole aim.

In order to prevent the borrowing from one fund to help another, Mr. Lewis asked for a change in the by-laws to this effect. Complications have occurred from this source during the past year and it is believed that better harmony will be had if the change is made.

Mr. Lewis spoke very encouragingly of the present situation regarding the membership, saying that the possibility of reaching the 25,000 goal for 1925 was very good but would require the unified efforts of all grangers.

The grange went on record as approving the Ladd bill which provides for the issuance of legal tender to be issued to the people of the United States and prohibits any private corporation from issuing any currency whatever. The bill is drafted along the same lines as have been endorsed by the grange at previous sessions in other parts of the state and it was hoped that it would soon be enacted into law.

The Associated Grange Warehouse received immediate action when the delegates voted an increase of $100,000 capitalization to give the organization an opportunity to increase its volume of business. This will afford the 125 grange stores, located at different parts of the state, a chance to buy a greater number of commodities on a cooperative basis at a slightly reduced cost.

In commenting on the results accomplished by the warehouse during the past year, A. S. Goss, the manager, said that the entire business has averaged close to a half million dollars a month.

"We have been very successful in our undertaking," continued Mr. Goss, "and our business has increased greatly, especially with articles which are put out under our own brand. We have had our troubles in the past but have succeeded in solving the problems and in many cases have been able to head them off before it was too late."

The bookkeeping system of the Associated Grange warehouse is unique and Mr. Goss told how it has been self-supporting. This is carried on at the Seattle office and the local stores may take advantage of it at cost. They are required to send a daily report to the head office and it is gone over and audited in a set of books that are not complicated and almost anyone can understand them. There is one man who spends his entire time checking over the prices paid by the different stores. If any one has made a purchase that is out of reason or if he could have done better by buying on a different scale he is notified of the fact by return mail.

Upon commenting about this method, C. C. Day, manager of the grange warehouse at Kennewick, said he felt that even though the local warehouses did not buy all of their supplies from the head house, they should let them handle their bookkeeping. It was his opinion that they could save more than double the cost of the bookkeeping by such suggestions as they are able to give regarding purchases. This, he said, is an invaluable service that is not appreciated by all the houses but it would actually save them money in the long run because it eliminates the chance of being "taken in" on small sales that would otherwise pass unnoticed.

The sessions on the last day of the convention were largely taken up with the discussions of resolutions which had been previously drawn up by the different committees.

The resolution which seemed to concern most of the delegates was the one regarding the 30-10 school taxation plan. Ralph Swetman of the Ellensburg normal gave a short talk explaining the plan but the house failed to take any definite action, either for or against it, due to the wide differences of opinion of the grangers.

A very significant resolution was passed which declared that no officer, committee or member of the grange has the right to speak for the grange either in support of or in opposition of any candidate for a political office. This action places the grange on a definite platform opposed to any parcipitation in politics.

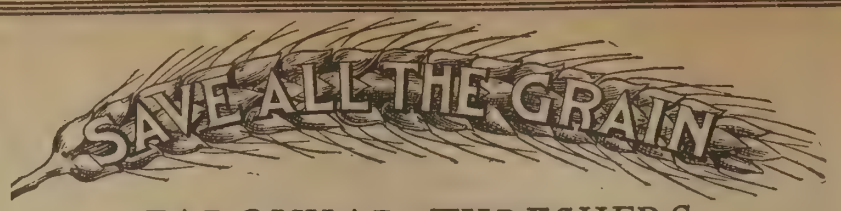
The Columbia Basin project was approved and it was recommended that congress take up all such reclamation projects in the order of their importance.

The work of the Washington State college was approved as well as the extension and experimental work which had much to do with the betterment of agricultural conditions.

The committee on marketing found that their subject was too extensive to be handled in so short a time and recommended that a permanent committee be instructed to study marketing conditions and follow the arrangements being tried with the sending of market reports by radio. This committee was instructed to work closely with other farm organizations in the study of standardization, financing, distribution and cost of production.

The report of the taxation committee included many suggestions of which the following were passed: The taxation of timber lands to be levied according to their increase in valuation; a further extension of the income tax; an increase in the inheritance tax; the exemption of $1000 in valuation on improvements on small tracts where the owner lives on same; the assessment of all unoccupied land; the exemption of improvements on land for a five-year period after improvements have been made. It was recommended that such property as mortgages be taxed. A suggested tax of $1.50 a case on all condensed milk where substitutes were used in the manufacture was voted down and a resolution substituted asking for the prohibition of the manufacture of all milk substitutes.

One of the most important resolutions passed was the one which favored the fight against the drug evil and calling on the granges as well as the individual members to support the enforcement of the prohibition law.



The committee on publication advocated a change in the management of the Agricultural Grange News, which would put one man in charge of the publication.

TO PUSH WORK OF THE JUVENILE GRANGE.

Mrs. Agnes Johnson of Redmond was reappointed as matron of the Juvenile Grange and a collection of $45 taken for the carrying out of the organization work in this department throughout the state. Mrs. Johnson will have the power to appoint supervisors wherever they are needed. This work is much similar to club work and is carried on in the same manner as the grange, the officers being the same as with the older organization. Almost any kind of work that is called for can be taken up provided a supervisor can be found who will give boys and girls the instruction needed. Mrs. Johnson has been matron of the Happy Valley Grange at Redmond, where there is a membership of 26 juveniles. Last year there were 130 juvenile granges in the state and Mrs. Johnson intends to increase the membership to a much greater extent by the time of the next convention.

The executive committee passed a resolution which protested against the action taken by the milk dealers against the Seattle Milk Shippers' association which case is now up for a hearing soon. The milk dealers are trying to make out that the Milk Shippers' association is subject to and has violated the Sherman anti-trust law.

P. J. Cleaver of Toledo, Wash., has been appointed manager of the Associated Grange warehouse and will work under Mr. Goss. He has been manager of the Cowlitz Valley Cheese association at Toledo for a number of years.

A LITTLE "WANT AD" FREQUENTLY OFFERS A BIG BARGAIN. MAKE IT A PRACTICE TO READ OUR "WANT ADS"

HOME BUILDERS

New Book of Home Plans Now Ready

SEND 25c in coin or stamps for our Wonder Book dealing with the all-absorbing subject of building your own home. This book contains designs of homes you would be proud to own; also floor plans, etc.

This book represents the combined knowledge and experience of a half a dozen men who are specialists in architecture, lumbering and actual building construction; and the homes illustrated are not just homes on paper, but are photographs of ideal and practical places that the Anderson Brothers have built for hundreds of pleased customers. Although this book only costs 25c, it may be the means of saving your hundreds of dollars.

REMEMBER, if you can drive a nail, you can build your own home from ready cut plans and ready cut material which we furnish.

Get this book; by signing the coupon you can start on the road to possess a beautiful, well constructed home.

REPRESENTATIVES WANTED

Live, aggressive men are desired everywhere to become our special representatives. Very few opportunities offer the money-making possibilities that a "worker" will find in the selling of Tumwater Ready Cut Homes. Address us today for full particulars.

House No. 361-A Very Popular Design

Ready-Cut Houses

From the Olympia Daily Recorder

The work the six Anderson Brothers of Tumwater are doing in the manufacture of ready cut houses has significance for Olympians who look expectantly to the future. These men have something good for the years to come, something which avoids waste of natural products, which opens the way for other natural development and which will spread the name of Olympia and Tumwater far afield as the home of industry whose products promise to be sold everywhere. This is the sort of industry most appropriate and most needed in the northwest at this time. * * *

Master's Address Urges Broader Cooperative Work

"Let us mutually resolve to labor for the good of our order, our country and mankind, remembering our motto, in essentials, unity; in nonessentials, liberty; in all things charity." These are the words of Fred Nelsen in the master's address to the thirty-fourth annual session of the Washington State Grange at Yakima. Reviewing the conditions of the order of the state, the master's address continues:

"One year ago when we met at Colville, we seemed to be at the peak of our success as a farm organization, as we had the largest number of members ever in the history of our state grange. Since that time events have occurred which has tended to tear our beloved order, in this state, to tatters and today we show a decreased membership, although not to such a great extent might have been expected, when the man who was elected as master by an overwhelmingly large majority deliberately walked out, organized a competing organization, making use of our legal name, and invited and urged our granges and our members separately as well, to join with him in the secession movement. It is to be noted that, instead of our organization being destroyed and our membership taken over by the the competing organization, that we have lost, from all causes,, only about one-quarter of our members of a year ago, and a very large part of this loss is caused by the loss of granges, which has not been overcome by the organization of new ones as heretofore." Other informative extracts from the master's address follow:

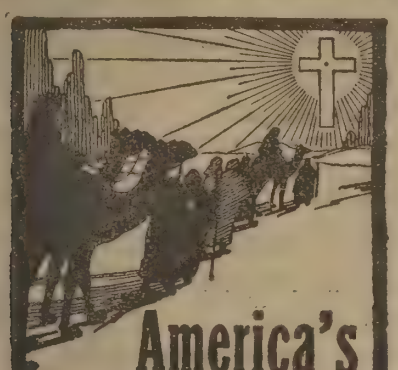
"The secretary's financial statement for September 30, as perhaps you will remember, showed a deficit of $4716.63. This was the time when your acting master took entire charge of the work. Since then we have paid a debt of $500, which had been borrowed to start the life insurance which failed to materialize, and our expense in attending the national grange meeting at Portland called for about $500 more, besides the expense of the several executive committee meetings and legal expense we have been obliged to meet since that time, which has been rather heavy, yet in spite of this additional expense we have been able, as you will see from the secretary's report, to reduce the deficit in the general fund over $1200, which is not a bad showing under the circumstances.

"This lack of funds has prevented our sending organizers into the field to get new granges and reorganize old ones, and voluntary effort has had to be relied upon to do this work, with the result that we have only organized five new granges since our last meeting. This has prevented the usual method of overcoming the losses caused by the weak granges dying, which has been no greater this year than common, but which has also been beyond our power to prevent on account of the lack of necessary funds to send help when needed.

"On the other hand, however, there is a unanimity of purpose among our members greater than ever before, and a determination to make our organization the power for good that it might be.

"Those of our members who have left us for the new organization have largely been those who have tried to make the grange a political organization, and their leaving has diminished to no small extent the cause for much of the discord that has heretofore existed, and we believe that the grange of Washington is in a healthier condition than it has been of late, and that if you are wise in your deliberations at this session, its future will be even greater than in the past, and that the proposed slogan of '25,000 members in 1925' may easily become a reality.

"Although the grange has no direct vote or voice in the Washington Fire Relief association, we feel it is a grange enterprise as its membership is limited to grangers only. Consequently the grange gets the credit or discredit, whichever it happens to be, of the management of the company. We therefore think that the Washington State Grange should have a representative on the board of directors.



"The state college is a farmers' institution and it is up to us to make the very best use of it. We have the assurance of Dr. Holland that he stands ready and willing to give us any assistance within his power.

"The election of any man or the success of any political party is of little value unless they are possessed by the desire to protect human rights ahead of property rights. As a horrible proof of the truth of this statement stands the United States senate by its action in the Newberry case. Its adoption of the Willis resolution, an attempt at self-justification, is worse, if such a thing be possible, than the original offense.

"Included in the report of the agricultural committee, adopted by the national grange at its Portland session, we find the following good advice, 'and recommends further that the American farmers take their business with them to the polls and secure the election of legislative and administrative officers who are familiar with the farmers' problems, and are in sympathy with his interests.' We, as American citizens, can not look for relief from any other source than the ballot.

"Experience has shown that we have been too narrow in our cooperative work.

Shorthorn Excursion

An enthusiastic Shorthorn excursion was held in Stevens county the first week this month. While about 15 breeders or persons directly interested in the breed made the entire tour of farms where the reds, roans and whites prevailed, a large number of neighbors attended the herd inspections and judging demonstrations at the farms. On June 2 the farm of D. E. Pearsons, near Boyds, was visited, the herd inspected and a judging demonstration staged by C. M. Hubbard, state college live stock extension specialist, and A. E. Lawson, field representative of the Shorthorn association. The herd of Alex Morrison at Valley was also visited on this day. On Saturday the herds of J. W. Fox, Cedonia; Worthly Brothers, Hunters; M. S. Little, Fruitland, and L. E. Warren, Fruitland, were inspected. Judging demonstrations were given on the Fox and Little places. From there the party went to Sprague, in Lincoln county, spending the night at the Hercules farm of F. M. Rothrock, and inspecting the Hercules herd the following morning before disbanding. Among those who made the greater part of the tour were: Mr. and Mrs. D. E. Pearsons, Mr. and Mrs. John F. Helfrey, Curlew; George Reed, Curlew; Mr. and Mrs. Alex. Morrison; James Crawford, Colville; Mr. Graham, Chewelah; Mr. and Mrs. J. W. Fox; Worthly Brothers, M. S. Little, Dr. Kenneth McKay, Colville, and Henry Plumb, county agent, who had general supervision of the excursion.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

INFECTIOUS DISEASES—ARTICLE II.

Tetanus (Lock Jaw).

This disease is becoming more prevalent in this section of the country and will increase as time goes on, for the reason that it follows civilization. That is, the longer a part of the country is settled the more these diseases are cultivated as one case sows the seed for many more until the soil becomes quite thickly inhabited with the organism that causes the disease. Many years ago this disease was quite rare, but now it is not an uncommon one, and as years go by it will be more prevalent. It is found now more frequently in the eastern states and more extensively probably in Europe where the soil has been tilled for a greater period of time.

The organism lives in the soil and there is danger of the disease occurring whenever a wound is inflicted by a dirty tool or instrument. That is why it so often follows injuries by dirty nails or pitchforks or rake teeth and the like. It is also a fact that this organism does not grow well in an open wound that has free access to the air. The germ does not grow in the presence of free oxygen and for that reason does not ordinarily occur in the open wounds, but selects the punctured wound like the nail prick or the puncture from a rake tooth or some other pointed body that makes a very small outer opening. This gives the organism a good chance to become deeply planted in the tissues and away from the free air, and under those conditions the organism thrives well and is liable to cause serious damage. It may do the same thing if for any reason the open wound becomes sealed up as sometimes happens when a wound heals too quickly on the surface.

Wounds therefore should be encouraged to heal firmly from the bottom first.

We frequently have our attention called to cases of this disease where the owner has forgotten that the animal had any kind of a wound or it may happen that the wound was so small as to go unnoticed. But when it does occur it is quite a certain thing that a wound has preceded it. I have in mind a particular case where the animal was suffering badly and inquiry of the owner brought out a statement that the animal had not suffered from any wound. Then on second thought he said: "Yes, he did have a small nail prick a few weeks ago." This completed the history that is typical of almost all cases.

In horses the time elapsing between the infliction of the wound and the time when the animal begins to show symptoms is from one to three weeks, and it is in horses that the disease most often occurs. Next in order are sheep and goats, especially in the young ones when the infection enters through the open naval cord, Great care must be taken in some localities where this disease is common, in protecting the young animals against this infection.

Muscles Become Rigid.

The symptoms vary with the intensity and the stage of the particular case. There is always the stiffening of the muscles of the body, causing the animals to walk rigidly and there is almost certain to be the same spasms in the muscles of the jaws which gives the disease its common name. As the disease progresses these symptoms become more pronounced until the animal walks like a sawhorse or, losing its balance and getting down, can not rise again, but lies prostrate in spasms, moving its legs and frothing and sweating in pain, many times with the lips drawn back away from the teeth.

When the cases are severe most of the animals die as the treatment in these advanced cases is not very effective. Animals that have this disease should be taken to a cool, dark, quiet place and away from all noise and excitement. The veterinarian should be called immediately as home treatments are useless. The animals must be quieted and relaxed as much as possible. They may have to be fed through a stomach tube or by way of the rectum, as they can seldom eat.

The use of the serum is the best treatment, the only drawback being its cost, which, for a complete treatment is considerable. The use of the serum for prevention, however, when an animal has been injured, is good practice and as the amount required is small the cost is negligible and the results are splendid.

The best advice to give is to keep the animals' quarters as free from loose nails and such things as possible and to prevent the punctured wounds. But after they have occurred the wounds should be properly treated with antiseptics and drained well, and in addition a dose of serum is not bad practice, though, on account of the few cases so far occurring in the northwest it is not generally given.

Protecting Jersey Records

Breeders of Jersey cattle in Washington will be interested in a resolution adopted by the Oregon Jersey Cattle club recently providing for the "preliminary milking" in the testing of cows of the breed. In part the resolution adopted reads as follows:

"Whereas, a preliminary milking is enforced by the other dairy breeds and was recommended by the American Dairy Science association, and while we believe a better system of dairy protection could be devised, nevertheless be it hereby

"Resolved, by the Oregon Jersey Cattle club, that we request the Oregon Agricultural college to put into force the preliminary milking until such time as a better system of protecting records against fraud is adopted."

Guernsey Club

Its Few Members Are Active Ones

What promises to be one of the most active clubs in Whatcom county is one known as the Hub Purebred Guernsey Calf club at Ferndale. Although not one of the largest this club is accomplishing more than some of the larger clubs and will have something to show for their summer's work when the Whatcom county fair is held at Lynden this fall.

There are six members in the club, each of whom owns and cares for a purebred Guernsey calf, and is preparing to fit his animal to be shown at the fair. The members assemble twice each month and carry on a program of some kind for the purpose of keeping the Guernsey standard constantly before them.

Jack Plaster, their club leader, with occasional assistance of Mrs. Plaster, has done much to help the boys and girls to carry out their meetings and to bring up such subjects as are of common interest to all. At one of their meetings held at their schoolhouse on May 20 the entire club assembled, bringing their calves with them in order to look them over and compare them. Some of the business men of Ferndale, as well as many of the boys' and girls' parents attended the meeting and listened to the program, which was held in the open.

The calves were judged by one of the business men, who placed the animals according to the improvement they had made since the calves were purchased late in the winter. The placing of the calves were as follows, the owners' names only being given: Billie Kellman, first; Vincent and Stanley Plaster, second; Lucille Hansen, third; Ted Plaster, fourth; and Floyd Kinley, fifth. This placing, of course, was only for their improvement, and does not mean that the animals will stand this way at the fair, but much will depend on the way they are fed and cared for during the summer.

Members expect to take up feeding and fattening problems at their future meetings, and be in readiness for such work as will be necessary to have them in show condition.

Master's Address

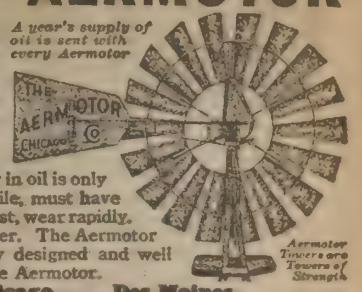
(Continued from page seven.)

Instead of working in harmony with other organizations engaged in the cooperative work, we have been inclined to antagonize them. We can make no progress by tearing down the good efforts of other cooperatives, and we should endeavor to accept and make use of the cooperative institutions established by other organizations and in return should extend to them like courtesies in the use of our organization.

"To the farmer who is thousands of miles from his markets the matter of a square deal in transportation is a matter of almost life and death. A fair deal in transportation, other things being equal, means prosperity, and a crooked deal, means the robbery of profits to the point of making farming mere slavery. Our greatest danger from transportation discrimination today is on the ocean, and the greatest need we have today to insure us a rightful share of the world's market prices of our products, is an American merchant marine absolutely loyal and just in its service to all the people. This can only be accomplished by building and operating enough merchant ships to have a controlling power over ocean freight rates.

"We believe the tendency of consolidating our rural schools with the city is a serious mistake. It tends to draw the boys and girls from the country to the city."

The master's address also reviewed the work of the national grange held in Portland, Ore., last November and announces that invitations were sent out to the farmers' union and the farm bureau to send delegates to the state grange meeting to form a farmers' council at Washington, D. C., and "has accomplished much good by supplying data and figures on the railroad situation, which have been of great value to us. However, the open and vicious attack on the national grange should not be tolerated. We still believe that calling one another wild names does not get us anywhere. An earnest difference of opinion properly presented can not be taken as offensive. Stop slandering. Much good can then be accomplished with such a council." It is also stated that "the work of the cooperative committee of the grange and the Associated Grange Warehouse company during the past year has been along the line of getting the different cooperatives to cooperate rather than organizing new cooperatives. The fact that out of 97 stores affiliated with the Associated Grange Warehouse in 1921 there was only one failure, means that considerable progress was made along this line."



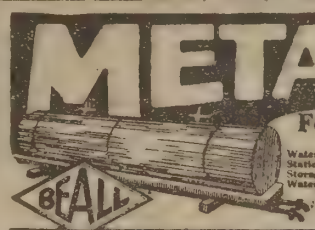
Speaking of the cooperative association of dairymen, especially on the west side of the mountains, the address said: "We can only recommend that our local and pomona granges support the dairymen's organization wherever possible.

"We find that taxation is steadily growing worse and believe a revolution in tax laws is necessary. A land value tax is the only solution."

The address reviews the fact that for many years the Washington State Grange fought for a dry law and finally succeeded, but that now "thousands of stills have been established and operated in every nook and corner of the state," and that the only way "to stop this evil is to make it a criminal offense, punishable by a term in the penitentiary for the first offense." The recommendation is made that the growing drug evil should be referred to a committee of the grange to work out a plan for a vigorous campaign against this evil.

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill



Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

POULTRY AND RABBITS

Lice and Mites

By W. D. BUCHANAN
Poultry Extension Specialist, Washington State College.

This is the time of year when both lice and mites are getting in their deadly work. Mites do not stay on the hen more than a day or so at a time. They usually live on the roosts, roost supports or in the roosting closet. They can always be reached by a good spray. Some people get good results from using the cylinder oil drained from the auto or stationary engine. If the latter is used it should be strained so that it may work well in a spray pump.

It is not safe to assume that a house is free from mites just because it is new and has been kept clean. I have seen new houses that were literally full of mites, and old houses that were free. Take no chances. Lift the roosts from their supports occasionally and look for a silvery dust or scale. Its presence is a sure sign of mites. Run your fingers along the lower edges of the roosts. If you find them stained with blood, the mites are getting fat off the hens. Spray once or twice a year, whether you find mites or not.

As for lice, there are many varieties. All of them live on the hens. In looking for them, examine the feathers just below the vent or in the thick feathers on the thigh. If you find any, powder the hens with sodium fluoride, using about 10 small pinches for each bird. The proper method is illustrated in a bulletin published by the western Washington experiment station at Puyallup. In warm weather the birds may be dipped. Use water about blood heat, dissolving one ounce sodium fluoride in one gallon water. Use tub holding about four gallons. Hold hens by grasping wings in left hand and using right hand to ruffle feathers so that water will reach the body. Submerge head for an instant before taking the bird out. In doing this, it is wise to hold the beak shut with the finger and thumb. Remember, this drug is very stringent; use it with care.

Meat in the Poultry Ration

While all poultry rations should contain more or less meat scrap or its equivalent, it must be used judiciously. Too much of it will overbalance the ration and perhaps cause digestive troubles. Where milk is fed the meat scrap in the ration should be considerably reduced. The same is true where green bone or bone meal is being fed. Green bone is one of the most desirable elements in the ration, but should not be fed too lavishly.

Too much meat or other feed containing high percentages of protein are likely to cause leg weakness as well as digestive troubles. Leg weakness is sometimes referred to as protein poisoning because of an excessive percentage of protein in the ration.

A liberal amount of green stuff always available for the chickens will go a long way in helping them to avoid the troubles from excessive meat or other elements in the ration.

Rabbit Furs

Six years' experience with the rabbit business has taught T. J. Bergeron of Bellingham, Wash., that the furs will bring a neat profit if properly handled. The meat, of course, is the first consideration and he makes a point to put out a first quality product for which there is a constant demand on the local market, but in all cases the hides are carefully saved and sent to a furrier where they are tanned, dyed and clipped.

This work costs slightly over a dollar a hide, but they are then ready to be sewed into the proper shape for furs or coat collars. A special machine makes the sewing easier since all seams must be made from the under side and not show from the fur side. All padding and lining is done similar to that done on furs which are on the market and it is difficult to detect the finished product from one purchased from a clothing store.

"I made a large sealskin fur for my daughter not long ago," said Mr. Bergeron, "and I used eight skins. The fur when completed was eight feet long and could hardly be detected from genuine sealskin. In fact, they are sealskin furs after being clipped, but they are made from rabbit hides and it takes an expert to detect them from the genuine fur.

"It would take about 62 skins to make a fur coat that would cost from $150 to $400 if purchased outright. There are several different finishes that can be put on the furs and it is all done in the dyeing. Hudson seal and Hudson Bay seal are the most common furs, the latter having a red tint to the under fur. If the clipping is done very close they can be made to look like mole skin. This, of course, requires a different color of dye."

Mr. Bergeron explained how the animals could be killed so as to have the furs prime. The New Zealand Reds are usually at their best when three and a half weeks old, while it takes four and a half weeks for the Flemish Giants to become prime. One can tell by pulling gently at different places on the fur and if none pulls loose the animal can be killed. If properly fed the meat will be at its best because at this age it is always fat if the animal is properly fed.

"When the skins are to be saved for tanning they should be removed with care and the legs and head skinned out clean. This will make larger trimmed furs and it is not so hard to get them stretched on the boards. It is also a good plan to keep the fur as free from blood as possible when butchering.

"Almost any breed of rabbit is good for a fur animal, but for myself I favor the Flemish Giant," said Mr. Bergeron. "There are four colors in this breed, but that makes little difference since they must be dyed anyway. The New Zealand Red is also a good fur rabbit and so is the Polish White. I have a few of the American Checkers, which are white with black spots. These can be used for making furs without clipping or dyeing.

CUT GRAIN RATES.

Reduction in freight rates on grain from Molson and other points on the Oroville branch of the Great Northern railroad to Puget sound terminals has been ordered by the state department of public works, with the recommendation that rates frmo the same points to Spokane be maintained on a parity with the Puget sound rates to give the grain growers access to either market on the same basis. The reductions ordered by the department are made effective on or before July 2.

At the time the reduction was asked the rate on wheat and wheat products from Molson to Seattle and Tacoma was 33 cents, as against a 27-cent rate from Spokane to the same points. While the case was in progress the railroads made a reduction of 10 per cent, which left the Molson rate at 30 cents and the Spokane rate at 24 cents. The department reduces the Molson rate to 27 cents, with corresponding reductions from all other points on the Oroville branch.

MINERALIZED WATER ROUTS CHICKEN LICE

Tablets Dropped Into Drinking Founts Banish Vermin, Make Fowls Grow Faster and Increase Egg Yield.

Any poultry raiser can easily rid his flock of lice and mites, make chickens grow faster and increase their egg yield by simply adding minerals to the fowls' drinking water. This does away with all bother, such as dusting, greasing, dipping and spraying. The necessary minerals can now be obtained in convenient tablets, known as Paratabs. Soon after the fowls drink the mineralized water, all lice

and mites leave them. The tablets also act as a tonic conditioner. The health of the fowls quickly improves, they grow faster and the egg yield frequently is doubled. Little chicks that drink freely of the water never will be bothered by mites or lice.

The method is especially recommended for raisers of purebred stock, as there is no risk of soiling the plumage. The tablets are warranted to impart no flavor or odor to the eggs and meat. This remarkable conditioner, egg tonic and lice remedy costs only a trifle and is sold under an absolute guarantee. The tablets are scientifically prepared, perfectly safe, and dissolve readily in water.

Any reader of this paper may try them without risk. The laboratories producing Paratabs are so confident of good results that to introduce them to every poultry raiser they offer two big $1 packages for only $1. Send no money, just your name and address—a card will do—to the Paratab Laboratories, Dept. 878, 1100 Coca Cola Bldg., Kansas City, Mo., and the two $1 packages, enough for 100 gallons of water, will be mailed. Pay the postman $1 and postage on delivery, and if you are not delighted with results in 10 days—if your chickens are not healthier, laying more eggs and entirely free from lice and mites—your money will be promptly refunded. Don't hesitate to accept this trial offer as you are fully protected by this guarantee.—Adv.

Here's a real treasure from Nature's storehouse

GOOD old Mother Nature has placed in wheat and barley the wonderful food properties which build and sustain life and health.

Many so-called "refined" foods are robbed of vital elements which the body needs.

Grape-Nuts—that famous wheat and barley food—brings you all the natural goodness of the grains in perfected form, with a crispness and flavor that charm the appetite.

You will find Grape-Nuts an ideal dish for breakfast or supper-time. Ready to serve from the package, with cream or good milk.

ORCHARD AND GARDEN

Nitrate of Soda

By A. B. NYSTROM.

Nitrate of soda applied at the rate of 2 1-2 pounds per tree to run down apple orchards may be the quickest means of bringing them back to full bearing.

In March of 1921 A. J. Linnestad of Vashon island, in cooperation with J. L. Stahl of the state college and the county agent of King county, planned an orchard fertilizer test to find out what the soil needed to bring back the orchard into full bearing.

The trees selected were 80 Baldwins in a block set 8 trees in 10 rows. Two rows were left untreated. The third and fourth rows received an application of 2 1-2 pounds of nitrate of soda and seven pounds of acid phosphate per tree. The fifth and sixth rows received 2 1-2 pounds of nitrate of soda and 2 1-2 pounds of muriate of potash; the seventh and eighth rows were left untreated and the ninth and 10th rows got 2 1-2 pounds of potash and seven pounds of acid phosphate per tree.

The yield last fall, as was expected, did not show striking differences. The average yield per tree from the check rows was 18 1-2 boxes per row and from the nitrate of soda rows was 22 boxes per row. The rows treated with potash and phosphate alone yielded only nine boxes per row.

However, there was a noticeable difference in the foliage last season. The nitrate rows had a much heavier foliage and the apples were larger and greener than on any of the other rows.

There was also a heavier setting of fruit spurs on the nitrate rows. This was apparent even during the dormant season, and when the trees were in full bloom there was a marked difference. The trees treated with nitrate were loaded with blossoms, while the check rows and the rows treated with potash and phosphate had only a few scattering blossoms on them.

The real test will come next fall at harvest time. Mr. Linnestad will keep accurate account of the yields of the different plots, and it seems apparent that an interesting deduction will be made at that time.

Spray Pipe System

The report comes from Wenatchee, Wash., of the use of the pipe system in orchards for spraying.

This year A. H. Cady and C. E. Smith are using this system on their 25-acre ranch in Sunnyslope and J. W. Zufall installed one on his ranch on North Wenatchee avenue. Last year William Moss of Sunnyslope piped his 10-acre tract.

The first rancher to pipe his place for spraying was Joe Edwards of East Wenatchee, who installed a system three years ago.

There are no patent rights on the idea, and the orchardist can put in his own pipe lines and pumps if he is a fairly good mechanic, says the Wenatchee World.

The system consists of a cement mixing tank, a pump mounted on a cement base, a main pipe and lateral pipes going all over the orchard and plenty of small bore hose.

Mr. Cady and Mr. Smith installed the systems on their 25 acres at an approximate cost of between $900 and $1000.

Mr. Cady and Mr. Moss outline the advantages of the system as follows: It is more reliable than a spray rig; it gets the spraying done quicker and with less work; it practically eliminates sprayer repair bills; it eliminates the need, in many cases, of keeping a team of horses; ditches are not damaged and apples are not knocked off and trees bruised as when the spray wagon is used.

The cement tank and the pump mounted on a strong cement base do not get out of order quickly; vibration is what damages machinery and stationary base largely does away with that.

The large cement tank holds enough to spray a half day with two guns at a pressure of 350 pounds. The spray wagon tanks must be replenished every hour, more or less.

Mr. Cady has a tank that holds 1150 gallons, and has a five-horsepower engine to operate his pump. His main pipe rises 90 feet in 700 feet. At the end of that pipe, he gets 400 pounds pressure with one gun, and 350 with two guns.

Each pipe serves seven rows of trees. Hydrants are 150 feet apart. Mr. Cady uses 125 feet of 3-8-inch hose.

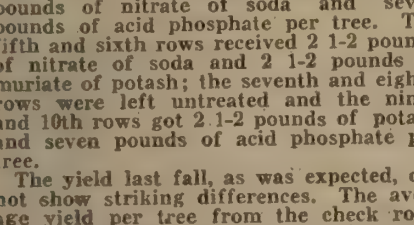
Effect of Size in Grain Seed

"Many experiments have been conducted to determine the relative value of large or heavy and small or light kernels for seed," says a government bulletin on the subject of small grains. "While there has been some conflict in results, they have usually favored the use of large, heavy seed. Particular attention has been given to the subject at the Kansas, Ohio and Ontario stations. An eight-year test was conducted at the Kansas station, in which heavy-seed oats gave an average yield an acre of 30.9 bushels, common seed 29.9 and light seed 27.5 bushels. The common seed used was the seed as it came from the thresher, the light and heavy grades being obtained by the use of the fanning mill. The grades were usually taken from the ordinary seed, but in the last year of the experiment, when the greatest difference was noticed, the heavy and light seed were taken from the corresponding grades the previous year.

"At the Ohio station, in a seven-year test, the average acre yield for heavy seed oats was 46.3 bushels, for common seed 44.8 bushels and for light seed 42.6 bushels. In a similar nine-year test with wheat little or no difference resulted in favor of the heavy or large kernels.

"More striking results were obtained at the Ontario station, where the grading was done by size instead of weight. In an eight-year test large seed yielded an average of 21.7 bushels per acre, as against 18 bushels per acre for the small seed. In a six-year test with fall wheat the large seed averaged 46.9 bushels per acre, as against 40.0 bushels for the small."

DON'T BLAME THE WORM.



If you do not spray don't get peevish when you find worms in your apples.

THAT STITCH IN TIME.

Give the garden seed enough moisture to insure a good start.

Invest in the Crop-Saving Binder of 1922

Today's *McCormick, Deering,* and *Milwaukee* binders are marvels of skill and good workmanship, improved in many ways over the binders of ten years ago. The better steels and bearings in them, and refinements in construction, make for longer service, for lighter draft, and for satisfaction.

At your first opportunity, look over the binder of 1922. Study the outside reel support, the grain-saving floating elevator, the new durable woven straps for the canvases, the perfectly working bundle carrier, and the tongue truck that steadies the load and carries half of it. The new McCormick, Deering, and Milwaukee grain binders are capable of harvesting economies that invariably surprise the new owner.

Will your binder stand the test this season? Harvest is no time to be risking trouble with an old machine, too-long repaired, outdated, and outworn.

If any doubt is in your mind, invest in the crop-saving machine sold by your *McCormick-Deering Dealer.* Remember that you will find the new McCormick, Deering, or Milwaukee the more efficient for each added year of repairing given an old binder. And safeguard the harvest by the use of strictly high-grade twine (McCormick - Deering - International). Then you will be ready for such harvesting difficulties as rough fields, long, short, lodged, and tangled grain, etc.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Dr. Copeland.

A few weeks ago I had occasion to travel out to Ohio to make some addresses about health. It is remarkable what interest is being taken everywhere in this subject. More than ever before people are seeking accurate knowledge about health and disease.

It is easy now to cross the continent. The modern Pullman car is a very comfortable substitute for home. Every effort has been made to make travel safe and attractive. Two or three days on a train can be spent delightfully.

Of course, there are health hazards associated with travel. To begin with, you come in contact with persons from every part of the world and from all sorts of homes. Not every such individual is a clean and sanitary companion.

The washbasins, bathtubs and toilet articles should be looked upon always as possible dangers. In this modern age it is believed that disease is carried by persons and not by things. To contract contagious or infectious disease it is necessary to come into such intimate contact with the sick person as to be sprayed by the secretions of his nose and throat, or otherwise to receive the products of his body. The fresh secretions are much more dangerous than the dried secretions. The soap, the lining of the basins or tubs, and the towels may retain the moist secretions of an infected person.

Never make use of a public comfort station if you can avoid it. If you do so, make sure that your own person is protected in every possible manner. Instead of using the basin, wash in the running water if you can. Cleanse the soap before you use it. By the way, leave the piece of soap clean after you have finished with it. The surest mark of good breeding is found in the soap receptacle. If it is dirty and the soap is covered with dried lather, I am suspicious of the cleanliness of that establishment.

Fortunately, liquid soap or soap powders are employed almost universally in public places, and this should be the rule. Likewise, the dangers of the common towel are avoided by the use of paper and individual towels.

The traveler gets thirsty. He takes a chance every time he gets a drink of water in a strange place. The public safety is promoted by the governmental supervision of water supplies. Most of the states demand water on the railroad trains, and the federal government supervises the water supply of the railroad cars used in interstate travel. Care is taken to get the water from approved sources, and the manner of icing the water and the conditions of the storage tank are looked after by the government.

Needless to say, the common drinking cup is rarely seen these days. Years ago in New England it was a source of sad amusement to me to see the brakeman "pass the water" to the passengers. When his other duties were not pressing, he would carry the wooden pail along the aisles. For every thirsty passenger he dipped the single cup or "dipper" in the pail and repeated the process for the next one. The declining contents of the pail became constantly richer in germs. Thank goodness, that sort of thing is not done any more! Paper cups have replaced the common drinking glass.

Not every community regulates the quality of its milk and other food supplies. The traveler runs the danger of food poisoning. On this account he should indulge sparingly in every kind of uncooked food.

The temptation to overeat is ever present. Most of the traveler's meals are in the dining car, hotel or restaurant, where the bill of fare offers a variety of attractive or attractive-sounding dishes. Self restraint must be exercised or digestion will be upset. Many illnesses of travelers may be traced to lack of good judgment in eating.

Temperance in eating and drinking and the few precautions I have suggested will add to the safety of travel.

HENRY R. ANDERSON, Deer Park, Wash. —Would not be without your good paper. Have enjoyed the stories and find much of interest for every one.

Every Woman Loves to Paint

When She Knows How

—Let Us Tell You

PAINTING is really fascinating work. Once you are started you'll probably not want to stop until you have refinished many things you did not intend to do at first.

Of course, there are some simple directions that must be followed if the work is to be successful, and we have a special "Home Service Paint Department" which was organized just to tell you how to paint.

Perhaps some of your furniture, floors, woodwork or walls are beginning to look a little old—just on the surface. Pick out one or two things to do. Tell us about them and how you want them to look when finished.

Our experts will tell you what materials to use, how to do the work step by step, what brushes you'll need, and everything about it.

For 73 years we have been making paints, varnishes, enamels, wall finishes and stains for women to use. They are the finest materials of their kind that we know.

Write for Fuller's Free Advice and refinish a few home things. You'll be surprised how fascinating the work is and how much you can save, too.

Free Advice

Write us now—a postcard—for Fuller's "Home Service" Paint Book, which tells you just what to buy for every kind of painting. Send full description and get our free advice on any kind of painting you want to do.

Decoret Varnish Stains for refinishing furniture and interior woodwork. They stain and varnish in one operation. Match the color of any natural wood. 8 colors.

Silkenwhite Enamel produces a rich, beautiful finish on woodwork and furniture. Flows out smoothly and does not show brush marks. Produces a mirror-smooth surface. Stays white and wears long. Gloss white, semi-gloss white and 8 colors.

Rubber Cement Floor Paint: A durable, sanitary, waterproof paint for floors of kitchens, closets, etc. Spreads easily, covers well. Dries hard over night. 12 colors.

Fullerwear: The all-purpose spar varnish which is unexcelled for all interior and exterior surfaces. Fine for linoleums, floors, woodwork, furniture, front doors and vestibules. Dries hard and glossy. Very durable.

There is a size and style of De Laval Separator for you, no matter if you have one or a thousand cows.

De Laval Separators are furnished with hand, electric, steam turbine or belt drives, for any kind of power.

Don't Let This Happen to You

"Last week we replaced a machine made by ..... which had been used only five years. Our customer, Mr. Crawford Cook, living near Foyil, Oklahoma, shipped one can of cream from ..... and then one from the De Laval, and changed about in this manner for four weeks, the result being that the De Laval got him exactly two pounds more butter-fat per day, and he is milking 12 cows. This amount at 35c per pound makes 70c per day, or $255.50 per year, more than twice as much as the new De Laval was worth. Mr. Cook said we could use his name and this information, and if they didn't believe it, he would make an affidavit to that effect."

This was taken from a letter from one of our agents, but there is nothing unusual about it. We are constantly receiving letters of a similar character from people who say they waited too long before buying a De Laval.

On hundreds of thousands of farms today there is an enormous amount of butter-fat being wasted by inferior or worn-out separators and by hand skimming. Perhaps such waste is going on right on your farm. Stop it at once by getting a new De Laval. It is not only the world's best cream saver, but lasts longer and is easier to clean and turn than any other.

Call up your De Laval Agent today and ask him to bring out a new De Laval so that you can try it, or write us for full information. Sold on such easy terms that it will pay for itself while you are using it.

Cream Separator and Milker

Spends Much for Roads

The United States spent $600,000,000 for roads in 1921, according to estimates of the bureau of public roads, United States department of agriculture. This sum was derived from the following sources: Local road bonds, 33 per cent; county, township and district taxes, assessments and appropriations, 14 per cent; state taxes and appropriations, 12 per cent; state road bonds, 7 per cent; motor vehicle license revenues, 19 per cent; federal aid, 14 per cent, and miscellaneous sources, 1 per cent.

CHAPTER XXV.

A Mission of Life and Death.

Bob's face had grown pale and tense as he listened. With Mookoomahn's last words he rose from the edge of the bunk where he had seated himself, and turning to Ed Matheson, asked:

"Be you goin' with me, Ed? Th' moon's good for travelin', an' I knows th' way."

"That I be," Ed responded, beginning his preparation at once. "I couldn't be restin' here a minute knowin' them poor souls was dyin' out there."

"I'm goin', too," declared Dick Blake, reaching for his adicky. "Three can travel faster'n two, by changin' off in th' lead."

"What you doin', Bill, with your adicky, now?" Ed suddenly asked, observing that Bill Campbell was also drawing on his adicky.

"Goin'," answered Bill laconically.

"No, Bill, you better stay here with th' Injun," directed Ed. "Somebody'll have t' stay with he. If they don't by tomorrer he'll get eatin' so much he'll kill hisself if he ain't watched.

"You stay an' keep an eye on he. Give he just a small bit t' a time, till he gets over th' first sickness. He'll be wonderful sick t'night, an' for a week, but sick's he is, by day after t'morrer he'll be wonderful hungry, an' want t' eat everything in sight, an' more too, an' if he eats too much 'twill kill he sure. His belly'll be givin' he trouble for a month yet, whatever, two ways—wantin' t' stuff un, an' makin' he sick because he does."

Bill Campbell was plainly disappointed, but there was no doubt Ed was right, and laying aside his adicky he uncomplainingly assumed the role of nurse to which Ed had assigned him.

The men set forth in haste upon their mission of life and death. The moon, a white, cold patch, lay against the steel-blue sky. The snow, thick coated with frost, glittered and scintillated in the moonlight. A silence impressive, complete, tense, lay upon the frozen white world. It spoke of death, as the bated breath of the storm, before it breaks, speaks of calamity.

The three trappers, who had entered the tilt that evening wearied from the day's labor upon the trail, forgot their weariness as they swung forward at a rapid pace toward the camp on the Great lake.

First one, then another, took the lead, breaking the trail and making it easier for those who followed. To men less inured to hardship and less accustomed to wilderness travel, it would have been a killing pace, continued unabated, unvarying, hour after hour.

At length the moon, falling near the western horizon, threatened quickly to withdraw her light; and then a halt was called, the tent quickly stretched between two convenient trees, the sheet-iron stove set up, a fire lighted, a few boughs spread for a bed, and the men stretched themselves for a two hours' rest.

They were up again before light, a hurried breakfast was eaten, and with daybreak they were away. Seldom was a word spoken. Each was stingy of his breath. To have talked would have been to expend energy.

Only once during the day did they halt, early in the evening, to make tea and partake of much-needed refreshment, and then were quickly on their way again, continuing by moonlight.

It was past midnight when, Ungava Bob in the lead, crossing a barren rise, beheld the smooth white surface of the Great lake stretching far away to the northward. Descending the ridge and plunging into the thin forest below, he turned with a nameless dread at his heart toward the lodge where, three months before, he had said farewell to Shad and Manikawan. Then they were in the full exuberance of health and strength. How should he find them now? He dared not answer the question.

A little farther, and the lodge, a black blot on the snow, loomed up through the trees. Quickening his pace, he peered anxiously ahead for smoke, half hoping, wholly dreading, the result. Yes, there it was! The merest whiff rising about the protruding lodge poles at the top! At least one lived!

Bob broke into a run, the others at his heels, and, scarcely halting to drop the hauling rope of his toboggan from his shoulders, he lifted the flap and entered, calling as he did so:

"Shad! Shad! Manikawan! Does you hear me?"

The place was dark. The smouldering embers of a fire gave out no light, and receiving no answer Bob shouted to the others to bring a candle. Ed Matheson had anticipated the need, and, close at Bob's side, struck a light.

CHAPTER XXVI.

"Greater Love Hath No Man Than This."

As the candle sputtered for a moment and then flared up, it revealed, lying prone on opposite sides of the lodge, feet to the embers of the dying fire, two human wrecks, whose emaciated features and shrunken forms could never have been recognized as those of Shad and Manikawan.

Bob stooped, and taking Shad gently by the shoulder shook him, saying as he did so:

"Shad! Shad! Shad!"

Slowly Shad, awakening from deep and exhausting slumber, opened his cavernous eyes and stared vacantly at Bob.

"Shad!" Bob repeated. "'Tis Bob an' Ed an' Dick come for you! Shad! We has grub, Shad!"

Still Shad gave no sign of recognition.

"Shad! Shad!" pleaded Bob. "Don't you know me now, Shad?"

Then light came into Shad's face, and he forced himself to a sitting position.

"Bob! Oh, Bob!" he exclaimed, in a weak voice. "Am I awake or is it just a dream? Oh, Bob! Good old Bob! And Ed! and Dick! I was dreaming of you and the tilts. The dear old tilts! And you've come! You've really come? I heard you calling, Bob—days and days and days I heard you, and I answered. But my voice was took weak, and you couldn't hear.

"We've been in hell, Bob! In hell! The devils chased us, Bob—chased us for months and months and months. They looked like wolves, Bob—hungry, ugly wolves. I shot one! Yes, shot it! We ate it, and it was good! Ate the devil, Bob! and Ed! and Dick! Are you angels from heaven, or really you?"

"A bit o' tea's what he needs first thing," suggested Ed, in a shaky voice, as Shad paused in his ramblings. "Dick, you cut some wood, now, an' I'll be fillin' th' kettle with ice an' get un over. Bob better be stayin' right here."

"Bob!" Shad continued, as Dick and Ed passed out of the lodge. "Is it really you, Bob?"

His voice was now more rational, though very weak.

"Yes, Shad, 'tis me."

"How is Manikawan, Bob? Look after her, won't you? I'm all right now. I've tried to keep her out of the deep sleeps she falls into. I've been afraid she'd die. But I was very tired, and I think I must have been very sound asleep myself—and slept for hours. Leave me, Bob, and wake her up. I'm all right."

Bob obediently passed over to Manikawan, leaving Shad sitting and anxiously watching him.

It seemed for a time that he was not to succeed in rousing Manikawan from the coma-like sleep into which she had passed. But when Dick placed wood upon the fire, and the lodge began to warm, she displayed symptoms of waking; and Bob lifted her head to his shoulder, chafed her temples, and spoke her name over and over again. At last she opened her eyes, and with almost instant recognition smiled:

"White Brother of the Snow—Manikawan is glad you have come. It has—been—long—but Manikawan knew—White Brother of the Snow—would come at last—she did not—leave his friend."

Then she paused, exhausted, but presently continued:

"Manikawan told—White Brother of the Snow—she would—stay until he came—for his friend."

"Manikawan has done well. She has been very brave. She is a Ne-ne-not (Nascaupee), and brave." Bob could trust himself to say no more, for his voice was thick.

Manikawan's eyes lighted at these words of praise, and, never taking them from Bob's face, she lay silent upon his shoulders until the food was ready.

Ed Matheson gave some tea and a small portion of broiled ptarmigan and bread to Shad, while Bob held the cup for Manikawan, then fed her some morsels of the meat as one would have fed a child. It was difficult for her to eat, though the tea stimulated her temporarily, and she began presently to speak again, in a scarcely audible voice:

"The Spirit—of Hunger—followed us. The Gaunt Gray—Wolf—was—always—behind—us. The—Spirit—of—Death—stood—at—the—door—of—the—lodge. The spirits—were—strong—and cunning—like the wolverine—Manikawan—was—weak—like—a rabbit."

She was out of breath again and had to rest, and Bob held the cup of tea to her lips. With renewed strength she continued:

"Manikawan—killed—two ptarmigans—with—her—arrow. She—ate—the—entrails—but she—gave—the meat—to the friend—of White Brother of—the Snow. She was—not afraid—to die. She—could—not say to—White Brother—of the Snow—when he came—'The Spirit—of Death—has—entered—the lodge—and—taken—your—friend.'"

There was another pause. Bob could see, and Ed and Dick could see that the Spirit of Death was even then in the lodge, and that his cold hand was upon Manikawan's brow. Tears trickled down Bob's cheeks. He could not check them.

"White—Brother—of—the—Snow—must—not—feel—bad. He—must—be—strong. Manikawan—is—happy. She—is—warm—as—when—the—sun—grows — brave—in—summer — and — come—to—warm—the—earth." A smile played upon her lips.

"Manikawan—is — very — happy. She—sees — a — light — like—the—rising—sun. White—Brother—of—the—Snow——"

That was the end. Bob's cheeks were wet as he laid the lifeless form upon its couch of boughs, and gently covered it with a deerskin robe; and tears streamed down the weather-beaten cheeks of the two rough trappers standing at his side.

Manikawan was not a Christian. She had never heard of Christ and His saving grace. But dare any say He did not welcome her to His Father's house?

She had renounced her own hope of life by remaining behind in the lodge when Mookoomahn left them. In the name of love and duty she had made the supreme sacrifice—she had laid down her life for another—and Christ hath said: "Greater love hath no man than this, that a man lay down his life for his friends."

And, after all, did Manikawan not worship the same God that you and I worship? Standing upon the high pinnacle of rock, looking toward the rising sun, she offered a silent prayer to the Great Mystery, that she might be made nobler, braver, and more generous—worthy to stand in the presence of the Great Mystery—the Maker of heaven and earth and all things.

We call Him God. Manikawan called Him the Great Mystery.

CHAPTER XXVII.

Shad's Tribute to the Indian Maiden.

Though Shad's weakness caused him to wobble woefully when he walked, his knee had much improved since the day of his injury.

"Shad, does you hear me?"

The food, given him in small portions at frequent intervals, and the assurance of continued life that the appearance of the rescuers brought, stimulated his body to new strength and restored to him his mental equilibrium. Hope is life, and one possessed of a large degree of hope, coupled with a good physique, may withstand a tremendous amount of hardship and privation.

The very presence of Manikawan during the long period of enforced inactivity and waiting, had kept alive in Shad Trowbridge the hope that Mookoomahn might after all reach the river tilt and send his friends to the rescue before it was too late. Had it not been for this, it is scarcely probable he would have survived until they came.

The few Indian words which Shad had acquired had not been sufficient to permit him to carry on connected conversation with Manikawan or the other Indians. Denied this privilege for so long, he talked almost incessantly to the three trappers, while the four sat through the hours until daybreak, keeping vigil with Death. He talked of the prospect of continued life, and what a blessed thing it was to know that he was still to be in and of the great and glorious world; of his trying experiences since he had joined the Indians.

With dawn the tent was pitched among the trees, not far from the lodge. Then they removed to its more comfortable shelter, with Bob walking at Shad's side to steady his uncertain footsteps.

Shad was sick, and suffered severely from nausea that day—and at intervals, indeed, for several days thereafter—a result that always follows the introduction of food into the contracted stomach after a long period of starvation, particularly when the food is of coarse quality and unsuitably prepared.

Almost immediately, too, his legs began to swell. But this disturbed him little. It was merely an incident and another result of his long period of starvation, quite to be expected.

"Don't worry about un none," advised Ed Matheson, when Shad called attention to the phenomenon. "Injuns as starves always gets swelled legs, an' they stays swelled for quite a bit, too. Just forget un now. You'll be all right so long's you don't get too rapid wi' th' grub, an' set you'm belly swellin' too fast."

"Ed," said Shad, "after what I've been through, I think there's nothing would alarm me much. It doesn't disturb me in the least to have my legs swell. I'm rather proud of them They contrast beautifully with the rest of me, and give me a certain sense of stability that otherwise I should not have, for they're the only part of me that looks in the least natural. Do you hear my bones rattle when I move? I have a presentment that, unless I'm pretty careful, my skeleton will fall apart before I get flesh enough to hold it together."

"Now that's th' way I likes t' see folk!" exclaimed Ed. "Not growlin' like a bear because they looks summat like a dead man, an' because they has a bit o' ache in their insides every time they eats. You'm do look as though you'm just rize from th' grave. But you'm a wonderful live corpse yet, Shad. A man may's well be happy even if he do feel like all creation turned inside out, 'specially when he knows he ain't goin' t' keep feelin' that way. A man is just as happy as he's thinkin' he is, an' no happier, an' as miserable as he's thinkin' he is an' no miserabler. I finds bein' happy an' content wi' things is just a matter o' th' way o' lookin' at un."

"Yes, Ed, I think you're right," agreed Shad. "I'm finding no fault. I'm thankful to be alive and in the beautiful world, and I'm very much contented with my lot. I would be very happy, too, but for the thought of that poor little Indian girl."

The earth, frozen to adamantine hardness, precluded the possibility of digging a grave during the winter season. Therefore, after the manner of her people, a platform of poles, high raised above the snow, was built among the spruce trees to receive Manikawan's body.

It was late in the afternoon when the platform was completed and the four weather-beaten men again entered the silent lodge, where they were to conduct a simple, primitive funeral service, and give Manikawan the rites of Christian burial before raising her body to the platform.

Bob, who never was separated from the little Testament his mother had given him years before, drew the book from his pocket when they had seated themselves in the lodge, and opening to John xv, passed it to Shad, who, accepting it, read the chapter aloud in a low but clear voice, while the others, reverently listened.

"Bob," said Shad at length, closing the Testament, "you knew her first. Tell us about her."

Responding, Bob described how Sishetakushin and Mookoomahn, finding him unconscious in the snow, had carried him to their lodge—the very lodge in which they were now sitting; and how upon first opening his eyes to consciousness he had seen her, weaving the web of a snowshoe, opposite him, across the fire—just where she was lying now; and she had looked up and smiled when she discovered he was awake. And then, ever gentle, ever considerate, she had nursed him to health, and ministered to him until he had left them.

When Bob had finished, Shad spoke of her never-failing thoughtfulness and consideration. Of the encouragement of her example as, uncomplaining, she followed the weary, endless trail day after day. Of her hand lightly laid upon his shoulder as she looked into his eyes and spoke words of encouragement he could not understand, but which never failed to call him back to himself and his manhood and to banish an impulse which frequently assailed him to give up the fight for life, lie down in the snow and accept the release from suffering which death offered.

"But her crowning sacrifice," said Shad, "came when she refused to leave me alone to die; and I certainly could not have survived had I been left in this lodge without human companionship.

"Manikawan could have gone on with Mookoomahn and saved herself. He went to you and told you of our need. He did well, but he did it mainly to save himself. It was the instinct of self-preservation that gave him inspiration to accomplish it. But she remained, and remaining she gave me the only food that fell to her arrow, while she starved. That was divine unselfishness—divine sacrifice."

Stepping to the side of Manikawan's lifeless body, he lifted and laid aside the skin robe which covered her face, then kneeling at her side, with tears upon his cheeks, he continued:

"Manikawan, your skin was red, but your soul was as white as the driven snow that

Experience Letters

From Our Family Circle Women

Dear Family Circle: As I have had many requests for information about putting butter away for winter use I will give you my method which I learned from my mother, who was considered the very best butter maker in the community where she lived. She always received a little more per pound for her butter than the other butter makers because of its excellence.

The school in which I learned to make butter was a hard one and my mother a very exacting teacher for I began as a veritable apprentice. My first lessons were given in the place in our house called the "milk room" and it was important enough to begin with capital letters. Not a thing but milk, butter and cream was ever allowed to remain in that immaculately clean room. My first lessons, as I said, in butter making began in this room. It was built on purpose for milk after the rest of the house, so it was left unpainted and shelves and floor were of pine boards. Its only furnishings were the shelves and a pine table for working on and once every week all that pine wood was scrubbed to a wonderful whiteness. The floor was as white as the shelves and table. Oh, those scrubbing days! I shall never forget them. I used to wonder then why that room had to be so painfully clean, but now I know that the secret of my mother's wonderful butter was perfect cleanliness.

In course of time I was promoted from the scrubbing of the milk room to washing the "milk things." I am sure if it were possible to place me back in the same old summer kitchen where this important rite was performed, I could go through the operation blindfolded with credit, so exactly was the routine followed year after year.

I can see in my mind the whole array of "milk things" spread out just as they appeared morning after morning. There were the milk pails, five or six of them, and inside, the cheese cloth strainers which had to pass the inspection of my mother's nose as well as her eyes before they could be used again.

These were the days of setting milk in tin pans and mother would be up at 5 o'clock in the morning and have the skimming done and the empty pans would be piled high on the work table in that "summer kitchen," 20 or 30 of them. There was no convenient sink with water under pressure which came at the turn of a faucet. In those days of my apprenticeship we drew the water with buckets from a well and heated all we used in kettles on a wood range and it had to be boiling, too, or I heard from my mother in language easy to understand.

The pails were the first to have attention and I hated that part more than all the rest. First the strainers must be taken out and shaken free of all hair and straw or whatever may have fallen into the pail of milk while the milking was being done, then all the pails were rinsed out carefully in perfectly cold water and the strainers set aside to soak in cold water. Next the pans must be washed first in cold water, for they were the kind made with seams and hot water would convert the milk into a sort of paste in those seams.

Next a big dishpan of strong hot soap suds must be provided and a perfectly clean cloth and a pine stick sharpened at one end and one by one those pans were put through the hot suds; the stick run all around every seam every morning, and they were set aside till the pails were passed through the same operation and every strainer cloth was rubbed on a board and then the scalding began.

Nothing short of a whole pail of boiling water would satisfy my mother and once I got at the scalding process I rather enjoyed it. But best of all I liked to take the pans and turn them upside down in a long shining row on a rack made for that purpose out in the bright sunshine; there they remained till the middle of the afternoon with the pails keeping them company and the sweet strainer cloths pinned onto the line ready for the evening milking. The "milk dish cloth" also was left to float to the sweet breezes of heaven and woe to any one who used that cloth for any purpose under any circumstances, except for the "milk things." These milk laws were like those of the Medes and Persians, unchangeable.

I am sure you mothers are smiling if I have succeeded in making you see that 12-year-old girl putting all that pile of tinware through its morning ablutions day by day.

Every alternate day the old-fashioned dasher churn came in for its share of attention and was treated like all the other milk things, only more so, for the wooden dasher was hard to keep just right. The wooden butter bowl was mother's especial care. She seldom ever trusted any one but herself to wash that. I hate to think what would have happened at our house if any person had dared to put anything whatever into that bowl except butter.

I have told you this to amuse you, but in the story lies the secret of perfectly sweet butter which my mother made, and I have eaten it when it has kept from one June to the following June as sweet and delicious as when fresh churned.

There are other details as necessary as those mentioned. One should stir the cream every day once at least, lest it form a crust on top, which will make hard flakes in the butter and nothing can be done to remove them. It is common now in creameries to salt the butter and pack it away the same day, but when one is making butter at home and wishes to take no chance of its spoiling it is safest to leave the churning stand in the bowl after salting till next day and work out the salt, which is sure to remain even though one is very careful to work it out at the first period. The salt will draw out more of the buttermilk. Never work the butter till it becomes like salve, sort of greasy, for then the grain, as it is called, is destroyed and butter so worked will never keep sweet.

To pack for winter use have stone jars. I think a three-gallon size is good, and never use one to pack butter in which has had something else in it. This may seem foolish to you, but it is not. Sprinkle a handful of salt on the bottom of the jar pack in your butter (having allowed one tablespoonful of salt to the pound), put in your layers about two or three inches thick, then add another sprinkling of salt and add another layer of butter. It is easier to cut out the butter when the layers are not too thick. Keep on packing as you churn till your jar is within two inches from the top, then cut a piece of white cloth the size of the jar, fit it down over the butter, fill the jar with salt, then pour on water till almost the very top and cover carefully and put in a clean, cool place where there are no odors, such as onions or cabbage or other strong odors. Watch from time to time and add more water as it evaporates, so the very top of your butter will be as sweet as that down deeper.

Be careful your cream is "ripened" before churning. Never add cream skimmed the same morning to other cream you are to churn that day. Allow all to stand together for 48 hours, but never leave cream till it becomes bitter and old and never fail to stir it every day. This in itself will delay the cream from becoming too old to be good.

Remember, dear women, that perfect cleanliness about every thing, from the time the milk goes into the pail from the cow down to the cloth you tie over the top of your jar of packed butter is necessary for a perfect product. There are much easier methods now. Few of you have to draw water from a well. You do not have to use pans and there are fine churns with thermometers attached, but cleanliness is just as essential as when I was a little girl washing "milk things."

Your friend, ALICE W. BARLAND.

covers the desolate land of your people. Your features are shrunken with starvation and suffering, but still they are beautiful, for they reflect the beautiful, unselfish soul which they once sheltered.

"Your lips smile. Did you see the glory of heaven as you passed from us—a thousand times more beautiful than the brilliant aurora or the gorgeous sunsets that glorify the skies of this land of awful desolation where you existed? Did you see the light of the Eternal City shining through its gates when they were opened to receive you?"

As though in answer to Shad's question the last rays of the setting sun dropped through the open top of the lodge and rested upon the upturned face of the dead Indian maiden in a bright, illuminating glow.

"Manikawan, you sacrificed your life to duty and to human sympathy. You died a Christlike death, and your sacrifice shall not be wasted. Your body is dead, but your spirit still lives.

"So long as the breath of life is in me, Manikawan, I shall never forget your example of patience and encouragement and self-effacement. It has built for me new ideals. It has taught me that there are other things to live for than the mere attainment of pleasure and the gratification of selfish desires.

"You were an Indian, Manikawan, and the world would have called you a pagan and a savage. But you have pointed out to me the way to a nobler and better life."

Shad arose and resumed his seat. He had spoken in a voice of tense earnestness, and for a little while all sat in awed silence. Then Ed Matheson began to sing, and the others joined him:

"Rock of Ages, cleft for me,
Let me hide myself in thee."

With the last notes of the grand old hymn they all knelt, while big Dick Blake, in a voice shaken with emotion, offered a short but fervent prayer.

Manikawan's body was wrapped tightly in deerskin robes, and in the darkening twilight of the cold winter evening it was reverently borne to the newly erected platform among the spruce trees. Here it was to lie exposed to winds and storms, but beyond the reach of marauding animals, until the next summer's sun should warm and soften the earth sufficiently to permit Mookoomahn and the trappers to dig a grave and lay it in its final resting place.

How long should a shingle roof last?

Answer that by another question—How much service in a tractor? Depends largely on the care you take of it. Same for a shingle roof.

Unless you fill the pores of the wood with a weather-resisting preservative, natural oils will evaporate, rain will soak in, then shingles will warp and crack under the hot sun and withering winds.

ORONITE SHINGLE OIL made by Standard Oil Company (California), is easy to apply, and will save your shingle roofs or shingled side-walls many a repair job. A tight, well-laid roof treated with it should last a lifetime.

Our agent near you will tell you the success others have had with ORONITE SHINGLE OIL in securing longer roof life. Ask him, too, for color-mixing formulas.

High Points in News of the Week

The soldiers' bonus bill has been formally presented to the senate, Senator McCumber saying that in the very near future he hoped to be able to lay aside the tariff bill for a day or so for the purpose of considering and passing, if possible, the compensation bill. Informal canvasses of each side have indicated that the bonus legislation has a substantial majority in the senate, but whether the amended house bill will be approved is problematical.

* * *

Enactment of legislation designed to bring about development of the government's power and nitrate project at Muscle Shoals, Alabama, by private enterprise has been recommended to the house in three reports filed by members of the military committee. Each of the reports admitted that the committee had been unable to agree upon details for the project's development and expressed belief that the work should be performed by the public itself.

* * *

Appropriations of $294,235,000 are made in the annual naval appropriation bill as reported by the senate appropriations committee. This represents nearly $43,000,000 over the house bill, but $131,000,000 less than requested by the navy department.

* * *

James K. Mason of Chicago, treasurer of the United States Grain Growers' association, and William M. Eckhardt of Chicago, former treasurer of that association, were summoned to appear before a subcommittee of the senate agricultural committee, with the account books and records of their association. Members of the subcommittee say that this is to give an opportunity to combat the charges which have been made that the grain growers' association has not, in fact, aided the farmers.

* * *

A well-informed Washington correspondent remarks that the republicans say they are going to pass the tariff bill before the November election. The democrats say that the republicans are fooling, that they don't really expect to pass the bill, but merely want to put the blame for not passing it on the democrats.

* * *

The report is confirmed that Captain Roald Amundsen, the explorer, contemplates a polar flight. Captain Amundsen will be accompanied on his perilous journey by only two companions. The plane will carry gasoline sufficient for a 26-hour trip and the aviators will have for food only sandwiches, a few ounces of concentrated food and a vacuum bottle filled with tea. According to the plans, the plane will pass over the top of the world and head straight for Spitzenbergen or Grant land.

* * *

Li Yuan Hung, who five years ago was forced out of the presidency of China by the militarists, arrived in Peking Sunday and resumed the post of the nation's chief executive. Li came from Tientsin in response to the call of the revived republican parliament, which recently met there, that he again assume the direction of China's affairs.

Smith W. Brookhart was nominated the republican candidate for United States senator from Iowa at the primary Monday.

* * *

Richard A. Ballinger, who was secretary of the interior during President Taft's administration, died at his home in Seattle June 6.

* * *

Nikolai Lenine, dictator of Russia in its regime of bolshevism, can be considered as eliminated," says David Lawrence, the well-informed writer. "Brain trouble—some reports say a paralytic stroke—others say a cerebral breakdown—is taking Lenine out of the situation, if not out of the world altogether. Predictions vary as to whether he will live. Some reports indicate Lenine can not last 10 days more.

* * *

Wu Pei-Fu, dominant Chinese military leader, and Chang Cho-Lin, Manchurian war lord, have agreed on an armistice. The suspension of hostilities is to continue indefinitely while the two discuss a permanent peace.

* * *

"Keep your mouth shut; halt when you are ordered; keep out of crowds; keep moving and stay off the streets as much as possible." This is the timely and well-meaning welcome of Belfast, Ireland, to visiting strangers. Floyd Gibbons, the newspaper correspondent, adds: "Here, in this bustling metropolis of almost 500,000 souls, I have found in four hours more gun-toting than Kit Carson or Diamond Dick ever dreamed of in the early days in the west. To the stranger it would appear that half the population of Belfast carry revolvers with a city license."

* * *

A violent storm, accompanied by shifting winds that reached a velocity of 88 miles an hour, took the lives of more than 50 persons, injured more than 100 and caused enormous property loss in New York city, Sunday. Forty persons were reported to have lost their lives while boating in Long Island sound and many others were killed by falling trees, lightning and accidents caused by the wind. Ten bodies of the drowned have been recovered, and the waters about New York are being searched tonight for 33 reported missing.

The storm came at the close of one of the hottest days of the season.

* * *

Deciding the celebrated Coronado coal case, the United States supreme court holds that labor organizations, although unincorporated, are amenable to the Sherman anti-trust act and that under it such organizations may be prosecuted for restraint of interstate commerce. While the court also held, that, while unincorporated, labor organizations could be sued under the Sherman anti-trust law for triple damages for losses to property caused by them, there was nothing in the evidence of the present case to show that the acts complained of were aimed by the labor union to restrain interstate trade, and that the international union and its officers should not have been held by the trial court as subject to joint liability with the district and local organizations. Hailed as a "great victory" by counsel of the United Mine Workers of America, the Coronado coal case is expected by union officials to be followed soon by the release of $1,100,000 of union funds now tied up by litigation.

Bits of Fun for Everyone

That's Nothing—Who Didn't?

Weary Willie—I may be poor now, but when I was young I had my own carriage.

Leary Louis—Yep, and yer maw pushed it.

Time Was Precious.

Dad—Why are your clothes so very dirty?

Bobbie—I fell in the street.

Dad—With your new suit on?

Bobbie—Yes, dad. I didn't have time to come home and take it off.

Getting the Idea.

A Grand avenue school teacher was relating some of her experiences in different schools throughout the country.

"I taught school among my own people in the Tennessee mountains for several years after I graduated from college. Funny thing happened.

"Hearing a boy say 'I ain't gwine thar,' I said to him, 'That's no way to speak. Listen: 'I am not going there; you are not going there; he is not going there; we are not going there; they are not going there.' Do you get the idea?"

"'Yessum, I gits it all right. They ain't nobody gwine.'"

Glad if He Swore.

"What would your mother say, little boy," reproved a passerby virtuously, "if she could hear you swear like that?"

"She'd be tickled to death," answered the bad little boy. "She's stone deaf."

Out o' Luck.

A small girl asked her mother, "If I grow up, will I have a husband like papa?"

"Yes, my dear," mother replied.

"And if I do not get married, will I be an old maid like Aunt Susan?"

"Yes," was the reply.

The little girl thought for a minute, put her hands to her head, and said, "Well, I am in a fix."—Argonaut.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3948-3727: Ladies' costume—Waist 3948 cut in 6 sizes: 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 3727 cut in 6 sizes: 24, 26, 28, 30, 32 and 34 inches waist measure. To make the dress as illustrated requires 4 1-8 yards of figured material and 3 7-8 yards of plain material for a 38-inch size. The width of the skirt at the foot is about 2 1-4 yards. Two separate patterns 10 cents for each pattern.

3829-3985: Ladies' costume—Waist 3829 cut in 6 sizes: 34, 36, 38, 40 2 and 44 inches bust measure. It requires 2 1-2 yards of 36-inch material. The skirt 3985 cut in 7 sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. The skirt will require 3 3-8 yards of 36-inch material. The width at the foot is about 2 yards. Two separate patterns 10 cents for each pattern.

3653: Child's dress—Cut in 4 sizes: 2, 4, 6 and 8 years. A 4-year size requires 2 3-4 yards of 27-inch material. Price 10 cents.

4002: Girls' dress—Cut in 4 sizes: 4, 6, 8 and 10 years. A 6-year size requires 3 1-4 yards of 36-inch material. Price 10 cents.

The following is a note from Graham Spencer, who lives near the Columbia river in central Washington: "I shall be 11 years old August 28, 1922. I have 18 pet rabbits. They are Golden Fawns."

Pauline Manson says: "I am 9 years old. My birthday is March 6. My pets are a cow and a cat. Our school closed April 28. I have four brothers and four sisters." She is a southwest Washington girl.

Lady, Prince and Dixie are three horses and they belong to Evelyn Shockley's father, who lives in western Yakima county, Washington. Evelyn will be 9 years old June 23, 1922. Ada and Ethel are her sisters.

Frances Dirk was visiting with her cousins, Carol, Graham and Myra Spencer, in Chelan county, Washington, when we heard from her. She was going to see her grandma soon. Frances is 10 years old. Her birthday is November 30.

Every evening Norine Rinehart rides her pony, Jewel, to the pasture after the cows. Norine is a Lincoln county (Wash.) cousin. Before she came to Washington she lived in Kansas. She is 11 years old. Next year she will be in the seventh grade at school. Her birthday is September 11.

"I shall be 8 years old July 18, 1922," writes La Vonne Elm. This little cousin has blue eyes and light hair. She says school closed May 19. She used to walk a mile and a half to school. Her home is in Pierce county, Washington.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer.

Lauretta Schuman, Esther Simila, Beth Daniels, Leatha Runner, Hattie Nichols, Nadine L. Hutchens, Carol Margaret Smith, Mary Jane Liscum, Eula Turner, Shirley Brooks, Marie Wichert, Signa Nieme, Marie Thornton, Viola Spangenberg, Leona Ball, Esther St. Lawrence, Leetta Ball, Emrose Corbin, Caroline Wesch, Sylvia L. Wilson, Doris Vivian Aldrich, Laura Hill, Amy Beam, Helen Smith, Gladys Anderson, Sylvia Rogers.

BEDTIME STORIES

By THORNTON W. BURGESS.

WHITEFOOT SEEKS ADVICE.

Whitefoot the Wood Mouse was tired and frightened and homeless. Early that morning he had been frightened from his home in a hollow log by Shadow the Weasel. He had started out in the world to build a new home, and he had walked and walked and walked, but nowhere had he found a place that looked really safe. Whitefoot had not forgotten the advice of Striped Chipmunk, to build his house where no one would think of looking for it, but how could he find such a place?

Pretty soon Whitefoot met Johnny

They found Grandfather Frog sitting on his big green lilypad just as usual.

Chuck in surprise. "Aren't you lost, Whitefoot?"

Whitefoot shook his head. "No," said he. "I'm not lost, because I haven't any place to be lost from."

"What do you mean by that?" asked Johnny Chuck.

"I mean that my old home is no longer my home, for Shadow the Weasel has found it, and I do not dare to go back there. So now I am looking for a place to build a new home. Oh, Johnny Chuck, do you know of any place where no one would think of looking for a home of mine?"

Johnny scratched his head and thought very hard, very hard, indeed, for Johnny Chuck is a very obliging little fellow. "No," he said, slowly, "I don't believe I do. I tell you what, let's go over and see Grandfather Frog. He is so old and wise that he is sure to know.

Whitefoot agreed, so off they started for the Smiling Pool. Whitefoot had never been there before and he kept close to Johnny Chuck's coattails all the way there. They found Grandfather Frog sitting on his big green lilypad just as usual. He heard them coming through the bulrushes.

"Hello, Johnny Chuck! What brings you down here today?" asked Grandfather Frog.

Johnny Chuck explained Whitefoot's difficulty. Grandfather Frog listened very attentively.

"Now what would you do?" concluded Johnny Chuck.

"Chugarum! How should I know?" replied Grandfather Frog, in his deepest and gruffest voice. But all the time there was a twinkle in his big goggly eyes as he watched Whitefoot's face fall.

Just then a foolish green fly came within reach of Grandfather Frog. His big mouth opened wide, the fly disappeared and Grandfather Frog patted his white and yellow waistcoat as if something inside felt very nice, indeed.

"It seems to me that if I was in the habit of living in hollow trees or logs and wanted to make a new home where no one would think to look for it I'd hunt up some nice old house that is supposed to be deserted and I'd move in and not let any one know that I was living there," said Grandfather Frog, and as he spoke his eyes were fastened on one of Mrs. Redwing's old nests in the rushes.

Whitefoot saw the nest and a great idea came to him. "Thank you, thank you, Grandfather Frog!" he cried. "I'm going to do just that thing."

(Copyright by Thornton W. Burgess.)

Birthday Greetings

THURSDAY, June 15—Wilber Fagan, 7 years old; Dorothy Graham, 9; Bernice Reynolds, 9.

FRIDAY, June 16—Helen Sandberg, 11 years old; Sylvia Wilson, 10; Helen Moilanen, 10.

SATURDAY, June 17—Laverne Axlund, 10 years old; Frank Ennis, 10; June Johnson, 9; Bill Kemp, 9; Merna Van Leuven, 10.

SUNDAY, June 18—Robert Andrew, 8 years old; Carol Simerman, 11; Martha Stockton, 11; Anna Mae Tarter, 9; Andell Wilson, 10; Fern Elaine Hollingsworth, 4.

TUESDAY, June 20—Edores Bowles, 10 years old; Edward Copp, 11; Lina Kamm, 11; Fred Komar, 11; Marian Whitman, 8.

WEDNESDAY, June 21—Madeline Graham, 10 years old; Frank Simons, 11; Fern Parvin, 8.

Scientists, as Well as Practical Farmers, Contribute to Your State Farm Weekly

In addition to printing hundreds of articles from practical farmers, fruitgrowers, market gardeners, stock breeders and dairymen, The Washington Farmer gives space to the scientist and the agricultural expert who carry on careful research work with regard to seeds, plant growth, soils, fertilizers, the care and breeding of poultry and farm animals, the eradication of pests, and many other matters which have a close bearing on agricultural production and prosperity of this state. He has a vast store of information garnered together from many sources which can help solve the farm problems peculiar to this section. What the experimenters at the agricultural schools are finding out, what the scientists who specialize on agricultural problems discover are given to our readers in complete, reliable form. This feature helps round out the paper and gives it greater value to those who make a business of farming.

Your state farm weekly gives big value at low cost on account of its cooperative subscription plan.

We say to our friends: "Send your subscription orders direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, help us make our plan an even greater success during the coming year than it has been in the past. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

Subscription Rates of The Washington Farmer:

$1.00 for Five Years

50 Cents for 3 years.
25 Cents for 1 year.
In Canada add 1 cent a copy for extra postage.

Just Folks

Much trouble is caused by confusing purposes and methods. Methods are not purposes, although long-established methods may indicate the purposes behind them.

The broad purpose of health conservation may include a variety of methods. The avoidance of starchy foods may be taken to be the supreme health purpose, when, in fact, it is only one of the means of conserving health.

The purpose of religion is to implant in the soul a guiding principle in conduct, yet the methods of religion may cause serious faults when the purpose of religion is forgotten and methods become supreme.

Taking the symbol for the spirit characterized the hypocrite of the New Testament.

In other words, the same purpose is manifested through various methods, according to age, climate and nationality.

It is best, as a rule, to use current and understandable methods for the expression of a designated purpose, until those methods become so dominant that the purpose is forgotten. Then comes trouble, then comes the era of reform, then comes the establishment of new methods.

When shall the methods and forms be changed? Those are serious questions and are not to be solved in a hurry.

It is better to try to revive the spirit than merely to change the form. The true spirit will shine through almost any form or method. E&S

Montesano Club Work

Projects Are Outlined for Girls as Well as Boys

It was not until after the meeting of the Montesano Agricultural club was well started that the writer entered the room in company with Robert Cowan, the county agent. The boys were having their weekly meeting when questions were being asked by each member to be answered by the club leader, Robert Polson, or by the boys themselves.

The secretary was at his desk and as he called the roll each member rose to his feet and stated his question. Before he began he addressed the president of the club, who occupied a chair in front of the gathering, who, in turn, acknowledged the speaker as "Mr. ————."

As each boy asked his question it was answered by one or more members or by the club leader. The performance was repeated again and again until the entire roll had been called.

The most striking feature was the fact that almost perfect order prevailed in the room. Occasionally a bit of merriment was noticed when some of the boys saw the funny side of some particular expression, but they soon quieted down and listened to the program. In one case a boy forgot to address the chair and he was immediately called by the secretary, who insisted that he be recognized by the president before speaking.

The questions that were asked showed that much work and study had been done. In some cases the club leader himself was forced to fall back on the county agent for advice. The last part of their meeting was given over to a demonstration of milk testing, put on by the county agent. Other demonstrations of this kind are given and each meeting is a drawing card, which no member can afford to miss if he is able to venture out of his home.

There are four branches of club work being taken up, namely, garden, pig, poultry and potato. Each branch of club work has a separate meeting each month, many of the boys taking up two or uore branches. While the work is carried on in the school building and many of the boys are high school students, the work in the classes have no connection with the school, but it is hoped that agricultural classes can be included in the work for next year.

Officers of the Montesano Agricultural club are: James Hutcheson, president; Floyd Gochnour, secretary; Earl Nelson, treasurer, and Crosby Valentine, vice president.

While the boys are meeting in one room the girls of the Montesano Home Economics club hold their meeting in an adjoining room. A similar program is carried out with the girls and they have outlined a heavy schedule for the summer months with the help of Miss Mabel Webber, county home demonstration agent. The girls' work includes sewing, cooking, canning and home management. Each member in the canning club is required to keep a budget which outlines the amount of fruit that is needed in the home for winter. The girls will endeavor to can as much of this fruit as possible in order to save work for their mothers.

A Mothers' day has been planned, which will give each mother a chance to get away from her work for at least one day during the summer, at which time the daughter will have complete charge of the house and preparation of meals for the men folk.

An exhibit will be prepared for the county fair. This will include some of the best articles that have been made by the sewing club, as well as some of the canned fruit and vegetables.

Each member has resolved to bring herself up to normal weight by fair time. An outing to Pacific beach has been planned, which will take place some time during the summer. Officers of the club are as follows: Mary Evers, president; Margarite Curle, vice pres.; Phillis Bryant, secretary, and Genevieve Curle, club leader.—R. E.

Slay Jack Rabbits by Thousands

A total of 683,800 jackrabbits killed is reported by the biological survey of the United States department of agriculture as a result of jackrabbit campaigns this spring in Utah, Oregon and Washington. The figures are based on very close counts by farmers and other interested persons and are considered conservative. Probably a great many more rabbits were killed than were actually reported. In the Goose Lake valley, Oregon, while the actual kills of rabbits were not large, the saving of future crops was very important. This is an irrigated district that is coming into heavy production, and the rabbits do a great deal of damage. More than 278,300 rabbits have been destroyed during the Oregon campaigns.

In checking up the central Washington district a total of 155,500 rabbits were reported in six counties as having been killed between November and February. This is the most successful campaign ever conducted in the state.

WANT MORE LIVE STOCK.

St. John, in Whitman county, is awakening to the need of more live stock on the farms and the business men are taking an interest in a movement to remedy the shortage of live stock. A pig club, with 15 boy members, has been organized and brood sows bought for each of the 15 members, who are taking a deep interest in the matter and will strive hard to win prizes that will be offered for the best results. A poultry club is now in process of formation and will be organized soon, and then the matter of increasing the number of dairy cows for the district will be taken up. St. John is preparing to adopt the Idaho farm bureau slogan, "The cow, the pig and the hen," and to secure more of each for the farms surrounding the prosperous town. St. John is the second largest wheat receiving point in that section of the Palouse country, the annual receipts direct from the farms there averaging from 500,000 to 600,000 bushels annually, but the need of more poultry, more hogs and more cows is keenly felt and united efforts will be put forward to secure more of each during the next year or two.

How To Crowd Two Days' Tillage Work Into One

MANY jobs are done on Fordson farms that would not be done if horses were depended upon for power. More thorough seedbed preparation is possible because there is more time available for this important work. Good farming practice demands that stubble be disced immediately after removing the grain from the fields, to return valuable humus to the soil, to make fall plowing easier and to conserve moisture.

The success of the next crop may depend upon this saving of moisture already in the soil. For this work with the Fordson, as well as for cutting up corn stalks, cotton stalks, and for many other jobs, no other implement does as well as the double disc harrow. There is one disc harrow especially built in every feature to work with the Fordson.

Roderick Lean
Automatic Engine Disc Harrow

Made dy Roberick Lean Mfg. Co., Mansfield, Ohio

This tool is operated entirely from the tractor seat, and the angle of the discs changed by the power of the tractor, providing quick and easy adjustment without stopping and with little effort on the part of the tractor operator. The entire harrow may be fully and instantly straightened for wheeling through a wet spot, or over an obstruction, while the tractor is in motion.

Working your ground with the Roderick Lean means working every foot of soil. Double reach bars connecting the rear harrow to the front, make the rear disc blades always cut midway between the cuts of the front blades. They cannot track. The rear section cannot slide down hill on sloping ground.

Because the rear section is flexibly connected to the front, this harrow turns short and works close in field corners. No time is lost at headlands —straightening of gangs for turning is unnecessary. The harrow works at uniform depth its entire width, leaving headlands level and well pulverized.

These and many other features have placed the Roderick Lean Automatic Engine Disc first in the estimation of Fordson owners.

The World Famous Oliver No. 7
On thousands of farms, the world famous Oliver No. 7 has been the plowing partner of the Fordson from the beginning.

The Oliver Two-Way Sulky
Fordson power is available in plowing to the irrigation farmer with the Oliver Two-Way Sulky. Power lift, easy running.

Fordson Disc Plowing
Oliver Fordson special disc plows have set a new standard. They penetrate the toughest soils, yet are light running.

Good Work With Roller Pulverizer
Final Fitting of the seed bed with Fordson power and the roller pulverizer has meant more bushels for many farmers.

Roderick Lean "Cutmore" Mower
Attaches without changes to the Fordson. Power taken direct from driveworm. Makes a one-man outfit with Fordson.

The Amsco Tractor Drill
Tractor speed and accuracy utilized by the Fordson owner with the Amsco special drill. Force feed makes positive planting.

The Amsco Two-Row Cultivator
Cultivating corn is easy for the Fordson farmer with the Amsco Cultivator—special for the Fordson. Made for hard work.

Money-Maker Ensilage Cutter
Fordson silo filling with the Money-Maker done quickly and cheaply. Strength and scientific design give perfect work.

Wood Bros. Individual Thresher
The Wood Individual Humming Bird Thresher and Fordson make short work of threshing. All grain is saved.

The Money-Maker Hay Press
Baling hay with the Fordson and Money Maker baler is an important operation to the farmer with large hay acreage.

Railroads Can Help Build Up Livestock Industry—Page 3

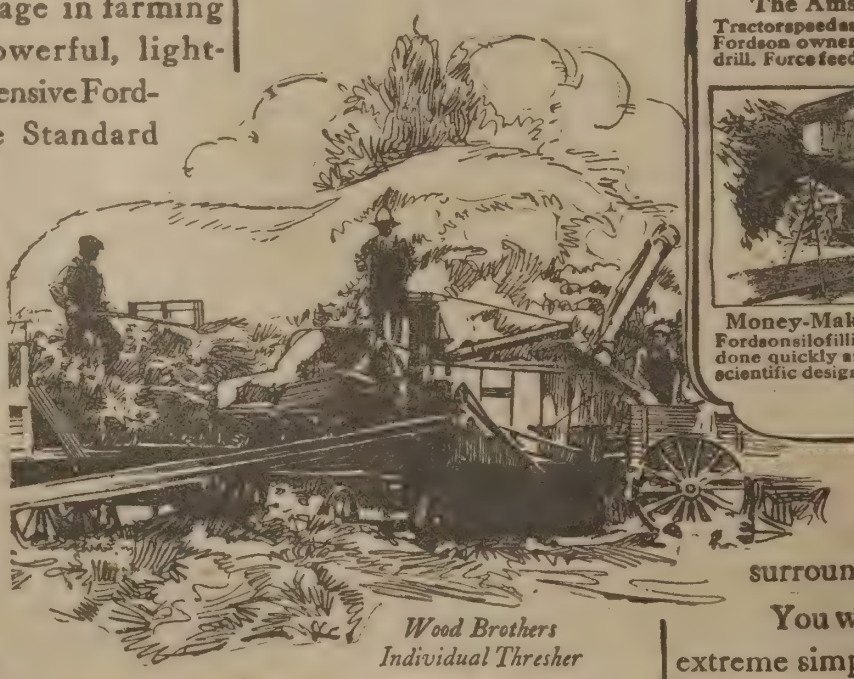
Why We Can Now Have Big Yield Farming

Since oxen tramped out wheat on the threshing floor, no more important invention has been made than the modern thresher that saves all the grain

FARMERS everywhere are rapidly recognizing the new era of farming—the era of Fordson Farming, the era of farming-profit without the toil and drudgery unavoidable when old-fashioned methods were employed. For the farmer of today has come to realize the tremendous advantages now offered him through the use of mechanical power—bigger crops, larger profits, with time for pleasure doubled.

Highly important in the era of Fordson Farming is the Wood Brothers Individual Thresher. For with it, a big yield is assured because *all the grain is saved.*

This big yield feature illustrates what is probably the chief advantage in farming with the powerful, lightweight, inexpensive Fordson and the Standard Equipment that operates so perfectly with it.



Not only does this combination put the soil into the very best of condition, giving the seed an opportunity to produce its utmost, but with Standard Individual threshing equipment, all of the grain is saved thus making the biggest yield.

Saving of grain is dependent upon two things: sufficient power, and a separator that will thresh clean. When grain is once blown into the straw stack, there is no means of recovering it.

Patterned in simplicity after the Fordson itself, and built in large quantities, the Wood Brothers Individual Thresher produces results fully up to the Fordson standard and is sold at a price that any farmer can afford.

Individual Threshing is the coming method because it permits threshing at the time the grain is in its best condition. Thus it all is saved.

At a price only about twice that of the Fordson itself, this separator often earns its own cost the first season by using it to thresh for the surrounding neighbors.

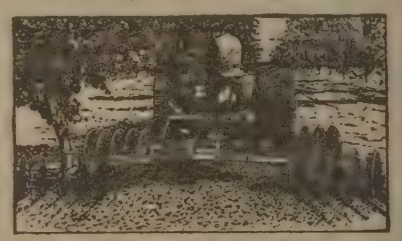
Wood Brothers Individual Thresher

You will understand its extreme simplicity when you know that there are only five belts and every one of these operates in a straight line. Farmers with no experience, use this Individual without any difficulty at all.

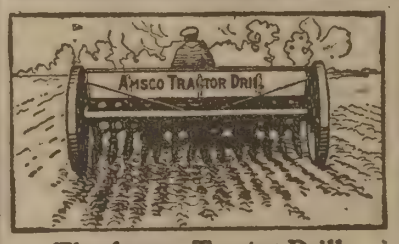
It is guaranteed that even wet straw will not wrap 'round the cylinder, that every Individual will thresh clean.

The World Famous Oliver No. 7
On thousands of farms, the world famous Oliver No. 7 has been the plowing partner of the Fordson from the beginning.

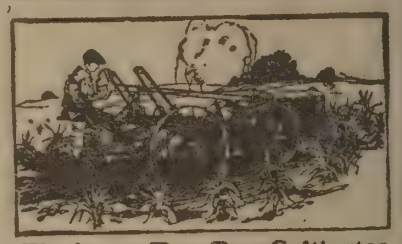
Oliver Single Bottom Sulky
For deep mouldboard plowing in trashy conditions with the Fordson. Similar in construction to world famous No. 7 gang.



Fordson Disc Plowing
Oliver Fordson special disc plows have set a new standard. They penetrate the toughest soils, yet are light running.



Roderick Lean Automatic Harrow
Fitting the Seed Bed the Fordson way with the Roderick Lean Automatic Tractor Disc—a special Fordson Harrow.



Good Work With Roller Pulverizer
Final Fitting of the seed bed with Fordson power and the roller pulverizer has meant more bushels for many farmers.

Roderick Lean Orchard Harrow
Orchard discing with Fordson speed with gangs set in or extended with the Roderick Lean Automatic Orchard Disc.

The Amsco Tractor Drill
Tractor speed and accuracy utilized by the Fordson owner with the Amsco special drill. Force feed makes positive planting.

The Amsco Two-Row Cultivator
Cultivating corn is easy for the Fordson farmer with the Amsco Cultivator—special for the Fordson. Made for hard work.

Money-Maker Ensilage Cutter
Fordson silo filling with the Money-Maker done quickly and cheaply. Strength and scientific design give perfect work.

The Money-Maker Hay Press
Baling hay with the Fordson and Money Maker baler is an important operation to the farmer with large hay acreage.

For Good Farming, Attractive Country Homes and Happy Country People

Railroads Can Help Build Up Live Stock Industry

Build Up the Country in General as Well, by a Broad Policy, Applied Without Favoritism, Making Special Rates on Purebred Breeding Stock

It was one of Poor Richard's maxims that "God helps them that help themselves." George Herbert, English writer, living about 100 years before Benjamin Franklin, also said: "Help thyself and God will help thee."

At any rate, the recently organized Sherwood Live Stock association commands the encouragement and support of those who have the agricultural development of the Pacific northwest at heart. There is a note of inspiration in the way these Ferry county farmers have taken hold of the movement to improve their live stock. Read the following letter from the secretary of this association and you will join with The Washington Farmer in not only wishing them success but in lending a helping hand so far as it may be in your power to do so:

URGENT APPEAL FROM FARMERS' ASSOCIATION

To the Editor of The Washington Farmer: Five other farmers and I, living in the Sherwood valley, west of Boyds, have organized the Sherwood Live Stock association, with the intention of encouraging the breeding of pure blood live stock here in our community. We are all dairymen, clearing our farms on cut-over land, and want to eliminate the scrub sire and dairy cow. We were unanimous in selecting the Brown Swiss cattle breed, and we are intending to buy a registered sire now, and several heifer calves or yearlings as soon as we can dispose of part of our herds of grades.

Now we would like to know if the railroad companies will meet us half way in bringing this pure blood stock into the country, which will be indirectly a benefit to them, or shall we have to pay full freight rates, the same as merchandise. I have been told that Canadian railroads ship pure blood sires free of charge and such a concession, it seems to me, would greatly promote the breeding of pure blood live stock, especially in such a case as ours, where we are selling our cows down to the lowest number that will support out families in order to start with pure bloods. The transportation in our case will amount to something, as there are no Brown Swiss herds closer than 300 miles and no large herds closer than about 1000 miles, so that careful selection may mean a long-distance shipment.

Boyds, Wash. A. J. COULTER.
Secretary.

A copy of the above letter was sent to a number of prominent men who are known to be deeply interested in the growth and prosperity of the Pacific northwest, together with the following note:

"A real problem has been put up to The Washington Farmer. We believe it to be a problem of far-reaching importance. Its importance is not lessened by the fact that it is not a new problem.

"We are enclosing the letter of A. J. Coulter, which we propose soon to publish. Can you help us to answer our correspondent? He deserves a hearing by the best men in the state. It would seem a fine thing to do to help this little association which evidently is doing its best to help itself."

It will be interesting to note that this matter has at least been called to the personal attention of Louis W. Hill, chairman of the board of the Great Northern Railway company, who writes:

To the Editor of The Washington Farmer: Your letter of May 30, together with printed copy of letter from A. J. Coulter of Boyds, Washington, regarding methods for encouraging the breeding of pure-bred live stock in the vicinity of Boyds, Wash.

The question of rates covering movement of such stock is a matter which comes under the jurisdiction of Mr. W. P. Kenney, vice president and director of traffic, and I am therefore referring your letter and the enclosure which accompanied it to him for attention. LOUIS W. HILL.
Great Northern Railway company,
St. Paul, Minn.

RAILROADS ASSERT LEGAL RESTRICTIONS

W. P. Kenney, vice president and director of traffic of the Great Northern Railway company, to whom Louis W. Hill referred the Coulter letter, writes:

To the Editor of The Washington Farmer: Mr. A. J. Coulter, in his letter, comments on the fact that the Canadian lines are handling such stock for breeding purposes free of charges and suggests that it would be a very desirable thing for the American railroads to take similar action.

I am calling your attention to the fact that the legal restrictions as to such action are very different in the United States to what they are in Canada. We are prevented by law from making free rates on shipments of this character. Any rate below the regular rate which we felt should be made would have to be taken care of by published tariff—thereby making it a legal rate for all parties desiring to make use of it.

The Great Northern is, of course, very much interested in the proper building up of the dairy herds along its line, but we have not felt under present conditions that we would be justified in attempting to handle these shipments at less than the present tariff rates.

I am calling your attention to the fact that shipments of purebred live stock, on account of their high value, impose considerable liability on the carrier, and at the same time require special attention while in transit, as they are not—as a rule—accompanied by attendants. In addition to this it has been found impracticable to load other freight in the same car with animals. When all these conditions are taken into consideration it has seemed to us that the present rates are reasonable and just.

St. Paul, Minn. W. P. KENNEY.

EMERGENCY CASES HANDLED BY STATE

F. W. Graham, the writer of the following letter, is assistant general agricultural agent of the Great Northern Railway company:

To the Editor of The Washington Farmer: Referring to your letter of the 30th ult., with enclosure regarding a free or reduced rate on purebred live stock which Mr. A. J. Coulter of Boyds, Wash., wrote you about.

We did make a reduced rate for many years for the purpose of improving the live stock. This was back in the lifetime of Mr. J. J. Hill, who imported a large number of blooded sires and distributed them in Great Northern territory. We were obliged, however, to abandon this concession when the stringent laws governing the railroads became apparent. We could not defend a lower rate on high grade cattle than is applied on ordinary cattle. We are not permitted to publish a reduced rate under the present regulations excepting to departments of a city, state, or federal government, and in such cases the freight charges must be paid by the said governments. Where individual shipments are involved we can not discriminate. Neither can we publish rates of a class kind or contingent on some particular use.

Occasionally where emergencies have arisen in the past we have published half rates on hay, on account of droughts, but these cases were handled by the state.

We used to have half rates on seed and seed grain, but could not carry them any longer, as we can not make any discrimination as to the use to which a commodity or article is put. In other words, coal is coal, lumber is lumber, grain is grain, apples are apples, and by the same token live stock is live stock.

I appreciate the desire of Mr. Coulter and his associates to improve the quality of their live stock, and there are many other communities throughout the northwest who are working toward the same objective. Conditions, however, have so changed, and as much as we might like to, it would not be possible for us to make any rate reductions in this or any similar cases. F. W. GRAHAM.
Seattle, Wash.

It appears that an appeal had already been made to Ira Inman, secretary and treasurer of the Brown Swiss Cattle Breeders' association, by Mr. Coulter himself:

To the Editor of The Washington Farmer: We have your letter of the 30th in regard to letter written to your paper by Mr. A. J. Coulter of Boyds, Wash. Mr. Coulter has written to us and we assured him that we would be very glad to do anything that we could to assist the new organization of breeders. The point of shipping which he speaks of is surely a very important one, as there are few herds of Brown Swiss in his locality, and we would be very glad to see the organization get a good deal from the railroads.

We will keep these breeders in mind and perhaps may be able to locate some cattle nearer them within a month or so. IRA INMAN.
Beloit, Wis.

JIM McCROSKEY SAYS IT'S ONLY AN EXCUSE

James H. McCroskey, the well-known Lincoln county stockman and who, with his sons, are the proprietors of Meadow Lake stock farm, writes:

To the Editor of The Washington Farmer: Yours regarding the Coulter letter received. The high freight and express rates charged by the transportation companies have always been one of our chief obstacles in distributing purebred cattle. We have tried in vain to show the companies it would in the end be a great benefit not only to the breeder, but themselves, to distribute purebred sires in their respective neighborhoods at half price. Now they claim the commission will not allow them to discriminate in favor of live stock, which I think is only an excuse. I believe the fact should be brought before the commission and insist on a reduction.

The financial stringency has about killed the purebred business and something must be done to relieve the situation. In reviewing the situation I find very nearly as many scrub sires used now as ever in the history of the state.

You know I have spent the most of my life working and talking for better stock, but I'll have to admit now that I've almost bucked a stone wall. A few obstacles I'll enumerate to you—high transportation, high rates of interest charged stockmen, 2 to 3 per cent more than any other business, as well as short loans; freaky health laws to be enforced by ignorant vets.

Now the finances should have been relieved by the war finance loans, but how can stockmen expect relief from that source when administered by the same bankers that have charged us high rates and wish still to charge high rates? Take it onto yourself to ask a committee of, say, three or five men to go personally before the rail-

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Regional Farm Headquarters

The seriousness of a fruit pest was being discussed by the agricultural bureau of the Spokane Chamber of Commerce.

An appeal was made for greater research work in determining the best methods of controlling the pest. After the discussion had proceeded apace, one man arose, saying that recently he was talking with a scientist on a 1400-acre orchard in western Montana where the control of the same pest had been under investigation; that he spent an evening with the scientist, who gave him details and figures showing the wide range of experiments made and those that had proved most successful in controlling the pest.

Leaving the meeting, a member of the committee said, "That again brings up the importance of a clearing house of farm information for the Pacific northwestern states."

It is becoming more and more evident that regional investigation and a regional clearing house of farm information must come sooner or later.

Value of Good Paint

The Dutch have an old proverb which says: "Good paint costs nothing, for it saves more than it costs." Painting one's buildings is an investment. It insures against depreciation and rotting.

Paints have been high during the last few years, but are now reported down to about a normal basis. There are many brands of paint on the market and to the consumer all paints look about alike. It is only when the paint has been applied to a building for four or five years that the quality is demonstrated. See that you get the brands of paint that have a standardized value.

Paints are not new. From the days of the pyramids to the present is a long period, yet in those far-off days, as at present, paints were used for beautifying and preserving the objects which they covered.

Federal Food Inspection Service

The latest figures give evidence of the growing popularity of the food products inspection service of the U. S. department of agriculture.

The inspections now cover 75 different fruits and vegetables. During the 10 months ended May 30, 1920, 20,746 inspections of fruits and vegetable shipments were made; in 1921 there were 19,316 inspections, and in 1922 there were 24,986 inspections. Potatoes and apples are the two principal commodities inspected; 6524 shipments of potatoes being inspected during the last 10 months, and 4761 shipments of apples. Butter inspections at five markets last year totaled 3649, and the preceding year 1881.

In the past the service has been restricted to products in interstate commerce and markets specially designated by the secretary of agriculture. Beginning July 1, the interstate restriction will be removed, provision for inspection being made "at points which may be conveniently reached from designated markets." Also, in accordance with provisions in recent appropration bills, efforts are now being made to cooperate in inspection at shipping points with state officials in states that have well organized shipping point inspection organizations.

Big-Mindedness and Big-Heartedness Are Needed

According to a survey recently made by Harry Thompson, agricultural engineer, the total area of logged-off land in the state of Washington approximates 4,603,450 acres, of which 3,974,250 are in western Washington.

This is the report made public by D. A. Scott, state director of conservation and development. Mr. Scott believes that the logged-off land investigations and the future should be along lines to determine, first, the cost and methods of clearing these lands, and, second, the income from the farms already developed on the soil types of the uplands.

Logged-off land is found in every county in western Washington and in six counties of eastern Washington.

The report continues, that dairying is the type of farming most frequently found on logged-off lands, although poultry and fruit farms are numerous. The principal crops are hay, oats and potatoes. Small fruits, strawberries, blackberries and other bush fruits are grown on the fruit farms. Farmers on the uplands estimate that prewar average cost of clearing land to be $150 an acre.

"So far, poultry farming has proved the most profitable on the logged-off hill lands," says the report.

In the six counties of eastern Washington—Klickitat, Pend Oreille, Skamania, Spokane, Stevens and Kittitas—there are 629,200 acres of cutover lands, of which 188,000 acres are suitable for agriculture and 425,200 for grazing.

Three great farm problems are being attacked by the people of this state—irrigation, drainage and cutover lands—and the problem of settling them is surely as big as that of preparing these lands for settlement.

Big-heartedness as well as big-mindedness is needed in the successful solution of these great problems.

LOOKING INTO OTHER FARM FIELDS

Salisbury, Md., will ship over 1000 cars of cantaloupes this season, starting about August 10.

* * *

Onley, Va., has shipped 375 solid cars of strawberries this season, which netted growers over $500,000.

* * *

"There is only one important canned milk factory in France, and it is not likely that that country will become an important producer in the near future. The French prefer to devote surplus fresh milk to cheese and butter making.

* * *

With an estimated planting of 20,000 acres, it now appears that the shipments of white potatoes from South Carolina will fill 4000 to 4500 cars. Last year only 9000 acres were planted, and about 2500 carloads were shipped from that section.

* * *

Reports were received from France the early part of the week and have since been verified that the crop of French prunes this year will be almost a total failure. Last year the production was over 15,000,000 pounds and this year, on account of the recent damage, they do not expect to have over 2,500,000 pounds.

* * *

Another record breaking year for the deciduous fruit industry of California, with shipments totaling over 50,000 cars, is expected. Some officials expect 55,000 cars, and no estimates of less than 50,000 cars have been spoken of. Last year 40,420 cars were sent east. In 1921 35,420 cars were shipped, and in 1920 shipments were 26,121 cars.

* * *

Rhode Island and Connecticut report no large settings of apple trees beyond what is needed to replace old ones and perhaps a small gain. Apparently the best selling early and fall varieties and Baldwins are the ones mostly set. These include McIntosh, Wealthy and others that have proved their commercial value.

State Farm News

A 520-acre tract of splendid timber, 12 miles south of Chehalis on the Pacific highway and near its junction with the National Parks highway, probably will be set aside for state park purposes, as the result of an inspection of the property by several members of the state park board. The tract is almost ideally located for park and tourist purposes, is well watered, and is said to contain the finest body of standing timber along the highway. In the inspection party was W. P. Bonney, secretary of the state historical society, who visited also the old courthouse where civil life in Lewis county began, and made some plans for its development. The courthouse is very close to the proposed park site, and readers of The Washington Farmer may recall that a photograph of the old log building appeared as a cover picture several months ago.

* * *

The Mount Adams creamery plant has been opened at White Salmon by a company formed of George A. Read, Roy L. Heaman and Ira E. Hyde, all White Salmon business men. A 900-pound-capacity churn has been installed and a modern refrigerating room has been built.

* * *

A number of dairymen of the Pleasant valley, Salmon creek and Baker districts, south of Ridgefield, held a meeting recently at the Salmon Creek schoolhouse for the purpose of organizing a chapter of the Battle Ground Dairymen's union, which resulted in the election of the following to head the Salmon Creek union: George Goddard, president; Mrs. William Steward, vice president; Mrs. B. A. Bowdler, secretary; H. P. Hanson, treasurer. Other officers chosen include: Mrs. A. Olsen, lecturer; E. P. Miller, master-at-arms; M. H. Anderson, guard; C. Hutchins and B. A. Mowdler, councilmen.

* * *

B. E. Gregory has sold his 10-acre orchard on Pogue flat, two miles north of Okanogan, to Otto Newman of Wenatchee for $12,000. The tract is set to commercial varieties of apples, the trees being 12 years old. There is an overcrop of alfalfa.

* * *

The fruit crop in western Washington is threatened by an invasion of the tent caterpillar, which is doing a large amount of damage, according to telephone advices received at the state department of agriculture from state horticulturists in the field. On Vashon island, where the season is earlier than on the mainland, the caterpillars are reported to have cleaned foliage off many fruit trees and are attacking the gooseberries and currant bushes.

* * *

That grain warehouse rates should not exceed 75 cents a ton for handling charges and 5 cents a ton per month for storage was the sentiment of the 150 farmers attending the tri-county union meeting at Pomeroy recently.

* * *

A group of project leaders of the Spokane county farm bureau have agreed to help conduct a fly campaign this summer. This will consist of an attempt to gain concerted action in the treatment of breeding places, the construction and use of fly traps and finally the persistent use of the swatter.

* * *

Christen Brothers of Frances, extensively engaged at dairying, have taken up chickens, beginning with a lot of 500 day-old chicks.

* * *

June 24 has been set as the date of the annual Cowlitz valley cheese carnival given at Toledo by the highly successful cooperative cheese factory there. It is expected that President E. O. Holland of Washington State college will be the principal speaker on the elaborate program which is being prepared.

* * *

The Grays Harbor county fair will be held this year September 3 to September 6 at Elma.

* * *

Plans to ship in three large cars of binder twine, which will cost but $11.10 a hundred, as compared to $15.14 a hundred, paid last year by the Spokane county farm bureau members, were made at a recent meeting of the board of directors. The bureau will order 120,000 pounds.

* * *

Dan W. Bush, who will operate the Lewis county cannery this year, has signed contracts for beans and pumpkins for this year's packing. A large quantity of Burpee stringless greenpod beans will be canned.

* * *

The Washington Berry Growers' association is building two new refrigerating rooms at their shipping station at the Northern Pacific station at Sumner, doubling the capacity of the pre-cooling plant, which was built last season. Their cannery, near the Milwaukee station, has been completely renovated and it is expected will begin operation in two weeks. The association has more than 500 members, with a daily increasing roll.

* * *

Franklin county will hold its first county fair next fall. The people of Connell had the initiative, and citizens of that part of the county have obtained grounds and organized a fair association. The county commissioners have appropriated $2500 toward the erection of buildings.

* * *

In spite of a salary cut from $3000 to $2500 per year, A. W. Kasten will remain at his post as head of the agricultural department of Walla Walla high school. He returned his contract when the salary was cut to $2400, but reconsidered when urged to do so by the county farm bureau. Mr. Kasten is one of the most successful Smith-Hughes teachers in the state. He has occupied his present position several years. The farm bureau of Umatilla county, Oregon, likewise took a hand in affairs when Fred L. Bennion, county agent there since 1919, was offered a five-year contract at $5000 per year as director of athletics and head of the department of economics and marketing at Montana Agricultural college. They insisted upon assurance from the county court that Bennion would be retained for one year, at least, at his present salary of $4250.

Coming Events of Interest

June 21-23—30th annual pioneer picnic, Elberton.
June 21-25—Chautauqua, Pullman.
June 26—Pioneer picnic, Woodland.
June 28—Demonstration day, experiment station, Lind.
July 12—Demonstration day, experiment station, Prosser.
July 24-Aug. 5—Live stock tour, Vancouver to Bellingham.
July 26-27—International apple shippers, Seattle.
July 27-28—Whatcom Guernsey gallop, Bellingham.

FARM BUSINESS AND MARKETS OUTLOOK

Handsome Margins for Feeders

Every factor in the cattle trade at present is in a state of health. The eastern dressed beef market is advancing, reflecting improved public buying power, hide prices are higher, eastern slaughterers are buying in the middle west and operations of exporters are only restricted by the fact that steer prices are a trifle out of their range.

The corn belt harbors a limited number of feeders who specialize in the production of long-fed steers for the early summer market. Cattle from such feed lots are now on top. Most of them have been money makers, with margins between cost as feeders and final selling price ranging from $2.50 to $3.50.

At last the steer market is showing returns more comparable with those obtained by lamb and hog feeders. A top of $9.75 has been reached at Chicago and an advance to $10.50 for grain fed steers within three months looks probable.

Further advances on lower grades of beef steers are not so probable. The movement of stockers and feeders from the 12 leading markets to the seven principal feeding states in the first four months of 1922 totaled 665,000 head compared with 500,000 head in the same period a year ago, and 575,000 head two years ago. These figures do not indicate a shortage. Steers have been an attractive vehicle with which to market the huge corn crop.

The Arizona crop of beef, the only state upon which an official forecast has been made, is estimated at 103,000 head compared with 94,000 head last year and 86,000 two years ago. More steers were shipped into Kansas and Oklahoma in the last two months than during the same period of either of the last two years. Private estimates upon the supply to come from the northern range states point to a decrease under last year.

Grass beef is not yet an important factor, but most cows and heifers demonstrate that diet; south Texas is beginning to forward grass steers to Fort Worth, and dressed beef markets report a larger percentage of common and medium carcasses, many of them showing a grass finish.

Interest in Stockers Not Appeased

The buoyant fat steer market, together with confidence restored in the future of the cattle industry revived interest in stock steers and breeding cows after it had died down in May. Suitable kinds are scarce and priced too high to look safe, especially with the season just ahead when a sharp drop in values generally occurs. The breadth of interest and scarcity, however, may prevent as severe a decline in midsummer as usual.

Higher Hog Prices Ahead

The June run of hogs has been absorbed without average prices at Chicago dropping as low as $10 at any time. The market has been repeatedly halted whenever prices reached a top of $11 in the last month, but declines below that point have not been severe and probably the next time the line is reached it will be crossed.

Within 30 days receipts of hogs should begin to decrease. Weekly runs at the leading markets may drop as much as 40 per cent or more below the present level before the fall increase begins so that an advance of $1 to $1.50 appears reasonably certain. Packing sows and heavy barrows will not advance as much as butcher and bacon grades, but can easily sell higher than at present.

Lamb Prices Trending Lower

The trend in lamb prices continues downward although there are occasional temporary halting places. The southeastern crop will be moving for two or three weeks longer, and the number of corn belt lambs waxes weekly. Range lambs will not become numerous until late July so that temporary bare spots may develop in the meantime, but it is quite unlikely that lowest prices have yet been seen as the period of heaviest receipts has not been reached.

Buying of feeding lambs and breeding ewes is exceptionally heavy for this time of the year. It is reasonable to expect better bargains, especially in feeders, and a more choice selection a little later on.

With virtually all the wool in the Pacific northwest already sold and a good lamb market assured when the 1922 crop is ready for the block in the early fall, sheep of the territory will pay dividends this year of approximately $60,000,000, according to estimates of sheepmen. The 1922 wool clip is estimated at 22,000,000 pounds for Idaho; 15,000,000 pounds for Montana; 15,000,000 for Oregon and between 4,000,000 and 5,000,000 pounds for Washington.

Averaging eight pounds to a fleece this represents approximately 6,800,000 sheep.

Sheepmen expect that lambs ready for the market this year will be worth about $7, or $42,000,000 for the total production.

Washington wool has sold this year at from 18 to 35 cents a pound, the top price last season at this time being 18 cents and many sales being made at from 11 to 14 cents. Fall sales last year ran from 22 to 24 cents.

Prices vary in the western states. Montana growers this year are getting from 25 to 41 3-8 cents per pound; Idaho from 25 to 35 cents and Oregon from 25 to 40 cents. With a total production of around 55,000,000 pounds and averaging the price at slightly above 30 cents, the value of the wool clip is put at close to $18,000,000. It is estimated that 90 per cent of all northwestern wool is now in the hands of dealers.

The lambs are on the forest ranges. The Washington Wool Growers' association has sold between 4,000,000 and 5,000,000 pounds of wool. The members are enjoying a lower freight to Boston, the Spokane rate being $2.35, as against $2.76 last year, and the Yakima valley rate, applying on the bulk of the state production, $1.99, as against $2.39 a year ago.

Grain Crops Exceed Last Year

The official forecast upon the wheat crop confirmed private estimates of a yield of 855,000,000 bushels of winter and spring compared with 795,000,000 bushels harvested last year and an average of 799,000,000 bushels in the five years, 1916 to 1920.

Cutting of wheat has started in Oklahoma, Kansas, southern Missouri, Illinois and Indiana so that a large area is past the danger point. As the harvest season is reached, however, reports indicate that the crop in Kansas and Oklahoma which was delayed by drought up until March, has not headed as well as the growth of straw promised and recent hot weather has caused some premature ripening. Early threshing returns from Texas have been disappointing. The spring wheat states had rains recently, but they can be severely damaged still by drought and there is some apprehension of a black rust scare.

Wool Market Remains Firm

Although the wool market is nervous with much talk of a possible reaction on the part of buyers, prices have been quite firm both at seaboard markets and in the country. The finer grades appear to be especially scarce. Prices in some cases are said to be up to the level of the rates in the senate tariff bill, but they are not yet up to the emergency tariff which is the measuring stick until the permanent tariff bill is nearer enactment. Foreign markets have been a little easier in the last few days, with declines of 5 per cent reported at London and Sidney. Prices at country points in many cases are above a parity with Boston.

Horse Buyers Want Specialties

Choice draft horses are sought for rather actively and lumber companies have been in the market for hairy legged horses to be used in logging camps. Rugged workers suitable for city teaming and a few wagon horses sell fairly well. Demand for farm chunks is practically nil.

Chicago—Good and choice heavy drafters, $175@275; common and medium drafters, $110@185; good and choice wagon horses, $110@150; common and medium wagon horses, $60@110; farm chunks, $50@135.

Wheat Buyers' Indifferent

Both mills and exporters continue to be indifferent buyers of wheat. Mills are grinding about the average amount for this season of the year, but this normally is a dull season. New wheat is a little more desirable for milling so that there is but little incentive to accumulate reserves of old wheat, especially with the market declining. A little wheat is being sold for export from time to time, but amounts are small and European buyers have been reselling a good deal notwithstanding the general belief that Europe must draw heavily upon the United States during the last half of the year.

Growers are contracting to sell some new wheat, but such advance sales have been few whenever they netted the producer less than $1 at his loading point in the middle west, a price which necessitates about $1.15 at Chicago.

In view of recent events, the wheat market may sag a little lower, but if export develops later on as expected, prices are not far from their probable low point.

Coarse Grains Scratching Bottom

Corn prices have been on a low level, but there is a belief that they discount all bearish factors and that changes will be for the better. Corn fed to live stock, including dairy cattle and poultry, has netted in many cases two or three times as much as when sold as grain, so that farm disappearance has been heavy. The big crop and carryover have furnished enormous shipments to primary markets also, but domestic and export outlets have prevented any unusual accumulation at terminals. The after-planting run is practically completed. The new crop prospect is none too good. Corn prices easy; could have an advance of 10 to 20 per cent before summer is over.

The rye crop was estimated at 81,000,000 bushels which is 40 per cent more than last year and nearly 20 per cent over the average of the previous five years.

The oats crop estimate was 1,305,000,000 bushels. This is slightly larger than expected in view of previous reports of its low condition. Since the crop is late, cool weather will be necessary to prevent heavy deterioration. Some sections already report that the crop is heading out late. Last year's harvest was 1,061,000,000 bushels and the average of the preceding five years was 1,413,000,000 bushels.

The visible supply of old crop oats is about three times the average for this season of the year and prevents the oats market from scoring any pronounced advance. The carryover in commercial channels when new oats begin to move is sure to be heavy.

The barley crop estimate at 191,000,000 bushels is 40,000,000 bushels more than last year, but 6,000,000 bushels less than the average for the five years, 1916 to 1920.

Cash Grain Markets

The range of cash grain prices for the week ending June 14 was:

Chicago—Wheat—No. 2 hard, $1.14@1.18. Corn—No. 2 mixed, 59 1-2@61 3-4c; No. 3, 58 1-2@61 1-2c; No. 4, 57 1-4@60c; No. 2 yellow, 60@62 1-2c; No. 3, 58 3-4@61 1-2c; No. 4, 57 1-4@60 1-2c; No. 2 white, 60@62c; No. 3, 59@61 1-2c; No. 4, 57 1-2@60c. Oats—No. 2 white, 35 1-4@41 1-2c; No. 3, 33 3-4@39 1-2c; No. 4, 33@37 1-4c. Rye—86 1-2@93c. Barley—55@69c.

Selling pressure has been reduced in the market for wheat feeds, but demand is limited and prices have advanced but little. A still lower market would not be surprising later on when mills begin grinding the new crop of wheat. Demand for other feeds also is slight.

Prices per ton (100 pound bags) in carlots—Chicago—Bran, $18.50; standard middlings, $20.25; flour middlings, $24.50; cottonseed meal, 36 per cent, $47; 43 per cent, $51; hominy feed, $24; gluten feed, $32.85; old process oil meal, $50.50; tankage, $50.

Hay Crop Looks Heavy

The hay crop, according to the government's June 1 estimate, will be 106,000,000 tons compared with an average of 101,000,000 tons in the preceding six years. Condition of pastures on that date was placed at 93.8 per cent compared with a 10-year average of 91 per cent. With increased receipts and slow demand, hay prices have been working a little lower recently.

Prices per ton in carlots—Chicago No. 1 timothy, $22@24; standard No. 2, $19@21; No. 3, $15@18; No. 1 light clover mixed, $20@22; No. 1 clover, $16@18; No. 1 clover mixed, $17@19; alfalfa, $14@24; upland prairie, $13@18; midland prairie, $13@16; rye straw, $16@17; oat and wheat straw, $12@14.

Egg Market Declines

Egg prices held at about the same level for 60 days, but the accumulation in cold storage has become so large that doubt has been aroused as to the possibility of merchandising it to advantage during the coming fall and winter and prices have sagged. No drastic break is expected, however, and fresh egg prices will recover later on from any loss.

Heavy Butter Storage Under Way

The movement of butter into cold storage at the four leading cities in the last 10 days averaged over 1,000,000 pounds per day. Prices are about 10 per cent higher than during the storing season a year ago, but the prospect of a broad demand during the fall and winter has induced operators to buy rather freely. Receipts at the leading markets during the past week promised to set a new record at least so far as the last three years are concerned. Demand for butter scoring 90 or better has been active, but lower grades moved slowly. The market has been slightly nervous with prices a little lower at the close. They are likely to hold within a limited range for the next month or two.

Prices on 92 score fresh butter on June 14 yere:

Chicago, 35c; New York, 36 1-2c; Boston, 37c; Philadelphia, 37c.

Cheese Markets Soft

Cheese prices at distributing markets are materially higher than a year ago. The cheese arriving is showing full grass flavor and is excellent for storing. Some storing is going on, although the net accumulation is still comparatively light, comprising only about 20 per cent of the receipts.

Potato Prices Hold

Potato prices have held most of the recent advance. Shipments are comparatively heavy, but below the average of the last 12 months. Old potatoes composed about 25 per cent of the supply, but they will be off the market by the middle of July. The early crop in the intermediate states was estimated on June 1 at 20,672 cars, an increase of 1700 cars over last year. Northern whites are quoted at $1.75 to $2 per 100 pounds in the Chicago carlot market.

Fruit Crops Generous

The apple crop was estimated at 180,000,000 bushels on June 1 compared with 97,000,000 bushels harvested last year and an average yield of 179,000,000 bushels in the five years, 1916 to 1920. The peach crop was estimated at 54,000,000 bushels against 33,000,000 bushels last year and a five-year average of 44,000,000 bushels.

		The Bedtime Story	18

Sheep Market Jargon

Like all the rest, the sheep market has a little language all its own. For example:

"Mutton Sheep" are mature ewes and wethers fat enough for slaughter.

"Choppers" are aged ewes which are not fat, but in medium flesh, whose carcasses, presumably, are good enough to produce mutton chops.

"Docked Lambs" have had their tails cut off. Those which have not been docked generally come to market with tails badly gummed up, a condition which hurts the sale. Docking is universal on the range, but corn-belt farmers often neglect the operation, which is one reason why range lambs generally outsell natives.

"Peewees" are small, unfinished lambs often thrown out of loads of fat lambs. Many of them are late born lambs.

"Hothouse Lambs" are those born during the fall or winter so that they can be marketed while still quite young anywhere from Christmas time to Easter. They seldom come upon the open market, but are farm dressed and sold direct to hotels and restaurants.

"Spring Lambs" are those born in the spring and sold in the regular way. After June 15 or July 1 the term "spring" is generally dropped.

"Aged Lambs" are those born in the spring of the previous year, but marketed after "spring" lambs are available. They are classed as yearlings on most markets after June 15 or July 1.

"Montanas," "Wyomings," and "Idahos" are names indicating the state of origin. "Mexicans" come originally from Mexico or New Mexico, but generally they have been fattened in Colorado or an adjacent state. They are not good mutton types, but are high dressers and sell exceptionally well.

"Light Lambs" are those weighing around 75 pounds or less. "Handyweights" are those weighing 75 to 85 pounds.

"Break Joint" is not a true joint, but in dressing the carcass of lambs and most wethers less than 2 years old the leg can be broken at a point about a half inch above the pastern joint. The "break joint" has a sawtooth appearance and the housewife who can recognize it can make sure that she is not given mutton when she asks for lamb. Naturally the leg is broken in this way whenever possible. A "breaker end" refers to a small part of a load of mature sheep which probably can be made to show this sign of youth.

LIVESTOCK AND DAIRY

Pasteurizing Milk

By WINIFRED MITCHELL.

Milk for ordinary uses and for infants and children may be successfully pasteurized on the farm. It is not hard to do and requires but little equipment. A deep pail with a perforated false bottom is the best utensil in which to heat the milk. An inverted pie tin with a few holes punched in it makes a very good false bottom. A good thermometer is also needed. Milk is very easily pasteurized in bottles. Fill the bottles almost to the top with the milk and place the covers on, punching a hole in one of them for inserting the thermometer. Set the milk in the pail and fill with cold water nearly to the level of the milk and heat until the thermometer registers 145 degrees F. Remove the pail from the flame, allowing the milk to remain in it for 30 minutes, replacing if necessary to maintain the temperature of 145 degrees F. Next replace the hot water with cold, gradually, until the temperature of the milk is down to 50 degrees, using ice water if necessary. Place it in a refrigerator and keep at that temperature or less.

Milk is a dangerous carrier of disease germs. Serious epidemics have been traced to the milk of one farm. Among those diseases which may be spread by milk are scarlet fever, typhoid fever and diphtheria. The bacteria causing these diseases may enter the milk from contaminated water used in washing milk utensils or from persons handling the milk who have been exposed to the disease or who carry the germs in their own bodies.

Pasteurizing kills about 90 per cent of the milk germs.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

INFECTIOUS DISEASES—Article XII.

Forage Poisoning.

Under the above name is listed those disturbances that occur in animals from eating spoiled foods or foods that contain an organism that causes a severe general systemic disturbance. It was previously supposed that the foods causing this trouble were always moldy or spoiled in appearance, but we have more recent evidence to indicate that the cause is in most cases an organism that lives well on moldy hay or grain, but one that may also live on feeds that to the eye may appear quite normal. For this reason the matter is beginning to clear up somewhat, when we realize that where the trouble is found it is not necessarily associated with the visibly spoiled feeds.

The greatest losses probably have occurred in localities where the animals were required to eat spoiled stuff, as in the cases that occurred several years ago in the middle west where the trouble was due to eating spoiled fodder. In that particular outbreak the losses were particularly severe. It is true that animals may eat moldy and spoiled foods and not suffer, as they frequently do, but it is equally true that they may suffer serious consequences as a result. It is impossible to tell by looking at the hay or grain whether it will injure the animals or not. I have seen typical cases of this trouble that resulted from eating grain that to the eye appeared good and wholesome, unless it was for a very small lump here and there that had been wet at some previous time. The animals may get sick from this disease while on pasture that has passed through the fall rains and frosts or from feeding at old strawstacks or from any moldy or spoiled foods particularly. The trouble can usually be traced to something of this kind, though not always.

Animals Become Unsteady.

The symptoms that are common are for the animals to first show a certain unsteadiness of gait, frequently in the hind limbs first. They may have difficulty in rising after they have been down, but after being assisted to their feet they may be able to get around in a rather uncertain fashion. As the disease advances this unsteadiness or weakness becomes more pronounced and the animals are unable to rise or even stand after being assisted to the standing position. They lie in a normal position and appear to want food, but are frequently unable to swallow, not only solid foods, but liquids as well. They may put the nose into the water and appear to drink, but the water does not go out of the pail, as there is a paralysis of the throat as well as the other parts of the body and they are unable to take any nourishment whatever. After such a course the animals usually die, though some of the milder cases recover. However, if the case is so severe that the animal can not rise the chances are not good. This is especially true in horses.

Prevent Rather Than Cure.

The treatment of this disease is mainly in its prevention and the source of the trouble must be located. This is best accomplished by one who is accustomed to dealing with the disease and who knows the most likely place to look for the source of the trouble, as it is sometimes obscure. Preventive treatment by vaccination is now recommended and some good results have been reported by its use. In this connection the veterinarian will be of great value in its application. It is probably too early to give unqualified approval of this treatment since it has not been time tested, but it is worthy of earnest consideration.

Some feeds that are harmful for horses can be fed to cattle without producing the disease as the cattle are not such frequent suffers, though in all cases it would not be wise to recommend its use extensively. When the trouble has occurred it is frequently necessary to completely change the feeds that the animals are getting, or at least that part that appears spoiled if such can be located. Your veterinarian's advice in such outbreaks is of greatest value and may save many hundreds of dollars' worth of animals. This disease is actually very serious, as when it occurs the losses are usually not single, but dozens are frequently laid to rest from its ravages.

VETERINARY

By DR. S. B. NELSON.

Horse Tonic.—I have an old mare that does not seem well. She was all right this winter when kept in the barn and fed hay and oats. Since turning her out on grass she will not eat hay or oats. There is always noise in her stomach and she is getting thin. E. H.

Anacortes, Wash.

I am going to suggest that you give your horse a tonic composed of one dram of powdered iron sulphate, five grains of powdered nux vomica, two drams of powdered ginger, four drams of powdered gentian and two drams of powdered fenugreek seed. Give this once daily for about 30 days.

Swelling on Back.—I have a heifer that got a swelling on her back two weeks after freshening. The swelling broke and a white substance runs from it. She does not seem to be sick or lame. R. J. K.

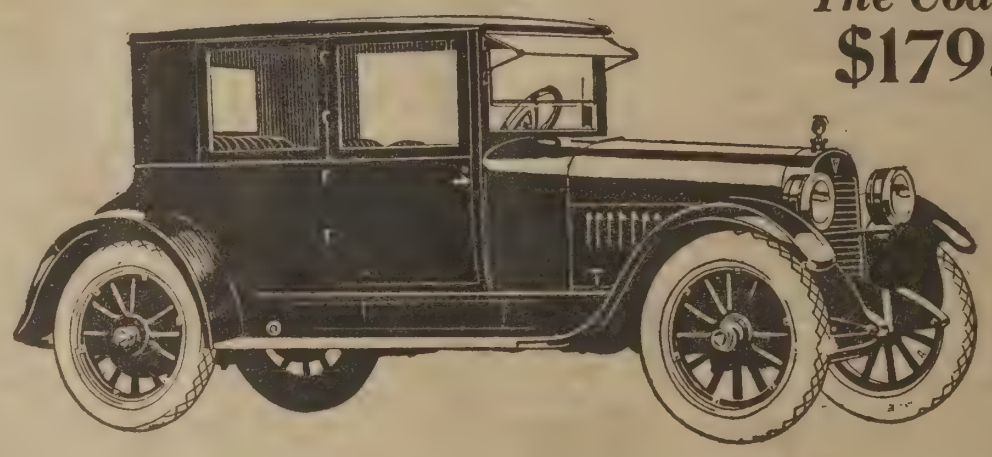
Mineral, Wash.

I am going to suggest that you lance the swelling over the back at its lowest point. Wash it out daily with equal parts of peroxide of hydrogen and water. Use just a little and let it foam out and then wash out the wound with a 2 per cent solution of creolin.

Stunting Horns.—Please tell me how to stop the growth of horns on our 2-month-old calf. F. N. S.

Selah, Wash.

It is difficult to remove the horns from a 2-month-old calf so as to do a nice piece of work. It is better to wait until she is 8 or 10 months old and then remove them with the clippers. In the young animal you can often well remove the horns through the means of caustic applied when the nubs begin to appear when the calf is 3 to 5 days old.



Nose Discharge.—Can a horse be cured of a continued discharge from the nose? C. Y. C.

Madras, Ore.

Whether a horse can be cured that has a continual chronic discharge from the nose depends entirely upon the cause of it. This may be caused from the animal being affected with glanders; it may be caused from a chronic catarrh, or it may be caused from infection of the sinuses of

(Continued on page nineteen.)

HUDSON

The Coach
$1795

Has the Wonderful New Hudson Motor

This beautiful closed car is the most attractive value ever offered by Hudson.

See how fully it meets your closed car requirements at a saving of perhaps $800 to $1500. Think of a closed car on the famous Super-Six chassis for $1795.

Hudson's Greatest Value

It is less than 6 per cent above the cost of the Hudson open models. It is the lowest differential between open and closed cars ever attained.

It is a sensational achievement in car manufacture.

And now it adds a new and greater motor. Even Hudson owners marvel at the change. Performance is wholly altered—smoother, quieter, more reliable.

Order Now to Insure Prompt Delivery

The Coach is certain to be the most popular type Hudson ever built. Be sure to see it and take a ride. It is just out. Early deliveries will be possible only for those who place their orders at once.

Phaeton $1695 7-Pass. Phaeton $1745 Coach $1795 Cabriolet $2295
Coupe $2570 Sedan $2650 Freight and Tax Extra.

HUDSON MOTOR CAR COMPANY, DETROIT

POULTRY AND RABBITS

Poultry as a Sideline

Although orchard owners do not usually feel that they can afford the time for the raising of poultry on a commercial scale, there are many in the Yakima valley who have taken up the business as a side line to their orchard, according to A. S. Brown, manager of the Yakima branch of the Washington Cooperative Egg and Poultry association.

"The members so far are commercial egg producers," said Mr. Brown, "and as yet we have not encouraged small shipments. The flocks are increasing rapidly and we expect to have a greater amount of eggs to handle after the new pullets begin to lay in the fall.

"Our feed business has also made a rapid increase and it reached the $1000 mark one week in June. As yet we are only mixing the scratch feeds, but we handle the mashes ready mixed. Our branch warehouse at Sunnyside has been doing a good business in feeds and we get more than a third of our eggs from that district. There are also many eggs shipped from Grandview, Kennewick and Prosser and they are all from members of the association.

"We are placing a larger number of graded eggs among the local stores," continued Mr. Brown, "and we do not plan on shipping many out of the valley. The housewife is beginning to appreciate the value of grading eggs and she calls for them. They find that they can get a better quality egg if it has been graded for size and condition. The association members are advised to gather their eggs at least four times each day during the hot weather."

Mr. Brown told how they were encouraging the orchardists to modernize their poultry houses and keep from 200 to 300 hens. This can be done, he said, as easily as raising 75 and it will bring in from $300 to $400 a year if properly handled. The income will be made between harvests and it is considered a good side line that will pay the grocery bill.

A few hot weather suggestions are given out by the association which, if followed, will result in a better grade of eggs during the summer. They are as follows:

If the dropping boards are cleaned every morning just after feeding it will mean cleaner feet and, therefore, cleaner eggs and a cleaner house.

Keep plenty of clean straw in the nests, since it is a help to keeping the eggs clean and it prevents checked eggs.

Clean straw on the scratch floor will also help to keep the feet clean.

It is very important to gather the eggs at least four times every day. Each hen that is on the nest keeps the egg at an incubating temperature of about 90 degrees and lowers its keeping quality.

Less time is required to prevent eggs from getting dirty and to gather them oftener than it does to wash them after they have been gathered.

When eggs are gathered they should be put in an open container and kept in the coolest place on the farm. It is best not to wash or pack until ready to ship.

Poultry Problems

By W. D. BUCHANAN, Extension Poultry Specialist, W. S. C.

MAY BE ALL GANDERS.

I have two geese and one gander. They are very friendly, but have never mated, neither have the geese laid. They are the big Toulouse geese and white Chinese gander. They were fed with the chickens all winter and are in the open alfalfa field with water. Can you give me any information? MRS. B. B. B.

Toppenish, Wash.

There is a possibility that the geese are all ganders. Either that, or they got so fat feeding with the chickens, that they can not lay. Another possibility is that they are laying in the alfalfa field where you can not find the eggs. In this case they will soon go to setting. My guess is that they are all ganders.

BUMBLEFOOT.

We have some chickens that have lumps between their toes. They seem to be full of pus, but after opening I pressed out a hard substance as large as a small marble. They seem to feel all right. Could you give us any information as to what to do for them? MRS. G. H. W.

Everson, Wash.

The lumps between the toes are probably bumblefoot, or stone bruises, caused by flying from high perch onto hard ground or bare floor. Open the lumps, squeeze the pus and matter out as you have been doing and paint the scab or open sore with tincture of iodine. Then lower the roosts or cover the floor with deep litter.

LIVERS ARE ENLARGED.

My hens have been laying heavily since last September and lately I have lost six of them. They stopped eating and drooped around. Their combs turn black and they die in from four or five days. On opening them I found their livers were about two or three times the normal size and seemed to have started decaying. There was blood around the intestines. The hen house is 12x32 and they have free range. Have about 180 hens.

The trouble may be due to too much protein, or possibly to too much crude fiber. The latter would be the case if you find any oat hulls or fiber beyond the gizzard, that is, having passed through it. The trouble might also be due to intestinal round worms or even to tapeworms. I would suggest slitting the intestines lengthwise to see if any of these are present. If you can not locate the trouble, send a sick or dead hen to Dr. Johnson at the western Washington experiment station at Puyallup.

FARM BUREAU AIDS POULTRYMEN.

"Until the farm bureau came in here and organized the poultrymen into an association, there wasn't any market in Yakima except the one the speculators chose to give us," asserted George Slade, a member of both the bureau and the association, who runs 350 birds on the hill west of Selah. "Now we feel as though the thing is on some kind of sound basis. Associations have been successful elsewhere—why not here? There is no reason why poultry raising should not be profitable here, and we believe it will be. We are now selling eggs on a New York basis, whereas before they might be worth 50 cents and we'd get 15!"

CREAM WANTED

Correct tests, honest weights, fair treatment guaranteed. Make a trial shipment and get results.

HAZELWOOD CO.
Spokane, Wash.

LEE'S LICE KILLER

Kills lice, mites, bed bugs, etc., affecting poultry. Spray or paint on roosts, etc. Gets body lice on chickens, too. Works while they sleep. No dusting, dipping, greasing or handling. Saves lot of unpleasant work. At most towns, at stores handling Lee Poultry Supplies. Write for information and FREE Book.

Big Savings

On Auto Parts

Send right to the George W. Miller company, Seattle, for anything you need for your car, whether car is new or old. "The House of a Million Auto Parts" is one of the oldest and largest auto wrecking firms in the entire west. Added to hundreds of thousands of parts from 125 makes of cars, and 500 models, we have an immense and constantly growing stock of new parts, gears, axles, ignition equipment, horns—and all right down to bed-rock prices—lower than other wrecking companies, lower than your car dealer.

We want to make friends with you, want you to find how dependable, how satisfactory we are to deal with. Thousands of car owners send to us regularly for everything they need. You should be saving money, too. Try us out. Space permits us to list only a few items herewith. Let us know what you want. If we haven't got it in stock, we will get it for you—providing it is to be had. Everything is backed by the full and absolute money-back guarantee printed below. You take no chances. Use the coupon and we will prepay shipment anywhere in the Pacific northwest.

Reliable Gears and Axles

Gears and axles for practically every car—ring gears and pinions, differential and transmission gears, timing gears. If we haven't the gear or axle you want in our used stock in good condition, we will supply new equipment cut by the best and foremost manufacturers in the country. To a large extent these new parts are made by factories that turned out the original. New or used, our gears and axles are fully covered by the guarantee.

The George W. Miller prices on gears and axles are always lower—lower even on the new stock than your regular car dealer can make, for we buy in such large quantities as to be far below competitors. If your transmission or rear end is "shot to pieces" we probably can supply you used equipment in good order for much less than you can repair the old.

Space prevents listing prices on the gears and axles to supply all the makes and models, but depend upon it that we can supply it if it is to be had—and save you money.

Ignition and Starters

Most anything you need—and everything in good condition. Look at these prices. We carry all types of ignition in stock, priced proportionately to these low figures.
Bosch D. U. 4 magneto, rebuilt, $22.50; new, $27.50.
Dixie or Simm's magneto, rebuilt, $10.
Eisman magneto, $15.
Wagner generators, $17.50.
Replacement coils for any car, $5.75.
Auto Lite starters, $15.

Motor Parts

For almost every car. Cylinder blocks, crank cases, connecting rods, crank shafts, bearings, etc. Good, serviceable condition and 50 per cent or more below new part prices.

Motors for Power Plants

The cheapest power plant you can install around the farm is one of our rebuilt auto motors, ranging from 20 to 60 horsepower, and operated from 2 horsepower up to capacity, as you may need it. Equipped for 4-point suspension; easily set up, and ready to supply power for pumping, sawing, ensilage cutting, milling, churning, washing, separating, hoisting, operating electric plant, etc.

Price $50 to $100 and up, depending upon make, type of motor, condition, etc., but guaranteed what we represent it to be. We have a few motors for sale as low as $25, but this is without overhaul.

Luggage Carrier Special

Here is a husky, reliable luggage carrier that "stays put" on your running board; heavy construction, one inch bar steel, special, $2.75.

Motor Driven Horn

Here's another special. Schwartz long life horn, one of the very best, $3.75.

GOOD CARBURETORS—A big stock. Stromberg, Zenith, etc., as good as new, depending on make ..... $3.50 to $12.50

BUMPERS—New channel bars, badgers and Gemco make ..$6.50

RADIATORS—Don't waste money on that old radiator. Send for one to fit your car, fully tested and guaranteed, depending on make ..... $10 to $25

SPRINGS—Save 2-3 at Miller's. Used springs only 1-3 price of new.

Try George Miller First---and You Won't Need to Try Elsewhere

Guarantee: Not only will you find goods exactly as represented, but the George W. Miller company guarantees them to be just as you expect them—you to be the judge. If you are not satisfied with the merchandise, or with the saving you are making, return your purchase and receive money back as well as all transportation charges. This is our binding guarantee of absolute satisfaction.

Has 4000 Hens, With Market Garden on the Side

By RALPH ERSKINE

It is not always possible for a commercial poultryman to combine other industries with his work and be able to take care of each to the best advantage. At the Lynden Poultry yards in Whatcom county Herman Oordt and his three sons have been able to take care of 4000 hens and keep a good sized market garden as a side line as well as to feed and take care of four milch cows.

There is an unusual combination in the Oordt household, since the two boys take naturally to the raising of poultry and devote their entire time to the poultry plant. Mr. Oordt himself is more interested in the vegetable garden crops and gives his personal supervision to this part of the farm. Mrs. Oordt and the girls take care of the work that is necessary about the house and cook the meals for the men folks, including what hired men are needed during the summer months.

There are approximately seven acres of the 20 on the farm that are occupied by the buildings and poultry yards. The Incubator house has a capacity for 13,000 eggs and the machines are all electrically heated. While the baby chick business is largely a side line with the boys, they have found it almost necessary to continue to raise the chicks because of the strong demand for stock in this locality. At least twice the number sold this year could have been disposed of if they could have supplied the orders that came in during the hatching season.

One of the large yards of White Leghorns on the Lynden Poultry yards. The entire plant has been built in the midst of an orchard and the trees have been allowed to remain for commercial crops. The farm is only a short distance from Lynden.

DOES NOT TRAPNEST THE LAYING HENS.

"We do not believe it is worth the extra time to trapnest the laying hens," said Mr. Oordt, "because the slight increase in the quality we might build up does not pay for the extra time that would be necessary to carry on the work. We have thought some of doing this, but we find that by a thorough system of culling we can keep the stock at a high standard and there are only a few of the chicks that are not strong enough for breeding. This idea is contrary to the best authority on chick raising, but we believe it suits our conditions better than keeping a special pen of breeders.

"The 2-year-old hens are the best ones to breed from and we have made it a practice to use all the other pens for the production of commercial eggs. We have not sold any chicks to the out-of-town trade, since we have enough orders from the local poultrymen to keep our supply cleaned up."

NESTS IN TIERS PLACED FOUR HIGH.

All of the laying houses on the Oordt farm are of the flat roof type with a 30-inch open front covered with wire mesh. In bad weather this opening can be covered with a curtain to keep out drafts and dampness. The nests are in tiers, placed four high, and eight to 12 nests in a tier, according to the room available at the end of the house. Each section, which is made from 1x125 is placed one upon the other, the top one only being hooked to the partition. The nests open on the opposite side from the windows, which allows them to be kept dark.

Concrete floors have been installed in all the buildings except the incubator house. This is a great help in keeping the houses clean and it also eliminates rats. Each laying house is cleaned and disinfected twice during each year, while the drop boards are dusted with powdered lime, which makes cleaning easier and prevents mites.

An enclosed dust bath has been built at each end of the houses in front of the nest boxes. This keeps all dust out of the main feed pen and the hens are not apt to be molested by the other hens while dusting. The clean straw is placed on the floor every two weeks. No litter or egg carriers are used in any of the houses, since the boys finds that wheelbarrows or push-carts can do the work equally as well and these can be used in other buildings. It is also easier to keep the manure farther from the barn by the use of a wheelbarrow. A manure pile close to any building is an invitation for rats, according to Mr. Oordt, and then there is an odor from the manure which impairs the health of the flock. Cleanliness has long been one of the main axioms of the Lynden Poultry yards, and they consider it a key to successful poultry production.

SIXTY PER CENT EGG PRODUCTION MAINTAINED.

"Sixty per cent production of eggs has been maintained throughout the winter months, while there are times when this average will be beaten," said Mr. Oordt. "In good weather we will get a slight increase over this amount, but we try to keep it under 70 per cent. We grade all of our eggs before shipping, and we have found that it is easier to sell eggs when one has established an excellent grade. We are putting up from two to three hundred cases of eggs this spring for cold storage.

"We have fed our own cockerels and sold them direct to the larger cities, most of them going as live birds. It is not hard to fatten them to an average of one pound and a quarter at the age of eight or nine weeks. They are weeded out of the breeder pens at from five to six weeks of age. We find that we can make a fair profit on the cockerels by feeding in this manner because the feed consumed does not cost as much as can be realized from the marketable bird. This, however, applies only to cases where one is raising his own chicks."

Mr. Oordt explained how they kept their flock in best condition by feeding only the best feed which is free from dirty or moldy grain. There are times when it is necessary to feed epsom salts with the mash, but this is not done as a general rule. Very few of the birds are given medical attention except as above stated, because when such a large number are to be cared for they feel they can not afford the time to doctor any of the birds, but kill those that do not promise to recover.

TWO ACRES OF STRING BEANS.

While the two boys themselves could handle the poultry work they have found it best to hire two men that help them and attend to other details such as milking the cows, hauling eggs, and feeding and attending to other odd jobs about the place. The market garden is an outgrowth of the local demand for such products as green peas, string beans, and other vegetables. Two acres of string beans are planted this year as a commercial crop and sold to the cannery. The home garden is the first consideration, and Mr. Oordt believes in storing a sufficient quantity of all classes of vegetables for their own table supply during the winter.

Fruit trees are growing in and about the poultry yards and have been found a paying sideline and to have required little attention except during the harvest.

MRS. E. W. FLACH, Grandview, Wash.—We enjoy reading every bit of The Washington Farmer and the few times it didn't come, owing to the subscription having reached the end, we felt lost without it. I enjoy the letters of advice and suggestions in so many things, above all, my two children dearly love those little bedtime stories, which I even enjoy myself. I read them to the kiddies every time and they can hardly wait for them to come each week.

LOOK AHEAD TO THRESHING TIME

Four farmers, all good friends, Henry Becker, Joe Sedlacek, and Peter and Arthur Anderson, of Springfield, Nebraska, went in together to buy a Goodyear Klingtite Belt in July of 1920. They threshed all their wheat that season, the crop of several other farms—more than 350 acres of wheat and oats—repeated the performance last year, and used the belt in corn-shredding and silo-filling after threshing.

Goodyear Klingtite Belts are all-weather belts. They are not affected by heat, cold or damp. Their Goodyear ply construction gives them long life. They need no breaking in.

Your local dealer has Goodyear Klingtite Belts. They are made in endless type for threshing, silo-filling, feed-grinding, wood-cutting, and other heavy duty, and in suitable lengths for lighter drives, such as cream-separating, electric light generating, water-pumping, etc. For further information about them, write to Goodyear, Akron, Ohio, or Los Angeles, Cal.

The Thirty-Ten Taxation Measure

To to Editor of The Washington Farmer: In a recent issue of The Washington Farmer appeared an article on "30-10" by Dr. Penrose of Whitman college, in which were several statements that seem to need comment. One of these statements is that the parent-teacher association which is initiating "30-10" is "made up largely of teachers." This is not the case, as out of a membership of 23,000 only about 2000 are teachers. The other members are the parents of the school children and the majority of them are taxpayers. There are about 10,000 teachers in the state, and if every one of them belonged to the P. T. A. that would be only half the membership. However, all the teachers of the state do not belong, but only those in the 420 schools having P. T. A. in connection with the school.

Another statement carries the inference that this measure ought to be defeated because the teachers of the state are supporting it. Does Dr. Penrose know of any worth-while educational legislation ever passed anywhere without the support of teachers? Who but the teacher has fought the battle of the public school since the days of its beginning in Massachusetts in the 17th century, or since leaders like Horace Mann gave their very lives to the cause of public education? If the teachers of the state were opposing "30-10," instead of supporting it, there would in that case be reason to question its merit. He also says that the "teachers hope that salaries may be advanced out of the more abundant funds." Does he know of a single teacher organization in the state which is asking for an increase of salary?

Again Dr. Penrose says, "To introduce an initiative bill like the 30-10 under a deceitful title which suggests that it is proposing a new and fair principle of educational distribution may be smart politics, but it is bad citizenship." He goes on to cite the barefoot school boy law to show that this is not original with 30-10.

Evidently the doctor does not know that the word initiative is the one necessarily used in securing any law by means of direct vote of the people, and that the use of the word in no way implies that the principle set forth was first evolved by those backing the measure.

If Dr. Penrose will read the literature which has been sent out by the P. T. A. he will see that from the very first the barefoot schoolboy law has been cited as the foundation on which 30-10 was built. If the doctor was a resident of the state at the time of the passage of that law he will recall that it suffered the same kind of attack and opposition that is being meted out to this.

He says again that "Ever since the adoption of the barefoot schoolboy law by the legislature of 1895, as introduced by John R. Rogers, the public expenditure for education has been equalized throughout the state." That statement sounds as if all the money raised for schools were under the equnlized distribution plan, while the truth is that only such portion as is raised by the state is so distributed. The balance of the necessary fund is raised on the county and local district basis and in the latter of these occur the gross inequalities. For the very reason that the state portion of the school fund is raised and distributed on the most equitable basis, both from the standpoint of education and taxation, the P. T. A. proposes that a greater part of the school money be raised on that basis and lessen the local district basis. Dr. Penrose questions the reduction of local taxation. He evidently is not aware that the measure itself arbitrarily cuts 3 mills off the maximum tax that the people may vote upon themselves. It is not possible to legislate upon anything except the maximum. It is for the district which is paying the heavy tax that the help is sought. He says that local taxes will not be decreased, yet declares that the demand for tax reduction is overwhelming. If such demand exists, as all admit, then the people will reduce their local tax, and if they do not reduce it it will be because the demand does not exist. Does the doctor think that people levy 20 and 30 mill taxes upon themselves just because they like to do it, or that they would continue to do so if the necessity were removed?

How much does Dr. Penrose, from his pedestal as president of a wealthy private college, really know about the struggles of the isolated rural public school or of the children being given only six months of school a year under untrained, inefficient teachers?

He also says there is no crisis. In many districts there certainly is a crisis, when the P. T. A. has to vote dollars to buy a load of wood to keep their children warm, and when the teacher is instructed not to build the fire till a few minutes before the arrival of the children in order that the precious wood may last as long as possible, with that same teacher finishing out the term without any hope of getting her last month's salary because there is nothing to pay with, yet, rather than see the school closed and the children sent home, she continues to teach. Is that a crisis? Is there any reason why the district of abundant means, with surplus of funds at the end of the school year, should not be required to divide with such places? Dr. Penrose goes on to say, "The advocates of the bill say that it will help the poor country districts. They say that if $10 more is given per child to the remote country district, educational opportunities there will be greatly improved." Continuing, he says, "It might be well to look at the facts: a school district which has 14 pupils and one teacher would get $140 a year more under the proposed measure. A school district of six would get $60 more. In what respect will the educational opportunities in such districts be improved?" That paragraph is absolutely positive proof that Dr. Penrose is opposing a measure about which he is not informed. The 30-10 does not work like that at all. If he would read the measure once and find out a little about it and its real effect and how it does work, and if he would become familiar with the actual conditions under which many of our membership are struggling to give their children a common school education, he might not be so unqualifiedly opposed to this measure along with the other members of the governor's tax commission.

The parent-teachers' association does know the bill, it does know the conditions that call for relief, it helps to pay these taxes and it is the avowed purpose of the organization to look first after the welfare of the school children of the state regardless of color, creed, or boundary line.

MRS. VICTOR H. MILLER,
Chairman Washington State Parent-Teacher Association.

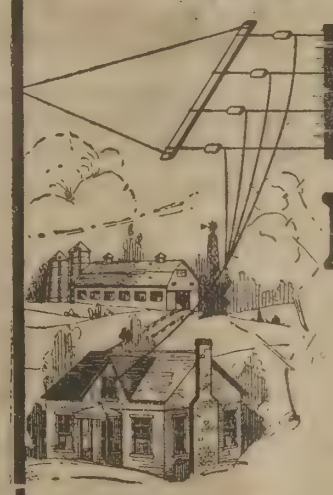
New Grange Master

The Washington Farmer is pleased to present on its cover page this week a portrait of the newly elected master of the Washington State Grange, A. S. Goss. The new master is both an east and west sider, in so far as his state-wide interests are concerned. For several years he was a farmer in the Kennewick section. Later he was for a period manager of the grange warehouse at Kennewick, from which position he went to Seattle two years ago to take charge of the Associated Grange warehouse in the western Washington metropolis.

Mr. Goss was born in Rochester, N. Y., some 40 years ago. Soon after finishing his high school education, he entered the milling business with his brother. He came west in 1912, and has been active in community and grange life since that time.

There is a significance in the foregoing facts. Master Goss is a real dirt farmer. He is a business man with several years' experience in the actual cooperative work of the grange. He has served as master in subordinate granges. This is a combination of experience that should serve him well in the important post to which he has been elevated by his fellow grangers. Following his election he repeated his oft-expressed desire that the grange proceed along conservative, constructive lines. "We must work for harmony," he said. "There are many problems to meet. They must be met as they arise and solved as best we are able to solve them for the good of our entire membership."

GOOD FRUIT PROSPECTS.



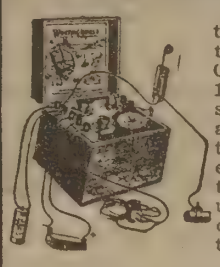
Fruit prospects in the vicinity of Miles and Peach, in the Spokane-Columbia river valleys, were reported never better. The Emerson sawmill, on the Columbia river near the mouth of the Spokane, has started a box factory to meet the prospective increased demand for fruit boxes this season.

MRS. J. BEYER, Seattle, Wash.—For a farm magazine, The Washington Farmer is the best ever.

The Dawn of a New Day

RADIO

In Every Home



Radio telephony is an accomplished, practical fact, and the most wonderful feature of this last great forward step of science is the fact that immediately it has become available to every home in the land, no matter how humble, no matter how isolated. The great electrical corporations, aided by the discoveries of enthusiastic amateurs, have reached a stage of perfection in their marvelous apparatus that will bring to your home all that is best in entertainment, in educational features and in the business news of the day.

There will be improvements in this wonderful apparatus from time to time, of course, just as the automobile, the phonograph and the aeroplane have been improved, but today we are able to offer you equipment that will enable you to enjoy immediately all the marvelous possibilities of this last great invention, and all at a cost well within the reach of the most moderate incomes. In every center broadcasting stations are being established and in the state of Washington alone there are already over 20 such stations, ready to serve the owner of a good receiving set. Daily market reports, latest news items from all parts of the world, weekly health talks distributed by the U. S. public health service bureau, covering the health of the live stock as well as of the family. Daily musical programs in which the country's noted artists often participate. Choral societies, symphonies and the latest phonograph releases. Special weekly dance programs which by means of a "loud speaker" can be used for dancing parties in your own home—these are only some of the advantages you are offered by this modern marvel.

Below we list two styles in receiving sets that are reliable in every respect, that any one can operate, and that come to you so complete that you can start to enjoy all these untold delights and advantages the same day as you receive your set.

WESTINGHOUE AERIOLA SENIOR RECEIVING SET

Complete with Brandes double telephones, dry battery, detector tube, and 1-22½ volt "B" battery. Complete aerial equipment including 150 feet of copper wire, set of insulators, ground wire and lightning arrester. A high grade tube set that under ordinary conditions will enable you to receive from a distance of 100 to 150 miles. Can be used anywhere and is absolutely complete to the last detail. For the inclusive price of **$73.50.**

FEDERAL CRYSTAL RECEIVING SET

Complete with double head phones, aerial equipment, ground wires and insulators all ready to use the day you receive it. Under ordinary conditions will pick up from a distance of 25 miles. As easy to use as a phonograph. Price complete **$27.50.** Many other styles of high-grade sets for long distance receiving at prices up to **$350.** Write for full descriptions and prices.

Whatever radio apparatus you intend to purchase you will save yourself the possibility of annoying and perhaps costly mistakes by first consulting our radio engineer, who will be glad to write to you on any point of radio service, and who will gladly advise you as to the best apparatus for your particular locality and requirements, regardless of the cost.

THIS OLD ESTABLISHED FIRM

has been known throughout the northwest for many years as a leader in the electrical engineering and contracting business and in entering the new field of radio telephony it is their intention to conduct a business along lines that will enhance a well earned reputation for absolute reliability in every respect.

ORCHARD AND GARDEN

Loganberries

Proper Handling When Picking

That a high-grade evaporated loganberry may be obtained certain conditions must be met, says J. C. Bell of the Oregon Agricultural college.

The best berries for evaporating purposes are fully ripe, yet firm. Immature berries are too tart and there is greater loss in weight in evaporating. It is well to bear in mind that during the ripening process the acid of the fruit is being changed to sugars and that these sugars are among the desirable qualities to be retained in the final product.

That these qualities may be obtained it is necessary that the berries be picked often, to the end that the fruit may be uniformly ripe. For if overripe, prime and underripe berries are being dried on the same tray the final product will lack uniformity. The frequency of picking will depend on weather conditions, soil moisture, type of soil and cultural methods. As most picking is done by piece work, there is ever present an incentive on the part of the pickers to hasten their work and become careless. By having too many berries in the hand they become crushed and melt down in the warm hand. Leaves and stems are also permitted to become mixed with the berries. To avoid such carelessness a rigid system of inspection must be maintained, discharging those pickers who disregard instructions after due warning.

Picking should be done during the cool of the day, as berries picked in the morning dry heavier, drip less and retain their shape better than those picked during the heat of the day. The drip carmelizes on the trays, giving the berries a mussy and discolored appearance.

Loganberries for evaporating should be picked only in hallocks, as it is necessary that they retain their natural shape and are not crushed. As it is the usual practice to use the hallocks over again, care must be exercised to keep them clean and dry, discarding at once those that have become soaked with juice as they soon become moldy. The filled boxes should not be placed one on top of another, preventing circulation. If the hallocks are piled several tiers deep a lath should be placed on top to allow air circulation.

It is the practice of some growers to use push carts to move the berries from the pickers to the end of the rows. The conveyance used for transporting the berries from the field to the evaporator should be provided with easy riding springs, so that there will be the least possible jolting. It is well to place a canvas over the load as a protection against dust, insects and the heat of the sun.

Prune evaporators are frequently used for evaporating loganberries. Both the stack and tunnel types are used, the latter being preferred by most growers. The tunnel evaporator is a series of parallel almost horizontal tunnels from 20 to 25 feet long, the width depending on the size of the trays used. To facilitate air movement and ease in pushing the trays along the runs the tunnels have a slope of from one to two and a half inches per foot. Along the sides are cleats or rollers upon which the trays rest. The fresh fruit is introduced at the upper end and pushed down. When the berries on the lower tray of a run have become dry it is removed and all the trays are pushed down one notch and a fresh one introduced at the upper end.

Vegetable Crops

More Than $1,000,000,000 in 1921

Vegetables grown on farms in the United States in 1921 had an estimated value of $1,104,000,000, according to the United States department of agriculture. This was 15.7 per cent of the total value of all crops. The products of market gardens, which may or may not have been productive enough to be farms within the census definition, are not included in these estimates.

The total estimated value of truck vegetables produced for sale, often called the commercial crop, was $227,000,000.

The potato crop had a farm value of $385,000,000, and the sweet potato $87,000,000. Together these two crops comprised 43 per cent of the value of all vegetables in 1921. The tomato crop of 1921 had a farm value of $60,000,000; the cantaloupe was worth $17,000,000; the cucumber, watermelon and cabbage crops each had a value of about $15,000,000.

Farm gardens are a new item in the vegetable list and had an estimated value of $405,000,000 in 1921.

The value of the vegetable crop in relation to prominent single crops and to groups of crops has some striking ratios for 1921, a year when the values of the large crops were low. The total value of the vegetable crop for 1921 was 85 per cent of the value of the great corn crop; it was almost as large as the value of the hay and forage crops; it was nearly one-half as large as the value of the dairy products; it was considerably larger than the value of all poultry products; 46 per cent larger than the value of the cotton crop, and 50 per cent larger than the value of the winter and spring wheat crops.

Honey Prospects

By GEORGE W. YORK.

Owing to the heavy losses of bees during the last winter, and also due to a very late and unfavorable spring, the prospects for a large crop of honey this year are not at all promising.

As so many bees were lost during the last winter, the demand for bee supplies has been rather meager. It may require one season to refill the empty hives with bees, so that the prospects for a fair crop of honey would not materialize until 1923.

It appears that the 1921 crop of honey is practically all disposed of so the new crop should find a very receptive market, and at a fairly profitable price to the producer. It would be a good time for the producers to get together and agree upon a minimum price for honey, both wholesale and retail. Then, if proper and more even distribution is looked after there should be no good reason why the right prices could not be maintained throughout the season.

The honey marketing problem is one that deserves more attention than any other in which the commercial beekeeper is interested at the present time. For what shall it profit him if he secures a good crop of honey and then disposes of it at a loss?

PRUNE CROP WITHDRAWN.

Report comes from Vancouver, Clarke county, that the Washington Growers' association has withdrawn the crop of the prune growers from the 1922 market, having already sold 4,000,000 pounds at from 6 to 11 cents. The price is thought to be stiffening. Indications are that the prune crop will be unusually good.

"EAT WENATCHEE APPLES."

The Wenatchee District Cooperative association has voted to appropriate 1 cent per box to the "Eat Wenatchee Apples" campaign and 2 cents to the regular association brand advertising.

1200 ACRES OF CANTALOUPES.

The report comes from Wapato, Yakima county, that the cantaloupe output of the valley will cover some 1200 acres.

Perfection Plaster Wallboard makes beautiful homes

"Perfection" is just the best plaster made up in portable form, and it's not only ideal for all kinds of repair jobs and for nailing over broken plaster walls and ceilings, but it can be used with the best results for the finest and most decorative interior construction of every description.

Fireproof, waterproof, soundproof and won't warp or buckle, and can be nailed on just like lumber. Can be used with or without battens and is easily decorated with paint, calsomine or tint. Ask your local lumber dealers or hardware man for sample, or write for free descriptive booklet to the makers—

Western Wallboard Co.
4527 9TH AVE. SO., SEATTLE, WASH.

"Watch me,"
said the strong swimmer,
"I'm not afraid."

So he matched his strength against the swirl of the rapids, and laughed at the danger, and kept repeating the stunt, until—

It was the day the life-savers had been waiting for—that day the call for help came.

It's an easy matter to smile at coffee warnings when you're going strong.

But a good many strong swimmers won't risk the rapids, and a good many coffee drinkers are beginning to think of the caffeine in coffee.

Coffee *can* disturb nerves and digestion, and often it *does.*

There's a safe and satisfying course for everybody in the selection of a table drink.

Postum has charm without harm. It's the *safe* drink for all, and probably, therefore, it's the *better* drink for *you.* Thousands have found it better, and fully satisfying, for *them.*

Your grocer has both forms of Postum: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for fully 20 minutes.

"There's a Reason" *for* Postum

Made by Postum Cereal Co., Inc., Battle Creek, Mich.

Western Canada
Wonderful Stock Raising Country

Vast stretches of undeveloped fertile agricultural land of the highest productiveness await the settler in Western Canada. The land possesses the same character of soil as that which has produced the high quality of cereals that have carried off the world's premier honors so many times in the past ten years.

Native Grasses are Rich and Abundant

Cattle fatten upon them without any grain being fed.

Limited capital on high-priced lands is not a success, neither can the tenant burdened with high rents hope to succeed. The place to overcome these is in Western Canada — where *land is cheap* where a home may be made at low cost, and where *dairying, mixed farming and stock-raising give an assured profit.*

Land may be purchased from the Railway Companies or from responsible land companies or from private owners. **Free homestead of 160 acres** each are to be had in the more remote districts.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write

Berry Prices

Puyallup-Sumner Fruit Growers

The marketing facilities of the Puyallup-Sumner Fruit Growers' association are outlined in a statement made by W. H. Paulhamus, the president of the association.

Mr. Paulhamus says that from this time on the association will be exclusively a marketing organization, that it has no canning alliance, but will sell berries to any canning company that desires to purchase at the best prices obtainable.

The board believes that the association has made excellent cannery sales this year, selling all the cannery gooseberries at 7 cents per pound; red sour cherries at 8 cents per pound; strawberries in barrels, 2 plus 1, at 9 cents per pound net contents of barrels; red raspberries in barrels and for canning will range from 9 cents to 11 1-2 cents per pound; evergreen blackberries for canning purposes at 5 1-2 cents per pound.

"It is the plan to sell all the strawberries possible for fresh consumption, so as to net the grower $1.50 per crate up. We expect to market for fresh consumption one-half of our red raspberry crop and one-third of our blackberry crop.

It is also announced that growers desiring to pick strawberries with the hulls off will be entitled to credit for the cost incurred in stemming the berries at the canning plant. Many growers' associations are picking all of their cannery berries with their hulls off. The recommendation is made to pay the pickers 30 cents per crate for picking with the hulls on, or 40 cents per crate for picking with the hulls off. The statement also says:

"The association has sold a considerable quantity of red raspberries to an outside canning plant at 9 cents per pound spot cash, the day delivered, or payments each week. It has also accepted a number of contracts for raspberries in barrels up to 11 1-2 cents per pound net contents of barrels, to be packed one pound sugar and two pounds raspberries.

"On blackberries the association has made two sales to canning plants operating outside of the Puyallup valley amounting to 1,000,000 pounds of blackberries at 5 1-2 cents per pound, buyer to furnish picking crates and accept berries at our receiving stations, cash when received."

Farmers' Want Ads

HELP WANTED—MALE 3

WANTED — SALESMAN WHO CAN SELL high-grade, dependable nursery stock; several counties in Oregon, Wash., Idaho and Montana now open for assignment. Our selling contract will interest you. Address Albany Nurseries, Inc., Albany, Ore.

Railroads and the Stock Industries

(Continued from page three.)

way officials and then to the railroad commission and ask and demand a lower rate. I'll act as one, if you wish. This is the only way to get action.

Passing resolutions by associations will never get us anywhere. Act and I am sure you will never regret it.

JAS. H. M'CROSKEY.

Sprague, Wash.

ONE-WAY FARE FOR EXHIBITS AT FAIRS

Dr. S. B. Nelson, dean and director of the extension service of the State College of Washington, whose heart and soul is in the work of improving live stock throughout the state, writes:

To the Editor of The Washington Farmer: I have your letter of May 30, to which is attached letter from A. J. Coulter.

For many, many years the live stock men of the state of Washington have been diligent in trying to obtain concessions from the railways in the matter of freight and express returns on purebred breeding animals. Up to the present time they have been unsuccessful in this. The best that they have been able to obtain has been a one-way fare for the round trip where they make exhibits and the animals are returned to the farm.

The State College of Washington, through its extension service, would be more than glad to do everything in its power which would reflect to the advantage of not only the dairy industry, but the live stock industry, as well, not alone through better breeding, feeding and management, but also, if possible, in obtaining concessions in transportation charges.

Pullman, Wash. S. B. NELSON.

BELIEVE RAILROADS POWERLESS UNDER LAW

No one takes a deeper interest in the agricultural development of the state than W. H. Paulhamus of Puyallup. He knows live stock as well as berries. In his answer Mr. Paulhamus says:

Mr. Coulter's suggestion appeals to every red-blooded citizen, but I doubt the advisability of asking the transportation companies to haul such animals free of charge, as it opens the door for exceedingly bad practice. I would suggest that the commercial clubs of various communities would be delighted to help finance meritorious propositions provided, upon investigation, they proved of merit.

A. L. Rogers of Waterville has been foremost in doing constructive work along all agricultural lines in the state. Following is an extract from his letter:

I have not taken active interest in outside matters for some time. There has been so much demand for all my energies right here at home in Douglas county. Replying to Mr. A. J. Coulter's letter, would state that railroads are not philanthropists, nor can they expect to be and pay dividends to their stockholders. Nevertheless, I have always found them willing to do their part when it is put up to them in a business way.

John A. Gellatly of Wenatchee, who has not hesitated to throw himself into the brunt of the fight, especially along the lines of irrigation development, says:

Most every industry and most every new district is held back for the want of similar assistance, and while I agree that this is a most worthy place for some one to give assistance, I do not see where the railroad company could be asked to do this unless they adopt a like policy in all of the districts where they will be directly benefited if they will help develop. It would pay the state or the government to see that every pioneer district is given the assistance it merits, but so far we have not done much along that line. We have all had to lift ourselves by the bootstraps, so to speak, and in many instances it has been a slow process.

Just Folks

Sometimes it seems to me that the specialist has become the supreme idol of modern civilization. It is easy for specialism to become idolatry in these days. We surrender body, soul and spirit to the specialist. The specialist in fashion imperiously dictates the style of the clothes we wear. The specialist in food becomes the autocrat of our diet. The specialist in education dominates our schools and it is the specialist in religious thought who carries the farthest.

Uncontrolled specialism runs amuck. Specialism is a two-edged sword. The specialist, whose chief aim is to climb higher and higher on the narrowing spiral stairway of his specialty, sooner or later topples over. He has neglected to broaden the base of his structure as he has sought record heights.

Wheat is regarded as the staff of life. Our specialists have been at work on wheat. Patent flour is the result of years of work of one specialist after another, of many combined specialists. Now we have bread of the finest texture. Other specialists come along and tell us that this finest of flour, producing the finest texture bread, is dangerous to health; that we must eat coarser wheat flour, graham flour and even bran to compensate for the necessary qualities which have been taken out of the wheat in the manufacture of flour.

We are more than apt to forget this idea of compensation, listen to the bran specialist and cast aside the use of flour. Coarse cereal food undoubtedly has its dietary use, but there are those who told us during the World war that the overbalanced use of these coarser cereals irritated and harmed the digestive organs.

Meat specialism has its danger point, fruit specialism has its danger point, cereal specialism has its danger point and it is a puzzle for the ordinary man to counteract the harmful effects of one specialism with another specialism.

We have specialists in drugs and drugless specialists. The medical fraternity is more and more given to differentiating the body and creating a specialist for every differentiation.

The time is rapidly approaching when we need another important kind of specialists—those who will tell us when to go to specialists and when to leave them alone and let nature do her best; when to use home remedies and when to ask for specialized medical prescriptions.

All idolatry costs money—big money. The devotee is peculiarly susceptible to pecuniary solicitation. The more different kinds of specialists there are the greater is the total cost of specialism. So great has this now become that those who can well afford to employ specialists are being more and more reduced to two great classes—the rich, who can pay, and the poor, who can not pay. The great middle class is struggling mightily to save itself from being ground between the upper and the under millstones of specialism.

But specialism is not confined to the medical fraternity by any means. The courts have become greatly specialized institutions, so have county, state and national governments. Look at the specialism running through the army and navy! Look at the specialism running through our transportation system, from dining and sleeping coaches to magnificently appointed railway stations! Take the telephone and telegraph, the auto and the thousand and one specialized agencies and conveniences of modern life—are they growing any less expensive in their total demands upon the people?

You say these things are necessary, are signs of progress, are the things which put us far ahead of all the generations which have gone before us; that specialism has made possible to the common people innumerable blessings of which former generations knew nothing. There is no disposition here to argue the question. Let it all be granted, and yet, has that old rule of life been successfully thrown into the discard, that old and simple statement: "Man's life consisteth not in the abundance of the things which he possesseth"?

In these days it certainly demands an abundance of possessions to meet the calls made by specialists.

TARIFF ON IMPORTED SEED.

Skagit county seed growers, who produce more than 80 per cent of the cabbage seed stock of this country as well as a number of other varieties of seed, have been advised by Senator Poindexter that the old tariff charge of 12 per cent on imported seeds will undoubtedly be carried under the new bill.

CANNING SPINACH AT YAKIMA.

It is expected that 400 tons of spinach will be canned in Yakima this year.

Watch for the announcement in next week's issue of The Farmer of another rattling good serial story by Lewis B. Miller, the author of "The Crooked Trail," "Trappers of the Ozarks" and "Big Smoke Mountain."

Keep Posted on Prices Through Advertising

You will have a better idea of the prices you should pay for merchandise if you carefully read the advertisements in this magazine and also write the advertisers for the catalogues and circulars which they offer free.

Moreover, you will find in the long run, that advertised merchandise, quality considered, costs you less than unknown brands.

For these reasons it pays you in dollars and cents to read the advertisements regularly; and in addition they keep you informed regarding many important developments and improvements in manufactured goods.

In dealing with our advertisers you are protected by our guarantee, but we request that in writing them for literature or to place an order, you mention The Washington Farmer.

GMC

More Speed and 30 Per Cent More Pull

There are sound reasons why the G. M. C. Truck, with its tremendous stability, flexibility, power and endurance, is the first choice of thousands of growers and farmers. One reason is

Two-Range Transmission

You will appreciate at once what a wonderful advantage it is to have a truck that will literally go anywhere a team can go; a truck with such extremely low gear ratio that you can haul the heaviest loads out of the field, yet with such extremely high gear ratio that it will take the load flying along the highway.

G. M. C. two-range transmission does this. It isn't complicated. It is simple. Easy to operate. One range-lever controls two distinct driving ranges, each with four forward speeds and reverse, each with the high speed a direct drive. Economical high-speed operation for the 96% of your work that requires it; yet, instantly ready, 30% super power for the other 4% of your work.

Think what an advantage this one feature gives you. Yet it is only one of the big features of the G. M. C.

Asotin Crop Prospects

Asotin county in general, and Clarkston and Asotin and surrounding districts in particular, are enjoying bright prospects for bounteous crops of grain, potatoes and fruits.

While the hard freeze of early May cut the fruit crop badly and reduced the yield from 25 to 50 per cent in some sections, there will be a fairly good crop of most varieties of fruit and the quality has never been better. Strawberries will be at least 75 per cent of a normal yield, with quality never excelled, if ever equaled, in the history of the district.

While prices are not as high as growers expected, the crop will bring in many thousands of dollars to the district. The local demand is heavy and fair prices are being obtained.

Scores of automobiles from the surrounding country visit Asotin and Clarkston daily and take back loads of strawberries to be canned. Ranchers from the Palouse, Potlatch and Camas Prairie districts and from the farming sections of southern and western Asotin county are buying heavily and great truck loads go daily to surrounding towns.

It is believed that the sweet cherry crop will be at least 75 per cent of normal and the quality promises to be unusually good. The trees are not heavily loaded with fruit and the smaller yield means better quality. Cherries are ripening rapidly, although retarded somewhat by the recent rains, and the harvest will begin as soon as the principal strawberry season is over. But as many growers raise the everbearing strawberries, this fruit will be on the market until frost comes next fall. The cherry crop will add thousands of dollars to the receipts of orchard owners in the district this year.

There is a considerable acreage of head lettuce which is now beginning to be marketed. The quality is excellent and the yield good. The season has been unusually favorable for head lettuce and good prices are expected. While the industry is yet in its infancy, it is believed it will become a permanent and profitable addition to the gardening and fruit growing of this section.

Clarkston is growing more rapidly this year than at any time since the war began. Building operations which were practically at a standstill during and after the war, have been resumed. Scores of new homes, many of them costing well into thousands of dollars, are being built, while good homes of lesser cost are springing up everywhere. The "Own your home" campaign, started here some time ago, is bearing fruit. It is believed that several hundred new homes in the town and on nearby orchard or garden tracts will be erected this year. Some good barns and poultry houses have been built and others are contemplated.

Clarkston and the Vineland district are getting down to real business in diversifying and poultry and dairying are being added to the fruit growing and gardening that have proved so successful in past years. Poultry raising is becoming an important industry here and there are a number of large poultry yards where egg production has been reduced to a science and purebred birds of high-laying records are being used exclusively. It has been found that poultry raising can be successfully carried on in connection with garden and fruit and this discovery is being utilized to add to the profits of gardeners and fruit growers.

Taken as a whole Clarkston and Asotin and the intervening and surrounding territory are enjoying greater prosperity and have brighter prospects for the future than at any time since the World war began and optimism is manifested everywhere among farmers, business men, fruit growers, gardeners and dairymen.

The grain-growing sections of the county are faring better than many parts of the wheat belt, and estimates of the 1922 crop vary from 70 to 90 per cent of a normal yield. The outlook was not encouraging during the early part of the season, but rains in the first half of June have added much to the prospects and give assurances of a good yield of fine quality grain in many parts of the county.

The live stock industry also shows improvement. There are not many sheep in Asotin county, but there are some, and sheep owners are jubilant over present conditions and future prospects. The hog industry is showing marked improvement and, while there is a shortage of hogs, the present high prices and prospects for future high prices are encouraging, while labor and feed costs have been greatly reduced. Those who have hogs feel that they are certain to make good profits this year and those who are short of hogs are striving to increase the number on their farms and, as hogs increase rapidly, the shortage will probably be overcome within a year.

Beef and dairy cattle also show improved conditions. There is an increased interest in dairying and fairly good prices for dairy products, combined with reduced cost of production, is helping the industry. More people are engaged in this industry than ever before. The beef cattle industry does not show as marked improvement as the others, but it shows improvement and the outlook is regarded as encouraging.

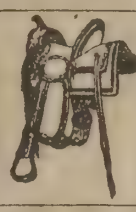
Public Market, Walla Walla

Walla Walla is to have a public market where farmers, fruit growers, market gardeners and poultrymen may dispose of their products direct to the consumers.

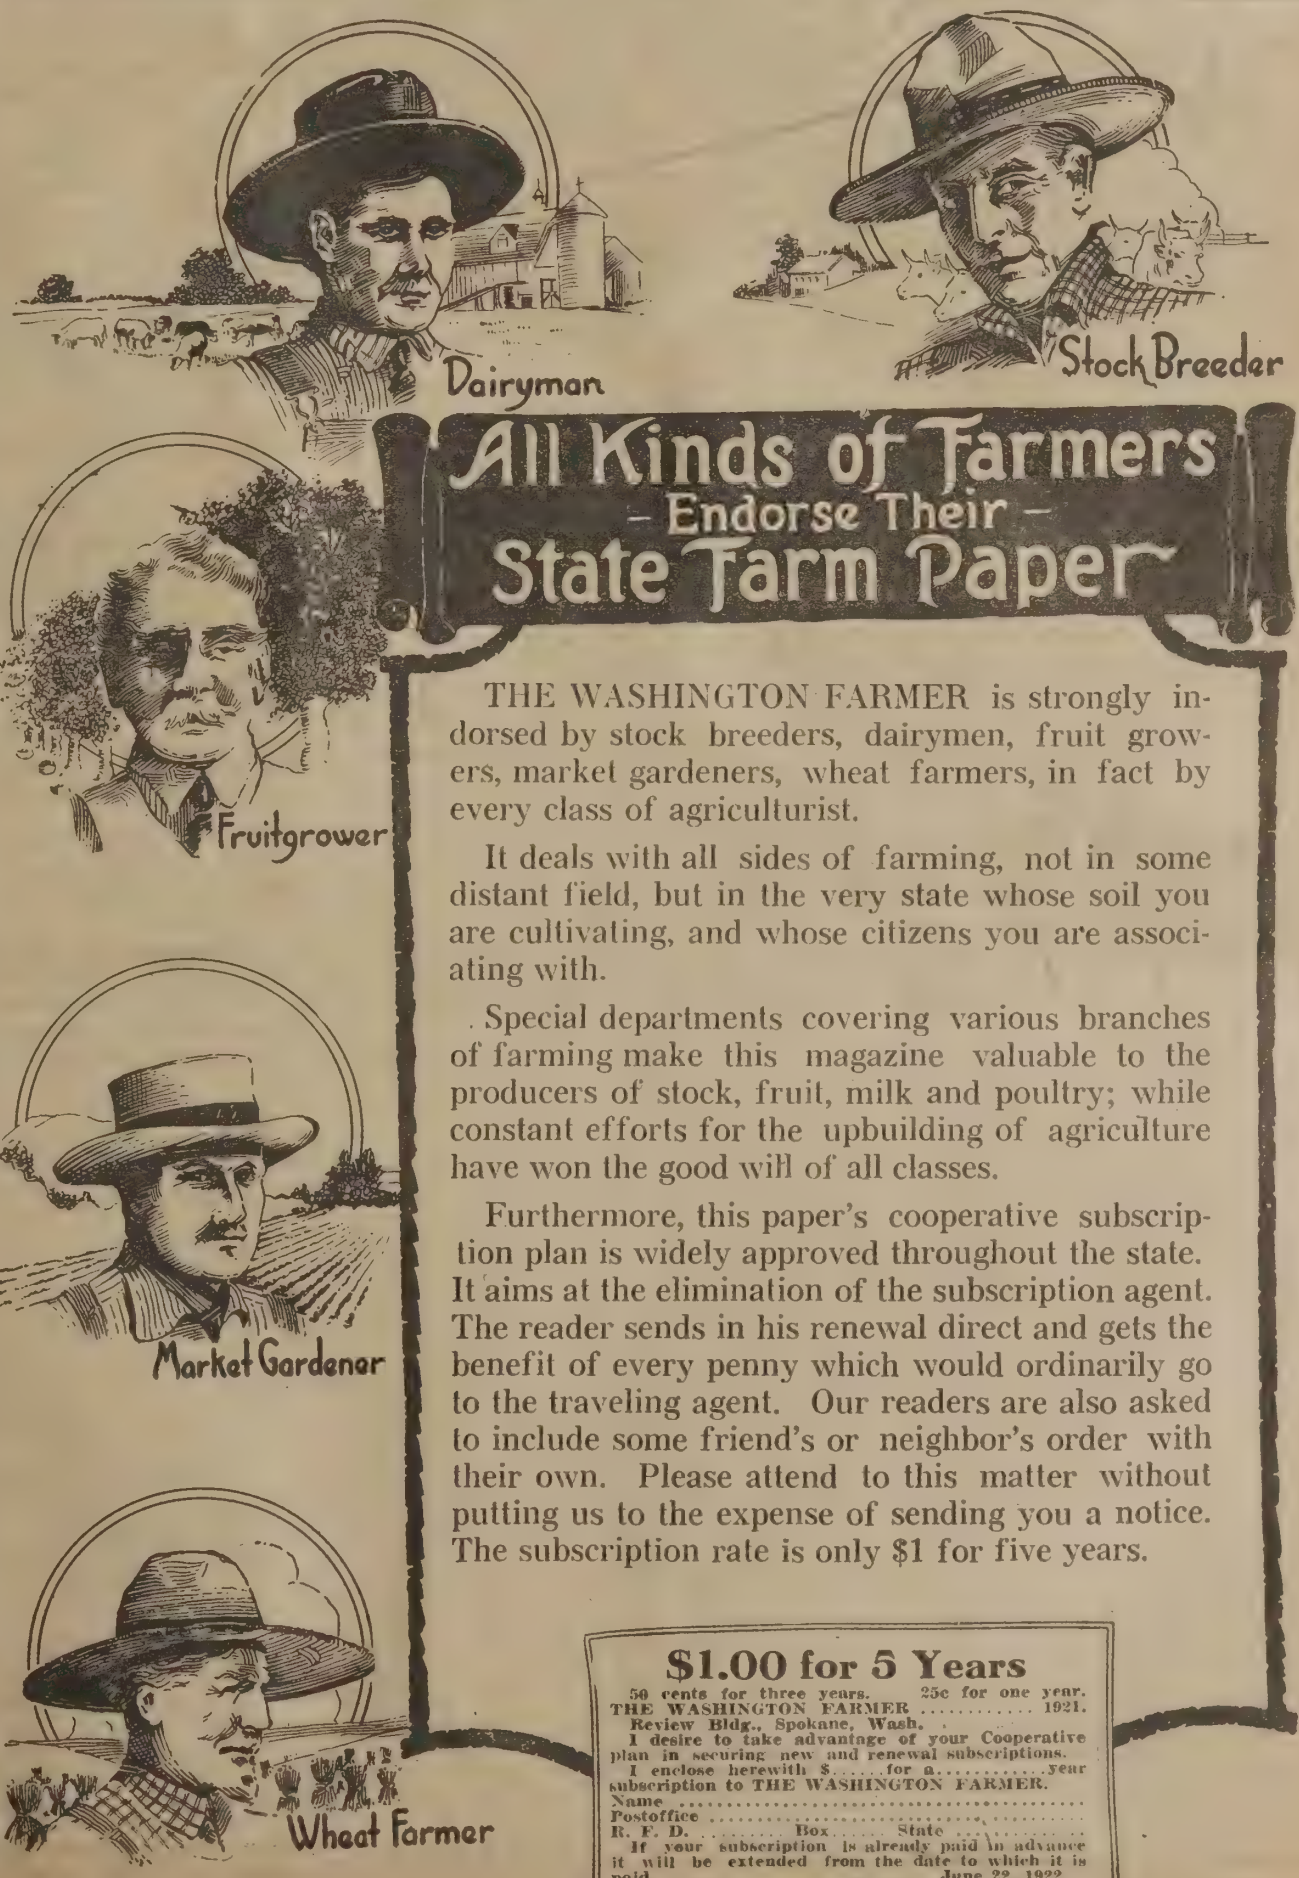
The market will be operated under the auspices and supervision of the farm bureau, which has completed arrangements and organized a corporation with a capital stock of $25,000 to build and equip the market. It is planned to rent stalls to merchants who may want room in the market.

A committee, composed of Milo McIvor, assistant county agent; G. W. Webber, J. D. Tuke and Harry Riffle, has the matter in charge. It is planned to have the market ready for occupancy within a few weeks, possibly by the time the fall fruit crop is ready to harvest.

The market will be patterned after the markets in other towns and cities. The committee which investigated markets was much pleased with the one at Eugene, Ore., and the Walla Walla market will be quite similar.



Thinning Demonstrations



A series of thinning demonstrations has been carried on recently in the fruit growing districts of Yakima county by E. G. Wood, extension horticultural specialist of the state college. "Although there are a few varieties that have a light crop of fruit, the thinning should be carried out," said Mr. Wood. "Even on the trees where only one or two limbs have a crop, the apples should be thinned. The limbs seem to work as separate units and will produce no bigger apples than if the tree were loaded. This has been proven by experimentation and we know that it is true."

In some of the orchards the trees being thinned are to be checked over in the fall when the crop is harvested and the thinned trees compared with an occasional tree that was left without being thinned. The crops will be compared for size and value of the crop. This will demonstrate in dollars and cents the actual value of thinning.

All Kinds of Farmers – Endorse Their – State Farm Paper

THE WASHINGTON FARMER is strongly indorsed by stock breeders, dairymen, fruit growers, market gardeners, wheat farmers, in fact by every class of agriculturist.

It deals with all sides of farming, not in some distant field, but in the very state whose soil you are cultivating, and whose citizens you are associating with.

Special departments covering various branches of farming make this magazine valuable to the producers of stock, fruit, milk and poultry; while constant efforts for the upbuilding of agriculture have won the good will of all classes.

Furthermore, this paper's cooperative subscription plan is widely approved throughout the state. It aims at the elimination of the subscription agent. The reader sends in his renewal direct and gets the benefit of every penny which would ordinarily go to the traveling agent. Our readers are also asked to include some friend's or neighbor's order with their own. Please attend to this matter without putting us to the expense of sending you a notice. The subscription rate is only $1 for five years.

$1.00 for 5 Years

50 cents for three years. 25c for one year.

CHAPTER XXVIII.

Trowbridge & Gray, Traders.

At the end of a week, when the supply of provisions which the trappers had brought with them was running low, Shad suggested that he was quite able to make the journey to the river tilt. His knee was now so far improved that it caused him but slight inconvenience to walk, and he was rapidly regaining strength.

He was anxious indeed to return to the tilt. He thought of it much as one thinks of home, and the thought carried with it visions of rest and comfort. The others could ill afford a longer absence from their trails, and it was, therefore, with a sense of deep satisfaction to all that the camp on the shore of the Great lake was broken.

Traveling slowly, with Shad following in the well-packed trail which the others made, they arrived at their destination on an afternoon five days later, and were welcomed by Bill Campbell and Mookoomahn.

How deeply or how lightly Mookoomahn felt when he learned of Manikawan's death, none knew. He listened in stoical silence while Bob related to him in detail the circumstances of her going and the subsequent happenings in the lodge and in the camp at the Great lake, but throughout the recital Mookoomahn made no comments, and his countenance betrayed nothing of his sensations.

Mookoomahn was recovering rapidly. He was passing, indeed, quite beyond Bill Campbell's control, and not satisfied now with the limited portions of food which Bill, religiously adhering to the advice he had received from Dick Blake and Ed Matheson, doled out to him, he had the day before the return of the travelers stolen away to the willows along the river bank below the tilt, killed some ptarmigans on his own account and gorged himself upon the flesh to his temporary satisfaction, but nature balanced her account with him in the hours of subsequent agony which he suffered for his indiscretion.

Fully a month elapsed after their return before Shad could eat a meal with any assurance that it would not be followed by distress. His normal appetite, however, had begun to return before they broke camp on the Great lake, and had quickly developed into a highly abnormal appetite.

No sooner was one meal finished than his mind was centered upon the next. At night his last thought was his next morning's breakfast, and when he awoke breakfast was still on his mind. Eating during this period of recuperation was to him the all-important object in life.

It was nearly a month after his return to the river tilt that Shad first learned of Bob's loss of fortune. It was upon the occasion of the fortnightly rendezvous, when Ed Matheson remarked:

"Th' next round's about th' last we can make. Th' fur's 'most too poor t' take, now, an' when I comes back I'll strike up my traps. An' it's been a wonderful poor hunt."

"Aye, wonderful poor, an' wonderful disappointin'," sighed Bob.

"Th' worst I ever see," continued Ed. "If 'tweren't for you, Bob, clearin' Dick's an' my old debts, we'd be in a bad way gettin' next fall's debt from th' company. An' now your losin' all your money, th' bad furrin' comes hard on you—wonderful hard. I'm fearin' th' new debt we'll all have t' start off next season with'll be a big un."

"What money did you lose, Bob? I hadn't heard of it," asked Shad, as Ed passed out of the tilt to join Dick and Bill, who were cleaning the snow from the roof of the tilt in anticipation of an early thaw.

"Th' money I has in th' bank t' St. Johns," explained Bob. "When Ed comes back from th' bay he brings me a letter from mother sayin' th' bank broke an' th' money's gone."

"That bad!" Shad sympathized. "How much was there?"

"About $12,000. But 'tain't so bad. We has th' traps, an' th' new trails laid."

"But that was the capital you were t' begin trading on?"

"Aye, but we'll have t' give th' tradin up now. I'm thinkin' th' Lard weren't wantin' us t' go tradin' or t' have th' money, an' I'm not complainin', though I were wonderful disappointed when I hears of un first."

Shad asked many questions, in the course of which he drew from Bob a description of the air castles which Bob had been building, and which had been so unceremoniously knocked down about his ears by his mother's letter; of the poverty-stricken condition of the bay folk, which Bob in his big-hearted and youthful enthusiasm had hoped to relieve, and of many other things which he had planned to do with his fortune.

Though all this was of the past, and of little importance now, he had intended to keep it a secret. But he and Shad had grown very close together, and somehow Shad had a way of drawing from him even his most sacred thoughts—and before Bob realized it he had bared his heart to his friend.

"An' I were thinkin'," said Bob, after the sum total of his shattered plans had been disclosed, "when we was up on th' Great lake, what a rare fine thing 'twould ha' been for the Injuns, if I hadn't ha' lost th' money, t' make a tradin' station an' a cache o' grub up th' other end o' th' Great lake—70 or 80 miles in from where Manikawan dies— so when another bad year comes th' Injuns down that way could get grub t' carry un out t' th' Ungava post. If they'd been a cache there this winter Manikawan wouldn't ha' died, an' a lot o th' other poor Injuns as must ha' died would ha' got out."

"That's so," agreed Shad. "What an amount of suffering it would have saved! And the poor little Indian girl wouldn't have been sacrificed."

The others returned at this point, and conversation drifted into other channels—the striking up of the traps—the probability of an early break-up—the hard times that the present season's failure was certain to cause among the people of the bay.

"Bob, if you're going to strike up and make this next trip your last one of the season I'm going over the trail with you," said Shad, the following day. "I want to see again the trail I helped you lay, and the tilts we built together. It seems a long while ago, and the memory of it is already a pleasant one."

So on Monday morning they started on the last round of traps for the season. The days were long now, and the sun was still high when they reached the tilt on the first lake—the tilt where Manikawan had found Bob's rifle, and the first of the series of tilts Bob and Shad had built.

They cooked and ate their supper, and then lounged back upon their bunks to chat of their first exploration of the trail, their visit to the falls and of Manikawan's unexpected appearance when they were on the island.

Finally they lapsed into silence, Shad sitting on the edge of his bunk, his elbows on his knees and his chin in his palms; Bob lying back, his hands folded under his head, his eyes studying the ceiling, but his thoughts far away with the loved ones at home and with Emily at school.

Suddenly Shad broke the silence and Bob's thought with the question:

"How would you like me for a partner, Bob?"

"A trappin' partner, Shad? 'Twould be fine, now!" exclaimed Bob, coming back to himself and his surroundings. "But I was thinkin' you'd be weary o' th' trails, Shad, after what you've been through."

"No, Bob, a trading partner," and Shad sat up. "You were going into business, Bob, but your loss, you tell me, has made it impossible, because you have no capital. I'd like to be let in on your plans, for they appeal to me. Such a trading operation as you outlined to me should prove not only profitable, but at the same time would be a practical method of relieving a vast amount of suffering. It would give the bay people independence and bring them a good many comforts of life they've never enjoyed.

"And if your suggestion were carried out to establish two or three trading stations with provision caches attached, up here in the Indian hunting country, there could be no repetition of this year's horrible experience.

"Now, Bob, you know the people and their needs, and you're an expert in judging furs, but you haven't the funds to carry out your plan. I don't know much about these things, but I have the funds. Let's come together—your experience and knowledge against my cash—and form a partnership. What do you say?"

"Oh, Shad! 'Twould be—'twould be th' grandest thing in th' world, Shad!" and Bob's face flushed with excitement; and then suddenly, he continued: "But I

"How would you like me for a partner, Bob?"

couldn't do it, Shad. 'Twouldn't be fair for me t' be partners, for I hasn't any money t' put in for a share."

"Don't be foolish, now, Bob. Don't talk nonsense. Money without a knowledge of the people and their needs isn't enough. I haven't the knowledge, and I'd make a failure of it alone. But with your knowledge and my money we'd be successful.

"You've said a good many times that things don't happen by chance, but are brought about by the direction of the Lord, haven't you, Bob?" asked Shad.

"Aye, 'tis th' Lard brings things t' happen," admitted Bob.

"Now, Bob, listen to me. I came here in the first place just to enjoy a pleasant summer's outing. Pleasure and good times were all I ever thought of, and I knew nothing of life or life's higher motives. I doubt if I could have earned my own bread if I had been turned loose in the world empty-handed, because I hadn't the power or patience to stick to a thing or to face discouraging conditions for any length of time.

"I did not know the meaning of the word toil; I did not know what privation meant, or the suffering that comes through privation. I had always had whatsoever my fancy craved, and had never known want or disappointment.

"Here in your country, Bob, I have experienced toil. I have been tried out in the furnace fire of physical suffering and mental agony, and I have learned what sympathy means.

"I am living today only because Manikawan, an Indian girl, made it possible by the sacrifice of her own life for me to live. I'd have given up and thrown myself down in the snow to die a hundred times but for the encouragement she gave me to keep going, for I was constantly possessed of a desire to seek the rest and peace of death. And those poor Indians shared with me, Bob, the little they had, when they might easily have left me to perish.

"Do you know, Bob, there has not been a night since she died that I have not dreamed of Manikawan? She seems to say to me: 'I gave my life for yours. Go forth and make your life useful—offer a helping hand to others. It is in your power to guard my people from starvation.' So, Bob, I've got to do it if I am ever to have peace of mind, and you've got to help me.

"Do you think that these things just happened, Bob? Or were they brought about by divine direction? Don't you think that this combination of incidents points out to us our life work? Don't you think they suggest that we are to unite our talents and so use them that we shall not only help ourselves, but help others? Come, Bob, what do you say?"

For a moment Bob did not speak, and when he did his voice betrayed deep emotion.

"Th' way you puts un, Shad, I'm thinkin', now, you'm right. 'Tis th' Lard's way o' bringin' things about. You'm wonderful good, Shad, t' think o' me for a partner, an' I'll be wonderful proud t' be partners with you, Shad."

"That's the way to talk, old man!" exclaimed Shad, grasping Bob's hand.

"I'm not' knowin' how to thank you, Shad," replied Bob, his heart overflowing.

"That feeling is reciprocated, Bob, so we won't either of us thank the other. Now we've agreed to our partnership, we'll have plenty of time to arrange the details of our business before we go to the bay, and then I think you'll have to make a trip to St. Johns or Boston with me to have the copartnership agreement drawn and executed in proper legal form."

Shad explained to Bob that at the time of his birth his grandfather set aside $100,000 to be held in trust for his benefit. It was provided that the income of this trust fund was to be paid to his guardian annually, upon his birthday, to be applied to his immediate needs, or to constitute an annual allowance of spending money, until he attained his majority, when he was to receive the principal.

"But I've never spend any of grandfather's allowance," said Shad. "Father got me everything I needed and kept me supplied with spending money, and every year when the income from the trust fund came in father bought government bonds with it and placed the bonds in a safety deposit vault for me.

"These bonds amount to more than the principal of the trust fund now—I don't know just how much, but I know there's considerably more than $100,000, for they have been earning interest all these years.

"This money is mine to use as I see fit, and I'm going to invest $100,000 of it in our partnership and hold the balance as a reserve. Of course my sister will have to act for me until I'm of age. She's 10 years older than I am, and has been my guardian since father died. She'll not object, for she has a great deal of confidence in my judgment.

"When father died, nearly three years ago, he left me a snug fortune, and I have plenty to live on even if our trading venture doesn't prove a money-making business at first."

"'Tis a wonderful lot o' money!" declared Bob. "More'n I can think!"

"We'll need a pretty fair capital to succeed," said Shad. "We'll have to purchase a vessel of some sort to carry on trade along the outer coast and bring our supplies to the bay, and carry to market our furs, fish and oil. You'll look after the native trade, with the men you employ to help you, but I'll have to engage expert assistance in purchasing the trading goods and disposing of the products to the best advantage until I finish college and learn my end of the business. All will cost money, though I hope when we once get started we'll build up a trade that will warrant it."

Bob went to his bunk that night with his head all awhirl. The amount of capital which Shad proposed to put into their partnership, and the extensive business which he proposed to build up, were too big and too wonderful for Bob to comprehend all at once.

A substantial structure had indeed taken the place of his tumbled air castles, though it was long before he could bring himself to realize that this structure was not, after all, another and greater air castle than those which had been destroyed. (To be continued.)

Bits of Fun FOR Everyone

What Are They, Compared to—?

"You have a better home, nicer clothes and more playthings than Jimmy Jones," said the mother reproachfully.

"I know, mom, but he can wiggle his ears."—Country Gentleman.

And There's Only One Cure.

"Is your husband still worrying about your automobile?"

"Constantly," replied Mrs. Chuggins. "I never knew a man to suffer so much with flivver complaint."—Washington Star.

Why They Were "Canned" Perhaps.

A teacher who believed in keeping her youngsters in touch with the march of events was beginning a lesson on the revolution in Russia.

"Now, who can tell me what the ruler of Russia used to be called?" she asked.

"The czar," bellowed the class.

"Right! And what was his wife called?"

"The czarina," two or three ventured.

"Good," said the teacher. "Now, I wonder if you know what the czar's children were called?"

There was a long pause, then one little voice piped up: "Czardines!"—Union Pacific Magazine.

Convinced—Almost.

A traveler on a sleeping car had written a complaint to headquarters about the presence of vermin in a berth that he had occupied. He received from the department a lengthy letter of apology. Never before had such a complaint been lodged against the line and the management would have done anything rather than offend such a distinguished citizen, etc.

He was pleased with this abject apology and was about to throw the letter away when he happened to notice a small slip of paper that had been enclosed, apparently by mistake. On it was his address and these words: "Send him the usual bedbug letter."—Forbes.

Defining a Second.

"Now, Willie," said a schoolmaster to a pupil, "how many seconds make a minute?"

"Masculine or feminine?"

"Masculine or feminine? What do you mean?"

"There's a big difference," replied the youngster. "When father says he'll be ready in a minute it takes him 60 seconds, but sister's minutes contain about 600 seconds."

Or Skip It Altogether.

A Britisher tells a story of an English railway strike during which much difficulty was experienced in obtaining engineers.

One of the young substitutes ran some distance past a station, and then, putting back, ran as much too far the other way. He was preparing to make a third attempt, when the station agent shouted:

"Never mind, Harry; stay where you are! We'll shift the station!"—Capper's Farmer.

Admirable.

"How did you get on with spelling?" Harry's mother asked him, after his first day at school. "You look so pleased that I'm sure you did well."

"No, I couldn't spell much of anything," admitted Harry, "and I couldn't remember the arithmetic very well, nor the geography."

The mother showed her disappointment, but Harry had consolation in reserve.

"But that's no matter, mother," he said; "the boys admire me; they say I've got the biggest feet in the class."—Chicago News.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I have been a reader of the Family Circle ever since it started and greatly enjoy the letters.

We live on a small farm but it is all our own. I am glad we live in the country even though there is a great deal of hard work connected with farm life. We have so many blessings when we stop to count them. There is every fall, a cellar filled with canned fruit and vegetables enough to last all winter, two or more hogs and very often a beef to be butchered, providing plenty of meat. Then we have the old bossy cow and the hens giving us the best of food. We must not forget the wood lot and the well of nice pure water free for the taking.

All these things are enough to make one love the farm if nothing else was taken into account. Who would trade places with the city sister who has to go to the grocery store and pay out cash for every mouthful of food her family eats?

I wonder how many have tried making every-day middies for themselves and the little girls out of flour sacks? Bleach well before cutting and use plain colors or plaids which will not fade, for collars and cuffs and pockets and a band around the bottom.

Pretty quilts can be made also by dying six sacks green and six red and cutting them into six inch squares, then sew alternate colors together and tie the quilt with white yarn.—MRS. C. T., Wash.

Dear Mrs. Barland: I am like many others who enjoy the Family Circle and I get much help from the recipes and in hints on the care of children. I have three and the oldest is only four years old.

We live on a small ranch three miles from White Salmon and we like it very much.

I would like to ask if any of you women have been bothered with a little black bug which seems to stay mostly where bacon and hams are kept. I have lots of meat and I can not get rid of these bugs. I have often seen them in flour. I wish you would tell me how to get rid of them. —MRS. L. H. BREEDLOVE.

Dear Mrs. Barland: I have a boy of five years who was very much inclined to lag when dressing so one day I made him go all day with only his union suit on and needless to say he has been very prompt in dressing ever since.

Depriving him of a pleasure doesn't do any good at all, he is so stubborn, but if I make him do some real disagreeable task he remembers the punishment and never repeats the same misbehavior. I have to spank him occasionally as the same punishment becomes too common so I change whenever I think of a new way. By this method he doesn't know what to expect when I tell him he has to be punished, and is more apt to heed a warning.

Please don't think I have to be punishing him all the time for on the contrary he is a very good boy and a great help to me. He carries all my wood and water and empties my tubs on wash day. This last is a great treat as he likes to see the water run. When we are working we sing little duets together or sometimes I tell him stories and this makes him want to help me.

I do enjoy the letters from the mothers of the little ones and I wonder if Mrs. E. K. answers all the questions asked, especially when she is in a hurry to have something done. My daddy used to tell us to do the task first then ask questions afterward.—MRS. H. D. ALLEN, Wash.

Dear Mrs. Barland: I read with interest the letters on children as I have four. They are aged four, six, eight and 11, girls oldest. I will number them as they come, to save space. Number one, the oldest, sleeps till 7:45 in the morning, then dresses, eats breakfast and walks six blocks to school. She helps me fine only when she gets on a tired or lazy streak. Then I ask her how she ever expects to keep house if she doesn't learn and how long a life she wants me to live or how long she expects I can live if I have all the work to do. This usually brings results. If she offers back talk I appear very much surprised that a daughter of mine would do or say such things. I wonder what "grandma or auntie would think." She has never seen her grandmother since she can remember.

Number two gets up about 6 o'clock and usually has one foot dressed by 8 if she has good luck. But she gets a move on, then as she says "time to hurry" and she gets ready for school and goes with her sister. I use the same tactics with both of them.

Number two always figures everything counts and doesn't care to do anything she can't turn into arithmetic. She always tries to have the last word. If I tell her to put wood in the stove she usually minds, but while doing it she says, "I don't see why you don't make No. one do it, she never has to work."

Number three always minds me though he is so small, only six. He is always ready to stop play to "help mamma." He wants to do things too hard for him and is never too tired or lazy.

Number four is about like number three though not quite so willing as he is yet so young. I find I need to use the strap sometimes; the fault may be mine, though I hope not, of course.

My children have all been teased by their uncle, auntie, grandpa and even by their daddy and have been made unruly and rebellious. They think if others tease they can talk back. I talk to them about it but I don't do more for I do not consider them to blame. I feel that it is spoiling my babies, but seem powerless to help it.

I do not wish to complain, but it is hard to bear even though it is only thoughtlessness on the part of these grown-ups.—MRS. H. G.

Dear Mrs. Barland: I have been wanting to send a letter to THE FARMER for a long time but I have three small children and am never idle and have very little time for writing even to my relatives and friends.

In Mrs. M. F. M.'s letter in the December issue she tells of making or fixing a box into a dresser and making a nursery chair out of an apple box. I did about the same thing except that I made a regular chiffonier with three long drawers and two small ones at the top.

I made a nursery chair out of a box and put a small board below the seat concealing the chamber and I put on the chair a table from an old high chair which had been laid away for two years.

I removed mildew from a white voile dress by soaking it in buttermilk over night then washing in warm suds.—MRS. G. GOE, Worley, Idaho, R. 2.

Dear Mrs. Barland: I live about two and one-fourth miles from the Pacific ocean over quite a steep hill. I have never seen the waves by moonlight but have driven for miles along the beach and watched the waves when the sunshine made them sparkle like jewels of all colors.

It seems to me sometimes, that we live almost out of the world. There is not even a railroad as we have to cross the bay to reach one. It is about five miles to the bay from our farm. Neighbors are very scarce, there is one a mile away and no others nearer than two miles.

I am not very strong as I had a nervous breakdown two years ago and as I have a large family of small children I am sometimes worn out and get lonely and blue. I feel sometimes that I could never endure the loneliness of this place if it were not for my love for nature. I get much comfort writing poetry mostly about nature.

I would call the attention of any of you to the beauties of nature if you, like myself, feel lonely. You will find therein great companionship.—A READER.

Dear Mrs. Barland: I have canned apples and pears when the flavors have not been distinct. I would like the sisters of the Circle to send combinations of fruit juices to use with this sort which would be good for pies, puddings, etc.—MRS. M. D., Wash.

Dear Mrs. Barland: I would like to know if there is any way to take out a cider stain from a white table cloth. I have a fine one and napkins which were soaked in cider. I washed the napkins and seemed to have ruined them.

The table cloth has very fine lace work on it and will not stand much hard rubbing.—MRS. B. E. B., Wash.

Dear Mrs. Barland: I would like to ask if some one can tell how to restore night gown yokes to their original whiteness which have become discolored with vapo rub used during the "flu."

Would like to ask also what will remove old olive oil stain from a linen center piece. It hasn't been laundered since oil was spilled on same.—MRS. G. F. G., Wash.

HOME-MAKING AN ART.

"Ladies" means, literally, loaf-givers, remarked Miss Mary Sutherland of Washington State college extension department, recently addressing a home bureau. Miss Sutherland's appeal was for more appreciation of the high task, the duty and the grace of home-making. "Let us try to put into our cooking and into our serving something of English thoroughness, something of French art, and of Arabian hospitality," she said.

Rhubarb Recipes

Steamed rhubarb puffs: Sift together two cupfuls of flour and three teaspoonfuls of baking powder, a little salt. Add one cupful of milk and make a heavy batter. Grease small cups, put one tablespoonful of batter in each, then a spoonful of stewed rhubard, cover with more batter. Steam for 30 minutes. When done turn out on small plates and serve hot with cream or sauce.

Rhubarb dessert: Wash three pounds of rhubarb, cut it into small pieces and stew it with one cupful of sugar until tender. Soak one heaping tablespoonful of gelatine in half a cupful of orange juice and when the rhubarb is removed from the fire add this mixture to it. Let it get perfectly cold. When ready to serve fill some small patty shells with the rhubarb mixture, heap sweetened whipped cream on top and sprinkle over a few chopped nut meats.

Rhubarb sherbet: One pound of rhubarb, six tablespoonfuls of sugar, the rind of one-half lemon, three cupfuls of water, a little whole ginger. Cut the rhubarb in small pieces, boil in the three cupfuls of water for 10 minutes, stirring frequently. Add the lemon rind and ginger and simmer for 10 minutes longer. Put in the sugar, stir until it is dissolved, then pour the mixture through a piece of muslin, bottle for use and cork.

Rhubarb omelette: Beat the yolks of three eggs; with three tablespoonfuls of sugar, the grated fruit or a three-inch stick of rhubarb and three tablespoonfuls of the juice. Add the stiffly-beaten whites and pour into a hot buttered pan. Do not shake the pan, but let it cook quietly. Fold at the edges and while hot sprinkle with powdered sugar, and brown with a hot poker.

Say "Nope"! to your Grocerman

if he tries to put over on you something "just as good as"

Red Cross Ball Blue

In the words of the immortal Josh Billings—"There aint no sich thing." There is positively nothing as good as, or equal to RED CROSS BALL BLUE for producing clothes of such white purity as bring a blush to new fallen snow.

High Points in News of the Week

By the vote of every delegate the American Federation of Labor convention at Cincinnati Thursday indorsed the nation-wide coal strike that, since April 1, has kept a half million miners from work, and also indicated, by a demonstration, its approval of the threatened walkout of more than 1,000,000 railroad workers.

Pruning nearly $27,000,000 from the annual payroll of 325,000 railway employees by cutting clerks, signal men and stationary firemen from 2 to 6 cents an hour, the United States railroad labor board Saturday announced another wage slash, bringing total reductions under the board's orders up to $135,000,000 beginning July 1.

Formal notice was served Sunday night on the railroad labor board by the chiefs of 10 railroad unions of their intention to go through with a strike in event one is authorized by the 1,126,000 workers whose wages are to be reduced July 1 under orders of the board.

Coupled apparently with the action of the rail union leaders was a statement that the railroad workers "have no alternative except to fight," made by John L. Lewis, leader of the striking coal miners, who will meet again with the rail union leaders to consider joint strike action. He also pledged the miners' aid to the rail men, but declined to state definitely what might result.

* * *

Favorable report on the Capper-Tincher bill to amend the future trading act so as to meet the recent decision of the supreme court deciding sections of that act inoperative was ordered by the house committee. Declaring that contracts upon exchange for the future delivery of grain are "effected with a national public interest and that grain or its products when "sent from one state with the expectation that they will end their transit in another" is interstate commerce, the friends of the bill are confident the government can exercise jurisdiction and control over the largest grain exchanges.

* * *

Legislation requiring operation of public terminal grain elevators by railroad companies was recommended to congress Friday by the federal trade commission in a report on terminal grain marketing, which also urged improved banking facilities for the movement of grain in the northwest. Elimination of the financing of commission houses by terminal elevators, improvement in the methods of making up cash quotations and elimination or reduction of so-called insurance charges levied on country shippers at Duluth were among other recommendations.

* * *

The navy department's plan to create a civilian naval reserve force, similar to the national guard, has been adopted by the senate in accepting an amendment of the house provision of $50,000 to $3,000,000 to begin the work. Under the plan of the department 3000 officers and 10,000 enlisted men will be molded into a civilian reserve force, paid for one month's service annually and be subject to call to duty.

* * *

House and senate conferees on the army appropriations bill have reached a compromise on an army of 125,000 enlisted men for the next 12 months. This represents a reduction of 8000 from the senate figure and an increase of 10,000 over the size of the army fixed by the house.

* * *

Shipping of liquor on shipping board vessels at sea will continue, Lamon Lasker reiterated Wednesday, until a separate decision is forthcoming holding such practice illegal under the prohibition law and until he "has been convinced of its illegality." Mr. Lasker's assertion was in reply to a communication addressed by August A. Busch of St. Louis to President Harding with reference to alcoholic drinks being regularly served on shipping board vessels at sea.

* * *

General Chen Chiung-Ming, formerly civil governor of Kwantung province, whose troops seized Canton Friday, announced today that the south China or Canton government has been terminated and that henceforth Canton will unite with the north in recognizing the old republican parliament.

Dispatches from Canton describe the collapse of the southern government as complete, Sun's military forces crushed and the former Canton president himself a fugitive.

Dr. Sun Yat-Sen was called by his supporters the father of the Chinese republic and the life and soul of the democratic revolution of 1911, which resulted in the death of the monarchy and the birth of the republic.

* * *

Senators supporting and opposing Henry Ford's offer to purchase and lease the government's war-initiated projects at Muscle Shoals, Ala., clashed Saturday in a two-hour heated discussion over ways and means of developing the projects for peace-time operations.

Senator Underwood of Alabama, democratic leader, declared himself a "Ford man" and asked an opportunity to vote for the acceptance of the Detroit manufacturer's proposal before congress adjourned.

Senator Norris of Nebraska, chairman of the agriculture committee investigating Mr. Ford's proposal in connection with other offers for Muscle Shoals, also went on record. He declared he was opposed to the acceptance of the Ford tender or to any other which would have the effect of selling properties "costing the people $106,000,000 for $5,000,000" and leasing those not sold to private interests for 100 years.

* * *

Secretary Hoover has secured the agreement of representatives of the National Coal association and the National Retail Coal Merchants' association to the plan to prevent advance in coal prices in all branches.

* * *

Accompanied by a terrific rain and hail storm a tornado tore its way through parts of 8 or 10 townships in Saint Croix county, Wisconsin, leveling or otherwise damaging buildings on some 200 farmsteads, killing live stock, uprooting trees and damaging growing crops, is the report from Glenwood City, Wis. Six known deaths and injury to 200 persons and doing a damage of $1,000,000 is the latest summary.

Trade in China

Robert Dollar believes that opportunities for trade in China are greater than in any other country. This must come about by increasing the purchasing power of the Chinese people.

Mr. Dollar relates a conversation with a Chinese on a street in his native city, who declared that the purchasing power of the people can not be increased. "At that moment," says Mr. Dollar, "a wagon load of lumber from my lumber yard came along; it was being pulled by 13 men. It was in the winter and snow lay on the ground, but those men were all barefooted. I was paying them 8 cents a day. I said: "'You take those 13 men off that wagon, put a horse there with one man to drive it and put the other 12 men into a factory and you will increase their purchasing power. They will buy more and develop the commerce of your country.'

"I asked him how many persons in China were going barefooted, and he replied that there must be 100,000,000, anyway, if not more. I told him that they were going barefooted from necessity and not from choice and that if they could earn more they would not go barefooted. Each one of them wanted to buy a pair of shoes and stockings. Maybe a shoe manufacturer will read this; what would it mean to him to supply 100,000,000 people?

"And bear in mind that shoes are not the only necessities that these 100,000,000 people are doing without for the simple reason that they have been too poor to buy."

Shipments by Wheat Growers

With virtually all the 1921 crop of wheat shipped or in process of shipment, Walter J. Robinson, general manager of the Washington-Idaho Wheat Growers' association, reports the total shipments the last season through the cooperative marketing organization of 15,500,000 bushels. This is made up of 6,700,000 bushels from Washington, 3,300,000 bushels from Oregon, 1,750,000 bushels from Idaho and 1,175,000 bushels from Montana.

Mr. Robinson adds that all the main wheats are gone and only a limited amount of Turkey red remains.

The 1920 tonnage was about 3,000,000 bushels.

"Our 1922 tonnage will be much greater than 1921, other things being equal," said Mr. Robinson. "Our membership has been greatly increased and there will be little mortgaged wheat this coming season. In addition, of course, we will have 10,000,000 bushels of North Dakota wheat which will be marketed next season by the Northwest Wheat Growers, Associated."

Berry Rates to Be Investigated

Senator McNary of Oregon has replied to messages from W. H. Pauthamus of Puyallup, Wash., president of the berry growers' association, and Robert Paulus, manager of the Oregon Growers' Cooperative association at Salem, protesting against the continued high rates on berries, that after a conference with the interstate commission he believes the whole subject will be investigated.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Dr. Copeland.

One of the most difficult things in the world is to get a nervous individual to keep quiet for an hour or two. To ask a person of this sort to sit in a comfortable chair and to stay there for any length of time is almost equal to imposing penance. Repose seems impossible.

The same person will go to a concert and sit still for hours without moving an eyelid. Is it the effect of the music, conformity to a custom or the actual enjoyment of the occasion?

There can be no doubt of the subtle effect of music. To some it is soothing—almost sleep-producing. To others it is as stimulating as wine. To still others music really means little more than do the sounds of the city streets.

It is interesting to study an audience at a concert. The other night I sat in a box on the side of a great audience. In a position where I could look along one row and closely observe the 40 persons in that particular line. For a quarter of an hour at a stretch not one person would move.

I assume that most persons who go to a formal concert are interested in music. But there must be a few obliging husbands and some equally bored wives in an audience of that size. Therefore there are a lot of people who can and do keep quiet when custom demands it.

It is good discipline to compel yourself to sit with folded hands for two or three hours. It is refreshing to the tired body. It restores the over-active heart. No medicine can be better. Yet I suppose a doctor would be considered queer if he were to advise two hours of perfect quiet after lunch.

At the close of a social season many a woman is tired out. Her nerves are tingling, she is ready "to jump out of her skin." Why? Because she tries to run her body without replenishment of her nerve force. That is no more possible than it is to run an automobile without refilling the gasoline tank.

It is not possible for most of us, nor is it necessary for the perfectly healthy and normal person to take a rest in the middle of the day. But "nervous" folks, especially frail and anemic persons, must have periods of rest. They can not plough through the whole day without refreshment.

Now I can hear some lady say "I can not rest in the middle of the day." Why can not you keep perfectly quiet for an hour or two in the early afternoon, if you can sit through an evening concert without a murmur? Of course you can. Try it a few times and you will be amazed at the change in your attitude toward life. You will be less irritable, less fussy and will be in every way a better companion.

As I watch some thin and strawny persons I am not surprised they have no flesh. If exercise will take flesh off a fat person, why are you surprised if constant activity and lack of repose make a slight person skinny? Without a doubt a reasonable amount of flesh is essential to the best of health. To gain this flesh and to add to the health and vigor be reposeful for a few hours every week. Do not wear out your body by keeping it in perpetual motion.

INVASION OF TENT CATERPILLAR.

Department of agriculture officials advise that the fruit crop in western Washington is menaced by an invasion of the tent caterpillar, which is already doing considerable damage in certain sections.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3809. Ladies' work or house dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires five yards of 36-inch material. The width of the skirt at the foot is about two yards. Price 10 cents.

4022. Ladies' apron. Cut in four sizes: Small, medium, large and extra large. A medium size requires 2 3-4 yards of 40-inch material. Price 10 cents.

3815. Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. A 12-year-size requires 3 3-8 yards of 44-inch material. Price 10 cents.

4035. Girl's dress. Cut in four sizes: 4, 6, 8 and 10 years. A 6-year size requires 3 1-2 yards of 27-inch material. Price 10 cents.

4023. Ladies' combination. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires three yards of 32-inch material. Price 10 cents.

3571. A practical undergarment. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require three yards of 36-inch material. Price 10 cents.

4009-4012. Ladies' costume. Waist 4009, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 4012, cut in eight sizes: 25, 27, 29, 31, 33, 35, 37 and 39 inches waist measure. A 29-inch size requires 2 1-2 yards of 40-inch material. The width of the skirt at the foot is 2 3-8 yards. The waist requires 2 1-2 yards of 40-inch material for a medium size. Two separate patterns, 10 cents for each pattern.

A pure lubricating oil

"Zerolene oils are pure. The Standard Oil Company has always considered the removal of all detrimental properties and compounds as essential in making Zerolene."
— *Board of Lubrication Engineers.*

Zerolene in a good truck or tractor keeps your working equipment on the job—hour by hour—day after day—without a stop for the breakdowns of incorrect lubrication.

Because of its purity, Zerolene eliminates engine trouble. It gives perfect lubrication, and when it works into the combustion chamber, as any oil will do, it burns clean. Zerolene deposits a minimum of carbon, of a soft and flaky nature, most of which is blown out harmlessly with the exhaust.

Stability — Oiliness

The ideal motor oil, besides having purity, must be stable to resist engine heat. It must cling evenly to bearing surfaces, and must also flow freely and permit the development of maximum engine power and speed.

Zerolene is refined from crudes carefully selected for stability and oiliness, and our exclusive high vacuum refining process retains these qualities in their highest form.

Consult the Zerolene Correct Lubrication Chart for the correct grade for your tractor, truck or automobile.

Lois McAlvey writes to us again from northern Washington, Okanogan county. Lois was 11 years old March 3, 1922.

The school which Delerah Buckner attends closed April 29. Next term she will be in the fourth grade. Delerah lives north of Curlew lake, in Ferry county, Washington. She has one sister. Her papa is going to start his sawmill soon.

Clyde Dowell, a cousin in northern Washington, says he helped his mother tie a quilt. He was going to help her tie another one, but when he got home from school it was already tied. Clyde likes The Junior Farmer. He copied a cartoon for Aunt Nellie. (Thank you, Clyde.)

The following letter is from Christian Larsen, a cousin in Douglas county, Washington: "I live on a large wheat ranch. School is out now. I shall be in the third grade next term. I have three brothers. Their names are Everett, Raymond and Iven. I was 8 years old February 15, 1922. We have 31 head of horses."

A calf named Buster and two cows, Boss and Spot, are the pets at Grace Ione Mains' home in Yakima valley, southern Washington. Grace was 10 October 5, 1921. She has six brothers and sisters, and she is a new cousin.

We have a nice letter from Myrtle Easton, also a little poem written by her and her friend. Allienta Gifford. (Thank you, Myrtle.) Myrtle's pet cat ran away, but, she says, there are plenty left that she can pet. She hopes she will find her letter in print before long. Her home is in the Methow valley, northern Washington.

Dorothy Peterson now weighs 104 pounds, which is one pound more than she weighed when she wrote to us before. She lives on a 240-acre farm in Grays Harbor county, Washington. This summer, she says, her father is going to teach her to use the milker. Her pets are a cat, a dog and a calf. She has two cows all her own. Their names are Nellie and Chloe. (Yes, Dorothy, please send Aunt Nellie your picture.)

Some time this summer Esta Rivers, Okanogan county, Washington, is going to send us her picture. She has a camera of her own and has learned to take pictures. (The Junior Farmer comes out the first Thursday of every month, Esta. Thank you for the pretty Easter card.) Esta's school closed April 28.

We have another letter from Sennie Vandercreek, an Okanogan county (Wash), cousin who tells us a story about a lion, too weak and old to hunt for food. The lion went into his den and pretended to be very sick and many animals went in to see him and he ate them. One day a fox was going by and the lion begged him to come in and see him, but the wary fox did not do so. He sat down outside the den and took note that all the tracks went in, but none came out. He was too wise to go into the den and be eaten.

Marguerite Edline, 10 years old March 17, 1922, lives near the British Columbia line in Whatcom county, Washington. She is in the fifth grade and goes to school in a two-room schoolhouse. Why can't a button shoe talk to a lace shoe? Because it hasn't any tongue.

We have an interesting letter from Alvin Cline, a Walla Walla county (Wash.) cousin, in which he says he has passed into the sixth grade and is very happy about it. Alvin got 100 per cent in his arithmetic test. (That was fine, Alvin.) Miss Lillian Billington is his teacher and he says she is a fine teacher. He is going to set a hen and raise the chickens for himself. The money he gets when he sells them he will put in the bank. Alvin was 11 March 14, 1922.

We were glad to hear from Thelma Huck, who lives on a farm in Stevens county, Washington, where is a big orchard. She has a cherry tree of her own. Thelma was 9 June 25, 1922. She has five brothers and sisters. School closed May 25.

Ethel Strunk has joined a sewing club. All the girls in the school that she attends have taken up sewing. May 26 school closed and a nice program was given. Ethel has two little new cousins. One is named Lola Valentine White; the other one hasn't been named yet. Ethel's home is near the Columbia river, in Clarke county, Washington.

Nelle Hill went with her schoolmates and teacher May 19 for a picnic. School closed that day and everybody had a good time. Nelle writes that she passed into the sixth grade. She also got a certificate because she was neither tardy nor absent during the whole year. She has a spelling diploma, too. In three examinations her grade was 100 per cent in spelling and once she got 98, because she missed "punctuate." She left out a "t." Marie likes the stories in The Junior Farmer. Her friend, Marie Waters, borrowed her last paper, so she could read the stories. Marie lives in the Big Bend country, eastern Washington.

This is what we hear from Bertha Van Derschelden of Okanogan county, Washington: "I surely enjoy reading the letters and stories in The Junior Farmer. We have a little pet lamb, which we feed on a bottle. His name is Peter. I have a little pet lamb of my own. The bluebells and crayon bills are in bloom now. When sister Anna and I go for the sheep in the evening we pick many of them." Bertha also told Aunt Nellie about the old man who owned a donkey. One day when he was taking a sack of wheat to the mill, to be ground into flour, and the little donkey was staggering under the load, the old man decided to help the donkey out. He took the sack of wheat and put it on his own shoulders, then got on the donkey's back and rode up the hill.

Helen Staadt, a cousin in southwestern Washington, writes to us about the stock on her father's farm. There are cows, horses and pigs, besides four puppies, six cats, a little kitten and 90 baby chickens. Helen has a sweet pea garden, too. Before school closed she was in two plays. One was "Tom Thumb's Wedding" and the other was "The Brownie's Whisper."

Delma Hedington of eastern Benton county, Washington, writes her first letter to the Corner. Delma's papa has six acres planted to potatoes. Delma has brown, curly hair. A little kitten named Tommy is her pet. This cousin's birthday is November 9.

Birthday Greetings

THURSDAY, June 22—Margaret Prest, 9 years old.

FRIDAY, June 23—Gladys Critchfield, 11 years old; Clementine Deatry; Aune Palola, 11; Evelyn Shockley, 9; George A. Nelson, 10.

SATURDAY, June 24—Hanna Bohnet, 11 years old; Steinar Fjerlie, 9; Eva Paavola, 10; Thelma Paul, 7; Herbert Peters, 10; Sylvia M. Leikas, 8.

SUNDAY, June 25—Thelma Huck, 9 years old; Bernice Blanche Bafirs, 11.

MONDAY, June 26—Milan Marvin Byrd, 10 years old; Johnnie Mikesh, 10; Isabel Morris, 11.

TUESDAY, June 27—Bernice Brace, 11 years old; Marvin Olsen, 10; George Lanhart, 10; Addie Moore, 8.

WEDNESDAY, June 28—Alice Coons, 11 years old; Warena Jones, 11.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer.

Edith Clifford, Esther Duchow, Josie Murphy, Clare M. Salme, Odna Evans, Christian Larsen, Lillie Johnson, Edna Melton, Mildred Brown, Leslie John Beardsley, Violet Binder, Alice Taber, Esther Pershall, Kenneth Albert Leamer, Katherin Gies, Alvena Walter, Hugh Adams, Mabel Loy, Dora M. Duffy, Esther Bakke, Etta Marie Hill, Marguerite Duffy, Emma Jones, Lawrence Wade, Hulda Poutta, Bennie Nead, Clyde L. Harrison, Melva Underwood, Peggy Broadfield.

BEDTIME STORIES

By THORNTON W. BURGESS.

THE SKY PARLOR OF WHITEFOOT.

Whitefoot the wood mouse chuckled to himself as he ran up a low alder and examined an old nest that had once belonged to Mrs. Redwing before she had moved over to the bulrushes on the edge of the Smiling Pool. He had seen that old nest times without number, but he had never given it a thought until Grandfather Frog had said that if he was looking for a new home where no one would think to look for him he would move into the deserted house of some one else.

Now, Whitefoot had always lived in a hollow tree or a hollow log, and every one knew it. So when Shadow the Weasel, who is a robber and worse, had started out to look for Whitefoot he had first examined all hollows in trees and every hollow log that he found. He had found Whitefoot's house while Whitefoot was out, and then Whitefoot did not dare go home again. So Whitefoot had started out to build a new home.

Whitefoot picked up some bits of stick and old dried leaves out of Mrs. Redwing's old nest. Then he curled himself up in a ball in the bottom just to see how it would feel. The Merry Little Breezes came along and saw him there. They didn't know that he was thinking of living there; they thought he had climbed up there just for fun. Gently they rocked the alder to and fro. In a few minutes Whitefoot was fast asleep.

When he awoke he couldn't think where he was. He was in a lovely soft bed and he was very, very comfortable. Suddenly he remembered. Once more he chuckled to himself: "This suits me," said he. "It is my sky parlor. Who will ever think of looking down in a deserted nest of Mrs. Redwing for Whitefoot the Wood Mouse? I'll just put a roof on this and then I'll have the safest, coziest, snuggest house in the Green Forest."

Whitefoot peeped over the edge of the

"This suits me," said he. "It is my sky parlor."

nest. When he was sure that no one was looking he scampered down to the ground. Then he became very busy. What do you think he was doing? Why he was collecting soft, dry grass and the lining from strips of bark and little sticks and leaves. It took him all day, and just as Old Mother West Wind started for home behind the Purple hills Whitefoot sat down to eat his supper of berries and to rest. Hidden under the broad leaf of a skunk cabbage plant was his pile of grass, little sticks and leaves.

When all the little meadow people and forest folk who play by day had gone to bed Whitefoot climbed the alder once more, and this time he took up with him the grass he had gathered. Up and down up and down the alder all night long ran Whitefoot. When jolly, round, red Mr. Sun threw off his nightcap the next morning and started to climb up in the blue sky he looked down on the alder and smiled. Mrs. Redwing's old nest was still there, but it had a roof, and still it looked like nothing but an old nest.

And inside, in the softest of beds, was a little, round ball of soft fur fast asleep. It was Whitefoot the Wood Mouse in his new sky parlor.—Copyright, T. W. Burgess

RADIO
EQUIPMENT

Country life is at its best when placed in daily touch with the world's news, music and other entertainment through the medium of Radio—but your equipment must be effective and reliable. Insure yourself an efficient and satisfactory Radio outfit, incorporating properly chosen units designed to fit your particular Radio requirements. Avail yourself of our competent consulting facilities. Our new booklet will be found a source of information. It will be sent on request.

News for Breeders

ANNOUNCE PUREBRED SALES.

Two purebred sales will be held in the vicinity of Tekoa within the next few weeks, according to announcement by Colonel Harry C. Cranke, auctioneer in charge. The first is that of B. R. Svensgard of Tensed, Idaho, 10 miles east of Tekoa, on June 24, where 30 head of Shorthorn cattle headed by a Villager bull purchased from S. E. Bennett of Wilsall, Mont., will be offered. The catalogue includes four bulls and the balance females. The second sale is a combination of 30 Duroc bred gilts and 20 Holstein females on the farm of S. L. Banks, Tekoa. Most of the heifers are sired by Sir Fayne Pietertje Piebe, and the hogs include some excellent ancestry in their pedigrees.

PUREBRED SHORTHORNS.

One of the good Shorthorn herds of eastern Washington is that owned by W. H. Leonard of Pomeroy, who has about 100 head of purebred, registered Shorthorns on his farm of 1160 acres between Pomeroy and Mayview. Mr. Leonard is a pioneer of that section and still owns his preemption claim and homestead taken more than 40 years ago, and, like many other pioneers, bought all the land that joined his. He cultivates about 600 acres, raising fine crops of wheat, and uses the remaining 560 acres for pasture. He has a fine crop of wheat and barley growing on his farm and says the prospects for a good yield are good. Mr. Leonard plans to hold an auction sale of purebred Shorthorns each year.

LATAH-WHITMAN SHORTHORNS.

The annual Latah-Whitman county Shorthorn excursion will be held June 22-23. The start will be made at the Washington State college farm at Pullman the first morning, following which the party will go east through Johnson and Uniontown, Wash., to the Idaho line, thence through Genesee and on to Moscow and the University of Idaho farm. The excursion will continue north and northwesterly, visiting farms in the vicinities of Palouse, Farmington and Garfield, and probably disbanding at Hercules farm, near Sprague, Lincoln county.

VETERINARY

(Continued from page six.)

the head or from a diseased tooth. Generally an animal can be cured except when he is affected with glanders.

Lumps in Udder.—My cow has a calf a week old. Before the calf came she had a hard lump in her udder and there were a few lumps in her milk. Now there are three hard places in her udder. She is a heavy milker. Can she be cured?
Hood River, Ore. M. E. H.

Give your cow one tablespoonful of fluid extract of phytolacca night and morning for some time. Paint the quarter of the udder affected with tincture of iodine, four ounces; soap liniment, four ounces. Since she is a heavy milker, it may help to milk her three times daily for a while.

Lumpy Jaw.—Is there anything that can be done for a cow with lumpy jaw? Will she spread the disease to others?
Powell Butte, Ore. P. V. M.

Cattle affected with lumpy jaw sometimes yield to the potassium iodide treatment: One and one-half drams once daily for a week, rest a week, give a week, rest a week, give a week. Give it in a little water. If the lumpy jaw is not attached to the jaw remove it surgically and dress with tincture of iodine daily. This is an infectious disease and it will spread to others. It is wise to dispose of the affected animal rather than take chances in having her spread the disease.

Wild Parsnip.—Can anything be done for a cow that is poisoned with wild parsnips? S. S.
Merrill, Ore.

One of the remedies which have been recommended against wild parsnip poisoning in cows is to give the animal a quantity of potassium permanganate solution, from 15 to 60 grains, in one or two quarts of water, the dose depending upon the size of the cow.

Impaction.—I would like to know how to treat a horse for impaction. J. H.
Homedale, Idaho.

Impaction is caused either from indigestion due to feed or it is sometimes due to a twist in the bowel or to paralysis of a section of the bowel. If it is caused by indigestion purges are used, such as a quart of raw linseed oil once daily, for instance, in the morning, and one pound of epsom salts in two quarts of water at night. This can be repeated for three or four days if necessary.

If it is due to paralysis of the bowel the bowel wall must be stimulated. This is frequently done through the use of nux vomica. This is a poison and veterinarians knowing how to use it give very, very large doses of it with splendid results at times. Since this is a poison, it should be used practically by veterinarians only.

$7.50 After 30 Days Free Trial

The Belgian Melotte Separator—with the wonderful Self-Balancing Bowl. No other like it.

30 days' free trial—then, if satisfied, only $7.50 and a few easy payments—AND—the wonderful Belgian Melotte Separator is *YOURS*.

No Money Down!

Catalog tells all—*writes*.

Caution! U. S. Bulletin 201 shows that vibration of the bowl causes *cream waste!* The Melotte bowl is *self-balancing*. Positively cannot get out of balance therefore cannot vibrate. Can't remix cream with milk. *The Melotte has won 28 Grand and International Prizes.*

Catalog FREE

Write for new Melotte catalog containing full description of this wonderful cream separator and the story of M. Jules Melotte, its inventor. Don't buy any separator until you have found out all you can about the Melotte and details of our 15-year guarantee which is infinitely stronger than any separator guarantee. Write TODAY.

Runs so easily, bowl spins 25 minutes after you stop cranking unless you apply brake. No other separator needs a brake. Bowl chamber is *porcelain lined*.

55 Head **AUCTION SALE** 55 Head

Registered Holstein Cattle **Registered Duroc Hogs**

I will hold my second annual sale of Holstein cattle and Duroc hogs at my farm, 2½ miles west of Tekoa, Wash., July 12, 1922, at 10 a. m. The Holsteins consist of young cows and heifers and three young bulls ready for service, all T. B. tested and best of breeding.

The Duroc gilts are all bred for early fall litters to a son of Giant Wonder I Am, and a son of Great Orion Sensation. They are of the highest quality of breeding. There will also be two young boars, dam a litter-mate to the world's champion junior boar, Sir Western Wonder; also four ready-for-service boars.

Terms of sale: Bankable notes, without interest, due Oct. 1, 1922, or 3 per cent discount for cash.

For further information and catalog write to Economy Farms, Tekoa, Wash., or Col. Harry C. Cranke, Moscow, Idaho.

S. L. BANKS, OWNER, ECONOMY FARMS, TEKOA, WASH.
COL. HARRY C. CRANKE, AUCTIONEER, MOSCOW OR NEZ PERCE, IDAHO,
ASSISTED BY FRED MILLER, OAKESDALE, WASH.

Dispersal Sale

TENSED, IDAHO, SATURDAY, JUNE 24, 1922, AT 1 P. M.

Will sell at auction: 30 head registered Shorthorns, including Herd Bull Lurene's Silver, outstanding grandson of Villager, a bull of lots of scale and quality; 5 range bulls and 25 head of females.

Sale will be held at Tensed, Idaho, 10 miles south of Tekoa, Wash.

These cattle are all well bred and in just farm condition.

Terms of sale: Cash or bankable paper, due October 1, 8 per cent interest.

Write for catalog.

EXPERIMENT STATION
URBANA ILL

CHEVROLET

For Economical Transportation

The World's Lowest Priced FULLY EQUIPPED Light Delivery Car

$525 *f. o. b. Flint, Mich.*

Complete with Body, as illustrated

The Greatest Dollar Value in the Commercial Car Market

Every farm needs this car to carry milk, garden truck, feed and all moderate loads.

Every country merchant needs it to enlarge his trading territory and give better service to customers.

Costs no more to buy and keep than a team but does the work of two teams and saves one driver.

With two extra seats makes a fine bus or jitney for livery, hotel or school uses.

Can be had with special panel body at very reasonable cost.

Chevrolet Invites Comparison Because Comparisons Sell Chevrolet

Consider What Chevrolet Equipment Means:

Standard Rear Axle Construction. The new Superior Chevrolet has the strong, quiet Spiral Bevel Gear Axle that "stands the gaff" without breaking.

Standard Transmission—three speeds forward and one reverse.

Standard Braking System—foot service brake, hand emergency brake.

Standard Electrical System: Starter, storage battery, Remy ignition, electric lights front and rear, on battery circuit.

Standard Cooling System—pump circulation, large, honeycomb radiator and fan. This means a cool, efficient engine, saving gasoline and oil and ensuring driving comfort.

Standard Instrument Board, containing speedometer, ammeter, oil pressure gauge, lighting and starting switch, and choke pull.

Standard Type of Carburetor, with exhaust heater—one reason why you get most miles per gallon of gasoline with a Chevrolet.

Powerful, Valve-in-Head Motor. The same type as used in successful cars selling at much higher prices.

Demountable Rims—extra rim on side. No trouble to change tires on a Chevrolet.

Full Weather Protection—Waterproof curtains let down on sides and rear, fully protecting driver and load against rain or snow. Flexible windows in curtains.

Many Other Advantages which will be noticed on inspection comparison and demonstration.

Investigate the Difference Before You Buy

The Star-Spangled Banner

O say, can you see by the dawn's early light
What so proudly we hailed at the twilight's last gleaming?
Whose broad stripes and bright stars through the perilous fight
O'er the ramparts we watched, were so gallantly streaming;
And the rocket's red glare, the bombs bursting in air
Gave proof through the night that our flag was still there;
O say, does that Star-Spangled Banner yet wave
O'er the land of the free and the home of the brave?

On that shore, dimly seen through the mists of the deep,
Where the foe's haughty host in dread silence reposes,
What is that which the breeze, o'er the towering steep
As it fitfully blows, now conceals, now discloses?
Now it catches the gleam of the morning's first beam,
In full glory reflected now shines in the stream:
'Tis the Star-Spangled Banner. O long may it wave
O'er the land of the free and the home of the brave!

O thus be it ever, when freemen shall stand
Between their loved homes and the war's desolation;
Blest with victory and peace, may the heav'n rescued land
Praise the power that hath made and preserved us a nation!
Then conquer we must, when our cause, it is just,
And this be our motto: "In God is our trust";
And the Star-Spangled Banner in triumph shall wave
O'er the land of the free and the home of the brave!

Shall Intoxicating Liquor Be Served on American Ships?—Page 4

Washington Crops

Forecast of 44,865,000 Bushels of Wheat for 1922

The June 1 crop report of the bureau of markets and crop estimates shows, for the state of Washington, (1) a decrease of over 1,000,000 bushels of winter wheat production, as compared with the May 1 forecast; (2) a spring wheat acreage the same as last year, with about an average production expected; (3) small decreases in oats and barley acreages and production as compared with 1921.

Winter Wheat.

Washington winter wheat dropped from a condition of 85 on May 1 to 79 on June 1. This condition of 79 forecasts a production of 27,253,000 bushels, as compared with the May forecast of 28,404,000 bushels. The 1921 crop amounted to 37,457,000 bushels, while the average production for the five years, 1916-20, is 18,376,000 bushels. On June 1 of last year the condition of the crop was 96, while the 10-year average condition on June 1 is 89.

Spring Wheat.

The acreage of spring wheat in Washington this year is placed at 1,147,000 acres, the same as the acreage of 1921. Spring wheat on June 1 averaged 83 per cent of normal, against 91 on June 1, 1921, and 92, the 10-year average condition on June 1. The condition of 83 gives promise of a crop of 17,612,000 bushels, as compared with 17,205,000 bushels in 1921 and 17,543,000 bushels, the average production for the five years, 1916-20.

All Wheat.

June 1 conditions forecast a total production of 44,865,000 bushels this season, against 54,662,000 bushels in 1921 and 41,665,000 bushels in 1920. The average wheat production for the five years, 1916-20, is 35,919,000 bushels, while for the 10-year period, 1911-20, the average is 43,036,000 bushels.

Oats.

The oat average in Washington is estimated to be 202,000 acres, or 86 per cent of the 1921 acreage. Averaging 90 per cent of normal on June 1, the oat crop forecast is 8,636,000 bushels, as compared with 10,500,000 bushels produced in 1921 and 10,420,000 bushels, the average production for the five years, 1916-1920.

Barley.

The 76,000 acres of barley in Washington this season (92 per cent of the 76,000 acres last year) gave promise on June 1 of producing 2,267,000 bushels, against 2,797,000 bushels in 1921 and 3,964,000 bushels, the five-year average, 1916-21. The average condition of the crop on June 1 was 82, as compared with 92 one year ago and 93 the 10-year average condition on June 1.

Rye.

Rye on June 1 was 88 per cent of normal, a drop of 2 points since May 1. This condition forecasts a crop of 251,000 bushels, against 294,000 bushels in 1921 and 162,000 the five-year average, 1916-20.

Hay.

Hay with an average condition of 90 on June 1, shows an increase of 3 points over the May 1 condition. The total hay crop now promises to be 2,120,000 tons (2,091,000 of tame hay and 38,000 of wild hay), against the May 1 forecast of 2,015,000 tons. The 1921 hay crop amounted to 2,666,000 tons.

Clover and Alfalfa.

As compared with 1921, the clover acreage shows a decrease of 1 per cent and the alfalfa acreage a decrease of 4 per cent. Clover on June 1 had a condition of 95, against 100 on June 1, 1921. The condition of alfalfa on June 1 was 88, as compared with 96 one year ago.

Home-Made Soap

The making of home-made soap is usually regarded as a relic of frontier times and something that is too impractical for the modern housewife even to try to accomplish when she has the country store to fall back on for her supplies.

A group of women of the Eld community, Thurston county, have tried out a recipe for gasoline soap, which resembles ordinary white laundry soap, but which has given exceedingly satisfactory results, both as to efficiency and cost, according to figures compiled by the women.

The recipe is as follows:

Five pounds of grease.
Two and one-half pints of hot water.
One can of Red Seal lye.
Three tablespoonfuls of powdered borax.
One-half pint of gasoline.

Strain grease. Combine hot water, lye and borax. Stir until dissolved. Let cool until lukewarm. Pour lye very slowly into the lukewarm fat, stirring constantly until smooth and homeylike. Add gasoline. Mix well. Pour into mold, let cool, then cut into bars. This recipe makes 15 bars.

Mrs. Charles Starr, who is the community leader at McLane, is responsible for getting the idea started in the neighborhood and a number of the farm women in the district have found it to be equally successful. Almost any kind of fat can be used and there is often a chance to utilize surplus fat that accumulates about the kitchen or at butchering time. The use of gasoline adds to the cleansing properties of the soap.

Other details of home laundering have been taken up by this and other communities in the county and the women find that they can get many ideas on home washing that save considerable time and backache. Methods of removing stains have been found very practical and are not difficult to carry out. Equipment for the drying of clothes inside the house has been planned and installed which is found to be a great help in rainy weather.

One woman had her husband build some stationary tubs of wood in her new laundry and they have been found satisfactory. New methods that make the home washing easier are demonstrated before the community meetings and each woman can then use them or not, according to her own particular plan of carrying out her work.

The work is carried on largely by means of the community leaders, who are able to do much in getting the farm women organized and holding regular meetings. Occasional assistance can be given by Miss Ruth Kennedy, the county home demonstration agent, who can furnish bulletins and other information of this kind.

A plan is on foot to purchase soap chips by the barrel, where it is not found practical to make the home-made soap. In this way a great saving can be made on the grocery bill.

Kitchen Conveniences

Means for making housework more interesting as well as the saving of time have been found by the women of Wiley City, in Yakima county. This work was in the nature of a testing circle in which the women tried out a number of kitchen conveniences which had been furnished for trial by supply houses and were distributed by the local community leader, Mrs. M. W. Beechan.

Such articles as the bread mixer, gasoline iron, dish drainers and the utility table have been found to save much time in a month or a year's time, but the most interesting point brought out is that the daughters, in many cases, are as much interested in the articles as their mothers. Mrs. John Wiley told how her two girls, both under 12 years, asked to mop the floors in order to use the new mop wringer.

Miss Edna Ladwig, county home demonstration agent, tells of other similar testing circles that are being carried on with equally outstanding results. In all cases the local stores are willing to help the work along by getting such articles that are needed in the circle. In some cases the manufacturers have sent a list of articles from which the leader may pick out 10 to be used for trial purposes in the community and any additional articles can be purchased as needed. This plan has been a great help to the women in picking out the articles they want for their kitchens.

Glass Sun Driers

The women in Yakima county have found the glass-covered sun driers to be a great help in the utilizing of surplus fruit that can not be utilized in other ways. These driers are fitted with trays of wire mesh and there is an opening at the bottom on one side and at the top of the other side to allow for ventilation. All such openings are closely covered with wire screen to prevent flies from entering.

Such a drier can be placed on the porch or in the yard where the sun will strike it and be left until the fruit is ready to be packed for the winter. It needs practically no attention except filling and emptying and it has proved to be very efficient and is a convenient means of putting up dried fruit.

Never before could you get so much tire worth for $10.90

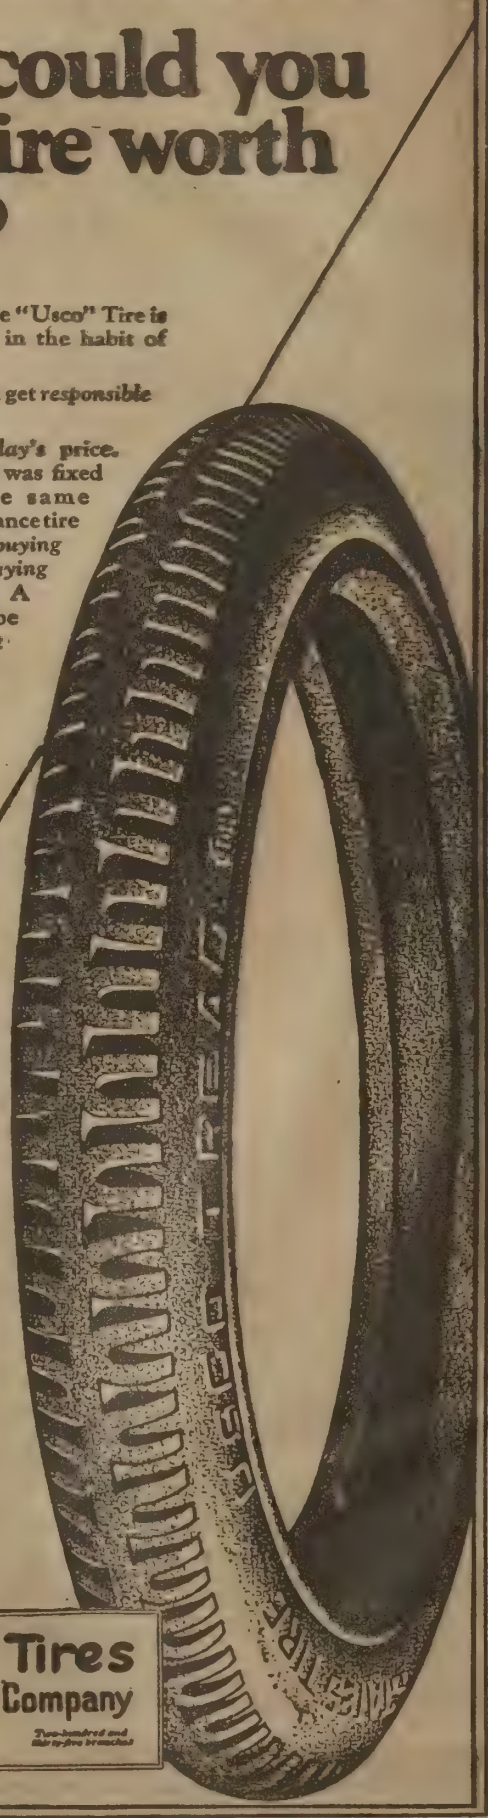
CAR-OWNERS who bought a 30 x 3½ "Usco" for $10.90 last Fall have discovered this by now—

Nobody before ever got so much tire value in the neighborhood of ten dollars.

They never had to question the *quality*—with the makers of U.S. Royal Cords behind it.

They couldn't help admiring the price—*spontaneously made* to meet the *new economy times.*

* * *



Today a number of other 30 x 3½ tires have come into the popular $10.90 price range originally established by "Usco."

So it might be well to remember just what the "Usco" Tire is in case you are in the habit of *comparing.*

In "Usco" you get *responsible quality.*

$10.90 is *today's* price. But the *quality* was fixed *long ago*—the same "Usco" performance tire users have been *buying* and *using* and *buying again* for years. A tire that would be *high value* at *more than* $10.90.

At $10.90 it is *unapproached.*

United States Tires are Good Tires

For Good Farming, Attractive Country Homes and Happy Country People

One Hundred Million Bushels Pooled

"It is a shame that farmers are being compelled to take the low price for wheat that rules the general market at this time," said President George C. Jewett of the Northwest Wheat Growers, Associated, to a representative of THE FARMER in his offices at Portland the other day. "The world needs our wheat, and it needs it to such a degree that the market ought to be strong enough to give at all times an adequate return to the grower for his investment and labor, but at the present time, as in times past, it doesn't do it."

Twelve or perhaps 15 per cent of the wheat produced in the United States this year will be marketed on a pooling basis if Mr. Jewett's estimate of the total amount signed up or to be signed up in 100 per cent pools proves to be correct. Mr. Jewett estimates that there will be approximately 100,000,000 bushels of grain pooled in the United States this year. Of this amount about 50,000,000 bushels will be in the five states now operating through the Northwest Wheat Growers, Associated.

Up to a few days ago there were only four states operating through the northwest organization. The fifth to come in is North Dakota, with probably 15,000,000 bushels and possibly as high as 17,000,000 signed up under iron-clad pooling contracts. Washington is estimated to have 19,000,000 bushels signed up, Idaho and Montana about 7,000,000 each and Oregon about 4,000,000.

The agreement for the entering of North Dakota into the Northwest Wheat Growers, Associated, was effected at Portland a few days ago when George E. Duis, manager of the North Dakota pooling organization, met with the board of directors of the Northwest Growers.

The North Dakota Situation.

The United States Grain Growers, Inc., included North Dakota in its campaign for membership and at the present time has a considerable bushelage signed up under the United States Grain Growers' plan. It is problematic at this time how large a proportion of the grain now signed up with the United States Growers will be marketed through the Northwest Grain Growers, Associated, but the bushelage above quoted is understood not to include any that is questionable and which may be marketed through the regular channels of the United States Growers.

A prominent North Dakota attorney, who has been active in the organization of both the United States Grain Growers' and the North Dakota pooling organization, is reported to have given the opinion that contracts between growers in North Dakota and the United States Grain Growers, Inc., are null and void, in that they were secured under alleged misrepresentation. It is asserted that growers signed up on the understanding that the United States Grain Growers was to form a functioning sales agency and financing corporation, but that such agency and corporation has not yet been so effected as to render the service originally intended. A couple of interesting questions arises in connection with the United States Grain Growers' membership in North Dakota: First, do the members of the United States Grain Growers, Inc., in that state wish to nullify their contract and enter the North Dakota pool? Second, would the United States Growers permit such nullification without recourse to court action to determine the validity of such contract?

The Northwest Wheat Growers, Associated, is now establishing in Minneapolis a sales department that will this year handle the grain of North Dakota and Montana and probably all pooled grain in South Dakota and Minnesota. Mr. Jewett is leaving early in July for Minneapolis, where he will have personal charge of the work at that market during the next few months.

The American Growers.

A few months ago a movement was launched under the leadership of the Northwest Wheat Growers for the formation of a national organization, to be known as the American Wheat Growers, Associated, for the purpose of coordinating the efforts of all cooperative grain associations. A tentative organization was formed at a meeting in Denver, but it is not actively functioning this season. However, in a somewhat unofficial way, under the leadership of officials in various 100 per cent pooling organizations, the wheat-growing sections of the United States have been divided into four general regions; namely, the Pacific northwest, with headquarters at Portland; the northern, with headquarters at Minneapolis; the central, with headquarters at Kansas City; and the southern, with headquarters at Galveston. While there is no binding contract between any of the various sectional organizations of 100 per cent poolers for a centralized control of this season's marketing of the estimated 100,000,000 bushels of wheat, there appears to be a sort of tacit understanding that, in the opinion of leaders, will unquestionably result in an orderly marketing of this grain in a way that will do much toward stabilizing the grain market.

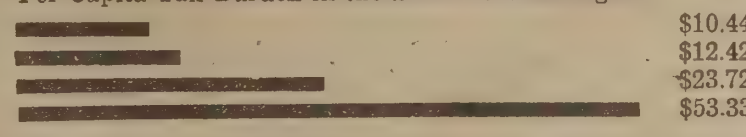
The financial condition of the Northwest Wheat Growers, Associated, is understood to be much better this year than at any time in the past. It appears doubtful that the organization itself will have to issue bonds or take other steps to finance itself, as there appears to be a much more favorable attitude on the part of the private banking institutions than heretofore. There appears to be a general sentiment among those close to the heart of the organizations of the Pacific northwestern states that several of the more or less violent storms of the past two years have been successfully weathered and that the prospects are good now for the best season in their marketing operations.

We Must Cut Expenditures

By LESTER M. LIVENGOOD, Manager Spokane County Taxpayers' Economy League

"As a member of the state commission for the revision of taxation appointed by Governor Hart, it has been my duty during the last winter to attend hearings in all parts of the state at which citizens of every kind expressed their views upon the subject of taxation. The impression made upon my mind was simple and deep. Everywhere people were protesting against the heavy burden of taxation," states President S. B. L. Penrose of Whitman college.

No wonder they protest! A 1214 per cent increase in the total tax burden in the state of Washington during its 30 years of statehood is certainly enough to make even a taxpayer protest, especially when the property that pays those taxes increased only about one-fourth as much or 336 per cent, and the number of people only 280 per cent in the same period.



Washington is not alone in this respect. Idaho, Oregon and Montana are in the same boat. If President Penrose could tour those states he would find the same universal protest against the tax burden. Rapid organization of taxpayers' associations in these northwest states is evidence that the "worm is turning." The people are beginning to realize the age-old legal maxim that "the power to tax is the power to destroy." The tax power like many another good tool may become dangerous to its user if not handled with judgment.

The key to the development of the northwest is taxation. It is fundamental that for us to prosper we must have more people and more money invested in our northwest states. Yet we have erected a tax barrier which must be cut down before these people and new capital will come. When the tax burden gets around 3 1-2 or 4 per cent investors look for other fields. When the tax rate passes a certain point people are deterred from entering into various business enterprises. Real estate does not move, buildings are not constructed, industries fail to develop, and so on. Out here in the northwest we have become public spendthrifts. We want everything that the old and rich communities in the east have, and feel that nothing is too good for us. The result is that in the state of Washington, for example, the total tax burden per capita increased from $10.44 in 1890 to $53.33 in 1920 (excluding federal income and profits taxes and other federal taxes) or to about $100 per capita including federal taxes, or about five times, while the property that pays those taxes increased from $622 per capita in 1890 to $880 in 1920 or only about one-third of one time which puts the increase in state tax per capita about 15 times as rapid as the property value increased.

The time has come to call a halt. Taxes must come down. Protesting against the tax burden is all right if followed by action, but the need of the hour is action.

The great question is: What can we do about it? The big thing to do and practically the only thing to do first is to cut expenditures. We can't have our cake and eat it, too. We are paying to have our government do things for us that we never dreamed of 10 years ago. We must get down to the fundamentals in government before we talk about new revenues. If we can not learn to spend our present revenues economically, then new sources of revenue will be nothing but new methods of robbing the taxpayer.

Per Capita Tax Burden in the State of Washington.

Merge Fruit Organizations

Cooperative Growers Will Sell Through North American

The Federated Fruit Growers, Inc., established a few months ago under the auspices of the American Farm Bureau federation on the recommendation of the bureau's fruit marketing committee of 21, last week entered into a contract under which the North American Fruit Exchange becomes its marketing agency. Under the terms of the contract the two organizations will be united after January 1, 1923. The merger is effected in order to give the Federated Fruit Growers the advantage of an experienced sales service.

A contract has also been signed whereby Arthur R. Rule, vice president and general manager of the North American Fruit Exchange, will become general manager of the Federated Growers beginning January 1.

W. F. Gwin, who has been active in fruit marketing work in the northwest several years and who is in charge of operations in the Pacific northwest for the North American Fruit Exchange, comments as follows on the step just taken:

"The consolidation of the North American Fruit Exchange with the Federated Fruit Growers, Inc.—an arm of the great American Farm Bureau federation—means the realization of the long deferred hopes of farmers' cooperative societies all over the United States for a big, strong, non-profit, cooperative marketing and sales organization of their own.

"Under this consolidation, the organization will be grower-owned and grower-controlled throughout."

Mr. Rule, who becomes general manager for the united organizations, says: "The arrangement marks the beginning of a new day for the American fruit gorwer by enabling him to sell his product cooperatively at all markets. It places at his disposal an efficient sales service which we have been 11 years in building according to a cooperative plan. It will likewise mean a better quality of products and improved service for the consumer. From member cooperative selling associations of the Federated Fruit Growers, Inc., and the large permanent clientele of the North American Fruit Exchange, sufficient tonnage is already assured to make the new cooperative sales service a pronounced and continued success from a business point of view."

President J. R. Howard of the American Farm Bureau federation, who appointed the committee of 21 that worked out the plan of organization of the Federated Fruit Growers, Inc., said of the action just taken:

"I believe this to be one of the greatest accomplishments yet made in the development of cooperative marketing and in the elimination of waste between the producer and the consumer."

Wenatchee Apples

Estimated Between 13,500 and 14,000 Cars This Season

An apple crop in the north central Washington or Wenatchee district of between 13,500 and 14,000 cars is indicated by estimates made during the recent series in thinning demonstrations held throughout the entire district under the auspices of the Chelan County Farm bureau.

More than 1000 of the leading growers in the district attended these demonstrations and all reported that their crops will be much larger than they believed one month ago. Most of them will have to thin their Winesaps heavily, though this variety was believed to be very scarce.

Hydrant System of Spraying.

The next drive to be taken up by the Chelan County Farm bureau will probably be in favor of the introduction of the pipe and hydrant system of spraying. This plan has been tried out during the past four or five seasons with such uniformly satisfactory results, that its general introduction will be strongly recommended by the bureau.

Demonstrations of the workings of this system will be made at various parts of the district during the next month, if plans of the bureau materialize.

The system consists of a tank and spray pump located in the center of the orchard, with pipe lines sufficient to reach within 100 feet of either side. About three lines are necessary for the average orchard. These can be moved as one section is sprayed. The usual method is to lay the pipes to reach one-fourth of the tract, using hose 100 feet long to attach to the hydrants in the pipes. As many as four of the lines, each having a nozzle or spray gun, can be used. A saving of fully one-half the time necessary for spraying is said to be obtained by this method and better results are obtainable with less difficulty mechanically. The cost of installation is not great.

BEET PROSPECTS ENCOURAGE.

The sugar beet crop in Yakima valley looks the best ever to Dr. E. G. Titus of Salt Lake City, Utah-Idaho Sugar company specialist. He says that the Yakima season is much farther advanced than those in Utah or Colorado, and that the plants look better than they did even in the banner year of 1920. The company is conducting trials in sugar beet growing in Skagit county, where if successful the industry would be a valuable adjunct to the dairy industry.

WHITMAN HARVEST WAGES.

Whitman county farmers in a meeting held adopted the following scale of harvest wages to be paid this year: Haying, $2; shocking, $3; box drivers, wheat haulers, straw haulers, hoe downs, header tenders, $3; sack sewers, combine drivers, loaders, $4; header punchers, push binder drivers, $5; pull binder drivers, $4; gas engineers, $6; steam engineers, $5; firemen, $4; separators, 50 cents, and wagons, 50 cents.

News comes from the Yakima valley that

Keep Bars Off Ships That Fly the American Flag

Chairman Lasker of the United States shipping board, the federal authority that manages and operates the great merchant marine that the American people built at such cost and sacrifice during the war, takes the indefensible position that the Constitution and the Volstead act do not apply to American ships when they are outside of the three-mile limit at sea. Chairman Lasker argues that, since foreign ships operate bars and sell booze to their passengers, American ships would be at disadvantage if they did not engage also in the liquor traffic at sea.

We are for maintaining an American merchant marine, but not at the expense of the Constitution, the law and the respect of other nations, as certainly would follow if Uncle Sam, who has declared for national prohibition, should permit booze to be sold on his ships at sea. The argument that he needs the money and can not afford to let foreign ships get the booze traffic is false and weak. It was the argument, before we came to prohibition, that was advanced by the breweries, the distilleries and the saloon keepers. They "needed the money."

The further argument is heard that shipping is a world trade and not a local matter, and that for American ships to compete with the world equal conditions must prevail for success. If that reasoning were allowed to control it would be necessary to let the Northern Pacific, the Great Northern and other American transcontinental roads sell booze on their dining cars because the Canadian Pacific Railway company has been selling booze on its cars.

Let us be consistent. Let us be courageous. Let us go down the line for prohibition, since prohibition is the constitutional and statute law of the land. Let us keep bars off the ships that fly the American flag. Let the shipping board appeal to that sane class of ocean travelers who feel, with reason, that they will be safer at sea on dry ships than on ships that are dispensing booze. If alcoholic liquors are bad on land, how far more dangerous they must be upon the deep sea, where opportunity and temptation to drink should be withheld from the captain and his officers and the members of the crew.

If, on that stand for principle and right, Uncle Sam's ships still lose some money from loss of passengers who prefer to sail on wet ships, why, let us pocket that loss and be consistent and true to the Constitution and the law.

The Halo of Economics

Economics is quite a word in itself. The word economics, like the word psychology, has all the flouirshes of learning surrounding it as a halo. Economics appeals to the practical man as well as to the speculative scientist.

The whole realm of housewifery is being summed up in home economics. Pretty near the whole realm of government is being summed up in political economics, and the whole realm of commerce and finance may be waiting for the right word to define its own economics.

In its methods, modern economics is comparatively a new science. Like all new sciences, exaggerated claims are made for its first conclusions.

There are dangers in economics as well as great helps. There are fads and freaks in economics as well as in any other department of knowledge. It is not only the student, the educated reader of books and other high-browed people who are interested in economics. The wage earner on the street and the hired laborer on the farm are thinking out these economic problems for themselves and becoming established in their opinions.

It is becoming a serious question whether the so-called hobo is not thinking out these economic questions in a more intensive way, though perhaps a mistaken way, than merchants or railroad directors. Is there a fundamental truth being sought by the street worker and the farm laborer, no matter how fantastic may be some of his conclusions?

The tortuous paths of economics need to be straightened into highways upon which the common people may travel toward the truth.

To Lead or to Follow

To lead or to follow efficiently demands that you should do one of two things—either lead or follow.

Some say that leaders are born, not made. It might be a truer statement that leaders are born and are made.

Likewise, the best followers are born and are made.

Every leader makes more or less mistakes. The nature and the frequency of those mistakes are the factors which determine whether he is a wise or an unwise leader, whether he is a successful or an unsuccessful leader.

Likewise, followers are apt to make mistakes with regard to their leaders, and whether they are loyal or unloyal followers depends upon the nature and the frequency of their criticism of the leader.

The leader who proves himself impracticable or false must be deposed and the loyalty of the follower is seen in deposing such a leader as well as staying by a leader whose faults are to be overlooked.

The follower who will not trust his leader, even to some personal disadvantage, can never hope to reap the ultimate rewards of true cooperation.

LOOKING INTO OTHER FARM FIELDS

Backed by bankers and other business men, 60 farmers residing in the immediate vicinity of Yuma, Ariz., have perfected plans for the planting of 500 acres of lettuce during the coming season. Already more than 1000 acres have been signed up near Gadsden.

* * *

Those who like garlic now need have no cause for anxiety, for the Royal School of Agriculture at Portici, near Naples, Italy, reports that the garlic crop has suffered no damage from a severe rainy spell. Better than that is the information just received by the department of Commerce from American Consul Byington, Naples, that the onion and garlic acreage is not only normal, but that the harvest now taking place is better than normal.

* * *

Lower California has been spared the decade of revolutionary disturbances suffered by the mainland of Mexico, and consequently its cattle supply has not been reduced, Consul William C. Burdett reports to the department of commerce. Thousands of semi-wild cattle are scattered over vast stretches of cheap land—mostly dotted with rather poor range land. While the forage is scant, the desert bred cattle thrive on it by running over large expanses of unfenced land. In very dry years the cattlemen move the animals into the high mountains, keeping them there until the next winter's rains. Lower California cattle have been bred up for 20 years and are considered superior to most range cattle of the United States.

State Farm News

Libby, McNeill & Libby of Yakima will handle this season from 550 to 600 tons of cherries, most of them grown in the Yakima valley, according to G. B. Kile, superintendent. The canning season will be a fairly long one, as cherries from other localities, such as Wenatchee, Walla Walla, Wash.; Freewater, Ore., and Lewiston, Idaho, will be brought in to extend the season. There will thus be but little time intervening between the cherry and the pear run. Some canning of apricots will be done in the interval, but a very limited tonnage will be handled, as the production of canning apricots is very light in the Yakima valley as yet.

* * *

One of the very active boys and girls' clubs in Pacific county is that led by Nestor Pessola at Naselle. This is a Jersey community, and quite naturally a dairy club would "lean" toward Jerseys. There are 11 members, and nine of them have Jersey calves.

* * *

The Chehalis Box, Basket and Veneer company, whose plant burned last winter, is operating again, the first work being an order for 7000 egg crates for local use. The plant was made into a box factory with the idea of making boxes for eastern Washington fruit men, said Mr. Merrell, recently returned from eastern Washington with an order for 200,000 boxes. But since the plant is in operation it has been discovered that there is a much larger demand for boxes and crates by local concerns than was supposed.

* * *

The Yakima warehouse of the Washington Cooperative Egg and Poultry association, though established only a short time, is now handling 400 cases of eggs weekly, all its shipments being to eastern markets.

* * *

Last year the Yakima Fruit Growers' association entered into a contract with the North American Fruit exchange to sell the association's fruit through that organization for the season of 1921, the confirmation of all sales being in the name of the association. At their last meeting the association voted to cancel this contract with the North American Fruit exchange, which has been done, and the association will proceed to sell its fruit again this year through its own sales organization and through its own broker, as it has in times past.

* * *

Directors of the Horse Heaven irrigation district have formally canvassed the returns of the bond election and prepared formal notice incident to court action asking for confirmation of the $32,000,000 bond issue. The vote was 221 for and 4 against. If there is no opposition to the confirmation, final decree of court will be obtained July 12 and under the contract with Howard Amon, construction of the canal must be started within 90 days thereafter.

* * *

George M. Wilson of Wilbur will again be the judge of horses at the state fair at Yakima this year.

* * *

Evaporated milk products, with substitute fats, produced in the state of Washington last year totaled in value $746,952, a report by E. L. French, director of agriculture, shows.

The total value of all dairy products in the state last year was $28,845,925, exclusive of milk delivered to dealers. The value of ice cream totaled $2,125,781 and butter products $9,499,647.

Yakima fruit dealers are planning to entertain the delegates who attend the fruit shippers' convention at Seattle July 26, 27 and 28. L. G. Hays has been appointed as chairman of the entertainment committee and reports that $10,000 has been raised in the valley, which will be used at Yakima and Seattle to show the visitors the apple-producing sections. The delegates will spend one full day in the Yakima valley and from there go to Wenatchee via Spokane.

Captain R. J. Graham has added 10 acres to his 25 acres of bearing orchard at Cashmere, buying the addition from J. G. DeBord for $13,000. This property was formerly known as the D. E. Graves place. It has the commercial varieties of Winesaps, Spitzenburgs, Jonathans and Delicious. This place joins a 15-acre tract already owned by Captain Graham. He now has 35 acres in bearing orchard.

A number of persons rose to prominence during the balmy days of hop growing on the Pacific coast. One of the best known of these was Julius Pincus, for 25 years a well-known hop grower and dealer. Mr. Pincus was a native son of the state of Washington, being born in Stillacoom 51 years ago. He was a son of Isaac Pincus, one of the founders of the state and a pioneer in the hop industry. Isaac Pincus established himself in business in Stillacoom in 1852, later moving to Tacoma. Two of Mr. Pincus' brothers also were prominent hop dealers.

Announcement is made that the Northern Pacific railway will put on special berry and cherry trains to carry Puyallup valley and Yakima products to eastern markets under a schedule that will be much faster than present passenger service between Puget sound and St. Paul. There will be two trains daily carrying refrigerator cars and stopping en route only for the purpose of reicing.

* * *

Yakima is to be linked with other cities in the northwest in a firm known as the Fruit Export corporation, just incorporated under the laws of Washington. J. McPhee Ferguson of Yakima is vice president of the company and will have charge of the Seattle office. H. F. Davidson, pioneer fruit grower of Hood River, Ore., is president of the firm and will have charge of the Portland office. A branch will be established in Wenatchee. The corporation is the first to be formed exclusively of northwest men to ship apples direct by water. The corporation expects to handle 600 carloads of apples its first year. An office will be opened soon in England.

FARM BUSINESS AND MARKETS OUTLOOK

Survey of spring pig crop shows an unusually large increase to occur in one season.

Top steers at Chicago have ascended to $9.75 and the general average price of good steers is the highest in 15 months with a further advance almost a certainty.

Veal calf market seems to have reached the turning point.

On western markets breeding cows and heifers are said to be so scarce that quotations are merely nominal.

Hot weather has reduced the domestic demand for fresh pork, but helped the sale of smoked meats.

Too many horses were offered at Chicago last week and prices fell $10 to $15 a head on the plainer sorts.

Wheat harvest is in full swing already in the southern part of the winter wheat belt.

Broomhall estimates a world carryover of 80,000,000 to 100,000,000 bushels of wheat at the beginning of the new crop year.

Corn market is primed for a moderate advance.

Heavy shipments caused a sharp slump in the potato market last week.

Big Increase in Hog Production

The survey of the spring pig crop by the department of agriculture on May 1 has been made public and shows a net increase in the number of pigs saved in 11 cornbelt states of 14.5 per cent over last year. The number of litters farrowed was 22.8 per cent larger than in the spring of 1921, but reports of heavy losses were confirmed as the average number of pigs saved per litter was 7 per cent less than a year ago.

The increase is an unusually large one to occur in one season. The department's report on the number of brood sows on farms in the same states on April 1 indicated an increase of 15.6 per cent in spring pig production.

Besides the increase in the spring pig crop the prospective increase in fall farrowing in the cornbelt averages 49.3 per cent. If the latter work out as expected, the total number of sows to farrow for the entire year will be 28 per cent larger than in 1921.

In the three eastern states, New York, Pennsylvania and Maryland, the total number of pigs saved this spring decreased 2.7 per cent compared with last year, while in the three southern states of Georgia, Alabama and Mississippi the number was only 0.3 per cent larger than a year ago. All of these eastern and southern states, however, show an increase of approximately 25 per cent in the number of brood sows bred or to be bred for fall farrowing.

The department points out that the increase in hog production will offset the shortage in meat stocks and lard in storage as compared with the average of the last five years. In two of those years, however, stocks of these products were a burden upon the hog market and if good hog prices are to be maintained, it is not desirable that stocks be built up again to this average.

This report indicates that hog prices may go considerably lower next fall and winter than during the last few months and they may average below the level of last fall and winter. Whether hog prices will maintain a profitable ratio compared with corn depends largely on the size of this year's corn crop.

Choice Cattle Higher; Others Lower

The cattle trade is becoming a two-sided affair with choice kinds advancing and common and medium grades, most of which show signs of grass, taking the opposite course. Top steers at Chicago have ascended to $9.75 and the general average price of good steers is the highest in 15 months, with a further advance almost a certainty. A falling market on lower grades of all sizes and sexes is even more assured. Their loss last week ranged from 10 to 50 cents.

Thus far the cattle shortage theory has not been confirmed. Receipts at the 20 leading markets from January 1 to June 19 totaled 5,313,000 head compared with 5,863,000 head in the same period of 1921. The result is surprising in view of the liquidation which was under way last year in contrast with the restocking process which has been going on this spring. The movement of feeders to the cornbelt in the last five months indicates a normal supply to come from those states while the grazing sections promise to have about as much grass beef as last year.

The veal calf market has limped badly recently, perhaps influenced by the slump in lambs. A good deal of the advance since the spring break was erased, but with lighter receipts on the horizon, recovery is probable. The market seems to have reached the turning point already.

Feeder Shipments Fall Off

Total shipments of stockers and feeders from the 12 leading markets have decreased over 50 per cent in the last few weeks, although the potential demand if prices were lower undoubtedly is broad. Kansas City reported a decline of 50 cents on some grades last week and further revisions in the price scale can be expected, although no bargain counter is probable at any time this year. On western markets breeding cows and heifers are said to be so scarce that quotations are merely nominal.

Rally in Hog Markets

The hog market dipped again early last week under receipts which were practically the heaviest of the June run, but rallied with the same promptitude that has followed each minor decline recently, and again reached a top of $11. Large packers bought freely on the break revealing that they need hog products and later on eastern shippers expanded operations after a long period of inactivity. In spite of the accumulation of lard, which increased 10,000,000 pounds at Chicago in the first half of June, heavy barrows and packing sows are still selling at a small discount, but the spread is widening. In another week or two receipts of hogs will begin to decline if they have not already started to do so. This should mean an advancing market. Light hogs are likely to sell at $12 or higher before the summer is over.

Clearances of hog meats and lard are making an excellent showing and foreign buyers were reported last week to be actively in the market for additional stocks. Foreign buying usually shows a decided increase in the late summer and the present spurt may mean that it is making an early start. Hot weather has reduced the domestic demand for fresh pork, but helped the sale of smoked meats.

Lamb Market Crowded

Native lambs crowded the market last week and prices fell $2 to $2.50. Kentucky and Tennessee shipped heavily, Virginia flooded Jersey City, the cornbelt sent a large quota and a few Idahoes arrived. Hot weather played havoc with the demand for the dressed product and heavy slaughter from previous weeks pounded prices on the hook in the east $4 to $5 per hundred pounds. A cargo of 17,500 carcasses of New Zealand frozen lamb and mutton arrived at New York.

The southern lamb run will soon be over and prices should become more stable. With a small crop in the range states, the market may not go much lower.

Feeder buyers are playing for a repetition of last year's fat lamb performance and are contracting for thin lambs in all the range states. A broad demand at the leading markets is expected this summer and fall, in addition, but values promise to be a little lower later on than they are now.

Too Many Horses Arrive

Too many horses were offered at Chicago last week and prices fell $10 to $15 a head on the plainer sorts. Good drafters are wanted, there is a market for loggers and rugged workers weighing 1450 to 1600 pounds, suitable for teaming, trucking, excavating and the like, can be sold. Blemished stock sells for but little more than the cost of freight.

Chicago—Good and choice heavy drafters, $175@275; common and medium drafters, $100@180; good and choice wagon horses, $100@140; common and medium wagon horses, $50@100; farm chunks, $40@125.

Advance in Wool Halts

Flolowing a slowing down in foreign wool markets with declines of 5 to 10 per cent on coarse grades in London and Australia, the domestic market has become less active. Although Boston quotations come higher, prices at a sale in Texas were a shade lower and buyers in the west representing eastern firms were told to reduce their limits by 2 to 3 cents. Mills are resisting further upturns in the price of raw wool and are not taking all the offerings. The course of the market will hinge upon the trend of prices abroad, the progress of tariff legislation and the tenacity of owners of the remainder of the clip not yet in manufacturers' hands.

Boston quotations were as follows:

Scoured basis

Oregon—Eastern No. 1 staple, $1.30@1.35; fine and fine medium combing, $1.20@1.35; eastern clothing, $1.10@1.20; valley No. 1, $1.10@1.12.

Territory—Fine staple, choice, $1.30@1.35; one-half blood combing, $1.12@1.18; three-eighths blood combing, 85@90c; one-fourth blood combing, 75@78c.

Wheat Harvest Is On

Wheat harvest is in full swing already in the southern part of the winter wheat belt. Threshing has begun in a number of states and the first cars of new wheat arrived at St. Louis and Kansas City. Most of the early threshing returns have been disappointing. Premature ripening from high temperature is reported from Kansas, Missouri and Nebraska. Spring wheat is progressing favorably in most sections and the prospect is one of the best in years, but rains will be needed soon to maintain its condition. The annual black rust scare has been started, but thus far it has not received serious attention.

The Canadian acreage is estimated officially at 22,464,000 acres or 794,000 acres less than last year. The crop has had a better start this year, however, and the yield may yet exceed that of 1921. The European crop is about up to the average in all countries except France, Germany and Poland where it is below the average. The acreage seeded for the next harvest in Argentina and Australia is reported to be heavy, but India needs general rains to aid in seeding.

Undertone in Wheat Improves

Wheat prices reached a new low point for the season last week, but the market is showing more resistance to pressure and the undertone is more firm.

Mills are supplying their wants without attracting attention and exporters have been indifferent until the last few days when breaks began to uncover liberal export sales and it is now reported that most of the heavy deliveries at Chicago on May contracts have been placed.

On passage stocks are only 58,000,000 bushels compared with 87,000,000 bushels at this time last year, sales to Europe for future shipment from the United States are smaller than usual at this season, and the new European crop is late as well as smaller than last year so that her fall requirements will be large. A year ago Europe scrambled for wheat when our new crop began to move and bought it on an advancing market for two months and a half. In view of the supply situation it is possible that she will repeat the performance this year, but there is no evidence of it yet.

Besides the 245,000,000 bushels of wheat on hand in the United States on March 1 about 3,000,000 bushels have been imported, making a total of 248,000,000 bushels. Approximately 33,000,000 bushels were exported in March, April and May, 27,000,000 bushels were used for feed and 101,000,000 bushels consumed as flour, or a total disappearance of 161,000,000 bushels, leaving 87,000,000 bushels in all positions on June 1. Consumption and exports during June promise to be about 43,000,000 bushels, leaving a calculated carryover of 44,000,000 bushels on July 1, if the estimates are correct, compared with 90,000,000 bushels last year and an average of 75,000,000 bushels. Due to small exports in the last few months the decrease below the average is smaller than expected.

The Argentine crop estimate apparently is in for revision. The export surplus would have been only 92,000,000 bushels, but 87,000,000 bushels have already been shipped since January 1, and the visible supply is 4,000,000 bushels, practically accounting for the entire surplus with no evidence that shipments are going to cease. Private estimates exceed the official by 25,000,000 to 40,000,000 bushels.

Broomhall estimates a world carryover of 80,000,000 to 100,000,000 bushels at the beginning of the new crop year. His earlier forecast was for a very small reserve.

Corn Market Ready for Advance

The corn market is primed for a moderate advance. The after-planting movement has come and gone, heavy feeding operations have cut down farm stocks and the new crop needs rain.

Cash oats prices are the lowest since last fall. Demand is only fair, stocks are large and shipments from farms unseasonably heavy. Crop reports are mostly unfavorable, with dry weather, weeds, rust and chinch bugs all playing part. The Canadian acreage is placed at 16,934,000 acres or 16,000 acres less than last year.

The cash grain prices for June 21 were:

Chicago—Wheat—No. 2 hard, $1.12@1.13 1-4; No. 3, $1.08 1-2@1.12 1-2. Corn—No. 2 mixed, 60@62 1-4c; No. 3, 59@61 1-4c; No. 2 yellow, 60 1-2@63c; No. 3, 59@61 3-4c; No. 4, 58@60 1-4c; No. 2 white, 60 1-2@63c; No. 3, 59@61c; No. 4, 58@60 1-2c. Oats—No. 2 white, 34 3-4@40c; No. 3, 33@36 1-4c; No. 4, 32@36c. Rye—86@87c. Barley—54@62c.

Feed Market Still Declining

The trend of the feed market continues downward. Rather large quantities of wheat feeds, especially bran, are being offered, although flour mills are not operating heavily. Offerings of high protein meals are not excessive, but demand is extremely limited. Total stocks of cottonseed and cottonseed cake at southern mills on June 1 were 132,919 tons compared with 213,781 tons on the same date a year ago. Hominy feed has declined, but gluten feed has held unchanged.

Prices per ton (100-pound bags—in carlots—Chicago—Bran, $17; standard middlings, $18.75; flour middlings, $25; cottonseed meal, 36 per cent, $46; 43 per cent, $50; hominy feed, $23; gluten feed, $31.85; old process oil meal, $49; tankage, $50.

Hay Prices Weaken

Few hay buyers are in evidence and only the better grades are wanted, while most of the arrivals are low grades. The markets are generally weak.

Prices per ton in carlots—Chicago—No. 1 timothy, $21@24; No. 2, $18@20; No. 3, $10@16; No. 1 light clover mixed, $18@20; No. 1 clover mixed, $12@14; alfalfa, $14@22; upland prairie, $13@18; midland prairie, $13@16; oat and wheat straw, $12@14.

Egg Prices Are Stable

Since the decline occurring about the middle of June the egg market has been rather stable. Storage stocks are of record size and are still accumulating. With much lower prices this year, however, consumption has expanded and the storage stocks, even though large, should be absorbed in due course. Receipts will decline rather steadily in the next two or three months.

Butter Markets Steady

The butter market has been holding within a limited range for the last month. Receipts increased sharply during the period, but the demand expanded likewise and drastic declines were prevented. With the market showing stability, storage operators have been coming to the conclusion that it will be impossible to buy butter much more cheaply and have been purchasing freely from the June make. Production continues to show an excess over any recent year. Lower scores of butter are becoming more plentiful and are more difficult to move.

Prices on 92 score fresh butter on June 21 were:

Chicago, 35 1-2c; New York, 36 1-2c; Boston, 37c; Philadelphia, 37c; San Francisco exchange quotation, 40 1-2c.

Cheese Stored at High Prices

Although this is the season in which the largest quantity of cheese goes into storage, prices have retained the advance which occurred during May. Storing operations expanded decidedly last week, about 50 per cent of the

(Continued on page twelve.)

LIVESTOCK AND DAIRY

Quality in Hay

Means Butterfat at Less Cost

By E. B. FITTS.

Quality in hay and other roughage in the ration is important. Dairy products should be produced largely from the cheaper and more bulky feeds.

A light green color, the presence of leaves and other finer parts and a pleasing aroma are indications of quality and feeding value in hay. Whether buying hay or producing your own see that it carries these qualities. It means milk and butterfat at less cost.

Of the crops grown in this country hay ranks third in value, being exceeded only by corn and wheat. The annual yield is nearly 100,000,000 tons. The average quality is inferior, not more than 10 per cent grading as choice. This means an enormous loss in feeding value. Improper methods in curing are responsible for the greater part of this loss.

No crop grown requires more care in harvesting and none is more easily damaged by neglect. The stage of growth at which the crop is cut and the manner of curing are the prime factors in determining quality.

When to Cut.

Early cut hay is best for dairy cattle. A common rule is to cut during the early bloom. This rule will vary somewhat with the different crops. Clover seems best when in full bloom or just after that stage. Vetch when the first pods are about half formed. Some hay plants rapidly lose palatability when nearing maturity. Rye grass, Johnson grass and mesquite are examples. These should be cut as soon as the heads appear. Late cutting means loss of protein, of palatability and of the finer and more valuable parts of the plant.

Mowing and Raking.

Do not mow when the crop is wet with rain or dew. This moisture will dry off much faster when the plant is standing. Cut in the morning as soon as the dew is off and rake in the afternoon, or cut in the afternoon and rake the next day as soon as the curing process is under way. The greater part of the curing should be done in windrow or cock. Get into stack barn as soon as sufficiently cured.

How Hay Cures.

In growing plants the roots are continually drawing water from the soil, which after having done its work is expelled through the leaves. Many tons of water thus pass through the leaves for each ton of hay produced. When the plant is cut the leaves continue to draw moisture from the stems and throw it off into the air. Therefore, the leaves should not be allowed to shrivel in the sun, as curing is thus retarded and leaves broken off and lost. Curing in windrow or cock provides partial shade for the leaves and allows them to continue their work.

Hay Caps.

Hay caps often save serious losses. They are made from unbleached muslin one yard square. The corners may be weighted or fastened with wooden pins stuck into the hay.

A cap will adequately protect a cock containing 150 to 200 pounds of hay and may easily save its cost in a single storm.

Canned Milk

"Before the war the American condensed milk industry contented itself with supplying domestic needs. These domestic requirements ran slightly under 20,000,000 cases a year. In the boom period, culminating in 1919, about 39,000,000 cases were produced, or nearly 100 per cent more than was needed for domestic consumption. This surplus represented nearly 75 per cent of the world's consumption of canned milk in 1914.

"In 1920 the United States production dropped to less than 25,000,000 cases. It is interesting to observe that whereas the United States attained peak production in 1919, continental Europe reached its highest production point only in 1921.

"A swift reaction has now set in, with evidences of marked curtailment. One may not reasonably anticipate a return to the small prewar production, but the drift just now is plainly toward the resumption of cheese and butter making at the expense of the newly developed canned milk industry.

"Even Italy, which can not be rated as a dairy country, has produced some canned milk in the last two or three years. Italian canned milk has been offered within the last 30 days on the Paris market, but at prices considerably above American brands of equal quality. Spain has been buying large quantities of tinned milk through its former source of supply, The Netherlands.

"There is no country in Europe in which more condensed milk could be used now than Germany. The reduced herds and the scarcity of fodder, due to last season's prolonged drought, combine to produce a severe shortage in the supplies of fresh milk. Trade with the United States is affected by the difficulty of financing imports. The same demand, only more acute."—From an official report to the United States bureau of foreign and domestic commerce.

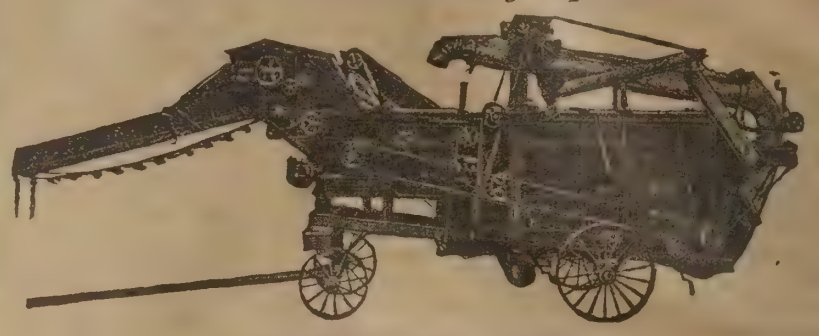
Silage Almost Essential

To get results economically most cattle feeders should use some kind of silage in the rations, says the United States department of agriculture. Steers fed on silage usually not only make more economical gains, shrink less and make more profits than steers fed on dry roughage, but also make it possible to utilize crops grown primarily in a rotation for restoring the fertility of worn-out lands.

The comparative value of a number of different silage crops for steer feeding was recently worked out by the department. In one instance similar lots of cattle were fed a ration of cottonseed meal and blackstrap molasses in combination with corn silage, corn and Biloxi soy bean silage, sorghum silage, sorphum and Biloxi soy bean silage, and Japanese cane and Biloxi soy bean silage.

The best gain was made by the steers fed the straight corn silage, but it was shown that the capacity of a farm for fattening or wintering cattle may be greatly increased by the use of heavy-yielding silage crops, such as sorghum and Japanese cane. Immature Biloxi soy beans mixed with corn or sorghum were not so satisfactory, but with late-maturing crops like Japanese cane, these soys gave very good results. Sorghum silage and Japanese cane and Biloxi soy bean silage are practically equal in feeding value for steers when supplemented by cottonseed meal and molasses.

OIL MACHINERY JUDICIOUSLY.
Use oil regularly and not too heavily.



Make Your Tractor Work

Attach It to a

Russell Thresher

AND INSURE YOUR CROP BEING THRESHED AT THE PROPER TIME

A size is built to suit every requirement

The "Russell" Junior Thresher
with Timken Bearings is the proper size for your Fordson, Samson or similar Tractor.

The "Russell" Cyclone Thresher
is built in six sizes for all makes of larger Tractors.

"Russell" Threshers, Tractors, Sawmills
are the leaders in their line.

THERE'S A REASON!

FISK
RED-TOP
EXTRA PLY OF FABRIC
HEAVY TREAD

ONE of our Western dealers reports: "A traveling salesman was in our office a few days ago. He said, 'I like your Fisk Red-Tops. I have three on my car and the next tire I buy will be a Fisk Red-Top. I travel for a wholesale hardware company and they have tires to sell that I can buy at 15% under the wholesale price, but I find it cheaper in the end to buy Fisk Red-Tops at retail.'"

Anyone who puts his tires to hard usage and who values his time and convenience should buy the Fisk Red-Top—the tire made with the extra ply of fabric and the extra heavy, extra tough red tread.

There's a Fisk Tire of extra value in every size, for car, truck or speed wagon.

POULTRY AND RABBITS

Capons Bring Much Higher Price

By H. W. BALDWIN.

The art of caponizing has been understood and practiced for a long time, although it is only recently that the possibilities of capon production have been realized, and are now being developed. In the eastern section of our country, principally in Massachusetts, New Jersey and eastern Pennsylvania, the production of capons has been made a specialized branch of the poultry industry, being produced for markets in the larger eastern cities As an industry it is still in its infancy, with great possibilities in its development. The question of whether to caponize the surplus cockerels, or to sell them as broilers, depends largely upon the local market conditions. Capons bring a much higher price than broilers, and if the demand is sufficient, capon production will be found profitable. Otherwise it will prove more satisfactory to market the surplus cockerels as broilers.

As capons grow and develop there is a marked change in their appearance and disposition. They are much quieter, lose their ability to crow and become very tame. If kept with the other fowls they much prefer the company of the old hens and chicks, and will keep away from the roosters. Some commercial poultrymen successfully use capons for hovering young chicks. In appearance the capons increase in size very rapidly, the comb, wattles and spurs cease to grow and the birds develop large and beautiful plumage

When preparing capons for market they should always be dry-picked. The feathers on the neck, head, tail, base of the tail, those on the last two joints of the wing and those on the lower part of the leg should not be removed. Neither should the head be removed, as this will prevent the bird from bringing capon prices. The true capon head, and the feathers remaining, are the characteristic signs by which a capon is distinguished on the market.

Capon production is greatly handicapped if range is limited, or if it is necessary to buy all the feed. The amount of feed consumed by capons is much larger than that of other fowls, and for that reason it is preferable to allow them as much range as possible, in order to lower the cost of production. This factor of range is a point in favor of raising capons on the farm.

The market requirement for capons is constant throughout the year, although the demand is greater during the holiday season. The advantages of marketing the surplus cockerels as capons are a larger and heavier fowl at killing time; sweeter meat of finer flavor; a much higher selling price; a lower cost, due to ease of fattening; the birds have a more docile disposition; they can better endure close confinement, and capons can be used for hovering young chicks.

Of the various breeds the Plymouth Rock is one of the best for capon production on the farm. Other breeds suitable for capon production are the Light Brahma, Barred Plymouth Rock and Wyandotte. The Light Brahma is generally considered the best capon breed of the three mentioned. It is possible to have a flock of these capons weighing 12 or 15 pounds each at 8 to 10 months of age. Birds of this weight are called heavy capons, while light capons, such as those produced from the Plymouth Rock, will weigh 10 or 12 pounds. This latter weight is undoubtedly in greatest demand, since it more nearly approaches the meat requirement of the average family.

The best time for caponizing is when the birds weigh from one to one and a half pounds, or are from 2 to 4 months old. It is not advisable to caponize birds over 6 months of age, as the operation is apt to result disastrously. Neither should cockerels under 2 months of age be caponized, because the testicles have not developed sufficiently to make their removal successful. Size is a better indication than age when determining the time to caponize. June, July, August or September are the best months, since spring-hatched cockerels will reach the desired size, and will be ready for market during December, January, February and March, the months of highest prices and greatest demand.

It is suggested that a beginner see the operation performed by an expert before attempting it himself, or else practice on dead birds in order to learn the location of the organs and the manner and place of making the incision. There are many sets of instruments on the market, some of which are satisfactory, while others have less value. The sets recommended are those made double, that is, each end of the instrument is used for some part of the operation. Such a set consists, in reality, of six instruments, but are so designed that they are combined into four. The chief requirements of a good caponizing set are that it be made of good material, that it is durable and that it is efficient. The set should consist of a sharp knife for making the incision, a spreader to keep the incision open while working, a probe that is blunt at one end and formed into a sharp hook at the other end. The fourth instrument is used to remove the testicles. Caponizing sets can be purchased from most any poultry supply house or veterinary instrument company at reasonable prices.

(Detailed description of performing the operation of caponizing will be given in another article.)

A Critical Season

The coming of the warm days of summer brings to the farm poultry flock one of its most critical periods. The body pests of poultry, especially the multitudinous mites, thrive when it is warm and only when it is warm.

The professional poultryman is not so likely to be troubled with mites and lice as is the ordinary farmer with his side-line flock, because the former is prepared to prevent the pests and combat them successfully if they appear. The farmer, on the other hand, with his many other duties, is likely to discover all at once some warm day that he is getting few eggs, that his birds are showing signs of distress and that, upon investigation, his poultry house is alive with the mites.

A poultry house may be thoroughly clean, so far as filth is concerned, and yet be a perfect breeding place for mites and lice. The mite does not breed and dwell in the filth as is sometimes supposed, but rather in comparatively clean places on the under side of the roosts, in cracks or in chinks in the wall.

One habit of the mite is at once a hindrance and an aid in the warfare against it. It spends the greater part of the daytime in its hiding place, coming forth at night to feed upon the hens.

Unquestionably the way to control this pest is to make its habitation uninhabitable. The best way to do this is to use an oil, creosote, or a disinfectant spray or paint that will serve not only as a death-dealing device, but as a repellant as well. Kerosene, crude petroleum or distillate is effective when sprayed onto the perches and walls of the poultry house with a garden or orchard sprayer or if applied with a brush. Carbolineum or almost any coal tar preparation is effective. Any waste oils from the automobile or tractor are effective.

Lime sulphur spray is sometimes used effectively in the same way that it is applied to the trees in the orchards.

Whitewashing is an excellent means of preventing and combating the mite pest. It is well, however, to supplement the whitewash with a frequent spraying of oil.

Under all circumstances, the application of the oil or other mite-destroying preparation must be repeated frequently throughout the warm season. It should be begun before the mites appear, as the season's control work will thereby be made much simpler and the losses be minimized.

Cost of Farm Products

For the third consecutive year, a force of agricultural experts representing the United States department of agriculture and the experiment stations of the agricultural departments of Washington State college and the University of Idaho is engaged in taking a large number of records on farms in Latah and Whitman counties to obtain data on farm organization, the cost of farm production and other facts. The records are to be taken on between 250 and 300 representative farms of this area. They will cover almost all phases of farm production in the two counties.

"BIG VALUE SHOES FOR BOYS"

ORCHARD AND GARDEN

Thinning Apples

Basic Principles Must Be Followed

By Elwin G. Wood,

While thinning alone can not be depended upon to produce the maximum crops of large fruit of the highest grades, it is necessary in orchards that are in full bearing in the northwest. The orchard management program aims at the maximum production of large fruit of the highest grade.

Thinning helps to maintain the vitality of the tree, which in turn results in annual bearing. While thinning alone can not increase the vigor of the tree, it materially prevents wasting the vitality the tree already has. A young vigorous tree making a good average growth will come into full bearing and produce several good crops. Then it will overbear and lose in vigor and thus begin the habit of biennial bearing. Too great a portion of the tree's activity is consumed in the production of fruit buds and fruit at the expense of wood growth and the tree loses in vigor so rapidly that it is only a step from biennial bearing to a condition in which the tree bears only an occasional crop of undersized fruit. Such trees can be brought back to normal bearing only by increasing the fertility of the soil, heavy pruning and heavy thinning. On the other hand, if the crops are thinned every year, beginning when the trees first come into full bearing, they are never allowed to overbear and the biennial bearing habit is prevented. We are assuming ,of course, that proper attention is given to pruning and to the maintenance of soil fertility.

Thinning in its relation to pruning deals with the individual fruit spurs of the tree, while pruning deals with the top and fruiting wood of the tree as a whole. Good pruning shortens the length of the branches and reduces the number of fruit spurs to such an extent that larger fruits are produced, but it can not take the place of systematic hand thinning.

It is the normal tendency of a fruit spur to rest one year after bearing fruit. It is only spurs of exceptional vigor that will bear two years in succession. Systematic thinning leaves a large number of spurs well distributed throughout the tree to rest each year, and this greatly increases the likelihood of the tree producing a full crop the following year.

Again, if the trees are not pruned sufficiently to induce to new wood growth and the production of new fruit spurs from year to year, the spurs may become too old and weak to produce good-sized fruit even on alternate years, and in that case thinning may fail to keep the tree in heavy annual bearing. This serves to emphasize the fact that all of our orchard practices are so interrelated that we can not neglect any one of them without its having an important bearing on the others.

Time to Thin.

From the above considerations we are able to see the importance of early thinning. The fruits should be removed before they begin to draw heavily on the food supply of the tree. Since an important factor is allowing a large proportion of the spurs to rest in order that they may set vigorous blossom buds for the following year, it is important that the thinning be done early. This will give such spurs the entire summer to rest and get ready a vigorous blossom bud for next spring.

Experimental data is lacking so that we do not know just how early in the summer the differentiation between blossom buds and leaf buds takes place in the various sections of the state. We do know, however, that the differentiation begins in the fore part of the summer and that the longer the apples are left on a spur before they are removed the less likely that spur is to form a fruit bud the next year. The best and most economical time to thin is just after the "June drop." At that time the thinning can be so thoroughly done that it will be unnecessary to go over the trees a second time except to pick off and destroy wormy apples.

In a second article Professor Wood will discuss the benefits of thinning.

Kill the Cutworm With Poison

Cutworms can readily be controlled by the use of poisoned bait. This is the way to prepare and apply the poison:

To one bushel of dry bran add one pound of white arsenic or paris green and mix thoroughly into a mash with four gallons of water, in which has been stirred one-half gallon of sorghum or other cheap molasses. This amount will be sufficient to treat four or five acres of cultivated crops. After the mash has stood for several hours scatter it in lumps of about the size of a marble over the fields where the injury is beginning to appear. Put it about the bases of the plants which have been set out. Apply the mash late in the day, so as to have the poison in place around the plants before night, when the cutworms are active. Apply a second time if necessary.

Cutworms destroy hundreds of thousands, even millions, of dollars' worth of crops every year throughout the United States. They especially attack tomatoes, cabbage, lettuce and other vegetables that have been started under glass and transplanted. Cutworms sometimes appear in great numbers in the spring and early summer and frequently do severe injury before their ravages are noticed.

Their method of attack is to cut off the young plants near the ground. They are of large size and are voracious feeders, capable of destroying many plants in a single night. Often they cut down more than they can devour.

Color Problem

Standards for Extracted Honey

By GEORGE W. YORK.

An attempt will be made by the bureau of crop estimates and the bureau of entomology at Washington, D. C., to work out color standards for extracted honey. Requests have been sent out to some of the leading commercial honey producers of the United States for samples of various kinds of honey which will be used in deciding just what the colors in different kinds of honey are. Some definite standards will then be fixed and indicated so that those buying and selling extracted honey can do business without seeing the honey.

There may be some difficulty in establishing these color grades, as it seems that honeys from the same source vary in color in different localities. For instance, alfalfa honey produced in Colorado and Utah appears to be very much lighter in color than that stored from alfalfa in New Mexico and Washington. If this condition prevails to any large extent it may be necessary to localize the color grades.

However, it will be interesting to note the results obtained by the government in this investigation.

As the expense involved in the undertaking is but nominal, it will not matter so much if no valuable results are obtained from the effort.

"Topping" Vegetables

Succulent vegetables, such as radishes, carrots, beets, spring onions and turnips, should be "topped" while in the field, to prevent withering and to keep them firm and fresh for marketing. This is the conclusion of L. B. Rhodes of the North Carolina department of agriculture, Raleigh, N. C., who recently read a paper on the subject before the North Carolina section of the American Chemical society.

"It is generally known that all growing plants continually give up moisture to the air from the leaves by evaporation, the phenomenon of transpiration," said Mr. Rhodes. "It seems to have never been recognized that transpiration would increase the wilting of root vegetables. According to the following explanation this would seem plausible. While the plant is in the ground, the soil through the rootlets supplies evaporation losses; when pulled up, transpiration continues, the moisture being supplied through the root as usual. The root, as, for instance, root vegetables, being unable to replenish the supply, wilts as the moisture streams up to the leaves.

"In order to find out just the effect of tops on vegetables as carrots, radishes, etc., a series of experiments was made. Vegetables of the same size and variety were matched by twos. From one the top was removed; otherwise the pairs were exposed for different periods of time under like conditions, after which the moisture content of each was ascertained.

"It was discovered that by removing the top the time the vegetable would invariably remain firm and marketable, under ordinary conditions, was practically doubled, while those exposed with tops on rapidly withered in comparison. These tests were made on radishes, carrots, beets, spring onions and turnips, all of which showed more marked wilting with tops on. Any cause, as sprinkling, that tends to preserve the tops increased the wilting at the root. It is practically certain that other root vegetables would behave similarly. From these experiments, the conclusions follow: Tops of root vegetables should be removed in the field. The vegetables would remain marketable and hence could be shipped further. Space and expense would be saved in shipping. They would be of superior quality, firm and containing the soluble mineral matter as when pulled. Valuable fertilizing constituents in the tops would be returned to the soil. It is no exaggeration to say that were this practice followed thousands of dollars would be saved to those who handle the products."

The Old Carriage Maker Had an Important Truth

"To make each part as strong as the rest," was his way of "building a wonderful, one-horse chaise that wouldn't wear out till judgment day."

This illustrates a fact that is keeping many doctors busy these days—human bodies, like chaises, break down because some part isn't as strong as the others.

Very often it's because of ill-balanced food, lacking in some important element of nutrition. This is especially true of ills developed in childhood, and carried on through life.

Grape-Nuts, that world-famous, ready-to-eat cereal, brings the plan of building each part as strong as the rest—to serve human need. Grape-Nuts contains all the nutriment of those best of the field grains, wheat and barley, including the vital mineral elements, and it is a wonderful food for building and sustaining health and strength.

The delicious flavor and crispness of Grape-Nuts make it a welcome dish whenever you're hungry.

SHAROOD COMPANY, Dept. 6J Minneapolis, Minnesota

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Aermotor Towers are Towers of Strength

State Hay Grades

Believing that the new state hay grades will be a benefit to the hay grower of the Yakima valley a committee of the county farm bureau have drawn up plans for selling their hay direct to the dairymen of the Puget sound district.

If sufficient tonnage can be signed up through the committee, or sales agency, to assure state inspection on the basis of the new grades, they will ship their hay direct to the dealers in Coast cities or the dairymen themselves. There have been some offers made for hay on the basis of the old grades, which include six grades instead of two, and the growers are greatly in favor of the latter, which is now the state grading plan.

A decrease of approximately 25 per cent in the acreage of alfalfa in the Yakima valley has been estimated for this year and there are a greater number of stock to feed at home. The growers anticipate a strong market this season. A number of the dairymen of the Coast have already begun to buy their hay direct from the growers in the hay-growing sections and it is the hopes of the farm bureau members that a greater tonnage can be disposed of in the future in this manner.

The committee is composed of H. L. Hull, president of the farm bureau; N. H. Massie, secretary; Claud White of Grandview, George W. Varnum of Mabton and George Dash of Naches Heights. The committeemen expect to meet at different parts of the valley to discuss their plan with other hay growers.

TO SELL RESERVATION FARMS.

The Spokane Indian agency has advertised 30 farms for sale on the Spokane reservation. The sale will close August 8. The terms are one-fourth down, with three annual deferred payments at 6 per cent interest. Ten per cent of the amount must accompany the bid in certified check or cash. Bids are received by J. A. Garber, Indian agent at Wellpinit, Wash.

Address A. E. Sears, trustee, Centralia, Wash.

BIG OPENING SALE OF YAKIMA VALLEY farmland, under an assessed state and government approved irrigation project; good, deep soil; close to town, railroads and state highway. We sell in tracts to suit purchaser at $25 per acre and up, on easy terms. Our many sales to farmers show that this land is a good investment. Western Lands, Inc., owners, 918 Green bldg., Seattle.

LOGGED-OFF LANDS IN STEVENS COUNTY, Washington, at greatly reduced prices. Most of land sells at from $5 to $20 per acre; thickly settled community, good schools, hard surfaced and paved roads to Spokane; best country in state for dairy and stock raising; most places water can be found at shallow depths. Write for folder. Phoenix Lumber company, dept. T, Spokane, Wash.

400 ACRES WHEAT AND DIVERSIFIED; 250 now in crop; 125 fall wheat, 125 spring grain, 50 summer fallow, 100 pasture; fine large house, spring water under pressure; 2 barns, silo, school on place; 5 miles to haul grain; 10 cows, 9 horses, harness, wagons, binder, mower, plows, harrows, etc.; 17 miles west Spokane. $31,000; $14,000 cash, rest easy terms. Owner, Box 595, Spokane, Wash.

FOR SALE—200-ACRE FARM, ABOUT 30 cleared; on county road, mail route, telephone; water piped to house; eight-room house, barn, etc.; some good timber; crops are in. Price $5000. Owner, John Kilkelly, Woodland, Wash. R. F. D. No. 1.

40-ACRE FARM FOR SALE—ONE OF THE best farms west of town; new model house, electric lights, air pressure water system; more information write H. F. Lovelin, Silverton, Ore.

BARGAIN—15 ACRES FOR $5000; ALL SORTS of fruit; stock, farm machinery, some timber. Write for terms. Myron Holden, Puyallup, Wn., R. 3, Box. 183.

TEN ACRES, ENOUGH TO SUPPORT YOUR family; best climate on earth; Puget Sound. Free booklet. Whidby Information Bureau, Clinton, Wash.

A. F. HORTON, NEWPORT, WASH.—TIMber products, cutover lands, $5 to $15 per acre. Good roads, schools, fine mountain water.

GOOD STOCK RANCH, 3520 ACRES; ALL fenced; 300 meadow; best range anywhere, $4 per acre. A. Millard, Kinsey, Mont.

FARM LANDS FOR SALE (Continued) 651

FOR SALE—IN THE FAMOUS TILLAMOOK cheese belt; 180 acres dairy ranch, cows and equipment. This ranch is perfectly level, two creeks running through place; half mile to school and cheese factory; quarter mile off paved road; on rural route; reason for selling, owner too old to operate; two houses on place; buildings in good condition. For information write to Box 194, Tillamook, Ore.

MUNICIPAL LANDS FOR SALE BY THE DIStrict; no agents, no commission; interested only in getting home builders on the project. Longest growing season in the northwest. Gardens and fruits thrive; schools, highways and railroads the best. Junction Snake and Columbia rivers. Write for terms and folder. Address Burbank Irrigation district No. 4, Burbank, Wash.

THURSTON COUNTY—5000 ACRES, VERY fertile, level; fruit, berry and poultry lands; right at beautiful state capital. No extremes of temperature; no storms or floods, no irrigation; bumper crops; fine markets. 5 or 10 acre tracts; low prices and long term payments. Send for our valuable pictorial booklet. Norpia Realty Corporation, Olympia, Wash.

WE SELL FORECLOSED LANDS FOR A loan company for one-third cash, balance easy terms. When writing tell us what you want, where preferred, how much you will invest, kind of farming you contemplate, as we have no list and must write special description in each case. No trades. Hartford Land company, 601 Paulsen bldg., Spokane, Wash.

FOR SALE—IDEAL STOCK AND DAIRY ranch; 120 acres; 9 miles south of Cottage Grove; 3 miles north of London; on good county road; good neighborhood; good house, two barns, family orchard, running water; 30 acres in crop; more land easily cleared. Price $9000, including stock and farm implements. O. P. Wills, Cottage Grove, London Rt., Ore.

174 ACRES, ON KOOTENAI RIVER AND Great Northern; 94 bottom, 8 pasture, 18 fenced and cross-fenced; 3 plowed, 15 ready; ½ acre fruit, 4 cabins, team, harness, wagon, plow, harrow, tools, etc.; 2000 ft. lumber, 14 bales roofing, 6 windows, fine cattle or chicken ranch; fine government range. $4000. Chas. R. Scholz, owner, Ural, Mont.

FOR SALE—IMPROVED 160 ACRES; GOOD water, good roads; 3½ miles from town with three elevators; 110 acres in crop; all can be plowed; crop, stock, implements if sold before harvest, $35 per acre. Ernest Mahr, Milk River, Alberta.

80-ACRE FARM, 17 MILES PORTLAND; ONE mile Wilsonville; 75 acres cultivation; good buildings; abundance water; $200 per acre, or $225, including machinery, stock and crop. Henry Raymond, Route 5, Sherwood, Ore.

160 ACRES, 4½ MILES FROM LEADORE, IDAho; 95 in cultivation; gilt edge water right; 165 inches; good pasture, 6 milch cows, 6 horses, tools, implements, $6000. R. H. Davidson, Leadore, Idaho.

STOCK RANCH FOR SALE—844 A.; 4-WIRE fence; cross-fenced; buildings, corrals, nearly new depot, P. O. on ground; forty miles south of Tacoma. N. W. Everts, McIntosh, Wash.

160-ACRE HIGH GRADE DAIRY; FINE buildings; $25,500; cash $10,000; good terms, 5 per cent. Particulars, write Frank Marquardt, Route 2, Lebanon, Ore.

SELL YOUR PROPERTY QUICKLY FOR cash; no matter where located. Particulars free. Real Estate Salesman company, 501 Brownell, Lincoln, Neb.

BEAUTIFULLY LOCATED, WELL EQUIPPED, prosperous ten-acre poultry farm, $12,000; $5000 cash. A. P. Rushton, owner, Southworth, Wash.

32-ACRE POULTRY-BERRY RANCH FOR sale cheap; 1800 feet beach; Puget Sound. Particulars from owner. Charles Engel, Yoman, Wash.

98-ACRE FARM FOR SALE; WELL IMproved; running water; near town, churches and high school. J. W. Sprenger, Shedd, Ore.

¼ SECTION TIMBER LAND; IN LAUREL, Wash.; must be cash deal. C. H. Abelson, Route 7, Idaho Falls, Idaho.

FARM LANDS—Wanted 654

WANT TO HEAR FROM OWNER HAVING farm for sale. Give particulars and lowest price. John J. Black, 80th street, Chippewa Falls, Wis.

FARMS WANTED — SELL YOURS QUICKLY for cash, no matter where. Particulars free. R. A. McNown, 310 Wilkinson bldg., Omaha, Neb.

IRRIGATED LANDS—For Sale 663

50-ACRE IRRIGATED DAIRY FARM; SIX-room dwelling, new barn; thirty acres cropped, balance pasture; eleven cows, team, machinery; living stream; driven well; quick sale price. Thos. G. Mortland, Sequim, Wash.

40 ACRES, MAIN HIGHWAY; CROPS AND equipment; want small improved acreage. Henry Savage, Firth, Idaho.

RESORT PROPERTY 684

WILL TRADE FIVE-ROOM COTTAGE, ACRE ground, valued two thousand dollars; East sound, Orcas island, popular summer and winter salt water resort. Percy Livesey, Bellingham, Wash.

SUMMER ON PUGET SOUND, AT CLINTON; ideal location; select your site; large 60-foot lots, $150. Free booklet. Henry L. Pinney, Clinton, Wash.

FOR SALE OR EXCHANGE 702

A REAL PUGET SOUND FARM—FAMOUS Skagit valley; 100 level, cleared acres in crop; finest silt loam, wonderfully fertile; complete set buildings, all machinery, tools and stock; 11 cows, 4 calves, 20 hogs, 10 sows, 4 horses, everything complete; adjacent fine town, schools, railroads, interurban electric; worth $50,000, priced much lower. Equity of $18,000 for going place or business, balance easy. J. W. A. Myers, owner, Route 2, Sedro-Woolley, Wash.

WELL IMPROVED SECTION OF LAND FOR sale with or without equipment; would consider small farm in exchange. For particulars apply to Isaac Gibson, Innisfail, Alta.

FOR SALE OR TRADE—NEHALEM VALley; 320 acres. Owner, Box 32, Birkenfeld, Ore.

TO EXCHANGE—Real Estate 705

TO EXCHANGE FOR CALIFORNIA, WESTern Oregon or Washington; 160 acres subirrigated land; house, barn, etc.; equity $2000; mtg., $1000; on a good trade would pay cash to amount of mortgage; prefer land on coast, unimproved. Address A. D. Hopper, R. R. 3, Coeur d'Alene, Idaho.

FOR TRADE—STOCK OF GENERAL MERchandise; in Fairport, Cal.; will invoice about $4000; building, 2 lots, small garage; worth $3500; want alfalfa or fruit ranch. Address Postmaster, Fairport, Cal.

WILL TRADE MY IMPROVED IRRIGATED forty acres, Yakima valley, for stock ranch. Write Alfred W. Jensen, Mabton, Wash.

Miller's "Pike's Peak or Bust"

The Washington Farmer's New Serial Story by the Author of "The Crooked Trail," "Trappers of the Ozarks" and "Big Smoke Mountain," Will Begin Next Week

It is with great pleasure that The Washington Farmer is able to announce that it has secured another serial story by Lewis B. Miller, author of "The Crooked Trail," "Trappers of the Ozarks" and "Big Smoke Mountain." The new serial, which will begin in the issue of July 6, is entitled "Pike's Peak or Bust." In regard to this story Mr. Miller says: "For serial purposes I consider this far and away the best story I have yet written. 'Pike's Peak or Bust' covers a phase of American pioneer history concerning which every school boy and school girl knows something. And yet, so far as my reading has gone, there is almost no story literature on the subject."

"Pike's Peak or Bust" is Mr. Miller's latest story, copyrighted in 1921.

"The Crooked Trail," "Trappers of the Ozarks" and "Big Smoke Mountain" stand out as the most popular and eagerly read stories among THE FARMER'S host of readers. One letter after another has reached the office showing the interest taken in these stories.

The principal characters of the story leave their home in Illinois and join the great rush of gold seekers to the Pike's Peak country in Colorado. This was before the days of transcontinental railroads. The adventurers in that great rush to the gold fields traveled a-foot, on horseback and prairie schooner and by every contrivance at hand. Fights with grizzly bears, narrow escapes from hostile Indians and murderous gangs of white men were some of the stirring incidents of those days.

An intimate knowledge of the builders of the great "Western Empire" of the United States is the heritage of Lewis B. Miller. His ancestors were pioneers. Mr. Miller was born in a settler's cabin near Red river, Cooke county, Texas, then on the very edge of the wilds. Almost his first recollections are of living in Fort Blocker, where the settlers had "forted up" as a defense against the Comanches and Kiowas. His father was a flatboatman on the Sabine river, a cowboy on the Texas to California trail and a Pike's Peak or Bust gold seeker. Adventures where life balanced totteringly in the hands of fate were the lot of his boyhood.

Is it any wonder he writes the fascinating and interest-gripping stories of pioneer days which readers devour with delight and clamor for more? Lewis B. Miller's stories are clean, wholesome, absorbing and teach splendid moral lessons. One of his best stories, if not his very best story, "Pike's Peak or Bust," will begin in THE FARMER next week, July 6.

Those who have read "Big Smoke Mountain," "The Crooked Trail" and "Trappers of the Ozarks," appearing in our columns, can imagine what a treat is in store for them. Those who have not made the acquaintance of Mr. Miller's stories will be delighted when they start reading "Pike's Peak or Bust."

CHAPTER XXIX.

The Fruit of Manikawan's Sacrifice.

At length the breakup came, much as it always comes in that country. The sun, grown strong and bold, vanquished the Spirit of Frost. The snow became a sea of slush, and water covered the ice of lakes and river. Finally the clouds opened, and for a week rain fell in a deluge.

A thousand new streams sprang into being, rushing in white torrents to join the swollen river. Cascades fell from every ledge and parapet. Now and again a great boulder was loosened and went crashing down a hillside with terrifying roar. The river, freed from its ice shackles, overflowed its banks, and in the wild, unrestrained ardour of its new power, uprooted trees and washed them away upon its turbulent bosom as it dashed madly seaward.

One day, when the rain had ceased and the waters had somewhat subsided, Ungava Bob and Shad Trowbridge, accompanied by Mookoomahn, turned northward in Shad's canoe to the Great lake, following the route which Manikawan had taken several months before in her journey to the river tilt.

Manikawan's body was found as they had left it, and undisturbed. It was lowered from its rude platform and they laid it in its final resting place in a grave among the spruce trees not far from her father's lodge. Over the grave a cairn of boulders was raised, and surmounted by a tablet of wood upon which was carved the word, "Manikawan."

Then they parted, Mookoomahn to turn northward in his long and lonely journey to join his people, Bob and Shad to return to the river tilt, and homeward.

It was on an afternoon late in June when the browned and weather-beaten voyageurs turned their boat into Wolf Bight. What a long, long time had elapsed, it seemed to Shad, since that foggy morning in August when they had left the little cabin and said farewell to the tearful group upon the shore; and how homelike and restful the cabin looked now! What an age of experience had passed since that night when Bob pulled him out of the bay and introduced him, shivering and wet, to its hospitable shelter and warmth.

As they approached the shore a glad shout was heard, and a moment later Emily—who had that very day reached home from St. Johns—and Bessie, who was there to meet her, came running to the landing, with Mrs. Gray and Richard and Douglas Campbell at their heels.

Emily laughed and cried with delight, quite smothering Bob with kisses, and when she relinquished him to her mother she kissed each of the other brown faces. Bob was quite impartial, and when his mother released him Bessie was not forgotten in his greeting.

The most important, and therefore, the first piece of news to be imparted, was the partnership agreement between Shad and Bob. Douglas at once prophesied success, and when, a fortnight later, Bob and Richard took passage with Shad to St. Johns, Douglas accompanied them as expert adviser in the selection of a trading vessel and the necessary supplies for their posts.

* * * * *

The firm of Trowbridge & Gray began operations with the establishment of stations in the interior, as originally designed. Dick Blake was engaged to take charge of the post at the northerly end of the Great lake, where he quickly built up a large and lucrative trade with both Nascaupee and Mountaineer Indians.

The river tilt was enlarged and became a trading station and supply base for the interior, over which Ed Matheson presided. Bill Campbell, during the open season of navigation, had command of the brigades of Indians employed to transport goods from Wolf Bight to the interior posts, and during the midwinter months conducted a subpost and storehouse situated at the southerly end of the Great lake, not far from Manikawan's grave.

With the interior trade in such able hands, Ungava Bob devoted his attention to the bay trade, and it is needless to say that the trappers of the region prospered.

Richard, in command of the trim schooner, "Manikawan," also opened a profitable trade with livyeres and Eskimos of the coast.

Shad Trowbridge, after graduation from college, quickly developed into an able business man, and personally attended to the purchase of supplies and the sale of products.

Trowbridge & Gray made mistakes, as was to be expected, and had their ups and downs, but in the end they succeeded, and the firm is known today from Boston to Hudson's straits as one of the most honorable and substantial concerns in the north.

At the very beginning of their career Shad and Bob adopted as their trademark the picture of an Indian maiden with bow raised and arrow poised ready for its flight, and beneath it the word, "Manikawan." With this constantly before them Shad declared they could never stray from the original object of their enterprise, and could never forget the lesson taught by Manikawan's heroic sacrifice. And never since the firm began business have Manikawan's people failed to receive relief in times of need, and never has there been a repetition of the awful year of starvation.

"'Tis wonderfully strange, Bessie, how things come about," Bob sometimes says to his wife, in their cozy home at St. Johns. "I used to think the Lord had forgotten me sometimes, but I always found later that those were the times he was nearest to me."

"The Lord has always been very close to you, Bob," Bessie invariably replies.

Emily, at the earnest solicitation of Shad, was permitted to finish her education in Boston under the chaperonage of Shad's sister, and developed into a charming and accomplished woman, though she never lost her love for the little cabin at Wolf Bight.

But the failures and successes of Trowbridge & Gray, and the experiences of Emily in the new and greater world which she entered, are stories by themselves, and each would require a volume to relate.

(The end.)

Bits of Fun FOR Everyone

Young Owl to Old Owl.

"Are all owls wise, pop?"

"No, my boy. Too many of them hoot without knowing what they are hooting about."

Like Mother and Father.

He—If we get married, I wonder if you can make pies like mother used to make?

She—And I'm wondering if you can make money like father used to make!

Efficient Remedy.

History lecturer—Can any of you tell me what makes the Tower of Pisa lean?

Fat lady—I don't know, or I would take some myself.—London Opinion.

Salary Insufficient.

One of the tellers in a Columbus bank says that, of his customers, a teacher is the wittiest thing yet. "We make it a practice to give out new bills whenever we are able to send the old ones back to the government," said the teller, "and once when this customer appeared I apologized that I was unable to give her new bills, and asked her if she had any fear of microbes. 'I don't really think there are any on this money,' said the teacher: 'no microbe would attempt to live on my salary.'"—Successful Farming.

Only One Could Say It.

Mrs. A.—Do you believe any man could truthfully say, 'You are the only woman I ever loved"?

Mrs. B.—Yes; I know one—Adam.

How to Tell a Gentleman.

An example of a fine, but it seems proper, distinction is given in this conversation reported in Harper's Magazine:

"Mr. Smith," a man asked his tailor, "how is it you have not called on me for my bill?"

"Oh, I never ask a gentleman for money."

"Indeed! How, then, do you get on if he doesn't pay?"

"Why," replied the tailor, hesitating, "after a certain time I conclude he is not a gentleman, and then I ask him."

The First Installment of the New Serial Story "PIKE'S PEAK OR BUST" Will Be Given in Next Week's Issue of The Washington Farmer, July 6

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Family Circle—Because of insufficient address several letters have not reached you and have been returned to me. Please don't feel neglected if you fail to receive the information you ask for, but write again and be sure to give full and correct address. When you don't give name I can not write to you and only when your questions are of general interest can I reply through the paper. Some have personal problems and I will gladly write you personally, but you must give name and address. You need have no fear that I will print your name if you object. A. W. BARLAND.

You have all been very kind to write and tell us how you make bread starter and it appears that all we need to make it is a couple of good big potatoes, about one-half cup of sugar and a yeast cake. We used to call this liquid yeast when I was a little girl and it was the very first thing my mother taught me to make in the line of cooking. The only difference is I was taught to grate the potatoes raw and pour over them some hop tea, boiling hot, and made by boiling a handful of hops in about two quarts of water and pouring over the grated potato, after I had stirred in one-half cup of sugar and one-fourth cup of salt. Then we set it away till cool and added some of the "yeast" saved from the last time or if we were out we added a cake of dry yeast.

There has been very little variation in the recipes which have been sent in except some add a little flour, some leave out the salt; all agree that it is much better to use than yeast cakes.

You will find in the following letter the gist of the whole matter.

Dear Mrs. Barland: Here is my story about starter yeast and I trust it will help some housekeeper:

I used starter yeast for years when I lived in Utah and when we moved to Idaho I took great pains to carry with me some in a pint bottle in my suitcase. All went well till one time when I was sick and the starter was neglected and spoiled. I didn't know what to do at first as I couldn't get any of the starter here, but finally a happy thought came to me that I could make it and start it with a yeast cake and save some from time to time. This I did and it worked all right and here is my method:

Bread Starter—Boil two medium sized potatoes, mash well, add enough luke warm water to almost fill a two-quart fruit jar, to this add two heaping teaspoons of sugar and one square of yeast cake. Set this in a warm place until it works well. (Don't cover tight.) I make my yeast at noon so as to use some of the potatoes that are cooked for dinner, but I do not salt the potatoes when I am to use them for yeast.

At night I make a sponge of a sieve of flour and all the yeast in the jar except about one and one-half inches which I save for the next start and to make this start I add to the amount in the jar two heaping teaspoons of sugar and tighten the cover.—Mrs. W. G., Idaho. (She can tighten the cover now as there is so little in the jar, and this will keep the yeast sweet till her next baking day when she will add her potatoes and water at noon. —A. W. B.).

Dear Mrs. Barland: Any one who has stomach trouble should refrain from eating baked or boiled navy beans, boiled cabbage, cheese, veal, young beef, bananas, nuts or candy. Grape fruit is very soothing to the stomach. Cut the fruit in two parts and extract the juice with a spoon. It is best to eat it without sugar. Following the method given above has been better for me than all stomach medicines. I did no lunching between meals and have gained in weight.

The stomach is the most abused organ of our bodies, caused by too frequent and overeating. The result is untold misery. —Mrs. M. D.

Have any of the readers had experience with using sour dough? I would like directions for using it in making hot cakes and bread.—MRS. C. D. W., Wash.

If thou are worn and hard beset
With sorrows that thou wouldst forget,
If thou wouldst read a lesson that will keep
Thy heart from fainting and thy soul from sleep,
Go to the woods and hills! No tears
Dim the sweet look that nature wears.
—Longfellow.

Dear Mrs. Barland: I feel that I would like to have a little visit with the sisters of the Family Circle.

I am the mother of six little ones and always enjoy reading the Circle page in search of suggestions that will save time and money, both of which are important where there are small children to feed and sew for. I make all my children's clothes, even their every-day stockings. I put up (last year) about 500 quarts of fruit (and fruit juice for jelly), pickles and vegetables. With all this to do I am always on the lookout for labor-saving devices.

The following is one of the most helpful devices I have found for making fruit butters. Take a piece of wire window screening the size of your largest dish pan, nail it to a wooden frame.

Stew your crabapples, pears or apples and after mashing them put them through this wire screen; you will be surprised how quickly they will pass through and how smooth the fruit will be. Ad your sugar and spices and bake in the oven. The fruit butter will need very little stirring and will taste much better than when cooked on top of the stove. This is also a good way to make apple sauce out of small apples.—"ANNIE LAURIE," Wash.

Will some one tell what to do for black head in turkeys?—MRS. C. E. S., Wash.

Dear Mrs. Barland: I have canned apples and pears that the flavors were not distinct. I would like it if the sisters of the Circle would send in recipes for combining them with other fruits or juices to make pies, puddings or salads. I like the household page in the Farmer, think it is fine.—MRS. M. D., Wash.

All mothers may not know that they can send to the United States department of labor, children's bureau, Washington, D. C., and get, free of charge, a bulletin on the care of infants.

Will some one tell how to put up horseradish, both with mustard and in vinegar? MRS. W. C.
Blaine, Ore.

Will some one tell me how to smoke hams and bacon when one has no smokehouse? I am a beginner in farm life.
Oregon. MRS. S. C. N.

Dear Mrs. Barland: I have a nice collection of dark shades in brown, black, tan and green in Skinner satin and would like suggestions for working them up.

Also I would like to know how to kill poison oak. Our yard is just full of it and we have to be on guard every time we go out of doors.—MRS. E. S. D., Oregon.

Dear Mrs. Barland: Please tell me how to make soda crackers like we buy in the stores.—MRS. M. E. S.

(If any one knows how to make this kind of crackers I shall be glad to have you write me, as I have had so many requests for them. In the factories the dough is run through heavy rollers, which makes the crackers tender.—Editor.)

Cool in the Kitchen

The coming of the hot weather of summer creates a problem in the farm home kitchen that all too few of us realize. Where there are hired hands or a large family to cook for, and where there is canning of fruits and vegetables to be done for the winter supply of these desirable foods, the housewife spends several hours each day in the hot kitchen, baking, cooking, washing, canning, scrubbing. The heat of the open harvest field, where the air is limitless and pure, is not comparable to the heat of the kitchen, where the coal or wood range is sizzling and the pots and kettles are sending up their clouds of steam.

Too little thought is given to eliminating or overcoming the discomforts and inconveniences of the kitchen. To be sure, they can not all be eliminated or overcome, but some of them can.

In many homes the small oil stove of one or two or three burners is installed to do a considerable portion of the cooking and boiling during the hot weather. Where this is done the added comfort may be experienced of taking it to the back porch or to a sheltered spot outside the kitchen where it may do its duty without heating up the kitchen. Now and then a farm home is so situated as to find gas or electric plates or ranges possible and practical.

Another life saver in many a home is the fireless cooker, by means of which much of the hottest work may be done in the day, with the cooker finishing the meal in a cooler kitchen. If one does not desire to purchase a modern and efficient fireless cooker, it is not a difficult task to make one that will serve many of the simpler purposes for which they are designed.

Running water, a most desirable feature in any home, is especially worth while in the summer time. It is not always possible to have a plentiful supply of hot water, but in the steaming kitchen the cold water faucet is the source of a world of cooling comfort, as well as relieving the housewife of the necessity of numerous trips to the well or the spring for a supply of water that she is sure to use sparingly because of the difficulty of obtaining it.

Screens on the windows and doors so that they may be thrown open, a screened-in porch where much of the work may be done, a refrigerator or other cooling device, a high stool upon which to sit while washing dishes or paring potatoes—such things as these are comparatively inexpensive when the comfort they bring to the busy farm housewife is considered.

It is well to think of the barn and field equipment and make it modern, but the time is ripe for the people on the farm—the man as well as the woman—to give part of their best thought to means of making the kitchen comfortable and efficient.

Home Recipes

Quick Salad Dressing—One-fourth cup condensed milk, a little salt and pepper, 2 large tablespoons of sugar, 1-4 teaspoon dry mustard; mix all the dry ingredients then add the condensed milk, mix thoroughly and to this add 1-4 cup or less of vinegar. When all is stirred it will be as thick as boiled dressing. Vary amount of vinegar to suit taste but always mix the sugar and cream before adding vinegar or it will curdle. If oil is desired it should be stirred into the cream before the vinegar. I sometimes add chopped green peppers and a little pimento in the dressing.
MRS. G. W. PERKINS, Wash.

To Make a Rose Jar—Gather the rose leaves and dry them in the shade. From a drug store get a few drops each of different kinds of perfumed oils in one bottle and having placed the leaves into a jar which can be sealed, drop bottle and all into the leaves and seal.

I made mine 10 years ago or more, and it is as fragrant now as when first made. The jar must be kept sealed.
MRS. G. B., Oregon.
(When you wish to enjoy the perfume open jar till room is fragrant.—Editor.)

Rose Jar or Pot Pourri—Gather rose leaves in the morning and spread on a cloth till the dew is dried off them. Put a layer of petals into an earthen jar and sprinkle with a little salt; continue to do this till you have gathered as many as you wish, stirring occasionally. Let them cure for a week or so then add spices or perfumes or oils, as many as you wish. One can use orris root, tonka bean, cardamon seeds, cloves, cinnamon, ground nutmeg, lavender flowers, oil of rose geranium and rosemary, essence of tuberose, cologne, any combination your fancy prompts.

After you have added all you wish seal up the jar and allow to cure for a couple of weeks, then place in fancy jars and distribute about the rooms. When you desire the fragrance open the jars and allow perfume to fill the room.
MRS. CHAS. MILNE, Oregon.

Just Folks

Two or three years ago, at a conference at Washington, D. C., I heard the head of the United States bureau of animal industry say that it was most difficult to obtain reliable information regarding the extent of steer feeding operations by farmers. Those who fatten stock for the market are too busy on the job to fill out blanks or to make reports of what they were doing.

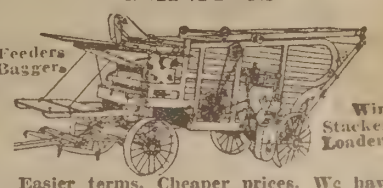
Even in these times of ferment the bringing up of children is much discussed. We hear a lot of talk about it—good, bad and indifferent.

Perhaps those who are really on the job are too busy to write about it.

I was reminded of this the other morning when a man invited me to ride to town in his auto. He remarked that he had just brought out his two boys to practice baseball. I do not know his name nor his business; never met him before and may never meet him again, but the little talk I had with him was illuminating. He said he had two boys and two girls. His girls were older, one being married and the other just graduating as a nurse from a hospital. The two boys evidently were in school. He said he kept track of his boys. There was seldom an evening that he didn't know where they were, because often he was with them, not as a spy, but as a comrade. When they wished to go to some athletic or other event he took them in his auto, and when it came time to go home he asked his boys if there were not other boys on the route that could be taken to their homes also, so the auto was filled up with boys and his own boys did not feel that their father was taking them home, but it was a party of boys that were being taken home together.

He said his wife remarked: "Why, you were out pretty near every evening this week with the boys!" He replied: "Yes, but I know where they are in the evening."

He added: "I always tell my boys that when they get into trouble to come to dad. If they break out a window in a neighbor's house we will go and fix it up and there is no upbraiding or other talk about the matter. Our home welcomes the other boys. They are pretty noisy at times, but they have a good time and while the other boys come to our home we know where our own boys are."



Here was a man who was giving the best there was in him of mind and heart and soul to the bringing up of his boys, and it came to me that there are dozens and scores and hundreds and thousands of men and women who are doing the same thing, who have neither the time nor inclination nor the ability to attend conferences, write for the newspapers and all that sort of thing, about the general subject of bringing up children.

Far be it from me to depreciate the wise advice, conference meetings, talks, writings and everything that can be said and done in the way of practicable advice in the bringing up of children. It's all needed. It is comforting, however, to think there are a lot of people who are doing this very thing in a constructive way. They probably pick up more or less of this information that is going around, but it has to pass their judgment.

A parent like this, like the unknown soldier, is worthy of all honor. E A S

High Points in News of the Week

An act of lawlessness seldom if ever equaled in this country was committed at Herrin, Ill., last week when a mob of citizens of that place, mostly striking coal miners or their supporters, attacked and killed some 25 strikebreakers who were operating one of the Southern Illinois Coal company's mines. This is one of the first acts of violence growing out of the nationwide coal strike in which some half a million miners are taking part. The situation is unusual in that the massacre of the strikebreakers appears to have the 100 per cent approval of the people of the community, who even forbid disinterested parties going in to recover and care for the bodies of the dead.

Steps were taken to send militia troops into the community to take charge of the situation, but a committee appointed by Governor Small of Illinois to investigate recommended that no troops be sent in, fearing that their coming would lead to further violence on the part of the mob element in that territory.

Reports of the massacre that appear thoroughly reliable say that the strikebreakers were attacked by overwhelming numbers of strikers and strike sympathizers, taken captive, driven into a wooden district, told to "beat it" and shot down as they ran for their lives.

The massacre was preceded a day by a skirmish in which one union striking miner was killed.

A coroner's inquest over the dead bodies resulted in a verdict that the coal mining company was both directly and indirectly responsible for the unfortunate affair.

* * *

An assassination of world-wide interest occurred in Berlin last week when Dr. Rathenau, German minister of foreign affairs, was shot and killed by three men as he left his home for the office. The assassination apparently had been carefully planned, the three assassins acting as a unit, even following up their shooting by the explosion of hand grenades in the minister's automobile and later making their escape in an apparently prearranged manner.

Dr. Rathenau was one of the important officials under the present republican government in Germany and his assassination is looked upon by many as possibly the first act in a monarchist plot to overthrow the republican form of government and reseat upon the throne the old Hohenzollern line or its representatives.

A tense scene was enacted in the reichstag at an extra session called by Chancellor Wirth. The nationalist members of this legislative body were openly charged with being party to the crime directly or indirectly. The act apparently has done much to solidify republican sentiment in Germany and representatives of the new form of government have virtually declared war on the monarchists.

* * *

Another assassination took place last week when two men in a prearranged manner shot and killed Field Marshal Henry H. Wilson of the British army in London. This act was charged in the public mind to the Irish republican organization as a retaliatory measure against the activities of the British army in Ireland. General Duffy, chief of staff of the Irish republican army, immediately denied that that organization had any part in the crime.

* * *

Between 10,000 and 15,000 Chinese soldiers, representing the northern army of the Chinese empire now operating against Sun Yat Sen's army in Kaingsi province, mutinied last week and destroyed much property and many lives. It is estimated that the dead as a result of the mutiny will reach 4000. Several cities were wrecked and considerable foreign property largely belonging to Christian missions was destroyed.

* * *

The elections in Ireland last week resulted in a victory for the treaty of peace entered into between the British and the Irish for the setting up of an Irish free state. Of the 128 members elected to the new parliament in south Ireland, only 36 are definitely committed against the treaty, whereas 58 are known to be for it and 34 scattered, many of whom are probably favorable toward the peace program.

* * *

Sentiment appears to be strengthening in favor of broader powers on the part of the tariff commission. It is charged that under present conditions the tariff is handled in a political manner whereas it should be taken out of politics and determined on an scientifically economic basis. Many favor extending to the tariff commission powers over tariff rates similar to those exercised by the interstate commerce commission over freight rates.

* * *

At the request of Senators Jones and Poindexter of Washington, Secretary Fall of the department of interior has prepared a tentative bill providing for the formation of a commission of three to work out the problems of the Columbia basin project. One member of the commission would be appointed by the secretary of interoir, one by the secretary of agriculture and one by the secretary of commerce. It would include an irrigation expert, a soil expert and a transportation expert.

* * *

The prosecuting attorney of King county has filed a suit against Japanese owners of the Japanese Commercial bank of Seattle on the ground that the bank is holding land illegally under the anti-alien land law. This is the fourth suit brought in King county for alleged illegal holding of land by Japanese.

President Harding has replied to the Philippine parliamentary commission that he considers the time for Philippine independence not yet reached.

* * *

The American Federation of Labor has launched plans for the establishment at the national capital of a labor defense council whose primary purpose will be to defend labor unions against suits that may be brought under recent supreme court decisions adverse to organized labor.

* * *

Samuel Gompers was last week reelected president of the American Federation of Labor at the convention in Cincinnati, Ohio.

* * *

The federal reserve bank in the New York district has announced a reduction of its discount rate from 4 1-2 per cent to 4 per cent, the lowest rate in five years. This reduction is understood to be due to a general improvement of the money market. Similar reductions are expected in other districts.

* * *

Indications are that the referendum vote of organized railroad employees on the question of a strike as a result of recent wage reductions will result in an overwhelming vote in favor of such strike. The vote is one on the question of whether or not to authorize the organization officials to call a strike or order a continuation of work in their own discretion. These officials have indicated that if authorized to do so they will call an early strike. The government railway labor board last week issued a statement through its chairman urging these officers to prevent a strike on the ground that it would work a tremendous hardship on the workers themselves as well as the country at large.

* * *

Guglielmo Marconi, the inventor of wireless, has announced the invention of what may be termed a radio searchlight by means of which radio waves can be reflected like light waves and sent in a given direction as a beam of light instead of being scattered broadcast in all directions as at present.

William Rockefeller, brother of John D. Rockefeller and heavily interested in the oil business, died last week at the age of 81 years. His wealth is estimated at a few hundred million dollars.

Farm Business and Markets Outlook

(Continued from page five.)

receipts at the four leading markets going for that purpose. Production probably has passed the high point for the season. Prices on the Wisconsin board have been advancing and distributing markets followed suit. Eastern buying is in evidence on Wisconsin markets.

Prices on No. 1 American cheese on June 21 were:

Chicago—Twins, 18 1-2@19c; S. Daisies, 18 1-2@19c; D. Daisies, 18 1-4@18 3-4c; Young Americas, 18 1-2@19c; Longhorns, 18 1-4@19c; Square Prints, 19@19 1-2c.

POTATO MARKET SLUMPS.

The potato market has lost some of its recent strength. Shipments are slightly above the average of the last 10 months. The supply of old stock is decreasing rapidly and will be practically gone by the middle of July. The crop of early potatoes in the intermediate states is estimated at 20,672 cars of 200 barrels each, an increase of 1700 cars over last year. New Bliss Triumphs are quoted at $2.75 to $3.25 per 100 pounds and Irish Cobblers at $4.50 to $6.50 per barrel in middle western consuming markets.

Heavy shipments caused a sharp slump in the potato market last week. The total movement has been nearly 1000 cars per day compared with an average of 700 cars during the last year. Prices on new stock declined $2 to $3 per barrel. Receipts are falling off and the market is strengthening.

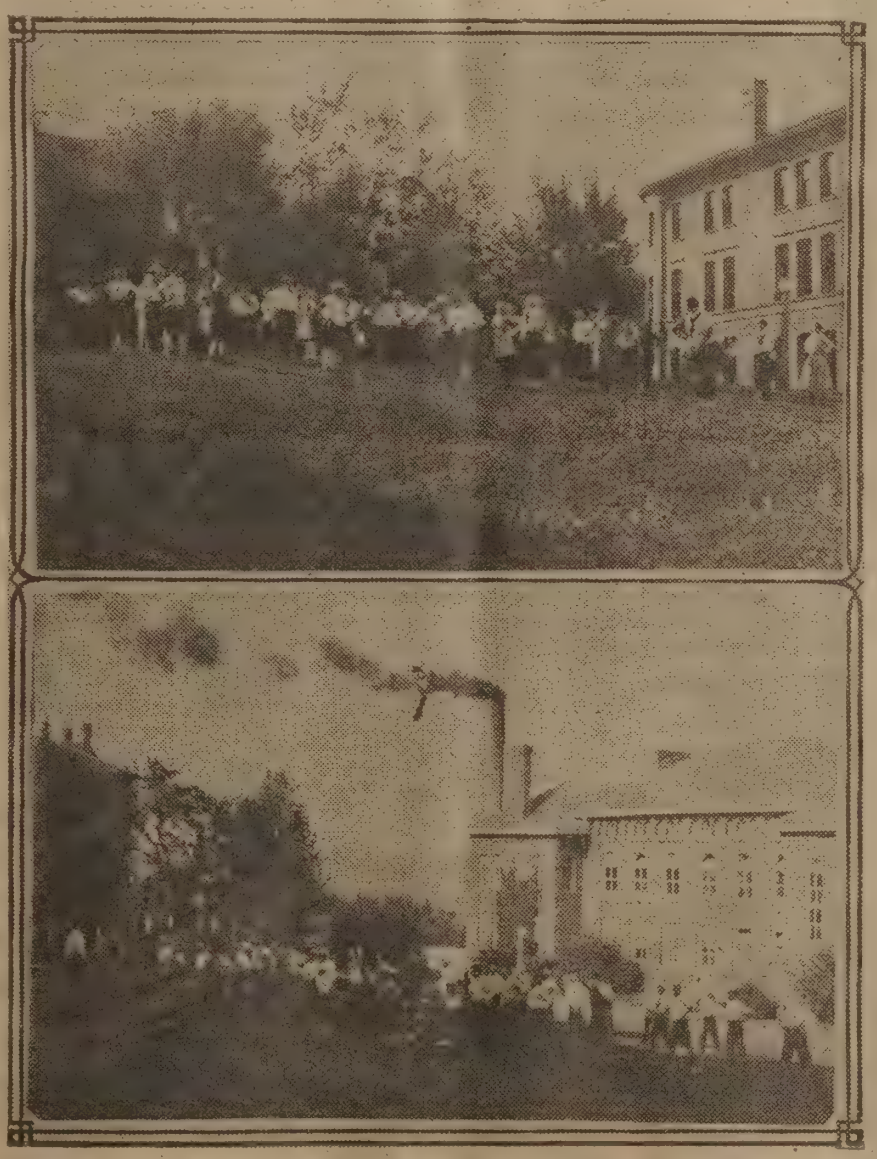
Junior Farmers Spend Week at College

By LINCOLN LOUNSBURY
Agricultural Extension Editor, W.S.C.

Lettuce—Lettuce—Turnips—Beets,
We're the ones that grow the eats.
Can the berries,
Cook the spuds.
Rah! Rah! Rah! Washington Clubs.

The club yell in the box rang out from the 121 boys and girls as they gathered twice daily at assembly during the first annual short course held for their benefit at the State College of Washington, from June 19 to 24.

Many short courses and institutes have been held for the regular farmer, but not till this year has the junior farmer been given a chance to receive training adapted to his own use. Boys' and girls' club week at the state college was inaugurated for the purpose of training club members in the use of the best methods in agriculture and home economics.



A regular junior college was established and classes organized and instruction given by members of the regular faculty and extension specialists. The schedule called for instruction in feeding, management and judging in poultry, dairy cows, swine, sheep and beef cattle, all of interest to the boys, while lessons were given in canning, cooking, sewing, hat making and home management for the girls. How to raise a garden, handle cereal crops, control diseases and pests which might trouble the crops of the junior farmer, and the principles of dairy manufacturing, were of interest to both the boys and girls.

"I am taking in everything I can, because I want all the information possible to take back to the Montesano clubs," said Robert Polson, when stopped on the campus and asked how things were going. This was the general sentiment of the 121 boys and girls representing 23 counties of the state.

"This is one of the most serious minded groups of boys and girls I have ever handled in my experience as a teacher," remarked one of the instructors after she had finished her first class. "It is certainly a picked group."

She was right in saying it was a picked group, for those 121 boys and girls were picked from over 6000 club members in the state. The five representatives from each of the counties were selected by F. L. Andrain, state club leader, with the assistance of club agents, county agents and home demonstrators in the various counties. They were chosen on the basis of quality of work accomplished last year, ability as a leader and interest in club work.

This group of boys and girls made the remarkable record last year of making $10,391.89, or an average of $115 each. While the average age of the junior farmers was a little more than 15 years, and the average net profit amounted to over $100, the highest amount was made by Clifton Axling of Lynden, who made $981.11 on his poultry. Out of the group of boys and girls, 29 made over $100; 15 over $200 and 12 over $300 from their club projects last season.

Every morning the boys and girls were assembled on the campus for a little vigorous exercise, a "morning constitutional," or what the soldier in the army camps calls "setting up exercises."

The daily life of a short course student was not in the least monotonous, but rather one full round of work and play. Reveille sounded at 6:00 a. m., after which Dr. Bohler, head of the physical education department, aided by one of his lady assistants, put the boys and girls through their morning exercises, just like a company of soldiers. With an hour for breakfast, the regular classes of the day began at 8 o'clock, continuing till noon. Assembly call was given at 1 o'clock, when a musical program was given by members of the summer school in music. Short addresses and an educational movie finished the assembly period. The balance of the afternoon was taken up with class work till 4 o'clock, when supervised play was conducted. Evenings were spent with movies, singing and general club rallies.

Besides having their regular classes for instruction, the local leaders gathered and formed a new statewide organization known as the "Washington Four

Continued on page eighteen

Community Experience Should Be Accepted as Guide—Page 4

Teaches By Object Lesson

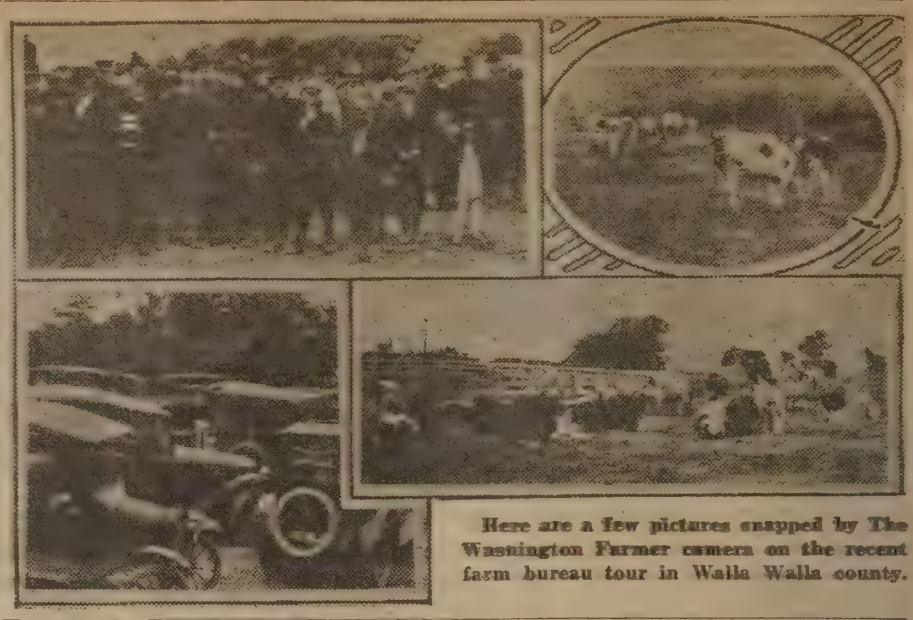
By J. E. NESSLY

Walla Walla county has a real, live, pushing farm bureau that is getting results. With 1100 "live wire" members, a county agent who takes his work seriously and a splendid farming district in which to operate, the farm bureau is "doing things" that are really worth while.

The farm bureau has adopted the more modern methods of teaching, which have been successful in the schools. Object lessons are being used. They theory "what man has done man may do" has been adopted, and the bureau, the county agent, the department of agriculture in the high school and the live citizens of Walla Walla (and no town its size has a larger percentage of live citizens) are cooperating in the effort to improve agricultural conditions in Walla Walla county.

Excursions which take those interested through the county, where they are given an opportunity to see what others are doing, have been arranged and they have proven highly beneficial and instructive. A poultry excursion held this spring took more than 100 who are interested in poultry raising to the leading poultry farms of that section. A live stock excursion was held Saturday, May 27, and a bee excursion is planned for later in the season.

The Washington Farmer representative had the good fortune to accompany the live stock excursion and has no hesitation in saying it was one of the most successful, instructive and enthusiastic he has ever seen and there can be no doubt the results will be highly beneficial to all who were fortunate enough to be members of the excursion and there were more than 150 such fortunate persons. The excursion was under the management of W. H. Talley, county agent; Dan Barclay, an expert on dairy cattle, and A. W. Kasten, instructor in agriculture in the Walla Walla high school, with a number of able volunteer assistants. Probably no one took a deeper interest than did C. M. Rader, an attorney of Walla Walla, who is interested with his son, Ralph, in a fine stock farm and herd of Shorthorn cattle. Mr. Rader took an active part in making the excursion a decided success.



Leaving Walla Walla at 7:30 in a drizzling rain, 30 automobiles, each loaded to capacity, headed for the state penitentiary to inspect the splendid herd of Hampshire hogs kept there. The excursion was for the double purpose of seeing the best herds of hogs, dairy and beef cattle, sheep and horses in the country surrounding Walla Walla and to give the agricultural and animal husbandry classes of the Walla Walla high school some object lessons in the care of live stock and in stock judging. While the students and many others took score cards and marked their estimates of the relative merits of five splendid Hampshire gilts selected for the judging contest, many of the visitors went about the grounds and viewed the 400 splendid Hampshire hogs on the penitentiary farm. Emil Wimer, who has charge of the hogs and poultry, accompanied these visitors and showed what has been accomplished in producing pork, eggs and poultry (for there are 4000 Leghorn hens and some turkeys and other poultry on the pentiary farms.) These visitors were intently inspecting the hogs and poultry and asking questions of Mr. Wimer, when the honking of auto horns announced that the judging contest was ended and it was time to be on the way to the next stop.

This proved to be the dairy farm of N. C. Nelson, where 11 head of especially fine Jersey cows and heifers, every one registered and a real aristocrat, were inspected and five of these were selected for the judging contest. The dairy judges announced their decisions on the placing of the cows, after which Mr. Barclay and Professor Kasten spoke briefly in explanation of why the animals were so placed. The cards marked by the contestants were assembled by the clerk before the announcements were made.

Just across the fine paved highway from the Nelson farm the big dairy of F. L. Shannon, called "Shannondale Purebred Stock farm," a beautiful, well-arranged and evidently profitable dairy farm, was next visited. Mr. Shannon has 40 head of purebred, registered Guernsey and Holstein cows, the latter slightly outnumbering the former. He is also milking a few high-class grade cows. "These rather spoil the looks of the herd," said Mr. Shannon to THE FARMER representative, "but they are fine milkers, give a lot of rich milk, and we are operating a retail milk route. That old brindle cow (pointing to a grade Jersey) is not a beauty, but she gives a lot of rich milk and we can not afford to dispense with her." Asked why he keeps both breeds—Guernseys and Holsteins—Mr. Shannon said: "We need the Guernseys to give more color and richness to the milk. The Holsteins give the quantity, but we need the richness gained by adding the product of the Guernseys." Several classes of cows and heifers were judged at the Shannon farm and then the caravan, which had been augmented to 36 automobiles, sped away to the farm of John W. Tenney, a Duroc Jersey hog breeder.

The visit was a complete surprise to Mr. Tenney, who said: "I expected three or four automobiles and about a dozen high school boys to judge my hogs and was not prepared for this crowd." He had five very nice, "typy" gilts, showing the modern type of Durocs, which were judged by the contestants. Mr. Tenney gave a very interesting talk on raising hogs for profit. Those shown, while nearly a year old, had been fed grain but two months. "They are pasture hogs," said Mr. Tenney, "and were raised at a minimum of expense, which naturally means a maximum of profit." He explained that he is producing, not raising, hogs, for the purpose of making money. He feeds his brood sows an average of one pound of middlings or an ear of corn per head per day and lets them run on alfalfa and bluegrass pasture. He fattens no hogs, but keeps 22 brood sows and each sow produces two litters of pigs each year; they average about 7 1-2 pigs to a litter, or 15 per year. He sells the pigs at weaning time (6 to 8 weeks old) at $5 each and has no difficulty

(Continued on page thirteen.)

Here are a few pictures snapped by The Washington Farmer camera on the recent farm bureau tour in Walla Walla county.

Mention THE WASHINGTON FARMER when writing advertisers.

A Tough Battery for Rough Trips

Long, hard runs—rough roads—extremes of hot and cold. That's the everyday life of the battery, and the reason why the lowest cost battery to have is the *toughest*, most *powerful* and *durable* battery you can buy.

Hundreds of thousands of owners have found this to be the Willard Threaded Rubber Battery. They find the best possible assurance of long battery life and low battery cost in the *tough* Threaded Rubber Insulation between the *tough* Willard plates.

All the dealers listed below give the Willard Standards of Service on all makes of Batteries:

For Good Farming, Attractive Country Homes and Happy Country People

The "Thirty-Ten" Initiative Measure

By N. D. SHOWALTER
President, Cheney Normal School

Before another issue of The Washington Farmer comes from the press it probably will be known whether or not the 30-10 bill will be on the ballot at the November election, as the petitions under the initiative law are now being filed. THE FARMER has presented from able educators and students of educational administration a number of articles dealing with both sides of this question. The article herewith is the last of the series, unless the measure is found to have enough legal petitioners to place it before the people of the state in November. If it goes onto the ballot, the discussion will continue with a view to enabling every voter to understand the bill in all its many aspects.—EDITOR.

One of the first fundamental principles of government is to provide a means for proper maintainence. The cost of government depends upon quality quite as much as the cost of living depends upon quality. The better the article the greater the value—hence the necessity of greater cost.

"A government of the people, for the people and by the people" becomes complex in its operation because it is dependant upon a multiplied number of individuals for its function and for its development, as well as for its maintenance. Free government must recognize the welfare of all of its citizens, considering the large social group acting and reacting together. To move forward together means united action; to lose because of a lack of unity or failure to cooperate means a serious loss indeed. If we really move forward at all we must move forward together—not by sections, not by groups, either social or economic.

Recognizing these governmental principles, general education becomes a basic necessity. Without referring to arguments used or statements made by our early statesmen, we may simply refer to the ordinances of 1787 and 1789. Since it was early recognized that our federal unit must be made up of a large group of sovereign states, it at once became a problem to determine just what should be delegated unequivocally to the state units.

Education was positively placed as an obligation on each of the several states and no constitution has been accepted since 1802 without a binding agreement placed therein relating to educational maintenance. The obligation then of public education rests upon the state unit. The state may find it expedient to shift its responsibility to the smaller district units. But whenever it fails to see to it that "a uniform system of public education is maintained for all of the children within the state" it has failed to meet its constitutional obligation. Further, it has lost its opportunity to consider equally the whole social group. A strong state as well as a strong nation meets its obligations willingly.

Much has been said about the 30-10 plan in connection with general financing. Nowhere have I seen the principle of increased state revenue for public education set forth on an applied basis. Our state law requires that first and second class districts must work on a budget basis. That is to say, the qualified officers must set forth in detailed budget form the necessary revenue required to maintain public education through the current year. This financial budget must be advertised and an opportunity given any citizen or group of citizens to have a hearing for consideration of any item of cost which they think extravagant or unbusinesslike in its provisions. The school officers who have been elected by the people are by law required to give attention to the people's wishes in their financial management. In third-class districts the school board is also required to make a budget, setting forth in detailed form their school needs, but this budget is reviewed by the county superintendent of schools and county treasurer, who have the right to make changes which seem wise and necessary to good financing.

In each case the plan of procedure is first to make an estimate of the state revenue which will come to the district under our plan of appropriation. Second, to estimate the county revenue on the same basis. These two funds when taken from the amount of the entire budget will leave the necessary balance to be raised by local taxation. The three funds taken in the aggregate must meet the financial budget lawfully adopted. And in each case this budget is subject to review and correction. Under such a plan there can be little waste, provided the administration is painstaking and considerate of the people's best interests.

The question at once arises as to whether the budget plan can be made effective. No one can question the fact that as the state fund increases the district tax decreases accordingly, and vice versa. Since the fairest means of raising revenue is to equalize the tax by means of covering the largest possible unit, then the fairest educational tax must be a statewide tax. It is not only equitable and fair, but it recognizes the state's lawful obligation. It is in harmony with the recognized spirit of our government and recognizes universal education as a basic need for social and economic progress.

The general statement that the 30-10 plan means simply an increase of taxes must presuppose that our budget plan of school financing is a failure. It must also presuppose the theory that our elected school officers are looking for an opportunity of advantage rather than giving first consideration to the educational needs of the community placed in budget form. If either or both of these theories are true, the condition can not be properly cured by simply withholding the state's obligation in making possible a uniform system of public education. The one greatest weakness in our whole taxing plan is the inequality which makes one piece of property in the state pay 20 times as much as others when equal benefits are to be derived. In all fairness it may be said that the 30-10 plan proposed will provide greater equality to the several communities of the state, and under proper administrative direction it should be just as economical as any other financial plan. Serious inequalities makes our present plan defective, and it is perfectly natural to look for some scheme which will place educational opportunity on an equitable basis for all the children of the state regardless of whether they live in the country or in the city.

Community Experience Counts

In Choice of Crops and Breeds of Animals

To the Editor of The Washington Farmer: I am very thankful for the marked copy of The Washington Farmer of June 22, in which you digest the question of the railroads helping build up the live stock industry.

I am afraid that you have not digested this problem in the best way. In my judgment it doesn't make any difference how much the railroads do for the average settler or whether the state would buy and give to settlers such stock as the settler should desire, unless the whole subject was treated in a constructive manner. For example, many settlers undertaking to farm do not first ascertain what kind of a crop they should produce or what kind of stock they should endeavor to start with, with the result that we have too many failures on the farm on account of lack of constructive vision.

It is now a well established fact that for egg production at a profit, the white leghorn hen has proven the best breed that the industry offers. In the production of dairy cattle, there are three or four outstanding breeds. In beef cattle, the same is true. In sheep and hogs, there are certain breeds best adapted to climatic and feed availability conditions. If this foundation is correctly presented, the first step that can be accomplished by The Washington Farmer is to impress upon its readers the necessity of first ascertaining what the farmer should produce and this would largely be based upon the section of the state located and if the foundation is properly laid, then is the proper time to ask for help, that when secured, will produce results.

For example, in the Puyallup valley we have established two or three industries in a substantial way and it is the constant effort of our people to ascertain what other industries are particularly suitable to the climatic and soil conditions of the Puyallup valley with a view of keeping our people from undertaking an industry that is impossible.

In my former letter to you I suggested that the inquiry printed in The Washington Farmer relating to the transportation companies helping certain settlers secure Brown Swiss cattle leads me to believe that you will not accomplish anything for these settlers by helping them secure a breed of cattle that is not particularly well adapted for profit making. Please do not misunderstand this communication. I appreciate that The Washington Farmer is rendering a wonderful service in a constructive way. I am only offering this suggestion for your consideration and not with a view of criticism.

W. H. PAULHAMUS.
The Puyallup and Sumner Fruit Growers' Association, Puyallup, Wash.

A new serial story, "Pike's Peak or Bust," begins in this issue of THE FARMER on page 14. This story is by Lewis B. Miller, author of "Trappers of the Ozarks," "A Crooked Trail" and "Big Smoke Mountain." This new story chronicles stirring events of the days of the gold seekers in the west. Do not fail to read this first installment.

The agricultural bureau of the Spokane Chamber of Commerce is actively interested in this matter of securing reduced rates from the railroads on breeding animals.

J. K. McCornack, the chairman of the bureau, is in favor of appointing a strong committee of three to start a request to the railroads for a special rate in such cases.

R. A. Balch of the live stock committee of the agricultural bureau tells The Washington Farmer that the tentative efforts already made convince him that the railroad officials sense the importance to the development of the country of better live stock, and he believes that when the matter is brought to their attention properly so that they can unite more or less on a concerted plan, they will be glad to do all in their power to make concessions of rates on the shipment of breeding animals.

Kale, Not Jim Hill

To the Editor of The Washington Farmer: In his article, "What Story Will the Thresher Tell This Fall," Mr. Nessly says of Anatone Flats, "There is a lot of Jim Hill mustard in some fields."

Closer inspection, however, would show that it is not Jim Hill, but what is locally called "kale." When blossoming in the wheat, kale somewhat resembles Jim Hill. At this time it is higher than the wheat, but at harvest time the wheat is from 6 to 18 inches higher than kale, so is easily cut.

Kale usually accompanies dry fall seeding and is quite easily controlled by summer cultivation. There is very little Jim Hill in this section and we feel the mistake (quite a natural and unintentional one) should be corrected.

Asotin, Wash. R. RAY TUTTLE.

Will Try Out New Grain Cleaner

A new grain cleaner, devised by the United States department of agriculture, has been received and will be tested out this season near Spangle by George W. Carr, pioneer farmer and thresherman, under the direction of an expert sent there by the department of agriculture. The machine was on exhibition recently at Spokane, where Mr. Carr had it in operation. The machine did splendid work in taking out foreign matter of every description.

It is not a fan, but a series of aluminum disks revolving rapidly, and each disk has small indentation, that take up the wheat, the weed seeds and all foreign matter and separates them, throwing the perfectly cleaned wheat into one receptacle and the dirt and cleanings in another.

Those who witnessed the test in Spokane were pleased by the results. From two sacks of very dirty grain 15 pounds of mustard, wild buckwheat, smut and cracked grains of wheat were taken out. The cleaned wheat was as clean as if run through the cleaner at a flour mill. There was absolutely no foreign matter in it. The machine is called the Carter-Mayhew recleaner and can be attached to a threshing machine and clean the grain as it is threshed, or can be taken off the thresher, placed in a warehouse and clean the grain there. It was sent west by the federal government and Mr. Carr has agreed to attach it to his thresher when he begins operations.

Wheat Growers

Hold Annual Meeting at Spokane

The annual meeting of the Washington Wheat Growers' association was held in Spokane last week with an attendance of between 100 and 150 members.

At the time of the meeting the association still had on hand about 194,000 bushels of grain, but General Manager W. J. Robinson announced that final returns should be in the hands of the growers early this month. Prices at which the association has sold its more than 6,500,000 of wheat ranged from an average of $1.19 to $1.39, depending on the variety, it was stated. The highest price received was $1.70 for Bluestem.

Secretary A. C. Adams' report showed that the association had recorded receipts of $8,256,772 during the fiscal year.

The membership of the Washington association approximates 3500, while that of Idaho, the northern membership of which operates through the Spokane office, approximates 3000.

The officers of the Washington association, many of whom are reelections to the positions they have heretofore held, are:

President, Roy V. Peringer, Oakesdale; vice president, J. H. Smith, Ephrata; secretary-treasurer, A. C. Adams, Spokane; general manager, Walter J. Robinson, Pomeroy.

Directors: District No. 1—J. R. Shepard, Goldendale. District No. 2—W. S. Guntle, Waitsburg, and C. N. Hatch, Walla Walla. District No. 3—James Oliver, Pomeroy. District No. 4—William McCauley, Dayton. District No. 5—H. E. Goldsworthy, Rosalia, and Roy V. Peringer, Oakesdale. District No. 6—V. R. Hyslop, Deep Creek. District No. 7—P. F. Oehlschlaeger, Connell, and W. A. Arlt, Ritzville. District No. 8—H. Jurgenson, Wilbur, and Almer McCurtain, Davenport. District No. 9—J. H. Smith, Ephrata. District No. 10—T. S. Hedges, Waterville.

The warehouse company of the association also met last week, the principal action being the election of officers and the decision not to operate warehouses this season. The company will remain intact, however, and assist localities in warehousing their own grain.

Seven warehouses were operated last year, handling 485,464 bushels of grain at an average operation cost of 3.15 cents per bushel, or $1.05 per ton. The company showed a gross profit of $7063, though the inclusion of organization expenses of the association in the warehousing company's accounts left a visible deficit of about $2000.

Officers of the warehouse company as elected or reelected are:

President, H. E. Goldsworthy, Rosalia; vice president, H. Jurgenson, Wilbur; secretary-treasurer, A. C. Adams, Spokane; general manager, W. J. Robinson; directors, Walter J. Robinson, Pomeroy; H. E. Goldsworthy, Rosalia; Almer McCurtain, Davenport; H. Jurgenson, Wilbur, and Henry Triede, Fairfield.

WAIKIKI GETS IMPORTED JERSEYS.

Waikiki farm of Spokane reports the purchase of the young imported Jersey bull, The Cids Imperator and the imported heifer, The Cids Oxford Duchess. Imperator was bred by J. Carson King's Sutton, Banbury, England, and imported by T. S. Cooper & Sons, Coopersburg, Pa. He is a son of the noted bull, The Cid, claimed to be the highest priced bull ever imported from England. The Cids Oxford Duchess is a beautiful show heifer bred by E. J. Malzard, Grouville, Island of Jersey. She is a granddaughter of Oxford You'll Do and The Cid, two of the most fashionably bred bulls in the world.

Waikiki has also purchased a carload of registered island bred Jerseys in Tennessee which are expected to arrive in about two weeks.

THE LOSS OF A CROP.

Many a fruit crop is lost because of improper pollination.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseasee in stock sold through these columns.

Community Experience Counts

In a letter to The Washington Farmer, W. H. Paulhamus, president of the Puyallup and Sumner Fruit Growers' association, brings out a proposition of the utmost importance in state development. Community experience in farming is beginning more and more to take the place of individual preferences of the farmer himself.

Wise farm leaders will agree with Mr. Paulhamus that the first thing to do is to find out what crops and what breeds of animals will do best in a community. Then, those crops and those animals are at the basis of farm success in that community.

The best switch on a railroad track is not necessarily the one that at first suits the fancy of the superintendent. The efficient superintendent will set on foot an investigation as to the merits of the proposed switch, will compare it with switches used on other railroads and then base his opinion on the reports of these investigations.

The successful merchant does not trust his own individual judgment when it comes to buying goods in large quantities for his customers. He finds out, in a small way at first, what his customers like the best. Those goods that sell the best in his town and district are the ones that he buys. His own thought as to what his customers should buy or what they will like to buy are in the background. Community desires are respected because community desires lead to good business for the merchant.

As Mr. Paulhamus, himself, says: "Many settlers undertaking to farm do not first ascertain what kind of a crop they should produce, or what kind of crop they should endeavor to start with, with the result that we have too many failures on the farm on account of the lack of perspective vision."

In publishing Mr. Paulhamus' letter, The Washington Farmer has no desire, at this time, to start a discussion of the relative merits of different breeds of cattle or hogs or chickens. It is simply repeating the fundamental farm doctrine that when community experience proves certain crops and certain breeds of animals to be the best adapted to the section and to give the largest returns in that section, the new settler, or even the established farmer of that community, will do well to listen to the voice of that community experience in preference to any individual notions which he may have or which he may have had.

Especially, when it comes to getting help from the outside to develop a farming industry, it is more than the part of wisdom for those who are rendering that help to insist that community experience shall be regarded.

In other words, we are rapidly departing from merely individualistic notions in farming and are learning that community experience and cooperative effort are becoming more and more necessary to successful farming.

The letter of Mr. Paulhamus, published elsewhere in this issue, commands thoughful reading.

A State Farm Bloc

A new movement appears about to be launched for the formation of a farm bloc to participate in the next session of the Washington state legislature at Olympia.

It may be safely predicted that certain other industries of the state will raise a protest if anything like this takes place. But we rise to ask what there is wrong about a farm bloc in the state legislature. Ever since the lumber industry of Washington began to grow there has been in the legislature at Olympia a lumber bloc, though, to be sure, it was never advertised as such. The fishing industry has always maintained at the state capital during legislative sessions a very definite alignment intended to protect and foster the fishing interests. Every big industry except agriculture has very definite ways of developing and protecting its own interests during the sessions of the legislature. The time is ripe, therefore, for the farming industry to see that good representatives and senators are chosen to represent them at the next session of the legislature and it is appropriate and proper that these senators and representatives align themselves in a clearly defined, well organized farm bloc to protect and foster the most fundamental of all our industries.

We are not advocating a farm oligarchy in the legislature. The farmers want no special favors at the hands of the lawmakers or of the state executives. All they want is fair play, and the way to get it is to go out after it in an organized way.

Unjust to the Dairyman

It is a common thing to find grocery stores in almost any town or city displaying prominent notices in their windows or in their published advertising quoting cut-rate prices on milk. Enough of these stores operate on this price-cutting basis frequently to bring about a general reduction in the price of milk throughout the city.

The dairymen, who are making little or no money at the most favorable prices they can receive for their product, are the victims of this practice. Milk is one of the most essential food products. The building up of a stable dairy industry is essential to the wellbeing and prosperity of any city and the rural territory tributary to it. Yet this staple and essential food product is made a football to be kicked around at will by retailers and cut-rate distributors.

City people with sufficient breadth of vision to see the injustice that is being done should cooperate with the dairymen in stamping out this evil practice.

LOOKING INTO OTHER FARM FIELDS

The blueberry crop in northern Wisconsin will bring in more than $200,000 this season.

* * *

WASHINGTON, June 18.—A Spanish decree has been promulgated, effective immediately, prohibiting the importation of wheat and wheat flour, to continue in effect until the price of wheat on the local market exceeds 53 pesetas per hundred kilos and remains at this price for one month, Commercial Attache C. H. Cunningham cabled the department of commerce today.

* * *

Production of 20,672 cars of 200 barrels each of early Irish potatoes in the states that produce and ship after the early southern crop has gone to market, is forecast by the United States department of agriculture. This is an increase over 1921 of about 1700 cars. The indicated yield per acre is the same as the reported yield last year, and the acreage planted is greater.

Production in New Jersey is forecast at 10,951 cars, or a little less than the 11,125 cars of 1921. Production in Kansas is forecast at 2816 cars, as compared with 2923 cars in 1921. Maryland will have 3375 cars, as compared with 2722 cars last year; Kentucky, 1635 cars, as compared with 1225; Oklahoma, 1089 cars, as compared with 472; Missouri, 542 cars, as compared with 338; and Arkansas, 264 cars, as compared with 160.

State Farm News

The Waterville experiment branch station has the best stands of both winter and spring grains that it has had since establishment five years ago, showing striking results in tillage experiments. The same results have been obtained on adjoining farms which have followed the station's good tillage methods.

July 8 Superintendent C. E. Hill of the station and Director E. C. Johnson of the experimental work in Washington will hold the annual demonstration day, when visitors will inspect all the crop work and tillage experiments. County Agent F. H. Zentner of Douglas county, and the Waterville Chamber of Commerce will cooperate. The latter will serve a free lunch to all guests.

* * *

Washington stands relatively high in club work among the states of the Union. The state stands sixth in the number of clubs organized and second in the number of standard clubs organized, according to E. C. Scott, Yakima county club agent.

* * *

One of the largest turnouts of farmers that has been known in the county for some time was had at La Conner, Skagit county, Washington, at the farmers' picnic on June 17. This picnic included all farmer organizations, such as the Farm Bureau, United Dairy association, beekeepers, etc. An extensive program was arranged and each party was asked to bring a basket lunch; the United Dairyman furnishing the ice cream and the Farm bureau furnishing coffee, cream and sugar.

* * *

Pioneers of the Yakima valley rounded out another year by the celebration of Pioneer day at the ranch of W. P. Sawyer in the Parker Bottom district, near Wapato, June 18. About 1000 were in attendance to enjoy the program.

* * *

David and Allen Fowler are two farm boys of the "Shanghai" district in Cowlitz county who are intensely interested in club work, though when a Washington Farmer man called at their father's hill farm to find out how his fertilizer demonstration was coming on, they had no local leader and were not certain that they would have any this season. This is merely another illustration of the inestimable value of local club leaders, for Miss Nora Kelly, county club agent, said afterward that the Fowler boys undoubtedly would do well in potato club work if they had proper direction and that she hoped to find it for them. J. L. Fowler, the boys' father, moved there not long ago from near Portland, and is farming 40 acres.

* * *

L. W. Hanson, state dairy inspector, who has been located at Seattle, has tendered his resignation to E. L. French, director of the department. Mr. Hanson has been with the state department of agriculture since 1905. He has announced that he will go into the creamery business in Skagit county.

* * *

Cranberry diseases in Pacific county are being studied by Dr. F. D. Heald, head of the plant pathology department of the state college of Washington, who spent a few days there recently. M. D. Armstrong, extension horticulturist, is planning a spraying program for the season as a part of the cleanup program which will be pushed vigorously in cooperation with the state department of agriculture in abandoned bogs and seeing that growers employ the best-known spraying practices.

* * *

Indians of the Quinault reservation reaped a harvest of $125,000 from this season's salmon run, according to W. B. Sams, Indian agent.

Canneries at Taholah, two at Moclips and one at Aberdeen have been packing the fish. Only Indians are allowed to catch fish in the Quinault river, which lies in their reservation.

* * *

Word comes from the state authorities at Olympia that the existing blanket freight rates on cull apples from the Wenatchee district to Puget sound points will remain in force despite the contention of an Everett company. Although Everett is 60 miles closer to the point of shipment than other Sound cities, the department of public works held that Everett facilities are inadequate to store cull apples and that lower rates would be unfair to the producers who seek greater markets.

* * *

According to District Horticultural Inspector P. S. Darlington the cherry crop in the Wenatchee valley is better than it has been for several years.

It is estimated that there will be about 200 cars of cherries shipped out of the valley within the next few weeks.

* * *

Virgil McWhorter, a former Yakima boy, now in charge of the sheep experiment station at Dubois, Idaho, has been selected as judge for the sheep exhibited at the state fair this fall, according to Secretary H. P. Vermilye. Mr. McWhorter has for a number of years been with the United States department of agriculture with one phase or another of the sheep and wool industry. He is considered an expert.

* * *

The new common frost-proof storage and fruit warehouse being constructed by A. E. Marsh of Yakima at Zillah is nearing completion. The building is 110 by 70 feet and has full basement. Including the porch, 10 feet wide, the building will have a total floor space of a little less than 16,000 square feet. The building will be used for storage and commercial packing. The first floor has skylights and is thus well lighted. The floor of the basement is nearly level with the ground on the lower side and the fruit will be received there and the packing will be done in the basement. The construction is substantial and ample ventilation is provided by four large vents passing from the basement up through the first floor. There are air intakes underneath the basement floor, thus providing for a change of air as desired.

Coming Events of Interest

July 8—Field day, experiment station, Waterville.
July 10—Field day, experiment station, Pullman.
July 12—Demonstration day, experiment station, Prosser.
July 24-Aug. 5—Live stock tour, Vancouver to Bellingham.

FARM BUSINESS AND MARKETS OUTLOOK

Long-fed cattle are becoming scarcer right along, but there is an abundance of light short-fed steers, which scarcely avoid competition with grassers.

The outlook is for an advance of $1 or more on the butcher and bacon grades of hogs.

Dry and hot weather over the greater part of the west and southwest was a prominent factor in an advance in all grain markets. The government's report confirmed premature ripening from hot weather.

A tentative estimate of the reserves of old crop wheat above domestic needs on July 1 in the United States, Canada, Argentina and Australia, indicates that the supply is below the average. The United States has about 40,000,000 bushels left, compared with an average of 75,000,000 bushels in the last 10 years.

The peak of butter production probably has been passed and, barring occasional reactions, the trend of the market is likely to be upward.

Steers Cross $10 Mark

The spread in cattle prices widened further last week. Choice heavy corn fed steers sold at $10.10 at Chicago, while common and medium steers continued the decline started two weeks ago. Long-fed cattle are becoming scarcer right along, but there is an abundance of light short-fed steers which scarcely avoid competition with grassers. Heavyweights are capturing the premium at present as prime yearlings have not sold above $9.85. This discount may become even more marked as summer advances owing to the partiality to light feeders last fall and winter.

Cows and heifers have declined $1 to $1.25 in some of the southwestern markets. The trend has been and is still downward in the middle west also. The dressed veal market was $1 to $2 lower last week and values on the hoof at Chicago sank $1. Recovery can be looked for in this division later on.

Grass Beef Harvest Begins Soon

A good many grass steers are coming to market already, but the real movement from the grazing sections will not get under way until about the middle of July. Kansas and Oklahoma will begin to ship freely by that time and before the end of the month the northwestern range states will begin to disgorge. Texas grass steers are already on tap and this beef is cutting a figure in the western dressed trade. Drought in that state early in the season delayed its arrival, otherwise common and medium steers and cows and heifers would not have sold so high during May and early June.

Stocker and feeder prices are following the trend of the lower sorts of fat steers. Some grades at Kansas City are as much as $1 lower than two weeks ago. Pastures are not so promising as they were a few weeks ago, the busy season on farms is keeping buyers away, and those showing up have been discouraged by sagging values for plain light killers. The same cause has shunted more of the receipts into stocker and feeder alleys.

June Hog Run Is Heavy

Although there has been nothing like the usual June break in hog prices, the June run is holding up and the total for the month will be far above the average. Receipts last week at the 11 leading markets were the highest since February. This is a little later than the run usually lasts and may have been due to an effort to anticipate the threatened railroad strike.

A substantial decrease in the supply in the next 60 days is a practical certainty. The outlook is for an advance of $1 or more on the butcher and bacon grades. A heavy run of brood sows is already under way and a further increase is to be expected as well as a lot of heavy barrows. The spread in prices between butcher and packing grades has widened considerably and is due to go still further.

Lard stocks in the United States on June 1 were 123,670,000 pounds compared with a six-year average on that date of 113,511,000 pounds. Stocks of frozen and cured hog meats including those in process of cure were 634,846,000 pounds compared with a six-year average of 844,726,000 pounds.

Southeastern Lamb Movement Subsides

Receipts of lambs, especially from the southeast, were lighter last week and the slump in the market was checked. The Tennessee movement is nearly over and Kentucky will be through in a couple of weeks. In addition, only a few yearlings and wethers are left at feeding stations near the large markets. The advance guard of Idahoes arrived last week, but the main crop is not due for several weeks. If receipts remain light as they were last week the market should hold at the present level for a while. The dressed lamb trade has digested its big meal from the heavy slaughter of the last few weeks and prices have begun to recover.

Breeding ewes are going to Kentucky in rather large numbers while Michigan feeders are the principal buyers of thin lambs.

Horse Buyers Are Scarce

The horse market generally becomes extremely dull late in June and during early July. It is going true to form. Receipts are running light, but buyers are scarce. Most of the 1800-pound drafters at Chicago are selling at a range of $200 to $250, although an occasional team is matched up from individuals costing as high as $400. Horses with a worky appearance weighing from 1400 to 1550 pounds bring $125 to $165. A few choice wagon horses can be sold at $160 to $200.

Wool Prices Slightly Lower

All the wildness has left the wool market and slightly lower prices were in vogue last week. With buyers' limits reduced, but little business was transacted in the west as growers are resisting the decline. Mills apparently have provided for their needs in the next two or three months and are buying sparingly awaiting the outcome of tariff legislation. Prcies at the London auction were lower at the opening, but choice merinos have regained their loss with some American buying in evidence. The more distinct outlook for prices after mills have used up part of their present holdings remains strong unless a low tariff is enacted. There are said to be about 86,000,000 pounds of foreign wool in bond at eastern ports.

Crop Damage Lifts Grain Prices

Dry and hot weather over the greater part of the west and southwest was a prominent factor in an advance in all grain markets last week. The government's report confirmed premature ripening from hot weather. In Kansas and Oklahoma only the late wheat was injured and the amount of damage is in doubt. Nebraska suffered more than any other state and private estimates upon the yield in that state are 20 to 25 per cent less than the government's June report. The crop in the Pacific northwest is being injured by continuous drought.

Conditions in the spring wheat territory are favorable with the exception of parts of South Dakota, but more rain will be needed right along. The spring wheat yield will probably gain a little during June and offset part of the loss in winter wheat. The prairie provinces of Canada suffered a little from dry weather, but fairly general rains have occurred since.

Damage reports upon the oats crop are numerous and are coming from a wide range in the surplus states. The grain is heading on short straw and it is entirely possible that the ultimate yield will be no larger than that of 1921. Conditions in the northwest are fairly favorable thus far.

Dry weather has damaged the corn crop in a limited area, but the critical period for this grain has not yet arrived. Chinch bugs are a serious menace this year.

World's Wheat Carryover Lower

A tentative estimate of the reserves of old crop wheat above domestic needs on July 1 in the United States, Canada, Argentina and Australia, the four countries which have furnished most of the wheat for export in the last several years, indicates that the supply is below the average. The United States has about 40,000,000 bushels left compared with an average of 75,000,000 bushels in the last 10 years. Canada on the other hand has about 50,000,000 bushels compared with an average of 25,000,000 bushels. Australia has approximately 5,000,000, according to recent estimates, against an average of 25,000,000 bushels, and Argentina 30,000,000 against around 20,000,000 bushels. Total holdings are about 125,000,000 bushels compared with an average of 145,000,000 bushels.

The estimates upon present reserves are not final, but are based on official data as far as possible. The official figures when issued may change the individual countries, but the total is not apt to be greatly altered.

Besides these four countries India also has a surplus of 55,000,000 bushels for export if her home needs are no greater than the average. But her preceding crop was so far below domestic requirements that invisible supplies undoubtedly were depleted and replenishment of these will cut down the quantity for export. Furthermore, the ban on exports imposed a year ago has not been lifted. The record indicates that India has held an average of about 15,000,000 for export on July 1. Even with possible exports from India considered, the world's supply appears to be only equal to the average.

Export buying of wheat has broadened in the last week and the Liverpool market shows more strength as a result of firmness in this country and the prospects of lighter shipments from Australia. Flour trade has been stimulated slightly and mills are buying back some of the wheat they sold during May.

Bulge in Coarse Grains

Coarse grains advanced even more than wheat last week. Corn was influenced by widespread belief that the price is lower than general conditions warrant, while crop damage gave independent strength to the oats market. There is some export buying of these grains and domestic distribution of corn holds at a high level. The advance last week was partly due to speculative buying and may not hold if the movement to primary markets continues heavy.

The range of cash grain prices for the week ending June 28 was as follows:

CHICAGO.—Wheat—No. 2 hard, $1.13@1.15 1-2.

Corn—No. 2 mixed, 62@64c; No. 3, 61 1-4@63c; No. 2 yellow, 62 1-2@64 3-4c; No. 3, 61 1-4@63 3-4c; No. 4, 60 1-4@62 1-2c; No. 2 white, 62 1-2@64 3-4c; No. 4, 60 1-4@62 1-2c. Oats—No. 2 white, 38 1-4@43c; No. 3, 36 1-4@40c; No. 4, 35 1-2@37 1-2c. Rye—83c. Barley—48@52c.

Feed Market Steady

Offerings of by-product feeds have dried up and the decline has been checked, although the market is unsettled. Demand is limited to immediate needs with the exception of bran, of which heavy sales for future shipment were made on the recent decline. If a drought occurs buying will increase, otherwise the downward trend on wheat feeds may be resumed.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $17.50; standard middlings, $19.25; flour middlings, $25; cottonseed meal, 36 per cent, $46; 43 per cent, $50; hominy feed, $23; gluten feed, $31.85; old process oil meal, $48; tankage, $30.

Hay Market Overloaded

Receipts of hay, especially of the lower grades, have been in excess of the demand and prices are weak.

Prices per ton in carlots: Chicago—No. 1 timothy, $21@23; No. 2, $18@20; No. 3, $8@14; No. 1 light clover mixed, $18@20; No. 1 clover, $17@18; No. 1 clover mixed, $14@17; upland prairie, $13@18; midland prairie, $13@16; rye straw, $13.50@15; oat and wheat straw, $9@13.

Eggs, Butter and Cheese

The decline in the egg market resulting from excessive storage stocks and liberal fresh arrivals was checked last week. A little further downturn may take place in prices of fresh eggs, but no drastic break is probable. Receipts decreased about 15 per cent last week and were only about equal to the average of the three preceding years. In the next 60 to 90 days receipts normally shrink about 50 per cent. This reduction in the supply should support the market and lead eventually to an advance on fresh eggs, but the outlook for storage stocks is not so hopeful.

Storing demand has been sufficient right along to clean up the supply of the higher scores of butter, but undergrades were piling up rather steadily until last week, when a big export order for 87 to 89 score butter, said to be for British account, was filled and the accumulations were cleaned up. With this supply removed from the market, top scores also became more firm and prices reached the highest point touched in June. When the order was filled the market weakened slightly again. The peak of production probably has been passed and barring occasional reactions, the trend of the market is likely to be upward.

Prices for 92 score fresh butter on June 28 were:

Chicago, 36 1-2c; New York, 38 1-2c; Boston, 38 1-2c; Philadelphia, 38 1-2c. San Francisco exchange quotation, 42 1-2c.

Prices for cheese on distributing markets advanced again last week. Country markets are setting the pace in the upward trend. Buyers have more confidence in present price levels than they have shown for several weeks. Twins, daisies and longhorns have been most active and prices seemed to be edging still higher toward the close of the week. The movement into storage at the four leading markets is heavy, accounting for 40 to 50 per cent of the total receipts and buying for this purpose is a big factor. Like butter, it is probable that receipts of cheese will gradually decrease from this time on.

Lexicon of Grain Pits.

Daily grain market reports are given over largely to a discussion of speculative operations. These transactions affect cash grain prices to some extent and thus are of concern to the farmer.

Sometimes actual grain is bought in the "sample market," the section of the exchange where samples of carloads of grain are displayed and put in storage as a speculation, but most of the "speculative trading" goes on in the "pit" or the miniature amphitheaters where the operators engage in "future trading" or buying and selling for "future delivery." Most of these trades are "closed" or crossed out by selling or buying equivalent amounts anywhere from a few minutes to a few months later, but before the final delivery day arrives.

These trades are made by "local professionals" who are members of the board of trade who buy and sell more or less frequently on their own account and have no cash grain business, or by "pit scalpers," traders who are in and out of the market many times in the course of a day taking small losses and small profits, by elevator" or "cash grain interests," or by mills who may or may not be "hedging" actual grain or flour or by outsiders or "amateurs" who are not members of the board, but who carry on their operations through "commission houses" or "brokers" who have memberships. "Wire houses" are commission firms which have branches at the smaller towns with which they are connected by private wires. Balances of the trades made by all these parties and through commission houses are struck through a "clearing house" system.

When buyers have predominated on the speculative market for a while, it sometimes crumbles under them when they endeavor to sell out and capture profits on their purchases, in which case the market is said to have been "overbought." Likewise the market may become "oversold," resulting in a strong rally. The "technical position" is considered strong when there is a big "short interest," that is, a large number of "bears" who have sold "short" and who must "cover" by buying back equivalent amounts. It is weak when there is a large number of "bulls" who are "long," or who have bought and must eventually sell out in order to even up their trades.

"Margin" is the money put up by the trader as a guarantee that he will fulfill his contract if the market goes against him or by the outsider as a protection to the commission house through which he is trading.

"Stop loss orders" are orders used to limit losses. They are placed by buyers to sell out immediately if the market declines to a certain point or by those who have "sold short" to buy back if the market goes up to a certain figure.

LIVESTOCK AND DAIRY

Tests Each Month

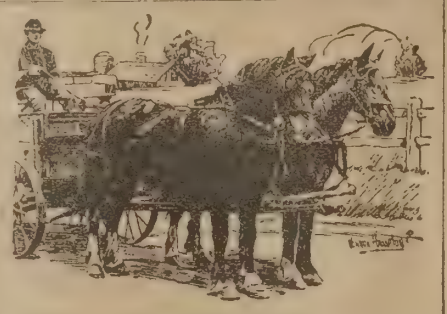
Knows What Each Cow Is Doing

In order to know what each cow is doing R. J. Kegley, whose farm is near Olympia, has his entire herd of Holsteins tested each month in the county cow testing association. It was from the association records that a total profit of over $1888 was estimated above the cost of feed on the cows tested. The outstanding individuals are put on official test.

Mr. Kegley has developed an interesting system of marketing the milk. About 50 gallons are bottled daily and delivered to the retail trade, both at private residences and at hotels. In addition some 40 gallons are delivered to restaurants in bulk, most of which is put up in three-gallon cans. In order to supply a certain demand for bottled cream Mr. Kegley separates a small part of the milk for this purpose.

All bottling is done in the concrete milk house on the farm and taken into town early each day.

The Kegley farm consists of 124 acres of sandy loam and shot clay soil. One piece of bottom land contains 40 acres, which is level and part of which is being seeded to oats and alsike clover. There are 45 acres on the place which is in cultivation and the rest is in stump pasture. One 12-acre field has a fine stand of red clover, which will be cut for hay this season. Eleven acres have been seeded to spring grain and 10 acres to potatoes. In addition a six-acre field will be planted to sunflowers which will be used for silage purposes.



"One of the most difficult problems of our farming in western Washington is the clearing of our logged-off lands," said Mr. Kegley. "We have found that one of the quickest ways to get the land under cultivation is to clear off the logs and pasture between the stumps until the land can be plowed. In this way one has a larger amount of land for pasture, and it requires less feed in the early spring and late fall months. I have found it is better in many ways to have the cows on pasture even during part of the winter months. It actually saves feed and cows are more contented.

"I am a strong advocate for the covered feed shed," continued Mr. Kegley. "Our milking barn has only 14 stanchions on each side and we are using only one side at present. We find that it saves much labor to drive in 14 at a time, milk them and turn them out immediately. During rainy or cold weather the entire herd is allowed to feed under the large feeding barn and an abundance of straw is scattered on the floor from time to time to afford good bedding. I have estimated that from $200 to $300 have been saved on the manure by leaving it in the feed shed until it can be hauled on the fields. In this way it is kept out of the rain and all the liquid manure saved. We used 20 tons of straw last winter for bedding, which also adds to the quality of the manure."

Mr. Kegley has proven to his own satisfaction that labor can be saved by hauling the manure only as the weather permits. This also saves much labor in the milking barn and the cows do not have to be kept so long in the stanchions. It is considered much easier to drive the cows to and from the milking barn, where they are fed grain only and allowed access to hay and water at will in a large building.

Ready for Work

These horses are more than 20 years old. The last 17 years they have been in the service of the farm crops section of the Iowa experiment station at Ames. Only

three men connected with the station are older in its service than Billy and Major and none has given more faithful service, according to L. C. Burnett of the farm crops section of Iowa state college.

Frisky? They will run away once in a while, Burnett says, apparently just to avoid the impression they are growing old.

But they can and will pull as was evidenced last fall when Mr. Burnett desired to move a wagon and load, weighing 10,000 pounds, a short distance. Billy and Major were hitched to it and a skilled driver took charge. The faithful old horses settled into their collars and "felt it out." Easing up to get their breath, they settled again and, slowly, almost by inches, the heavy load moved to the designated place.

Feeding Molasses to Steers

That there is a limit to the quantity of blackstrap molasses which can be added with economy to a ration of 5.4 pounds of cottonseed meal and 46 pounds of corn silage for fattening yearling steers was shown in a test made by the United States department of agriculture.

Two lots of nine 700-pound steers were fed for 112 days. Forty-six pounds of silage per steer per day was practically the limit of their capacity. Lot 1 was fed 5.42 pounds of molasses per steer daily, while lot 2 was fed 8.07 pounds of molasses per steer daily. As lot 1 gained 2.48 pounds per steer daily, while lot 2 gained only 2.41 pounds per steer daily, it is evident that 2.65 pounds of molasses was wasted daily per steer in lot 2. The results in lot 2 might have been more favorable to the use of so much molasses had the cottonseed meal ration been reduced to 3.5 pounds. In the test, lot 1 consumed 1880 pounds of silage, 218 pounds of molasses per 100 pounds gain, while lot 2 required 2 per cent more silage, 3 per cent more cottonseed meal and 54 per cent more molasses to produce 100 pounds of gain.

Advantages of Wooden Hoop Silo

Almost any kind of silo will prove satisfactory if properly handled, but because of its cheapness and simplicity of construction the wooden hoop silo is one of the most popular. No scaffold is needed to build one, except five or six poles or 2x4s, and four men to nail and one to help will complete a wooden hoop in one and one-half days, except the doors. The cost of materials is about $100.

WANT WATER FOR 10,500 ACRES.

Irrigation of 10,000 acres in the Spokane valley, which will practically double the present irrigated area adjacent to Spokane, is planned. Petitions have been in circulation and 264 land owners out of a total of about 300 have already signed. The cost of irrigation is estimated at $100 an acre.

SPRAY Before Milking

Swishing tails, stamping feet and fretting cows mean more than the discomfort to you when milking. They mean real money lost in lessened milk and loss of flesh.

SO-BOS-SO
KILFLY

rids cows and all other stock of the fly nuisance and expense. A little goes far and saves much.

Farmers who have used So-Bos-So swear by it. *Harmless, Effective, Guaranteed.*

What Would the Real Price Tag Say?

—if Tractors Were Priced According to Their Cost per Year of Service

FARMERS everywhere face the same problem. Here is a "low price" tractor with flashy inducements, on one hand. Here is a "quality" machine—a long-life machine—at a reasonable price, on the other hand. Which tractor is the best investment—which costs the least in the end? Here is the answer:

Imagine tractors priced on the cost per year of service. Add up the cost of fuel, oil, repairs, loss of time, depreciation, etc., for one year on each tractor. (Remember that the longer the life, the less the depreciation.) Then compare these totals, which are the real prices. These prices would tell a different story. Many so-called "cheap" tractors would be exceedingly expensive. "Quality" tractors would prove their real economy.

OILPULL
The Cheapest Farm Power

The OilPull saves at least 39% in fuel; saves 50% in upkeep; averages 10 years and more of service, according to authentic investigations and comparisons. This is real economy.

Mail the coupon for further facts and a copy of our booklet, Triple Heat Control. Then let our dealer show you why the OilPull is the cheapest tractor to own.

POULTRY AND RABBITS

Poultry Questions

BY W. D. BUCHANAN,
Extension Poultry Specialist, Washington State College.

Will you please tell me how to mix my developing mash for young chicks? I want to know what to use and the proportions. Also how is chick feed mixed?
Walla Walla, Wash. D. V. B.

A good chick mash could be made by mixing, by weight, six parts bran, four parts middlings, or 10 parts millrun, five parts ground corn, five parts ground oat groats, two parts best grade fish meal or sifted meat scrap, one part bone meal, one part alfalfa leaves and blossoms, and one part charcoal. One-half pound of fine table salt should be added to each 100 pounds of mash. Spread the ingredients layer upon layer, on the floor and turn over three or four times with a shovel. Chick feed may be made by mixing two parts cracked wheat, one part cracked corn and one part cracked oat groats.

USING SODIUM FLUORIDE.

I read in your paper that sodium fluoride was good for ridding chickens of lice and mites. Can it be used on hens that are sitting, also hens hovering chicks? If I can not use this powder what will rid my hens of lice so the little ones will grow? MRS. C. C.
Curlew, Wash.

Sodium fluoride can and should be applied to every sitting hen before she is set; but it may be applied any time during the hatch. If the hen is powdered thoroughly before being set she will be free from lice and so will the chicks. The hen may be powdered after the chicks hatch, but the powder must be used very sparingly and very carefully as too much will kill the chicks.

FEEDING MEAT SCRAPS.

Eight weeks ago I started with 1000 S. C. White Leghorn chicks. They did fine until I began to feed commercial meat scrap and since then they have been dying off right along. I started by feeding chick feed rolled oats, and chick starter, also one dozen eggs daily. Later I began feeding developing feed, curd and chick feed, also eggs, six daily. I am now feeding developing feed, rolled oats, curd, eggs and Dr. Le Gear's poultry tablet at each feeding. At first I fed every two hours, but now every three hours. The chicks get some greens. The droppings on many of them form in a lump on the feathers around the vent and harden. They just lie down and hardly move around. They eat little or nothing when they get that way. Sometimes one will have a white rectal discharge. I am feeding 56 ounces at each feeding. I have stopped the meat scrap. Please tell me what to do to save them? F. V. M.
Castle Rock, Wash.

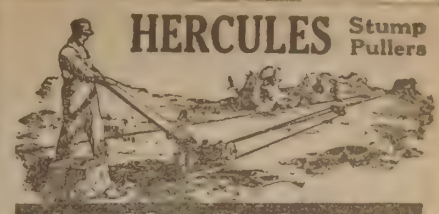
You seem to have started all right, though I am not sure from your letter whether you are feeding any mash or not. You mention chick feed and chick starter; possibly you mean that one of these is a mash. The curd and eggs probably furnished protein enough without meat scraps. If so, the addition of the meat scrap would overdo the protein content and give the chicks diarhea. The meat scrap may have been putrid or rancid and this would naturally increase the trouble. Clear the poison out of their system by giving them one ounce of epsom salts in four gallons of water. Cut out patent medicines and give plenty of green feed, fresh air, exercise, grit and charcoal.

WHICH IS MALE GUINEA?

Will you please tell me how to tell the male and female guineas apart? E. H.
Castle Rock, Wash.

The helmet and wattles are a little larger in the male, but the surest way is to watch carefully the cry of the birds. The male never cries in two syllables, while the female usually does, her cry resembling the word "buckwheat."

Turkeys in Orchard



Turkeys and an orchard are a very convenient and profitable combination, according to F. A. Stimson of the Fairview district of Yakima. Mr. Stimson raises the Mammoth bronze turkeys and has this year 100 young birds, part of which are being raised by Rhode Island Red hens. He has but 20 old birds and two toms, but in order to secure best results finds that each tom should be allowed with the flock for but one day at a time. Two toms are alternated, keeping each one in a pen to himself the first day and allowing him to run with the flock the second day. This is necessary in order to secure a high fertility in eggs.

"We have three acres in pasture for the birds, but find that it is enough for even a larger sized flock if it is given proper attention," said Mr. Stimson. "It is my experience that the birds do not interfere with the fruit crops, and we unusally get the picking done before the young birds are old enough to want to roost in the trees. The cropping system should be handled so that as much of the feed as possible can be raised at home. That is why we are raising as much corn as we have room for this year. Our garden crops are protected from the birds by a wire fence, although in the early season the hens and young turkeys will not injure the crop to a great extent.

"In hatching the young birds we find it most profitable to set the earliest eggs under hens, so that the turkeys can be kept laying. The eggs are taken from them every day and should any of them stay on the nest their quality will not be injured. When they are through laying they are given a setting of eggs in a nest built on the ground. The hens, however, do not make as good mothers as do the turkey hens. This is especially true in damp weather and the turkey will not take the young birds out into the grass while the dew is on. For this reason it is sometimes best to keep the hen in a coup and let her out only as the weather permits.

"Milk is very good for young turkeys and we give them all they will eat. They like it best as clabber, and will even eat it as thick as clabbered cheese. For very young birds it is best to add a little black pepper. Insect powder should be used in all cases to dust the hen as soon as she is set. When the birds hatch they should also be dusted and a little lard or vaseline rubbed on top of their heads and under the wings to prevent lice from getting started. Keep them warm at first and give them chick feed. The hens should have scratch, but the little ones will not eat enough of the larger sized grain to hurt them.

"I want to increase the size of the flock and feel that I can handle 1000 young turkeys next year," said Mr. Stimson. "I think, however, that one can not get too much experience before he goes into anything of this kind too deep. It is a business all of its own and a man should learn it as he goes along. I am making it a point to study the habits of the birds and give them what they want, and thus make them more contented. It is possible that I could handle a larger acreage and keep turkeys as a main line. I am not sure, however, as to the size of a farm one man could handle in this manner, and whether he wants an orchard in connection or not. This is but another detail that must be worked out to suit one's own likes and conditions."

HERCULES Stump Pullers
One Man Yanks Out Big Stumps Easy
Takes the work out of stump pulling. The easiest, fastest, strongest "One-Man" Hand Power Stump Puller made. Has pulling power of strongest steel cables. Three speeds. Low and medium to start the stump—high to rip it out. No horse needed. Four machines in one—single, double, triple and quadruple power. Wheels from place to place like a wheelbarrow.

$10.00 Down Easy Payments
Clear your farm, make money pulling stumps for others. Pay as you use it. Write today for my new low price. Also ask for catalog No. 614

ESSEX COACH $1295

Its owners like it—the best test of all

A Few of the Many Who Praise It

"This little coach is a revelation. Handles easier, runs smoother than any car I ever owned. I don't think I will ever want to drive a big car again."
F. CODA,
Jenks & Muir Mfg. Co., Detroit.

"We are highly pleased with the Essex coach. We like, especially, its simplicity; ease in operation, gas mileage, and price. I do not know of a car where you get as much for the money invested."
FRED E. BODIE,
Lincoln, Neoraska.

"After owning various multi-cylinder cars, I was a bit skeptical whether I could be satisfied with the four-cylinder Essex coach. Have had ample opportunity to test its worth, and must admit everything is on the favorable side of the ledger. Economical in upkeep, satisfactory gas and oil mileage, and power and speed aplenty. In short a 'delight' from every standpoint."
F. O. HANSON,
253 W. Utica St., Buffalo, N. Y.

Driving an Essex is so free of fuss and effort that every owner praises that remarkable difference. The hours they spend in their cars, above all, are comfortable hours. Controls are easy and natural. One is hardly conscious the hand directs them. Gears shift as easily as lifting a fork at table. Light-steering as a bicycle. Light pressure operates brakes and clutch.

And so reliable that thousands go out from the salesroom and serve for thousands of miles without returning for even a minor adjustment. That, too, is an experience not common to motor car owners.

Drive the Essex. It is altogether different from any car you have ever driven. It will delight—and tempt you. Any dealer will be glad to arrange such a ride.

Touring Car, $1095 Cabriolet, $1195 Coach, $1295 Freight and Tax Extra

ESSEX MOTORS—DETROIT, MICHIGAN

Live Stock in the Ahtanum Valley

BY RALPH ERSKINE.

There is yet some land in the Ahtanum valley, near Yakima, that is still in the raw stage and has not been cleared of the scattered sage brush and occasional willow clumps. This, of course, makes good pasture land and the small creek which winds down the valley affords water and shade. Ray N. West, Guernsey breeder, has 90 acres of such land and rents 80 more adjoining. About half of the acreage is in cultivation and is used for growing hay and grain crops for his cattle.

A group of Guernsey cattle on the Ray West farm near Ahtanum.

While there are 40 head of animals on the farm, there are but 22 that are registered Guernseys. Mr. West has four cows that are daughters of Langwater Emigrant from the Calkins and Riggs herd which is now located at Battle Ground, Wash. One female, Ribers Julia, is 20 years old and won many honors in the show ring during her younger days. She has three daughters in the herd and is still producing her share of milk.

Practically all of the animals are typical of the breed and even the grades are high class milkers. Some of the young calves and heifers look exceptionally promising and Mr. West expects to have something that will show up well at the state fair this fall.

Mr. West had the misfortune to lose his herd bull, Chicona Nabob, who came from the A. L. Gile herd and traces back to the May Rose breeding. Unable to get the kind of animal he wanted here in the west to replace him, a half interest was purchased in Bountiful of Fourpine, a yearling bull from the Babson herd at Hindsdale, Ill. This animal shows some excellent quality and has plenty of masculinity.

"Our main feed is alfalfa, corn silage anr barley," said Mr. West. "We raised 30 acres of wheat and the same amount of barley last year and this year we will have some oats. The barley and oats can be ground and fed at home, but we generally sell a large part of the wheat except what we feed to the hogs. In order to pay best the farm should support the herd and we can raise practically all feeds except a few concentrates.

"Another plan that has proved practical is the feeding of hogs and pasturing them on alfalfa. We plan on keeping at least three brood sows and raising from 30 to 50 pigs each year, part of which are fall pigs. There is always plenty of grain to fatten them on and we can use part of the wheat for this purpose. As a general rule they take but little work and they make a good combination with the dairy business."

Grange Store

Does a $120,000 Business in 1921

BY RALPH ERSKINE.

It was early in the winter of 1919 and 1920 that the grangers in the vicinity of Pullman began to plan on the organization of a store which would handle groceries and other goods for the farmers and some of the college organizations. There were many who believed that some plan of buying on a wholesale scale could be handled very advantageously.

Shares were sold at $25 each and there were 125 shareholders who used their capital for renting floor space and purchasing a stock of groceries. The plan worked well and the number of the shareholders increased until there are now 300 who represent a capital stock of $7500.

At first the farmers were the principal buyers, but in order to increase the sales, the different college group houses were invited to become members of the grange and take advantage of the plan of cooperative buying. Today practically all of the groups buy the bulk of their supplies through the store and a number of the faculty also take advantage of the new method.

Each house manager of the student organizations is a grange member and together they are allowed to elect one member to the board of directors of the store There are five directors in all who have entire supervision of the store and can be called for special session if any important matter needs attention.

Since there was a special call for such articles as automobile tires, paints, oils, hardware and a few other commonly used articles, the management has found it practical to carry them and the farmers find it a great convenience to be able to buy them at their own store.

"We feel that the plan has well been worth the effort to get it established," said E. F. Gaines, master of the Whitman County Pomona grange, who was one of the instigators of the plan. "At first we hardly hoped to get the fraternity and sorority houses to join us and help us to buy in larger quantities, but they have all done their part and taken a keen interest in our development.

"The store did a $120,000 business last year and is expected to turn over $150,000 this year since the sales have averaged approximately $500 a day for the first five months of this year. The trade does not drop off during the summer months as one might imagine when he thinks of the college trade that is curtailed at this time of year, but the summer needs of the farmer and his harvest supplies keep the store busy until school opens up again in the fall."

The officers of the grange store are as follows: E. F. Gaines, president; Fred A. Hodges, vice president; C. E. Colpitts, president of the board; Scott Getchel, treasurer, and Charles Cassady, manager.

More Live Stock

Campaign in Whitman County

By J. E. NESSLY.

Farmers in the country about Winona, in Whitman county, are taking a deeper interest in live stock and diversified farming, with the usual results. They are getting into better conditions.

A campaign to encourage the production of more live stock is being carried on. Professor M. D. Jacques of the high school, has organized a boys' pig club, with a good membership, and the boys have secured a fine lot of Duroc Jersey and Chester White brood sows and will contest for prizes at the county fair at Colfax. Arrangements are being made for a three-day celebration July 4, 5 and 6, and one of the features will be discussions of live stock by men prominent in the industry.

H. M. Moffitt of the program committee has asked President Holland of Washington State college to send an animal husbandman there to address the "old and young farmers" on the need of more and better live stock on the farms of that section.

The Henderson brothers, T. L. and W. L., who live near Winona, are setting a good example in this respect by building up good herds of Shorthorn cattle on their farms. They have secured some splendid individuals of the best breeding and they do not hesitate to pay high prices for the best animals obtainable. The Henderson brothers secured a number of the best individual Shorthorns at the Rothrock sale last spring and they have proved a valuable addition to the live stock industry of western Whitman county.

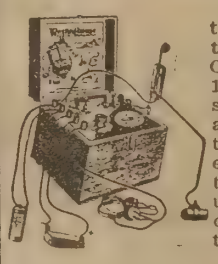
Purebred Hereford Cattle.

That purebred Hereford cattle can be raised profitably in connection with wheat farming is the belief of W. E. Chapman of southwestern Whitman county, and he

The Dawn of a New Day

RADIO

In Every Home



Radio telephony is an accomplished, practical fact, and the most wonderful feature of this last great forward step of science is the fact that immediately it has become available to every home in the land, no matter how humble, no matter how isolated. The great electrical corporations, aided by the discoveries of enthusiastic amateurs, have reached a stage of perfection in their marvelous apparatus that will bring to your home all that is best in entertainment, in educational features and in the business news of the day.

There will be improvements in this wonderful apparatus from time to time, of course, just as the automobile, the phonograph and the aeroplane have been improved, but today we are able to offer you equipment that will enable you to enjoy immediately all the marvelous possibilities of this last great invention, and all at a cost well within the reach of the most moderate incomes. In every center broadcasting stations are being established and in the state of Washington alone there are already over 20 such stations, ready to serve the owner of a good receiving set. Daily market reports, latest news items from all parts of the world, weekly health talks distributed by the U. S. public health service bureau, covering the health of the live stock as well as of the family. Daily musical programs in which the country's noted artists often participate. Choral societies, symphonies and the latest phonograph releases. Special weekly dance programs which by means of a "loud speaker" can be used for dancing parties in your own home—these are only some of the advantages you are offered by this modern marvel.

Below we list two styles in receiving sets that are reliable in every respect, that any one can operate, and that come to you so complete that you can start to enjoy all these untold delights and advantages the same day as you receive your set.

WESTINGHOUE AERIOLA SENIOR RECEIVING SET

Complete with Brandes double telephones, dry battery, detector tube, and 1-22½ volt "B" battery. Complete aerial equipment including 150 feet of copper wire, set of insulators, ground wire and lightning arrester. A high grade tube set that under ordinary conditions will enable you to receive from a distance of 100 to 150 miles. Can be used anywhere and is absolutely complete to the last detail. For the inclusive price of **$73.50.**

FEDERAL CRYSTAL RECEIVING SET

Complete with double head phones, aerial equipment, ground wires and insulators all ready to use the day you receive it. Under ordinary conditions will pick up from a distance of 25 miles. As easy to use as a phonograph. Price complete **$27.50.** Many other styles of high-grade sets for long distance receiving at prices up to **$350.** Write for full descriptions and prices.

Whatever radio apparatus you intend to purchase you will save yourself the possibility of annoying and perhaps costly mistakes by first consulting our radio engineer, who will be glad to write to you on any point of radio service, and who will gladly advise you as to the best apparatus for your particular locality and requirements, regardless of the cost.

THIS OLD ESTABLISHED FIRM

has been known throughout the northwest for many years as a leader in the electrical engineering and contracting business and in entering the new field of radio telephony it is their intention to conduct a business along lines that will enhance a well earned reputation for absolute reliability in every respect.

has demonstrated that his belief is founded on facts.

Mr. Chapman has been farming extensively near Canyon, below Hay station, on the O. W.-R. & N. He admitted to The Washington Farmer representative that he has a "fair-sized farm" and that he has "done pretty well" by farming and raising live stock.

His "fair-sized" farm contains 5400 acres. He has 145 head of purebred, registered Hereford cattle of high class. Mr. Chapman had his first annual sale the first Saturday in May this year and sold 15 bulls at prices ranging from $80 to $225. He plans to have a sale the first Saturday in May each year. Mr. Chapman's home is near Riparia, which is his postoffice, although Canyon station is on his land.

MAY "COPYRIGHT" WHEAT.

The Northwest Wheat Growers, Associated, is planning to adopt a brand or copyright mark for the wheat grown by its members in the various state associations.

Seed Potatoes

Yakima Growers Seeking the Best

The potato growers of the Yakima valley have long since learned the value of good seed, but they find that a still closer check on the quality of seed that planted will make an average increase of several tons to the acre above the present yield.

There are a number of experiments that are being carried out at different places in the valley this year, which will include seed from seven seed-raising sections. Spokane and Stevens counties and the Vancouver district in Washington, the north Idaho section, the Blue mountain and Bend districts of Oregon and a county in Montana have all sent shipments of seed to the growers and they will endeavor to determine which seed is best adapted to the Yakima valley.

This year there are a number of growers that have ordered their seed potatoes to be grown under contract, the total amount beinlg about 800 tons. Part of these will be grown in eastern Washington, while a greater portion of the tonnage will be grown in the north Idaho sections.

"We are past the point of education for a standardization of varieties," said H. N. Massie, secretary of the farm bureau, who has been helping with the seed potato question. "There is little else grown in the valley except the 'Yakima Gems,' as they are known, but there is some talk of working for a better pack.

"This can be worked out later, but the main point just now is to get the right kind of seed from which to grow our marketable crops. We are putting on another corn and potato show this fall and we expect to have a much better display than was shown last year. We are going to demonstrate the fact the imported seed will produce an increase of from 25 to 200 per cent, which was actually the case last year with two extreme cases.

Look for

LOWEST COST

in the next tire you buy

You do not want the kind of low cost that eventually becomes high cost. You do not want the cheap tire that proves in the long run to be an expensive as well as annoying experiment.

The real low cost tire is one that sells at a reasonable price and then rolls off mile after mile of uninterrupted service—the tire that renders easy, comfortable riding, low operating costs and greatest mileage.

The Savage Cord is built from the inside out to give long wear and faithful service, to resist hard usage and rough roads, and to save you money—even in gas, oil and repairs to your car. We realize this is a broad statement and we do not ask you to believe it without proof. Compare the construction of our tire with others, *see the seventeen constructional features we have put into it*—then you will appreciate our claims are true.

You can buy tires that cost less to begin with, but Savage Cords pay you better by costing less in the end.

Other good makes of tires may use one or more of the seventeen constructional features we have incorporated into the Savage Cord but no other tire that we know of begins to embody them all.

WE GUARANTEE

that not an ounce of shoddy or adulterants is used in the building of the

ORCHARD AND GARDEN

Strawberry Pest

BY CHESTER C. VINCENT,
Instructor in Horticulture, Washington State College.

The leaves on my strawberries are curling up and on the inside of the leaves there are worms that are white with brown and black heads. Their nest is filled with a web. The plants are bearing and what spray shall I use and will it injure the fruit for use? L. O. P.
Meteor, Wash.

The insect which you described is the strawberry leaf roller, and often seriously injures the strawberry plants by folding the two halves of the strawberry leaflets together and feeding within the shelter so formed, causing the leaves to turn brown and die. The worm is a small greenish or brownish caterpillar.

The strawberry leaf roller can be effectively controlled by a single, timely application of arsenate of lead, five pounds in 100 gallons of water. It is absolutely necessary that this be applied within a week after the first appearance of the moths, which appear from April to June, and just before the young larvae begin to fold the leaves. Spraying after the leaves are folded will do little or no good. I would suggest that you burn over your strawberry field soon after the crop is harvested since the leaves are already rolled up. In this way you can destroy practically all the larvae and pupae in the folded leaves.

Fundamental Facts

Two factors must always be borne in mind in determining the method of cultivating orchard soils, or the soils in which any crop is produced, for that matter. In the first place the soils must necessarily contain the plant food that will be needed by the trees or the growing plants for the production of a crop. Second, the condition of the soil must be such as to enable it to absorb and retain moisture.

While many farms and orchards have a soil today that is deficient in actual plant food elements, low production is probably more often due to a poor condition of the soil, which results in making the plant food that is present unavailable for use by the plant. Moisture and the bacteria that can thrive only in moist soil, are the fundamental factors in making plant food available for the plant.

Humus in the soil is essential to adequate absorption and retention of moisture. A soil deficient in humus tends to run together and pack, and when in this condition the evaporation is rapid, due to capillary activities.

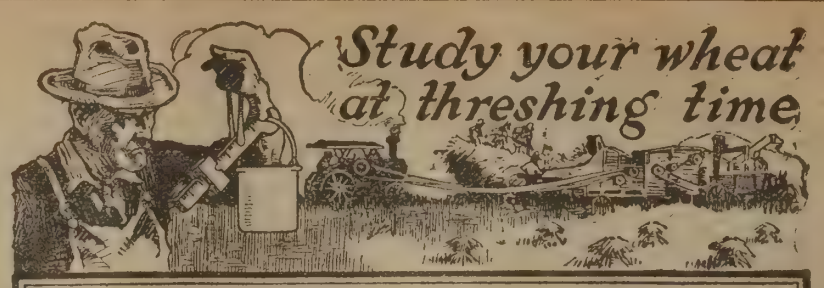
Probably the best method of incorporating humus into the soil is the production of cover crops and the plowing under or discing of them into the soil. Barnyard manure would serve the same purpose and, like the cover crops, incorporate plant food into the soil as well, but the amount of this material available is the limiting factor in its use in Pacific northwest orchards. On the other hand, there is comparatively no limit to the use of the cover crops for the upbuilding of the soil both as to plant food content and moisture retaining conditions.

Pruning Principles

In giving some advice on pruning, E. G. Wood, Washington State college extension specialist, outlines the following general principles which may be applied to almost any orchard.

One must keep in mind that old trees need a different kind of pruning from young trees. While the trees are young we prune to develop a large, strong, well formed tree which will occupy to the fullest possible extent the space allotted to it in the orchard when it becomes mature. The mature tree is pruned to influence the amount, size, color and quality of the fruit. As the tree grows older it tends to produce heavier crops each year at the expense of normal wood growth until it overbears and loses vitality. Consequently the fruit diminishes in size and often loses in quality. The problem becomes one of increasing the vitality of the tree, which in turn has its influence on the fruit produced. The trees must be stimulated by increasing the fertility of the soil, heavier pruning, and thinning the fruit. We must maintain a proper balance between wood production and fruit production.

Must Have Sunlight.



One of the most important factors in pruning bearing trees is to open them up to the sunlight. All plant food taken up by the roots of the trees must first be elaborated in the leaves before it can be utilized for tree growth or fruit development. It is only through the action of the sunlight on the leaves that this elaboration takes place. Hence, it is not only important that the trees have an abundance of vigorous, healthy leaf surface, but it is fully as important that the leaves receive sufficient sunlight. The trees in mid-summer should throw a mottled shade upon the ground and not a solid shade.

Most of the nourishment received by the fruit is elaborated in the leaves of the spur upon which the fruit is growing. Hence, every spur must receive some sunlight, if it is to develop its fruit to be a good size and quality.

Apples produce the largest fruits on the younger spurs. For example, the Winesap produces the largest fruits on one and two year old spurs and Jonathan produces the largest apples on three and four year old spurs. On any variety spurs which have reached the age of seven years or more seldom produce apples of good marketable size. We should prune old trees heavily and encourage the formation of new fruiting wood and young spurs. This will encourage the growth of crops of larger apples.

In as much as heavy pruning removes much fruiting wood it thins the fruit. This will increase the size of the apples on the wood that is left and will reduce the amount of hand-thinning necessary.

Letting the sunlight through the trees helps to control fungous diseases, espe-

OF course, you are very busy then but it will pay you to take time to find out not only the yield but the real quality.

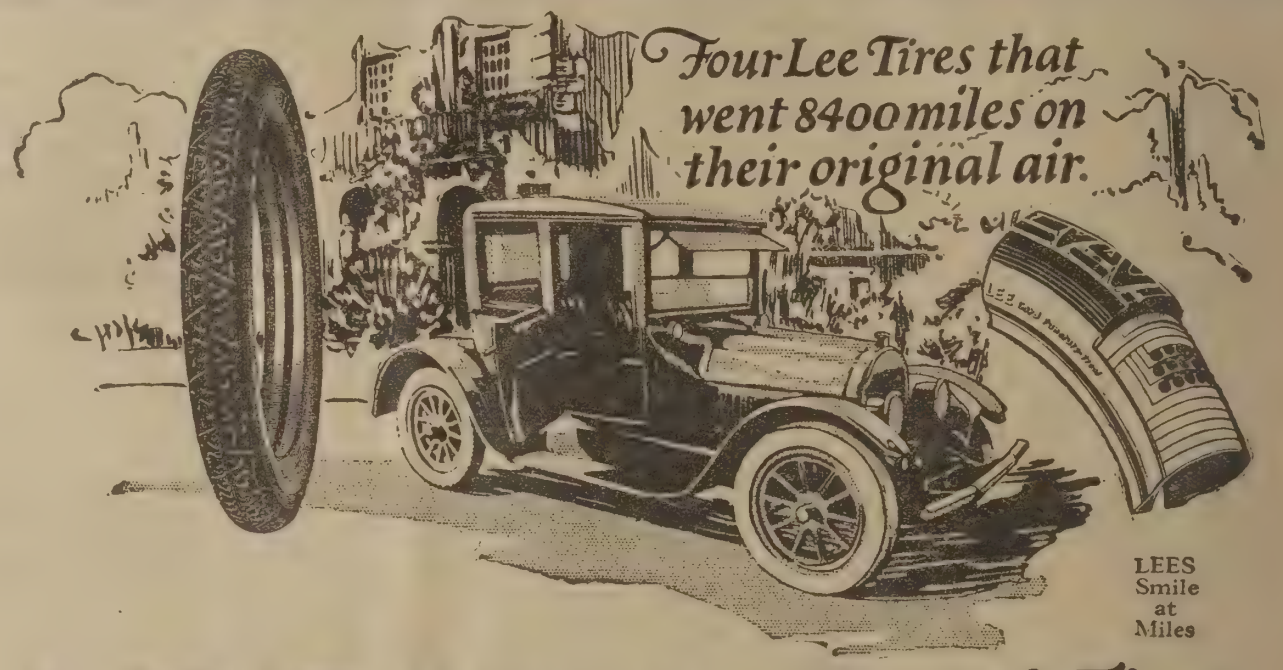
Is the weight per struck bushel up to the standard?

Does it grade high enough to bring the top price in your market?

Is the weed seed box free from light chaffy wheat grains?

Has the clover and grass made a good set in the stubble?

If not, why not?



Six years of Potash starvation has had its effect on wheat lands. Enough German Potash has now come forward, so that those who wish can buy wheat fertilizer with 4 to 6 per cent. of Potash. Potash prices are now much lower.

Tell your dealer now what you want and insist on having it.

LEE Puncture Proof Tires

Jno. L. Dabbs, E. I. DuPont de Nemours Co., Charlotte, N. C., reports: his Cadillac Coupe with Lee Cord Puncture-Proofs ran 8,800 miles the first 18 months on the original air in the front tires. After 8,400 miles the rear tires were retreaded, but up to that time had never been flat.

SHOD with Lee Puncture-proofs, you can forget your tires, except to see that correct air pressure is maintained.

A three-ply flexible armor of steel discs permanently vulcanized into the carcass of the tire gives extra strength without loss of resiliency.

This non-puncture feature makes Lee Tires especially desirable for automotive equipment on the farm. It eliminates a long list of tire troubles—punctures, blowouts, tire changing, inner tube and casing repairs, loss of time. It insures greater non-stop mileage in passenger car and truck service.

The Lee Dealer will prove to you that Lee Tires are actually puncture-proof. He will confirm our cash-refund guarantee against puncture.

LEE TIRE & RUBBER CO.
Executive Offices — 245 West 55th Street
NEW YORK CITY
FACTORIES CONSHOHOCKEN — PA

cially the pear and apple scab, and makes thorough spraying easier.

General Principles.

While each tree is a problem in itself, a few general rules of procedure for pruning mature trees can be laid down:

First, remove all dead and badly diseased wood in trees where such limbs are to be found.

Second, saw off large limbs that are parallel and too close to each other to allow proper formation of side branches. Where one limb is directly above another one should be removed if they are so close as to shade the lower one.

Remove limbs which hang too low or cut them back to stiffen them.

Remove crossing or interfering limbs. Thin the entire top of the tree by removing limbs about the size of a man's thumb. On most trees some smaller branches near the ends of limbs will need to be removed to thin out clusters of twigs.

Head back limbs which are growing out of bounds—either too high or too wide. Cut them back to a lateral branch whenever possible.

Never do short heading back, cutting in one or two year old wood unless the twigs are cut back to side branches. Such short heading in bearing trees fills the top with a growth of succulent upright twigs which shade the fruit during the latter part of the summer and prevent its proper development.

SHIP BERRIES BY FAST TRAINS.

Two special express trains of "reefers," which will stop en route only for the purpose of reicing and which will make better than passenger train time between Puget sound and St. Paul, have been provided by the Northern Pacific to accommodate shipments of Puyallup valley berries and Yakima valley cherries this season. Leaving Puyallup early in the morning, the first train reaches Yakima about 3 p. m. The second runs about seven hours later to pick up afternoon deliveries, and both travel over the Sunnyside branch to Pasco, where the nonstop schedule begins.

Solves Hay Marketing Problem

Feeds the Alfalfa and Grain Crops to the Hogs and Cows

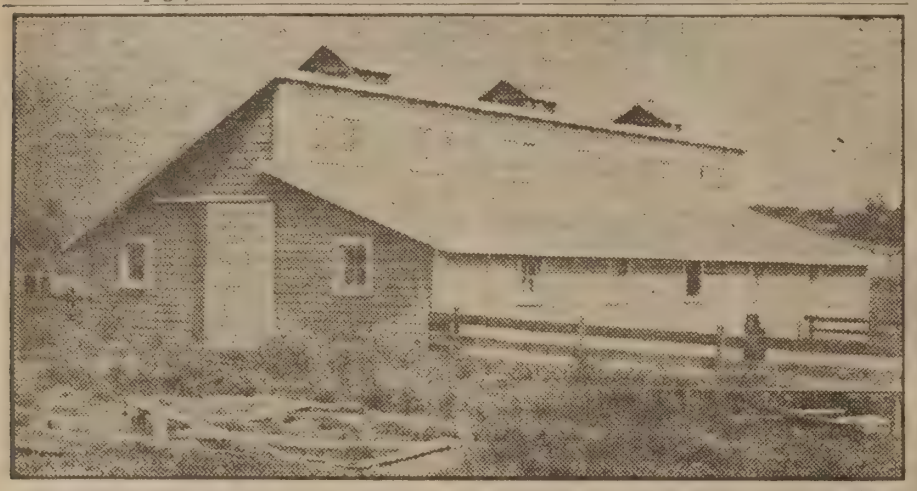
BY RALPH ERSKINE.

A good solution of the hay marketing problem is suggested by A. D. Paddison, who owns a 60-acre alfalfa and hog farm near Ahtanum, Yakima county, Washington. There are 10 acres of the farm devoted to an apple orchard, but the remainder of the land is planted to alfalfa and grain crops.

The remark from Mr. Paddison that he had not sold a load of hay in five years naturally causes astonishment until one learns of his feeding operations, that the farm has 65 pigs, 10 head of brood sows, and two herd boars, all of which are big type Poland Chinas.

For many years Mr. Paddison has been a breeder of registered hogs. One of his oldest sows, Cedar Daisy D., is an Iowa sow, now 4 years old, and has been priced at $400. All of the sows are typical big type Poland Chinas, stand well off the ground, and are kept in excellent condition. There are two sows and one boar from the John Funke herd of Cottonwood, Idaho. The large herd boar, Big Giant, is a Nebraska bred animal, formerly from a herd in the Naches valley. He won first prize as a 6 months pig at the state fair last year.

All of the animals are given an abundance of good alfalfa pasture, the 10 brood sows having two acres over which to range. In early June, most of the hay in the valley was ready to cut, but the hay in this lot was considerably shorter than in the unpastured fields, and Mr. Paddison remarked that he would not cut any hay from it if the sows could keep it down, as they had already done. Mr. Paddison believes in feeding a green ration both summer and winter.



Boxes of salt and lime are placed in the shade of some large trees which furnish shelter in hot weather. The animals are all given a balanced ration, with plenty of minerals, as well as an occasional worm remedy to keep the young pigs healthy.

Fifteen acres of the Paddison farm are devoted to alfalfa, and it has been known to run as high as five tons to the acre. The pigs are given all of the pasture they can keep down. Mr. Paddison does not put rings in their noses unless they root unusually bad. Even during the winter the sows are allowed to range in lots of this kind, and are taken into the hog house only as they are ready to farrow.

"In addition to the hogs, we keep from six to eight milch cows," said Mr. Paddison, "and we are sometimes short of hay for the winter. There is more money in farming in this section if one keeps a few cows to milk. It gives a market for the hay, and affords a steady income. It also gives an opportunity to hire a man the year around instead of having to pick up untried help at rush seasons of the year.

"The alfalfa is not kept as a continuous crop, but is rotated with oats, barley and corn. Blue barley has been found to yield almost as well as any other grain, and it can all be used in the hog ration by running it through a feed grinder. Corn also is a good grain to mix in the ration, and the fodder can be fed to the cows or horses. Oats is one of the best grains to feed the brood sows, even before they farrow, since it puts excellent growth on the pigs."

Mr. Paddison has a large hog house of the half-monitor type. There are six pens on each side, with outside gates as well as gates opening into the main alley. Shortly before farrowing the sows are brought into the house and allowed to become accustomed to their new quarters. There is an abundance of sunlight in all the pens, due to the windows in the top and the openings at each side. As soon as the pigs are large enough, they are taken from the sows to an outside pasture and fed in a trough which the sows can not reach.

The half-monitor hog house on the A. D. Paddison farm at Ahtanum. The building runs north and south, has good ventilation and sunlight. It measures 24x48 and is 14 feet high. There are six large roomy pens on each side of the alley which runs through the center. The gate from each pen closes the entire alley when open, thus avoiding the necessity of additional help to drive the sows from one pen to another. Feed gates are swung from the top, and allow the trough to be filled with feed without being molested by the sows. Guard rails are arranged on each side to prevent sows from crushing their pigs. The entire house was built at a cost of approximately $1000, including the time for two men, but not counting the part time put in on the construction by the owner.

CATTLE MARKET LOOKS UP.

There is apparent return of confidence in the cattle trade throughout the country following the depression of the last couple of years.

LEARN AUTO and TRACTOR BUSINESS

IN 6 TO 8 WEEKS

Automobile, Airplane and Tractor Mechanics, Vulcanizers, Acetylene Welders needed everywhere. We teach you to be an Expert so that you can make the biggest kind of money. Our Graduates command the biggest pay.

15 Minutes to Replace a Scored Cylinder

There are sound reasons why the G. M. C. Truck, with its tremendous stability, flexibility, power and endurance, is the first choice of thousands of growers and farmers. One reason is

Removable Cylinder Walls

Each cylinder in a G. M. C. engine is a separate sleeve which is pressed into place in the cylinder block—a new type of cylinder construction—so that in cases of a damaged cylinder it is not necessary to lay a G. M. C. Truck up for several days or to incur the heavy repair expense that follows when the entire cylinder block must be taken from the truck and remachined, as in the case of the ordinary type of engine.

An actual test recently made in the Eldridge Buick shop with an outside judge holding a stop watch on the operation showed that a scored cylinder could be replaced in just 15 minutes.

Think what an advantage this one feature gives you. Yet it is only **one** of the big features of the G. M. C.

in selling all that are produced. His only expense is feeding the sows, about 365 pounds of shorts or middlings and a little slop when the pigs are young. The sows produce about $75 per head per year, and it does not require the services of an expert to figure out a neat profit from this cost for feed and the gross receipts.

From the Tenney farm the excursionists drove to the dairy farm of John Michelbrook, where a fine herd of Jersey cows and heifers and one of the best Jersey bulls in eastern Washington were seen and admired. Four splendid heifers were judged and their respective merits discussed. One of these heifers was pronounced by the judges as "of grand champion qualifications," and she is surely an outstanding individual. All of the 13 females in this herd are splendid individuals, but this one, a little more than a year old, was pronounced a great animal by the judges. Dan Barclay said: "If Mr. Michelbrook were to tell me I could have two of his heifers for $500 or take my choice of one for $500 I would walk off leading this splendid animal and feel that I had got a bargain." The bull, Chief Waltz, carrying St. Mawes blood lines, attracted much attention and admiration. He had been recently dehorned. Mr. Michelbrook keeps only hornless or "polled" Jerseys. His older animals are dehorned and the younger animals have their horns blighted when the horns first begin to appear. Cattle without horns handle much better and are less apt to injure one another.

The next stop was at the beautiful dairy farm of R. H. Tuttle, who is an automobile dealer of Walla Walla, but has a hobby for good cows and a good farm and has built up one of the greatest Holstein herds in the Walla Walla valley. He has more than 30 head of especially good purebred, registered Holstein cows and a bull of royal breeding. His farm and country home are pointed out as one of the beauty spots of Walla Walla county and his dairy barns, milk rooms, cooling rooms and everything about the great dairy are models of cleanliness and sanitary care.

From the Tuttle farm the caravan drove to one of Walla Walla's institutions to which the citizens "point with pride." This is the Stubblefield home, established by a foundation given by Mr. and Mrs. Stubblefield, a pioneer couple who died childless and left their fortune to establish a home for orphans. The great building at the home located on a beautiful knoll that slopes gently in all directions, is beautiful and well arranged in all its departments. Superintendent and Mrs. Campbell take great pride in the institution and the more than a score of orphans who have a real home here seem to love their guardians as real parents. C. M. Rader is one of the directors of the home and upon his arrival the boys swarmed around him and told him of the work they had been doing, how they had cleaned the great garden, which supplies the home with fresh vegetables "from every weed and there ain't a weed in it."

Only a short stop was made at the Stubblefield home, for it was nearing noon and it had been arranged to have lunch at the William G. Cordiner farm, a short distance away. The people from town had been requested to bring their lunches and they had done so, but the meager lunches put up by the restaurants and hotels for the people from towns were not needed. At the Cordiner home a great table had been arranged under the spreading branches of a great maple tree more than 10 feet in circumference, with a spread of branches covering more than 50 feet, and this long table was fairly loaded down with only such a lunch as country people can provide for such an occasion.

After the lunch, or banquet, the visitors went to the great barns on the Cordiner farm and saw Shorthorn cattle that were worth going 100 miles to see. Mr. Cordiner has 20 head of them. When it is learned that he has cows for which he paid from $1600 to $2000 each, some idea of the real aristocracy of his splendid herd may be gained. Several classes, ranging from aged cows to suckling calves, were judged and A. E. Lawson of Spokane, western representative of the American Shorthorn association, gave an interesting and instructive talk, in which he told why the judges placed the animals as they did.

Leaving the Cordiner farm the excursionists drove 14 miles toward Wallula to the Shorthorn farm of Ralph Rader, where there are 60 head of high-class Shorthorn cattle, all purebred and many of them outstanding individuals. The splendid barns were filled with high-class cows on one side and young bulls, ranging from junior calves to senior yearlings, on the other. For the judging contest the two great herd bulls, each weighing more than a ton, were selected. Snow King, a mammoth pure white bull, not in the best of condition because of hard service and the fact that he has had no feed but grass, is a splendid animal. He is 6 years old and was a blue ribbon winner at Walla Walla, Spokane, Yakima and Salem in 1919. Good Mariner, a great roan bull, 3 years old and in the best of condition, was given first place by the judges, A. E. Lawson and Henry Delaney.

The next stop was at the farm of William Lauer, who specializes in Shire horses. Two splendid stallions, full brothers, one a yearling and the other 3 years old, were in the corrals at the barns and a Mammoth jack, also used for breeding purposes on the farm, attracted the admiration of the visitors, the judging classes and many spectators trudged across a summer-fallowed field to see some splendid Shire mares and their colts and these were judged by the class.

The next stop, which was the last of the long tour, was at the farm of Charles H. Craig, where some magnificent Rambouillet sheep were seen, admired and judged.

Professor C. M. Hubbard, live stock extension specialist of Washington State college, Pullman, judged the sheep and gave a highly interesting and instructive talk, in which he pointed out the best points of each animal judged and told why breeders sought to bring out these points in their sheep. His talk was of value to all present and the farmers, business men and agricultural students gave it the closest attention.

The excursion ended at the Craig farm and the automobiles scattered, the farmers returning to their farms, their flocks and herds and the townspeople and those from other points returning to Walla Walla through the beautiful and historic valley where the Whitman colony founded the first settlement in Washington. Some of the cars stopped near the Whitman monument and Mr. Rader pointed out the objects of special interest in connection with the settlement, the mill pond, the old mill, the stone burs which were made near Spokane and carted to the valley where the wheat, the corn and other grains grown by the pioneers were ground into flour and meal.

The excursionists returned to Walla Walla in the evening just as the country folks were returning to their homes from the circus. Covered with dust from the long drive (for the sun had come out about 11 o'clock and the afternoon was hot and dusty), they were a dirty but happy crowd, for all felt that the day had been profitably spent and that they had seen and learned much of interest and benefit in meeting the hospitable farmers and seeing the great work of improving the live stock of the Walla Walla country that is going forward slowly but surely and promises much for the future of this great agricultural section of Washington.

State Farm Paper

THE WASHINGTON FARMER is strongly endorsed by stock breeders, dairymen, fruit growers, market gardeners, wheat farmers, in fact by every class of agriculturist.

It deals with all sides of farming, not in some distant field, but in the very state whose soil you are cultivating, and whose citizens you are associating with.

Special departments covering the various branches of farming make this magazine valuable to the producers of stock, fruit, milk and poultry; while constant efforts for the upbuilding of agriculture have won the good will of all classes.

Furthermore, this paper's cooperative subscription plan is widely approved throughout the state. It aims at the elimination of the subscription agent. The reader sends in his renewal direct and gets the benefit of every penny which would ordinarily go to the traveling agent. Our readers are also asked to include some friend's or neighbor's order with their own. Please attend to this matter without putting us to the expense of sending you a notice. The subscription rate is only $1 for five years.

$1.00 for 5 Years

50 cents for three years. 25c for one year.
THE WASHINGTON FARMER..... 1921.
Review Bldg., Spokane, Wash.
I desire to take advantage of your cooperative plan in securing new and renewal subscriptions.
I enclose herewith $ ... for a... year subscription to THE WASHINGTON FARMER.

If your subscription is already paid in advance it will be extended from the date to which it is paid. July 6, 1922.

PIKE'S PEAK OR BUST

BY LEWIS B. MILLER

Copyright 1921

CHAPTER ONE

Off to the New Gold Diggings.

A pleasant morning it was, with blue skies, bracing air and bright sunshine, that morning in early April, 1859. And a rather numerous group of men, women and children had come together in the single street of a little Illinois village, Johnsville by name. Two persons were the center of interest in that group.

One of these was a broad-shouldered, powerfully built man of about 30 years. He was very sunburnt, somewhat weather-beaten and rugged-looking. Everything in his appearance indicated that he was accustomed to outdoor life and to the heaviest, roughest work.

The other of the two was very different. Still scarcely a month beyond his 21st birthday, he was slightly built, with a thin, rather pale face. Though wide-awake and intelligent-looking, he was plainly not very strong and not in the best of health.

Esau Haggerty, the older of the men, was standing between the handles of a wheelbarrow. The barrow's upper part was a box, whose contents, whatever they might have been, were concealed under folded canvas held in place by ropes. Between the ropes and the canvas was a gun, its muzzle pointing forward.

Haggerty's younger companion, Orlando Medford by name, was standing with a rope in one hand and a rather long, muzzle-loading rifle in the other. The rope's farther end was around the horns of a big cow of a brindled color. On the cow's back was a packsaddle, with a fair-sized load on it. This load, like that on the wheelbarrow, was mostly covered over with canvas.

The attention of several persons in the crowd was now directed to Haggerty's barrow. For on each side of the box, crudely burnt with a hot iron into the new plank, were the words:

PiKEs Peak oR BUsT

Most of those present had read of similar inscriptions on other vehicles headed in the same direction; but this was the first time that any of them had actually seen such a thing. Several were commenting upon it, jokingly.

At length Haggerty turned to the other man and remarked:

"Well, Lando, time for me and you to be joggin' along, I reckon. It's eleven or twelve hundred miles from here to Pike's Peak, they say. And the sooner we begin makin' tracks in that direction the sooner we'll land there."

"All right, Esau. I'm ready for the road whenever you are," answered the young fellow addressed, as he gathered up the rope connecting him with his burden-bearing cow.

Now everybody shook hands with the two travelers.

"Good-bye, Esau! Here's hopin' you may come back with all the gold you can push on your wheelbarr'!" called out the village blacksmith.

"Oh, I'll be satisfied with a whole lot less than that, Mr. Gray," laughed the prospective gold seeker, as he stooped and put his head under a leather strap, one end of which was fast to each handle of the wheelbarrow.

"Good luck to you, Lando boy! Come back to us rich and hearty!" called out the leading merchant in the village. In this man's store young Medford had been clerking until the last few days.

"If I can come back hearty, it's little I'll worry about how rich I am, Mr. Karnes. To me health will be better than wealth. But of course I'd rather bring home both."

Many similar good wishes were shouted at the travelers as they moved off. And all the villagers stood in the street or in their doors, gazing after them along the road that led west.

Once under way, the pair of gold seekers tramped along at a steady gait. Haggerty was trundling his wheelbarrow on one side of the wagon road, while young Medford, with his rifle on his shoulder, was leading his cow along the other side. And ahead of them trotted Frisk, their dog.

Two or three hundred yards beyond the village the young traveler turned and waved his hand to the people in the street. All of them waved in reply. Then he shifted his rifle to the other shoulder and tramped on.

About a mile from the village the pair found themselves entering some woods. There a bend in the road would hide the village from view. Now both paused and turned to gaze backward.

All their past lives had been spent near that village; and they had started on their present journey from a farm half a mile beyond it. As yet neither of them had ever traveled more than a hundred miles from home. Hence the journey they were entering upon seemed to them a venture into the great, mysterious unknown. As most of their traveling would be through a wilderness swarming with savages, both realized but too well that many things might befall them ere they returned. And they might never return.

However, they were too full of hope and enthusiasm to think much about possible misfortunes. Their minds were busy with the wonderful things they expected to see and with the golden treasures they hoped to unearth in that new California which had just been discovered in the Rocky Mountain region. After one long look behind, they turned and moved on into the woods, both with eager steps.

"Well, Esau, we're on the way at last! On the way to the land of gold and adventure!" young Medford exclaimed, his pale face lighting up with eagerness.

"That's what! That's what we air, Lando boy! A good many steps we'll have to take from here to the Pike's Peak country. But we'll step 'em. And no tellin' what we'll come packin' home with us."

"Even if we don't dig up very much gold, we're sure to run across hundreds of interesting things and to pass through some thrilling experiences," Orlando ventured.

"I'll bet we will! I'll jest bet a button we will! And, on top of all that, I'm hopin' we may come home with our pockets crammed and jammed with the yaller metal."

"That will be wonderful if we can—if we only can. Must be lots of gold out there, from all the excitement it's stirring up. But if I can just get back my health, that will mean more to me than all the gold that ever was mined."

"Oh, you'll do that, I've never a doubt. Them that's traveled through the Rocky Mountain country says it's fine to make ailin' folks well and pindlin' folks hearty."

"How does your wheelbarrow feel by this time, Esau? Beginning to get heavy?"

"Not a bit, Lando! Narry bit. Fact is, I half believe I can walk along better with it than I could without it. Gives me somethin' to lean ag'in'."

"Must be splendid to be as big and strong as that," remarked the young fellow, looking his stalwart companion over half enviously.

"Well, 'taint sech a bad thing, I own up. Like as not you'll be able to push a loaded wheelbarr' by the time we start home from this trip. That is, if the' ain't too much yaller gold on it."

Orlando laughed. "There'd have to be a lot of it to be too much."

In spite of its brightness, the morning had been chilly, almost frosty. But as the run rose higher the travelers took off their coats. Esau laid his on the wheelbarrow, but Orlando's was carried on its owner's arm.

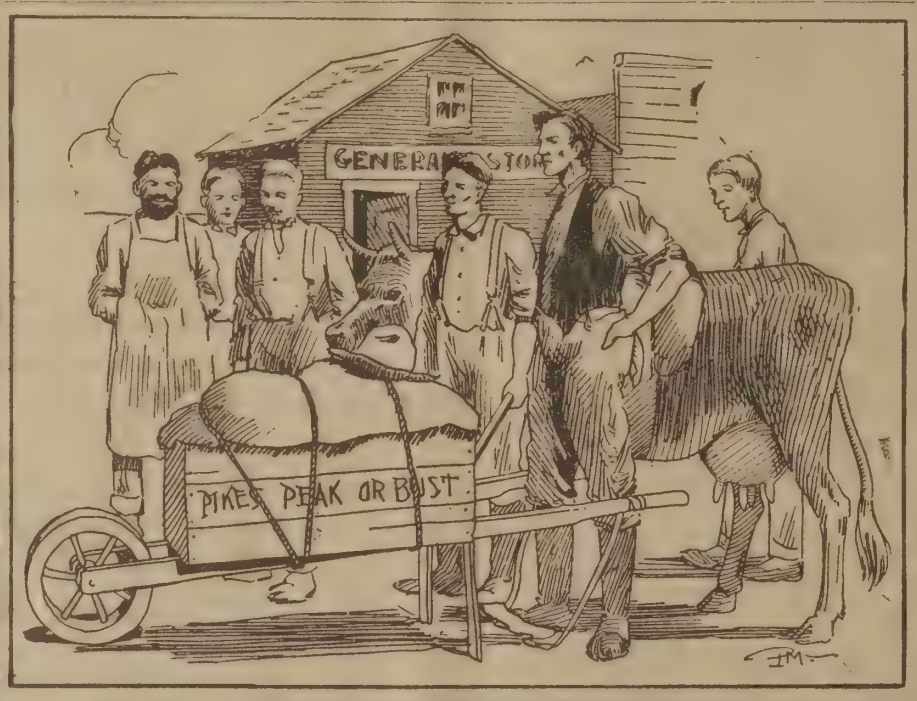
In time the travelers arrived at a good-sized stream. A rough wooden bridge spanned it, and they passed over without any trouble. But the sight of the water below moved young Medford to remark:

"I'm wondering what we'll do when we come to a creek like this without any bridge. Brindle can ford it all right with her pack. But how can you cross without wetting your load? Your wheelbarrow's legs are a lot shorter than Brindle's legs."

"Well, there'll be ways a plenty, I'm 'lowin'. If no other, I can unload and pack everything acrosst on my back. Resk me to find some way when the needcessity comes."

For a time the cow led well enough. But the farther she traveled from home the more reluctantly she followed. Finally it required steady pulling to get her along at all.

"Come on here, old lazybones!" exclaimed her owner, in exasperation. "Think I'm going to drag you all the way from here to the gold diggings? Not if I know myself!"



"Cow brutes don't like to travel fur from their ever'-day stampin' ground," Haggerty commented. "And Brindle may be thinkin' some about that spotted ca'f of her'n she didn't say good-by to this mornin'."

"A two-months' calf is old enough not to worry about. But I've got all I can stand of this! Driving beats dragging any old day!"

Soon the young fellow had his cow in front. He was still holding the rope that was around her horns; and sometimes he used the end of it to increase her speed.

"That's better—worlds better," he remarked. "Now maybe I can get to Pike's Peak before the gold there is all dug up. It's little chance I'd have had if I'd dragged that brute the whole way."

Steadily, but without hurrying, the two travelers pursued their journey. The part of Illinois through which their road led was not very thickly settled. Sometimes the road ran between rail fences; but more of it wound through woods, or stretched itself across unfenced prairies.

This was the first time any of them had actually seen such a thing.

The farmhouses they passed were, many of them, log cabins.

At last dinner time came. Esau and his companion had started early; and their half day of steady tramping had given them sharp appetites. They were now out on a rather wide prairie. But, coming to a little, winding stream, they halted by it, on a grassy bank, in the slight shade of some leafless willows. Here the wheelbarrow was allowed to stand. But they proceeded to unload the cow, that she might rest and graze to better advantage.

First the canvas cover was removed from her pack, and then a roll of quilts and blankets from the top of the packsaddle. Now the pack was seen to consist of two huge, well-filled pockets of rawhide, one on each side, and both hung from the crossed horns of the saddle by loops. When these pockets had been let down, the packsaddle itself was ungirted and taken off. After that a rather long rope was tied to the shorter one of the cow's horns, and the other end made fast to a willow. Then Brindle was fed nearly a gallon of shelled corn from her own pack and left to eat that and to graze for the rest of her dinner.

"We don't need a camp fire today, do we, Esau?"

"Guess not. We've got cooked victuals a plenty for this meal."

From under the canvas covering of his wheelbarrow Haggerty took two packages, both wrapped in newspapers. These, when untied and opened, proved to contain various cooked delicacies, prepared for the travelers the day before by their relatives. Of these edible things the two made a hearty meal, and with part of them and the scraps they fed Frisk.

"Well, how do you feel after your first half-a-day's tramp?" inquired Haggerty. The meal was ended, and he was sitting on the grass, picking his teeth with a grass stem.

"Nothing to complain of. I'm a little jaded, of course. Not so much, though, as I expected to be. But I'm wondering how I'd feel if I'd been pushing a wheelbarrow load of stuff, like you have, instead of merely leading or driving a cow. Does it strain your arms much?"

"Not yit it hain't. The strop over my shoulders keeps the weight off'n my arms. My shoulders does the holdin' up. 'Bout all the use I have for my hands is to push the concern along."

"How many days will it take us to reach St. Louis, do you think, Esau?"

"All depends on how fast we foot it."

"How many miles can we make a day?"

"We can make more'n it'll be safe for us to try to make. If we hump ourselves too hard at the start, one or both of us might break down. Then we'd have to lay by for a spell, to rest up. Twenty miles a day will be enough to begin with. After we've got our feet toughened and our muscles hardened, we ought to do a right smart better. Slow but shore is the idy at the startoff. We won't see St. Louis under five days, I'm thinkin'. That is, if the weather holds out good. No great certainty of that this time of year."

For at least two hours the travelers and their dog, and part of the time their cow, lay on the grass and rested. After that the men rose up, saddled and packed Brindle again and were soon on their way as before.

All the afternoon they kept traveling, their general course being toward the northwest. The sun was low when Haggerty said:

"Lando, you might take your gun and ramble around a little through the bresh. That is, if you don't feel to tard. See if you cain't knock over a rabbit or squir'l or somethin'. We may need it."

"We've got fried chicken enough and cold ham enough for supper, I'm thinking."

"For our supper, yes. But some game will come in handy for breakfast and for our dinner tomorr'. We've got to depend on our guns for meat anyhow; and the sooner we begin the better. Make a loop in your rope and hang it over my arm. I can drive Brindle."

Orlando did as his traveling companion had suggested. Soon he had the dog were off in the woods, wandering about in quest of such game as the country afforded. Ere long Esau, moving on at a steady gait, heard Frisk yelping and then barking excitedly. Evidently the dog had treed something. Later rang out the report of a rifle. And a little while after that Orlando returned to the road, carrying a rabbit and a squirrel. Esau and Brindle were in sight, and the hunter was not long overtaking them.

"Didn't have to shoot the rabbit. Frisk treed 'im, and I thrust my arm into the hollow tree and yanked 'im out. Air's getting chilly. About time to camp, isn't it?"

"As soon as we run onto water and grass together."

A few minutes later they found what they wanted. Now they went into camp, on the bank of a little stream. They were still in the woods. After the cow had been unpacked and unsaddled and tethered to a bush, the two men gathered a pile of dry sticks and logs and kindled a fire. Then they set up their little tent. Neither of them had done much camping before, and the experience was all the more interesting because of its novelty.

As darkness began to settle down, a great camp fire was flaming and crackling. Near it Haggerty was busy preparing supper. Farther back, but still in the light, Orlando, after feeding Brindle, was milking her. For she had been brought to furnish milk as well as to carry a pack.

For a little while after supper the traveling companions sat on the grass near their fire, chatting of the friends they had left behind, and of the 1100-mile journey that stretched out ahead of them. Both were weary from their unaccustomed exertions, Orlando especially so. Ere long they untied a roll of quilts and blankets and made a bed of them in their tent. On this they lay down, with their feet to the fire, and a few minutes later they were sleeping soundly.

At the first break of day they were up, and soon had their camp fire blazing. Before breakfast Orlando fed Brindle some more shelled corn, and while she was eating he milked her again, obtaining more milk than on the night before. Two big-mouthed bottles, brought for the purpose, were in Brindle's pack. In those milk for the travelers' dinner and supper could be carried.

"I tell you, Lando, that was a wise idy of yo'r'n—that idy of takin' old Brindle with us to Pike's Peak," Haggerty remarked, while the two were sitting on a log by the fire, eating their breakfast. "We both like milk so much better'n coffee; and it saves us the trouble of packin' an old, black coffeepot in our outfit."

"And the best of it is, Esau, that milk is food and gives strength, while coffee only stimulates. Let's hope it may be many a day before our pack horse goes dry."

Not a great while after breakfast the cow was saddled and packed. Now the bedclothes were stowed away on her pack-

Closetless House

A Little Thought Solves Problem

By MRS. E. M. ANDERSON.

When I hear any one say a certain person is or is not a good housekeeper, I wonder just how much it really amounts to anyway. It has been my experience and observation that the house often has fully as much to do with the matter as the woman has. To be sure some women are naturally orderly souls and some are not, but a house that is well supplied with closets and clothes presses is so much easier to keep in order than one without, that it seems as if it almost keeps itself.

My house is not very well kept, but it is much better than it used to be and possibly my solution of some of its problems may help some one else who is similarly situated. I haven't a single clothes press or a real closet; the house originally had no arrangement for putting anything away, because there was no logical place where anything in particular really belonged. I had a carpenter make several boxes with hinged covers and it is surprising how much stuff they stow away. One stands in the corner of the landing at the head of the stairs and holds some choice files of old magazines, a nondescript assortment of scraps for mending or piecing, and a smaller box or two containing remnants of various kinds of cloth. Before I make a new thing I always look over my accumulation of odds and ends and generally find a part, and often all of my materials already on hand. Another box is placed beside my dining room heater where it makes a cozy chimney corner seat. It holds a varied collection of little daughter's playthings, that would otherwise little the whole house. A third box stands in a "jog" in the wall in an upstairs bedroom where it serves as a window seat and also as a receptacle of freshly ironed pieces that may be folded flat. A fourth box slides under the cot-bed out of the way and holds winter underwear in summer and strictly summer things in winter. A smaller one than any of the others fits compactly into a corner of my room and holds shoes and slippers not in every day use. Otherwise they would be under foot and exposed to dust and dirt. These boxes are fitted with smoothly gliding rollers on each corner, so they move easily even when very heavy.

Across the end of my largest sleeping room (which is almost square) we put a long smooth pole such as rugs are sometimes rolled around and from this pole are suspended a quantity of clothes hangers. By this means a surprising number of coats, suits, dresses, etc., may be hung away in small space without crumpling or mussing. As a protection from the dust we have a curtain of muslin, colored, to harmonize with the wall paper, etc., strung across the front of our improvised "clothes press." Another sleeping room has a lot of big screw hooks in an out-of-the-way corner behind the door and these, with a big roomy shirtwaist box and a shirt box, help out wonderfully in a closetless house. Try my plan and see if it doesn't.

Home Recipes

Wormwood has many friends, here is another use for it.

To give one an appetite, put 2 leaves into a cup of boiling water, let stand till it is cool then drink it before eating in the morning.

Put a good handful of the herb in 2 quarts of water and let come to a boil, allow to stand one-half hour, then strain and add a large cup of sugar and boil 15 minutes, removing any scum that may appear on the top. When it is cool add 10 cents' worth of brandy to keep it and bottle. A dose is one wine glass every morning for 14 days, then omit for 14 days and take it again for 14 mornings. This is a fine medicine for a torpid liver. I have tried it with success.

MRS. ELIZABETH HOWARD, Idaho.

Hard Soap Without Boiling—1 can lye, 5 pints melted grease, 2 1-2 pints cold water, 2 teaspoons oil of sassafras, 2 teaspoons of ammonia, 2 teaspoons of carbolic acid. Dissolve lye in water and let cool, strain and have the grease luke warm, pour the lye in the grease slowly, add other ingredients, stirring all the time until it begins to thicken, then pour into paper lined tins and mold. Cut bars before too hard. It is very white if the grease isn't scorched. (I think cracklings do more good fed to the hens.) MRS. E. M. VARIN, Idaho.

Wormwood is a fine medicine for sprains and bruises. It is healing and wonderful to take out pain from sprains.

Put some of the wormwood on to steep and boil it well, keep it hot and wring out a woolen cloth and wrap it around the sprain, wringing out again as it cools. I had a sprained ankle which I thought would surely lay me up, but I treated it as I have said all day and the next morning got up and went about my work and had no further trouble.

MRS. J. MANELY, Wash.

Apply scraped potato to a burn as soon as possible; it draws out the fire and is cool and easing. MRS. G. S., Oregon.

Carrot Preserves—4 lbs. carrots, 4 lbs. sugar, 2 entire lemons, 1 can pineapple; cook carrots till done, put lemons, pineapple and carrots through the food chopper, using the coarse knife; add sugar and cook slowly until clear and thick.

C. C., Mont.

Canning Gooseberries—Pick the berries soon as they are as large as they will grow. Snip off the ends and wash and place from 2 to 4 quarts into a porcelain kettle and set on the back of the stove covered with boiling water; as soon as they begin to turn white fill jars as fast as possible but don't crowd or mash the berries; fill jars with the hot water and seal, using no sugar.

When a jar is opened drain off the juice which by this time has become thick and very tart. I use this for making jelly, and the berries are easily sweetened and very good.

Gooseberries are not very highly prized by some, but will be found delicious when canned by this simple recipe. — MRS. SQUIRE WEAR, Athol, Idaho.

Milk Pudding—To about a quart of lukewarm milk add sugar and flavor to taste, then dissolve a piece of rennet tablet about one-half the size of a dry pea, add this to the milk and stir well and pour into saucers. If you care to make it fancy add cake coloring and serve with whipped cream. (Plain cream is also very good.—Editor.) This makes a delicious pudding. If it becomes watery you have used too much rennet. The rennet tablets may be had for 25 cents a dozen at any drug store.—"ANNIE LAURIE," Wash.

Vinegar From Fruit Juices—A cask or barrel is best for making vinegar in, and it should never be more than three-fourths full so as to allow air space and the bunghole should be covered with cheese cloth or muslin.

Put in a quart or more of good vinegar for a start then add fruit juices of any sort carefully strained. One can boil apple parings and add the water and molasses rinsed from jugs and sirup pitchers. Judgment must be used in adding the proper amount of water; one can determine this by testing the liquid from time to time.

Place the cask out in the sun and on the side so as to allow the air to circulate over as large a surface as possible. In warm weather it will require about two or three weeks to make vinegar.

Make The Laundress Happy

by making it possible for her to turn out beautiful, snowy white, clothes like new.

Red Cross Ball Blue

will enable the laundress to produce fine, fresh-looking pure white clothes instead of the greenish yellow usually obtained. RED CROSS BALL BLUE always pleases.

5 cents.

At all up-to-date grocers.

POST CARDS BRING BIG RETURN

Many of our advertisers offer free booklets and information which is very much worth your while to send for. A postal will bring them. Why not place a dime or so in your rural mail box with a note requesting the carrier to leave you some cards? Then use the cards in writing advertisers. When you do so be sure to mention THE WASHINGTON FARMER.

Glance over the bargains on the "Want Ad" page.

Just Folks

If you were in a Portland hotel on a visit to the city and should take up a newspaper and find that a big fire in your home town had wiped out all your possessions, how would you take it? This experience overtook a citizen of Prineville the other day. The visitor told a reporter that he lost everything in the fire, and among other things were records and documents of which he had no duplicates.

One person after another has gone through this experience of losing practically all his property from one cause or another. Some have given way to despair; others have been born again in courage.

Once I was taking a vacation trip on horseback of a hundred miles or so over a portion of the old colonial stage road from Boston to Bangor, Me. Travel was meager over portions of that old highway, and in more than one place grass was growing between the wheel tracks. As the sun went down I came to an old New England village and stopped at the hotel, perhaps I should say the tavern. During the evening I picked up a story of one who had been a leading citizen of the town. I do not remember the name. What I do remember are the facts told me regarding this man, who had lost all his property when he was over 70 years of age. He did not despair. He had a new birth of courage. He shamed many a young man by the way he planned and worked. He had not only lost all his property, but his debts amounted to something big for those days. He was bound to pay those debts before he died. In a few years his big aim was accomplished; the last debt was paid. Then, he died.

The tremendous effort made by Sir Walter Scott or by our own General Grant in paying off gigantic debts during the closing years of their lives are not the only examples. Every day life has its heroes in this respect.

The only real loss is discouragement. Determined hope is the only thing that can call out that wonderful reserve power in men and women. More than once the impossible has become the possible. A hidden door has opened in the solid wall.

At any rate, the fight is worth while, and this heroic fight against calamitous misfortune even robs death of its horrors. E A S

TO SAVE THE LINOLEUM.

Linoleum conforms to the surface over which it is laid. Thus, if the floor is uneven or possesses unsightly bumps and ridges, the linoleum may be expected to do the same after it has been on the floor for some time. As a consequence the linoleum wears worse in the more prominent spots. An extra strip of linoleum is a protection in such places, or, better still, the surface may be leveled to some extent by the use of a cheap grade of building paper under the linoleum.

Easy Now to Rid Your Place of Flies

Widely Known Scientist Discovers Wonderful Chemical That Is Fatal to Flies. Not a Poison—Harmless to Stock.

Flies are one of the most dangerous and annoying things with which the farmer has to contend. Now, through the discovery of E. R. Alexander, widely known scientist, you can rid your house and barns and live stock of these pests almost instantly, and with no trouble at all. This discovery is in the form of an organic chemical that is fatal to flies, and similar pests, such as chiggers, mosquitoes and moths.

This new discovery, which is called Alexander's Rid-O-Fly, is not a poison. Though it kills flies like magic, farm animals and human beings are not affected by it at all. In addition to killing these insects, Rid-O-Fly is a strong repellant. Flies will not come near stock or buildings where Rid-O-Fly has been used. Rid-O-Fly is particularly valuable for cows and horses, as it is a known fact that flies do untold harm to these animals.

So confident is Dr. Alexander that his discovery will rid your house, barns and live stock of these pests that he offers to send a $2.00 supply for only $1.00 on the guarantee that if Rid-O-Fly does not solve your fly problems it will cost you nothing. Two big Kansas City banks guarantee the reliability of this offer.

SEND NO MONEY—Just your name and address to the Alexander Laboratories, 1508 Gateway Station, Kansas City, Mo., and this introductory offer will be mailed at once.—Adv.

High Points in News of the Week

The outstanding news feature of the week was the railroad strike which took place at 10 o'clock last Saturday, affecting about 400,000 employees in the railroad shops throughout the United States. During the last few weeks the members of the several unions making up the shopcrafts branch of the railroad service, which manufactures and repairs railroad equipment, have been taking a referendum vote on the question of whether or not to authorize their officers to call a strike rather than accept the reductions in wages recently ordered by the government railway labor board. The vote was said to be overwhelmingly in favor of the strike, and accordingly the officers called the men out.

Chairman Ben W. Hooper of the labor board declared in a formal statement following the strike that it would be considered an act against the government rather than against the railroads themselves, since the labor board is an authorized agency of the government. He declared that the government would consequently protect any members of the shopcrafts unions who declined to strike in response to the order, and would also protect any independent workmen who took the places of strikers.

Both the railway labor board and the heads of the railroads declared that the strike in its present form will not vitally affect the operation of the railroads for at least several weeks. Neither the maintenance of way employees nor the actual operators of the trains are affected by the strike order, and, therefore, the trains will continue to operate uninterruptedly until such time as the railroad equipment should reach such condition as to require the operation at full strength of the railroad shops. It is altogether problematic at this time what action other organized bodies of railway employees may take.

At this writing there is no definite information available as to the number of members of the shopcraft unions who are remaining at their posts, but it is known that in some cases a considerable percentage refused to walk out. The great majority, however, are idle.

The strike is in protest against wage reductions totaling about $135,000,000 annually, or an average of a little more than $100 per person per year, though the reductions are not uniform in all classes of employment.

There are approximately 1,425,000 railway workers in the service at present, but probably not more than 1,000,000 of these will feel the cut in their pay envelopes.

Three decisions of the United States railroad labor board during the last month and a half form the basis for the wage reductions. Several classes of employees, notably the engineers, firemen, conductors and trainmen, were not included in the reductions and no decision has yet been issued for one other group, the telegraphers. The train dispatchers suffered no reduction whatever.

The railway employees were not hit so hard this year as when the board cut the wages of all workers last year a total of $350,000,000. The cuts ranged from 1 to 9 cents an hour for various classes of workers, while certain groups of semi-official and supervisory employees escaped the pruning knife entirely.

The tendency in the United States senate seems to be to increase, rather than diminish, the tariff rates on agricultural products as compared with the rates already agreed upon in the house of representatives. The senate last week approved a tariff of 30 cents a bushel on wheat, or 5 cents higher than the rate fixed by the house bill which the senate is now considering. The senate has approved a tariff of 78 cents per hundred on flour, as against 50 cents per hundred in the house bill. The present rate on wheat, under the emergency tariff act, is 35 cents per bushel.

The house of representatives has adjourned for about a month's vacation, but the senate is still in session, wrestling with the tariff bill and other important legislation.

* * *

United States Senator McCumber of North Dakota was defeated in the primaries last week for nomination to succeed himself by Lynn J. Frazier, former governor of that state and leader in the non-partizan league. Governor Nestos, independent, who ran against Governor Frazier in a recall election a few months ago, at which time Frazier and two other non-partizan league state officers were recalled, was renominated over the candidates indorsed by the league. Both contests were in the republican primary.

* * *

The federal farm land bank at Spokane, serving the four Pacific northwestern states, during the month of June made loans to 546 farmers, totaling $2,064,700. This makes the total number of loans completed by the bank up to date 22,932, or a total of $66,162,585. In June 1177 applications were filed for loans, totaling $4,907,000. Since the bank was established four years ago 47,474 applications have been received, or a total of $156,473,000.

* * *

A conference of coal mine owners and representatives of the miners' union is being held in Washington, D. C., at the call of President Harding with a view to attempting to reach a settlement in the present coal strike. The last week brought no further apparent developments in the coal strike situation other than the calling of this conference.

* * *

Considerable rioting and warfare between the republican and the nationalist faction in Ireland continued throughout the last week. * * *

The next important state primary election occurs in Nebraska, and one of the interesting features in this election will be the candidacy of C. H. Gustafson for the United States senate on the republican ticket. Mr. Gustafson is president of the United States Grain Growers, Inc.

* * *

President Harding last week called a delegation of leaders of farm organizations and other representatives of the agricultural interests for the purpose of laying before them his reasons for wishing a ship subsidy to aid in the upbuilding and maintenance of the American merchant marine. * * *

The lumber trade in the Pacific northwest is said to be better now than for several years. This is understood to be due largely to the widespread activities in building throughout the United States.

Farm Business and Markets Outlook

(Continued from page five.)

Prices for No. 1 American cheese on June 23 were:

Chicago—Twins, 19@19 1-2c; S. Daisies, 19@19 1-2c; D. Daisies, 19@19 1-4c; Young Americas, 19 1-2c; Longhorns, 19@19 1-2c; Square Prints, 20c.

POTATO RECEIPTS ARE LIBERAL.

Receipts of potatoes have declined recently, but they are about equal to the average for the entire year and heavier than usual at this season. Old potatoes compose about 10 per cent of the supply, but they will be gone in another fortnight. Prices are more stable than two weeks ago with new No. 1 Bliss Triumphs quoted at $2.65 to $2.85, and Irish Cobblers at $2.50 per 100 pounds sacked in the Chicago carlot market.

LATEST QUOTATIONS.

The Live Stock Market.

Filling and Tamping the Hole

1 *Making the Hole*

2 *Cartridge Prepared and Ready to Load*

AFTER the hole has been made under the stump and the charge properly primed and loaded, the next step is filling and tamping the hole. The purpose of this is to seal the hole tightly so that the gases from the explosion will not escape, but will exert all their pressure against the stump. The success of the shot depends very largely on careful and thorough tamping.

Moist clay, free from gravel and stones, fine sand or moist loam, makes excellent tamping material.

First, fill up four or five inches of the hole with this substance, and tamp it down gently with a rake handle with end sawed off square, or similar tamping stick. Then continue to fill the hole, tamping more firmly until the top is reached, and the passage securely sealed.

Stump blasting has become a cheaper operation since the development of Pacific Stumping Powder. You get ½ more sticks per dollar and each 1¼ x 8 inch stick will do the work of a 1⅜ x 8 inch stick of any standard stumping powder.

Buy Pacific Stumping Powder at your local dealer's and write us for free 125-page book "Development of Logged-Off Lands," which gives full instructions covering the use of explosives for land clearing, ditching and tree planting.

Bits of Fun FOR Everyone

Industrious as the Devil.

It was an old Scotch lady who always saw some good in every one. One day a neighbor in desperation said, "Well, Mrs. Campbell, I do say I believe if I was tellin' ye the devil is black ye'd think o' some good o' him."

"An' I might," mused gentle Mrs. Campbell. "We'd have little trouble in this world were we all as industrious as the devil."

A New Hero.

"You say you're a moving picture hero?"

"Yes, my wife drags me to them four times a week."—Boston Transcipt.

No Cushioned Wheels.

An old farmer who, by hard work and parsimonious habits, had got together a little fortune, decided that the time had at length arrived when he was justified in ordering a family carriage. He went to a carriage builder's and described in detail the kind of vehicle he wished to buy.

"Now, I suppose you want rubber tires?" said the carriage builder.

"No, sir," replied the old farmer in tones of resentment. "My folk ain't that kind. When they're riding they want to know it."—Edinburgh Weekly Scotsman.

Feet, Do Your Duty.

A negro subpoenaed as a witness in a shooting scrape under cross-examination gave his testimony as follows:

"Was there actually any shooting?" he was asked.

"Yas suh, dah was some shooting, cause Ah heard a bullet!"

"You heard a bullet?"

"Yas, suh! Ah heard that bullet twice. Ah heard it wonst when it passed me, and wonst when Ah passed it!"—Union Pacific Magazine.

The Lesser of Two Evils.

"Why did you keep suggesting that Mr. Gadder put on another jazz record when we were at his house last night?" asked Mrs. Dubwaite. "I didn't think you cared for jazz."

"I don't," said Mr. Dubwaite, "but I could tell from the way he was fidgeting that he was getting ready to relate for perhaps the thousandth time how he felt when the liner he was on was torpedoed by a U-boat."—Birmingham Age-Herald.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

A doctor friend of mine has just completed 45 years of practice. Because he has reached a place of distinction in the medical profession he was given a dinner at the Detroit Athletic club. He was so kind to me when I was a young doctor that I traveled out to Detroit to attend this dinner. I am glad I did because I saw a number of old friends and received much inspiration from them.

Dr. Copeland.

At the table was a classmate of the honored guest. There was another doctor who has been in practice 50 years. There was still another who is engaged in medical work after 54 years of active practice.

As years go, these four doctors would be counted old men, but I should be shocked to hear any one of them referred to as "old Doctor" So and So. While three of them are white-haired, the oldest has locks as brown as when I first gazed upon them, a third of a century ago. Every one of these doctors stands up straight as a soldier on parade. When I saw the guest of the evening hustle down the front steps of the club, garbed in a plaid "sport" overcoat, jaunty in a soft felt hat and carrying a set of golf clubs we had given him as a souvenir of the occasion, I could believe it was only yesterday he was one of my professors in medical school.

These four doctors are not old men. They are as young as they ever were. Why?

To keep young you must live in the present. You must plan for the future, just the same as you did in your youth. When you spend your time thinking and talking of the past, when you pay little heed to every-day affairs, and when you have lost interest in the future, then you are old.

I observed that all four of the doctors I have mentioned are thin men—not skinny or scrawny, but lithe and hard in muscle. They walk and play golf. They never give thought to their years, but do now in a physical way exactly as they did 50 years ago.

What struck me most forcibly was their intense interest in the future of medicine, how the college should be conducted, the sort of teaching which should prevail.

"Times have changed." "Conditions are different." These were frequently used expressions. There was no evidence of crystallization. These men are adapting their lives and practice to modern conditions. So long as elasticity and adaptability remain, youth continues, no matter what the calendar may say.

The mental attitude means a lot. The other day Colonel William Muldoon told me that he never feels old except when some contemporary shuffles up and whispers:

"Bill, we're getting old!"

This wonderful man is as strong and active and useful as ever. It is hard to believe he was a dashing cavalryman in the Civil war. He acts like a boy instead of a veteran of a war nearly 60 years past.

Guard your health and keep up your mental and physical activity. You should be active and useful at 80.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3801-3639. Lady's Costume—Waist 3801 cut in seven sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. Skirt 3639 cut in six sizes: 24, 26, 28, 30, 32, and 34 inches waist measure. The width of the skirt at the foot is two yards. To make this dress for a medium size will require 6 yards of 40-inch material. Two separate patterns, 10c for each.

3839. Lady's Dress—Cut in six sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. A 38-inch size will require 5 yards of 40-inch material. Price 10c.

4019. Girl's Dress—Cut in four sizes: 8, 10, 12, and 14 years. A 10-year size requires 5¼ yards of 40-inch material if made with long sleeves. With the sleeves short, ½ yard less is required. Price 10.

4020. Misses' Dress—Cut in three sizes: 16, 18, and 20 years. An 18-year size requires 5 7-8 yards of 32-inch material. Price 10c.

3656. Lady's House Dress—Cut in seven sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. A 38-inch size will require 5 yards of 36-inch material. The width of the skirt at the foot is two yards. Price 10c.

3805. A Popular Apron and Cap Set—Cut in four sizes: Small, medium, large, and extra large. A medium size requires 3¼ yards of 36-inch material for the apron and ¾ yard of 30-inch or wider material for the cap. Price 10c.

3681. Girl's Undergarment—Cut in six sizes: 4, 6, 8, 10, 12, and 14 years. A 10-year size will require 2 1-8 yards of 36-inch material. Price 10c.

4036. Girl's Dress—Cut in four sizes: 8, 10, 12, and 14 years. A 12-year size requires 6 yards of 36-inch material. Price 10c.

3677. Boy's Suit—Cut in four sizes: 3, 4, 6, and 8 years. A 4-year size will require 2¾ yards of 36-inch material. Price 10c.

4031. Child's Romper—Cut in three sizes: 6 months, 1 year and 2 years. A 1-year size requires 2½ yards of 36-inch material. Price 10c.

4014. Lady's Skirt—Cut in seven sizes: 25, 27, 29, 31, 33, 35, and 37 inches waist measure. A 29-inch size requires 2 5-8 yards of 40-inch material. The width at the foot is about 2¼ yards. Price 10c.

4008. Lady's Waist—Cut in seven sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. A 38-inch size requires 2½ yards of 32-inch material. To make collars and cuffs, and bosom of contrasting material will require ¾ yard 32 inches wide. Price 10 cents.

CATALOGUE NOTICE.

Send 12 cents in silver or stamps for our up-to-date spring and summer 1922 catalogue, showing color plates, and containing 500 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating 30 of the various simple stitches), all valuable hints to the home dressmaker.

Please fill in this order and mail with remittance to:

You will find in Postum

a delightful and satisfying mealtime beverage, with no element which can harm nerves and digestion—or cause wakeful nights and dull days.

Your grocer has Postum in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for fully 20 minutes

Made by
Postum Cereal Co., Inc., Battle Creek, Mich.

We are glad to receive an interesting letter from Josephine Weaver, a new cousin in Skagit county, Wash., near the Cascade mountains. Josephine's home is a 22-acre farm with a large orchard and a big field. Her daddy is building a new barn for the cows. Josephine's birthday is September 27. She is 11 years old. Her kitten's name is Little Bun.

Arithmetic is Frances Letford's hardest study at school. When school closed, Frances attended the picnic and had a fine time. She caught 22 fish that day. Her home is on a farm in Whitman county, Wash. They have horses, cows, mules and chickens at the Letford home. Frances has four little kittens. Their names are Nigger, Spotty, Tiger and Biggy.

Birthday Greetings

THURSDAY, July 6—Olive Peterson, 7 years old; Mildred Brown, 11.

FRIDAY, July 7—Fanny Kalama, 11 years old; Roy Kister, 10; Alice O'Hara, 11; Fanny Pakkala, 11.

SATURDAY, July 8—Meredith Coon, 9 years old; Mary Reynolds, 8.

SUNDAY, July 9—Thelma Bulard, 10 years old; Pauline Clancy, 11; Harriet Perkins, 10; Daniel Trupp, 9; Elva Morehouse, 9.

MONDAY, July 10—Murray Dean Snell, 6 years old.

TUESDAY, July 11—Ethel Early, 11 years old; Grace Ensley, 11; Clara Breitmeir, 8.

WEDNESDAY, July 12—Ella Littlejohn, 11 years old.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

Esther Hoikka, Melva Hume, Hilma Hoikka, Bernice Rudrud, Maty Esther Thomas, Matilda French, Loretta Elma Zorneo, Iola Jack, Linda Hoikka, Clara Baskette, Joyce Louise Wise, Bernice Williams, Clara Breitmeir, Margaret Stockton, Anna Mae Tarter, Frances Letford, Wilbur Scott, Vernie Maurer, Okel Sperline, Dolly Gifford, Eva Cade, Anna Belcher, Carmyn Sherman, Josephine Weaver, Helen Miller, Myrtle Matre, Virona Johnson, Amalia Schaal, Annie Anderson, Archie Bishop, Esther M. Osborne, Grace Ross, Eva Charlotte Cole, Iva Harriet Hixson, Esther Walter, Blanche L. Gourlay, Ora Schafer, Edna Van Aalsberg, Hazel Schafer, Ethel Boawn, Frances Irene Haxton, Leda Ruby Harrel, Irene Bernece Beardslee, Arthur Gall, Floyd William Beardslee, Mabel Terry, Doris Jackson, Helen Berg, Lola Freeman, Alice Buntain, June Johnson, Sigrun Agnes Runol, Hazel and Mary Phillips, Madeline Moller, Margaret Anderson, John Otter.

BEDTIME STORIES

By THORNTON W. BURGESS.

MR. TOAD'S OLD SUIT.

Old Mr. Toad looked very fine in his new suit. Of course, it was very sober colored, because Mr. Toad wears sober colors only. But it was, nevertheless, veryb right and clean and good to look at. Peter Rabbit, peeping over the old log behind which he was hiding, could hold his curiosity in no longer.

"Good morning, old Mr. Toad," said Peter Rabbit. "You are looking very fine this morning. I see you have a new suit."

Old Mr. Toad rolled his big eyes round at Peter Rabbit.

"What if I have?" he asked crossly, for

He swallowed all his old clothes.

he was still tired from his struggle to get out of his old suit.

"Nothing; oh, nothing at all," replied Peter Rabbit, "only I would like to know what you do with your old suit. I have never seen your old clothes lying around anywhere."

"Humph!" replied old Mr. Toad. "I take care of my old clothes."

"But what do you do with them?" whispered Peter Rabbit.

"That is my business," replied Mr. Toad. "You notice, Peter Rabbit, that I don't leave them in rags all over the Green Meadows.

Peter grinned a little foolischly, while Striped Chipmunk and Johnny Chuck and Jimmy Skunk laughed uproariously, for they had many and many a time found bits of Peter Rabbit's old clothes clinging to the edge of the old brier patch.

Old Mr. Toad settled himself comfortably, with his old clothes lying on the ground in front of him. Peter Rabbit and his three little companions watched until they grew tired, but Mr. Toad seemed to be taking a nap.

"I don't believe he does anything with his old clothes," said Jimmy Skunk. "Come on and help me find some beetles."

"You think too much of your stomach, Jimmy Skunk," said Johnny Chuck. "Let's go down to the Smiling Pool and ask Grandfather Frog what Mr. Toad does with his old clothes. He'll know."

So off they started for the Smiling Pool. No sooner were their backs turned than old Mr. Toad awoke from the nap he had seemed to be taking. He scrambled up on the old log to make sure that his visitors had departed. Then he hurried down to his old suit. And what do you think he did? Why, he began with the trousers and swallowed all his old clothes, and to this day Peter Rabbit, Striped Chipmunk, Johnny Chuck and Jimmy Skunk still wonder what old Mr. Toad does with his cast-off suits, for, though Grandfather Frog knows, he wouldn't tell.

Pike's Peak or Bust

(Continued from page fourteen.)

saddle, and the other things in the wheelbarrow. Soon the gold seekers were moving again—following the well-beaten St. Louis road once more.

This second day proved as fine as the first day had been. And the two men tramped somewhat farther. They might have traveled farther still; but before night Orlando found himself growing very tired. So they camped rather earlier than they had expected. While Orlando was kindling a fire, Haggerty visited a farmhouse a quarter of a mile away, where he bought a sackful of corn in the ear and some sheaf oats. With these Brindle had a good feed. As before, Orlando fed the cow and milked her while his companion was busy with supper. Another night they and Frisk slept by a camp fire.

The sun was well up when they began their third day's journey. Neither of the travelers had as yet become accustomed to daily tramping, and both complained of feeling stiff and sore, as well as a little weary. For that reason it was thought wise to reduce this day's march to 12 or 15 miles. That gave them a long rest at noon, and allowed them to stop early for their night camp.

By the fourth morning Esau the rugged had regained his strength and he declared that never in his life had he felt better. But his companion, less hardy, was not doing so well. He had gone to bed very tired, and had complained of feeling tired when he awoke.

"Maybe we'd better lay by for a day or two, Lando, so's to give you a good chance to rest up."

"No, we won't! At least not till we have to. I do nothing but drive Brindle and carry my gun, while you trundle that heavy wheelbarrow. I don't claim to be very strong. But if I can't travel as fast and as far as you can with that load of yours, I'll keep trying till I wilt down in my tracks!"

"Jest as you say, Lando boy. Glad to see you've still got plenty of sand in your craw. But I don't want you to wilt down in your tracks. Better for you to rest before you peter out than after'ds."

"Oh, I don't think I'm going to peter out. At least I hope not. I'll get used to steady tramping before a great while, I guess. This is just the life I like. I'm hoping to have at least a year or two of it."

"So am I. But we'll jog along at an easy gait for sever'l days."

Not till the afternoon of the sixth day did the two travelers find themselves in Illinois Town. This place, some day to be an important city, known as East St. Louis, stood in the lowlands along the east bank of the Mississippi. Here Esau trundled his wheelbarrow aboard a steam ferryboat, and Orlando drove Brindle aboard. They were ferried across to St. Louis. Both men had been here before. But they found the scene along the levee, or river front, very busy and very interesting.

And the city people seemed to find the wheelbarrow, with its hot-iron legend, and the packsaddled cow interesting to gaze at. Indeed, the two gold-seekers attracted not a little atttention as they trudged westward up the middle of Olive street.

At length they halted in front of a store with a huge gun suspended over the door as a sign. There, while Orlando stood guard over Brindle and the wheelbarrow, and exchanged remarks with the passers-by, his partner went in to purchase some ammunition. After leaving the gun store, they halted again, in the next block, to buy several other things, particularly mining tools. After that they kept tramping.

When at length they had left the city behind, they found themselves in a picturesque, uneven country. Part of it was in cultivation; but the larger part was still wild woods. A few miles beyond the city night overtook them, and they went into camp.

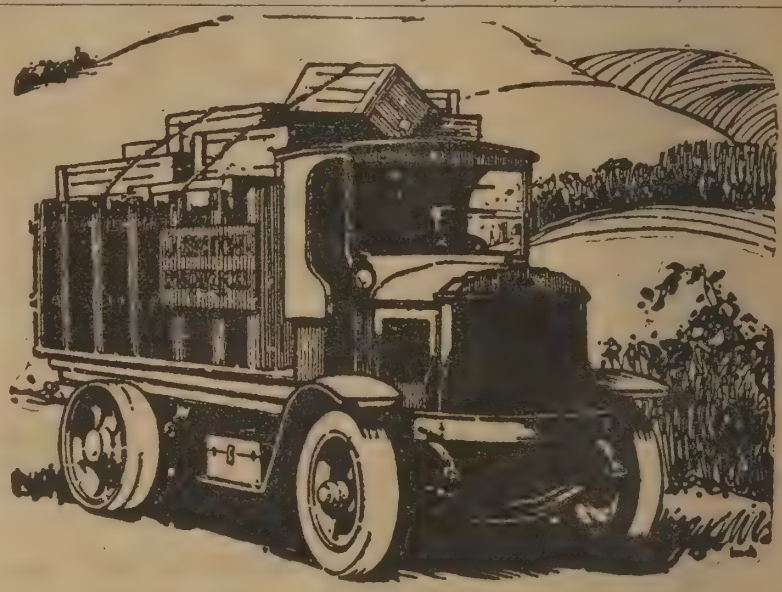
(To Be Continued.)

Junior Farmers Attend College

(Continued from page one.)

H club," the purpose of which will be to advance boys' and girls' club work in the state. Every member regularly enrolled in the regular clubs is a member of the state club. As part of the advancement plan, it is the intention of the state club to have each local club appoint some person in the community as sponsor for the club. The purpose is to have a prominent person backing club work in each community in which there is a club.

Bringing the delegations to the college from all parts of the state was no small part of the club week, and this was done through the splendid efforts of local bankers and commercial clubs in the different parts of the state. Generally the banks in the county provided the money to care for the club members in so far as their meals were concerned while at the college, and then either the business men individually or through the commercial clubs paid their traveling expenses in autos.



One of the exceptions in raising the finances is that of Kitsap county, where the chambers of commerce of Bremerton, Charleston and Port Orchard divided the expense equally. Another exception is that of Clallam county, where the Naval lodge of Elks not only raised the money, but provided their secretary on full time to use his car and drive the delegation from Port Angeles to Pullman and return, covering nearly 1300 miles with six boys and girls.

On the trip across the state, Grays Harbor, King, Snohomish, Kitsap and Lewis met at Fall City and the seven cars drove in caravan fashion with Yakima joining when the party passed through that city and Benton and Klickitat adding to the party at Kennewick.

The State College of Washington turned over two of the large dormitories for use of the county club delegations and their chaperones, and provided a special cafeteria arrangement to feed the junior farmers.

As a closing part of the program demonstrations were given in judging home economic products by the college faculty, while the live stock division held a judging contest.

In the judging contest, including classes in sheep, swine, beef cattle and dairy cows, all the boys entered and the 10 highest scores were awarded their choice between a year's subscription to Hoards Dairyman, the Breeders' Gazette or the Chicago International Live Stock Album. The boys winning in the contest were: Harlan Shephardson, Kelso, 390 points; Ralph Cole, Pullman, 375; Edwin Pease, Usk, 372; Earl Selle, Goldendale, 365; Patsy Page, Addy, 360; Clifton Axling, Lynden, 358; Donald Stein, Burley, 358; Robert Polson, Montesano, 356; Henry Weir, Yakima, 355; and Floyd Gouchner, Montesano, 350.

BIG POWER
for BIG TRUCKS

If you want to keep your truck trouble-proof, feed it "Red Crown" and *nothing else.*

The quality of "Red Crown" is always the same, whenever and wherever you buy it. It vaporizes rapidly and uniformly in the carburetor. And it is consumed *completely* in the combustion chambers, converting *all* its heat units into power at the driving wheels. That means a better average mileage, and a sweeter-running engine.

Fill at the Red Crown sign — at Service Stations, garages, and other dealers.

STANDARD OIL COMPANY

The Gasoline of Quality

Holstein Records Are Broken

Ten state records for Oregon, Washington or Idaho Holsteins in 305-day and 365-day work have gone down within the last few weeks and as many new dairy queens are on their thrones.

In Washington, Hollywood Segis Mercedes De Kol, a senior 2-year-old bred and developed by Hollywood farm, smashed both the milk and butter record formerly held by Aaggie Sunset Wayne, owned by A. H. Reilly of Waukon. She excelled the former milk record by more than 5000 pounds and the former butterfat record by 120 pounds, making 599.70 of fat from 19,221.2 of milk in 305 days. In 365 days a Todd heifer, Cascade Piebe, took the junior 4-year-old fat record from Inka Princess Mutual De Kol II., owned by Carnation, by making 912.70 pounds from 23,920.9 of milk.

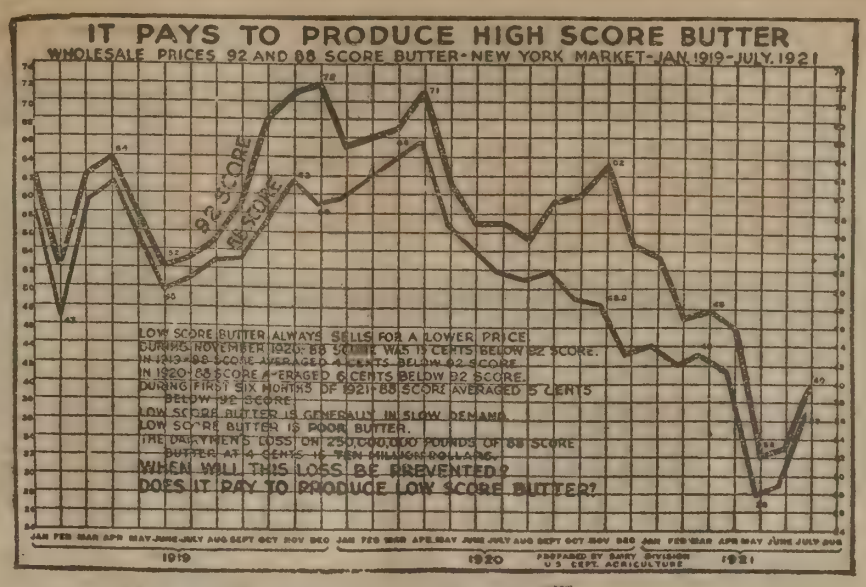
In Oregon one 365-day and three 305-day records have changed hands. Mercedes Beauty Alcartra, owned by Max Arp of Eugene, took the fat record from Henry McCall's Fairview Pearl Johanna, but left undisturbed her claim to the 365-day state milk title for junior 3-year-olds. This record, and that of Hazelwood Josephine Korndyke, Dr. W. T. Phy's new champion junior 3-year-old for both milk and butter in 305 days, have previously been reported in THE FARMER. Henry McCall of Prineville, whose Clothilde Hengerveld Washington held the belt for some time, had the experience of seeing another of his own cows, Florence Soldene, take it away from her with 16,867.3 pounds of milk and 514.82 of fat, and then lose it to Dr. Phy's heifer, which made 17,324.9 pounds of milk and 603.99 of fat. The Hot Lake physician has another state 305-day champion in Queen Ocean Rideau, which, by producing 18,493.7 pounds of milk and 615.11 of fat, took both records from Lady Von Holingen of Rock, owned by F. R. Beals of Tillamook.

In Idaho two existing records were broken and two established in classes from which none had previously been reported. The state university's Idaho Segis Colantha improved slightly on the 365-day junior 2-year-old record of another university heifer by making 13,004.9 pounds of milk and 470.47 of butterfat. The Intermountain institute's Institute Hope Walker improved considerably on the 305-day junior 3-year-old record of another institute heifer by making 16,751.8 of milk and 526.33 of fat; and Mercena Mabel Hartog, also an institute heifer, created a niche for herself by making 21,083.2 pounds of milk and 698.55 of fat in 365 days as a senior 3-year-old. Similarly, Viola May Hartog produced 11,727.3 pounds of milk and 404.32 of fat in 305 days as a senior 2-year-old and hung up the first record for that age in Idaho.

SELL 49 GUERNSEYS.

Over 400 people attended the consignment sale of 49 head of Guernseys at Chehalis June 7, when 23 buyers paid a total of $9510 for the animals purchased. The top animal was a yearling heifer, Murne Cowan Alice of Sylvanite, consigned by Richard F. Klemm of Wisconsin and purchased by Charles Gifford of Rainier, Wash., for $335. Mr. Gifford and W. J. Knutzen of Burlington were the heaviest buyers, taking five head each. The general average of the sale was $192.40, with the eight bulls averaging $158 and the 41 cows and heifers averaging $201. The list of purchasers follows: George W. Siepman, Bellevue; L. J. Pettit, Centralia; F. J. Saliger, Chehalis; Charles Gifford, Rainier; A. F. Schmit, Chehalis; Joe Muller, Oak Harbor; Joe Whealdon, Centralia; G. L. Seifert, Winlock; J. M. Pratt, Oak Harbor; A. L. Bell, Shelton; W. J. Knutzen, Burlington; James A. Luman, Bucoda; John Dean, Yelm; E. E. Case, Raymond; J. H. Guerin, Olympia; Mrs. Lena Hart, Roy; K. David, Portland, Ore.; Bues Bros., Menlo; E. B. Stookey, Olympia; Victor Furrer, Chehalis, and Johnson Bros., Mt. Vernon.

DAIRY COWS ON SMALL TRACT.



An interesting example of diversified farming is to be found at the home of Frank Majesski, near Yakima, who keeps four milk cows in a small feed lot and feeds them hay and grain the year round, with some green feed during the summer.

The entire eight and one-half acres are planted to orchard and the hay between the trees is used for feeding. There is not enough hay, however, and Mr. Majesski finds it necessary to harvest a neighbor's crop on shares in order to get enough for his cows. The entire six head of animals on the place are Guernseys. Three of which are registered, one of the cows is out of one of H. E. Angell's cows that has a 600-pound fat record. Zaro's Dallas, another one of the cows, won junior champion at the state fair in 1920.

This herd promises to be one of the high-class Guernsey herds of the valley when the young animals have had time to develop into mature animals.

PURE BREEDERS TO FROLIC.

The annual picnic of the Lewis County Pure Breeders' association will be held at Alexander park, Chehalis, July 26, on the day of the arrival of the western Washington live stock tourists from Vancouver to Bellingham.

Lost! 10 Million Dollars A Year

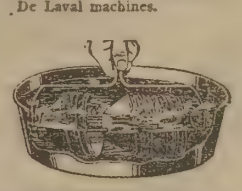
By American Butter-Fat Producers

It has been estimated by the Department of Agriculture that ten million dollars a year are being lost through the production of low score butter. With high quality cream your creamery can make higher score butter, which not only commands a higher price but is in greater demand; therefore they can afford to pay you more.

One of the greatest aids in p oducing high quality cream is a clean separator. The De Laval is exceptionally easy to keep in a clean condition, and in addition it will

—skim cleaner for many more years than any other;
—skim milk clean at lower temperature than any other;
—deliver a higher testing cream, which is more acceptable to the creamery and easier and less costly to ship;
—and deliver a cream which will make better butter.

A De Laval also lasts longer and turns easier than any other. Built in a variety of sizes, with hand, power or motor drives. See your De Laval Agent now about getting a new De Laval. It will soon pay for itself. Sold on easy terms.



De Laval Pacific Company
61 Beale Street San Francisco

The De Laval bowl is as simple and easy to clean as a teacup. It is completely unassembled in cleaning, and every part is smooth, visible and easily reached. The whole bowl is thoroughly washed in a few minutes.

The bowl shell is a single piece and the combined bowl bottom and central feed shaft is a single piece. The discs are very quickly cleaned and easily handled with a simple transfer device. This device, which permits of washing and rinsing the discs as a single piece, is a very great convenience and its use is restricted to De Laval machines.

Sooner or later you will use a
De Laval
Cream Separator and Milker

TARX
SOLIDIFIED DISINFECTANT

A Better Dip in a Handier, Cheaper Form

Comes in cube-marked cakes instead of cans. Solid like soap. You simply cut off and drop one of the handy Tarx cubes in a gallon of water and you have 1 gallon of the best dipping and disinfecting solution you ever used.

Railroads the Problem, Says Senator Norris

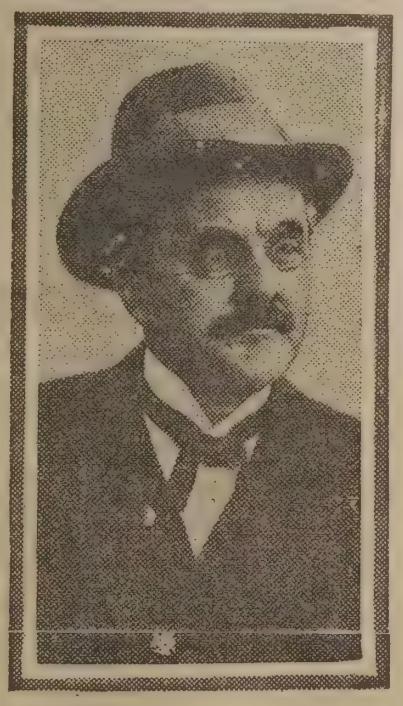
To the Editor of The Washington Farmer: I am in receipt of your letter of June 22d, in which you ask my opinion as to whether or not it would be good policy to permit the railroads to offer reduced rates upon the shipment of purebred stock for breeding purposes.

Your query opens up a very interesting question on transportation. To my mind, it would be good policy for the country as a whole, for the farmers, and for the railroads, if this reduction were permitted, under proper rules and regulations, by the interstate commerce commission. We would, however, have to guard against any abuse of the power so granted, and the reduction ought not be so low that shipments would take place at a loss.

In a much broader sense, I have been of the opinion for some time that the cost of transportation on our railroads is too great and ought to be reduced on everything. This must either be done or we must rebuild our entire system of business and of living. Transportation enters into the cost of everything that everybody uses in any way. There is nothing that we eat but what part of its cost is transportation. There is nothing that we wear but what is added to by transportation costs. We ought, therefore, to have a scientific system of transportation. The model system would be to take profit entirely out of it, the same as we do when we provide for the supplying of water to the citizens of a municipality. It is something that is of such universal use that it ought not to be used as a machine for the making of money or the building up of large fortunes.

In our system of privately owned transportation companies, all kinds of tricks have been resorted to in order to increase the profit. Fictitious values, the installation of water in the stock, the manipulation of contracts through a ring of managers by which the public is compelled to pay exorbitant freight charges in order to enrich the pockets of individuals, have put upon the shoulders of the American people a tax that is just as secure and just as definite as though it were a tax levied by an act of congress or of a legislature. We are paying interest on water that cost nothing when it was originally put into the stock.

I think the modern student recognizes that competition in the transportation business has long since disappeared. The railroads ought to be combined. The business ought to be a monopoly, and when you have gone that far, you are presented with the question of whether a monopoly ought to exist unless it is owned by all the people—the government. Personally, I believe the railroads ought to be owned by a governmental corporation, placed by law beyond the power of politicians to interfere in any way, either directly or indirectly, with their management. But if it is decided that this would be unwise, they ought at least be under one ownership, with strict governmental regulation. The distance between New York and San Francisco can be shortened by some 300 miles without the building of any additional railroad or the laying of any additional track except a few switches at transfer points. By the building of a very small amount, this distance could be shortened more than twice that length. The same thing can be said in practically every case when we are measuring distances between shipping points of our great manufacturing and distributing centers. A scientific arrangement would bring such a thing about. It would lessen the cost of transportation very materially.



If the railroads are privately owned, every particle of water ought to be squeezed out. Great economies could be brought about by avoiding in through shipments the delay and the expense incurred in transferring at some of the great shipping centers, like Chicago, St. Louis, etc. In shipping from New York to San Francisco, Portland, Spokane, St. Louis, or any other similar points, the freight ought not be delayed by shipping it into a place like Chicago, and yet, under our present system, freight thus shipped goes into Chicago, is transferred two or three times by switching operations, is delayed several days, and the cost very materially increased.

Our people have not yet commenced to realize the importance of transportation, and have not commenced to study it on a scientific basis. Until they do, we have not mastered the question of the cost of living. It has more to do with it than any other one thing.

G. W. Norris

United States Senate Chamber, Washington, D. C.

United States Senator George W. Norris, who writes the accompanying letter to The Washington Farmer, was one of the 15 original members of the farm bloc in the senate, and is now a member of that bloc and chairman of the senate committee on agriculture and forestry. These facts give unusual interest to his discussion of the railroad problem. His letter is in response to one written to him and a number of other prominent men throughout the United States by the editor of THE FARMER concerning the question of railroads granting reduced rates on the shipment of purebred breeding animals to assist farmers in building up their herds and flocks.

Senator G. W. Norris.

With Senator Norris' proposition, that if the railroads are privately owned "every particle of water ought to be squeezed out," THE FARMER is in thorough accord. There must be vigorous government regulation, to the fullest extent that will be consistent with justice and reason.

We doubt, though, if a majority of American farmers want government ownership and operation of the railroads. The farmers and other producers have not forgotten that we had government operation of the railroads during and after the war, nor have they forgotten the costs of that operation—higher and higher freight rates, enormous yearly deficits that had to be made up by taxing the people, unsatisfactory service, repeated wage advances to the organized railway employees, the granting to them of easy working conditions by the politicians who were in control of the roads, and the enormous resultant burden that rolled back upon the producers and consumers.

Senator Norris couples his support of government ownership with the condition that the railroads be "placed by law beyond the power of politicians to interfere in any way, either directly or indirectly, with their management," but that seems an impossbile qualification.

Don't Fail to Read Our New Serial Story, "Pike's Peak or Bust"—Page 10

Live Stock in Kittitas County

By RALPH ERSKINE.

The second annual Kittitas county live stock tour in June was the occasion which afforded approximately 100 farmers and business men an opportunity to visit some of the larger live stock herds of the county. The above number does not do the event justice, since there were nearly 500 who turned out for the barbecued dinner. County Agent W. L. Davis, ably assisted by other leaders, had planned an excursion program and conducted the tour effectively.

The first speaker after the barbecue was C. M. Hubbard of the state college. "Efficiency in the production," he said, "has been traced back to the purebred sire. One estimate brings out the striking fact that purebred live stock have been found to be 40 per cent more efficient in production than scrub stock. This is on a milk, beef or pork production basis and not from the sale of stock for breeding purposes. The extension service is making an unusual effort to increase the number of purebred stock in the state, believing that the entire country will be benefited as a result."

The president of the county farm bureau, C. B. Woodhouse, emphasized the work that the boys' and girls' clubs have accomplished, and said that in some cases they are even doing better than their parents. "Under no circumstances," he said, "can a farmer afford to raise scrub stock of any kind, especially if he is a poor man. In fact, the only one who can possibly afford to keep scrub live stock is the man who can afford to lose money. The farmer with small capital can not afford to take chances and should not make an attempt to raise anything but registered stock.

Duncan Dunn of Wapato emphasized the importance of the study of the taxation problem, the value of our educational institutions and the excellent work that is being carried on by our experiment station and extension service.

The tour itself started at 8:30 at the George Harvey farm, near Thorpe, when an exhibit of Chester White sows and litters was shown by five of the Kittitas County Boys and Girls' Chester White Swine club. The boys exhibiting at this place were: Elmer Harvey, Leonard Newman, Merle Yearwood, Ivan Hutchinson and Lewis Edes. A pen of five lambs, all of which were from two ewes, each of which had triplets, or a 300 per cent increase, was shown. One of the lambs was not shown in the pen.

The second trip was at the Paul Birr poultry farm, who has a modern laying house with a 1200-bird capacity. At present Mr. Birr has but 800 hens, but is raising 2200 young birds, pullets from which will be added to the flock and the cockerels sold as fattened. Partitions are set in as needed to afford room for the young birds until they are large enough to be placed in laying houses to themselves. Mr. Birr has but 10 acres of land, and makes no attempt to raise his grain, but raises an abundance of green feed. Runways are arranged both in front and at the back of the house, using the former for the old birds, while the young chicks are given range in the pens at the rear, where they have access to alfalfa pasture. Oats was seeded in the pens for the older birds, but they soon cleaned it out and are now being fed alfalfa. Mr. Birr uses the trap-nest system and believes that it more than pays for the extra labor needed, since it gives him accurate records on all birds in the flock.

At the J. Alva Bull farm, on the opposite side of town, the Shorthorns were tied to the fence under some large shade trees. Ten of the animals, including the herd sire, belong to Mr. Bull, while two steers were exhibited from the Hercules Baby Beef club. Roy Bowers brought his three head of polled Ssorthorns, one of which was a 2-year-old herd bull, Headlight. Mr. Bowers is getting started with this type of Shorthorns and expects a large per cent of his calves to come without horns.

The swine pens were another source of interest on the Bull farm and the six head of Berkshire brood sows were penned up temporarily for exhibition. The sows have access to a large alfalfa pasture, the dry sows getting no grain in addition to the pasture, and yet they are in excellent condition. The herd boar, Riverby Duke 7th, is sired by Royal Dominator the 4th.

At the D. B. Jeffries farm were five Shorthorn heifers and one bull, all of which came originally from the Duncan Dunn herd of Wapato. Three of them were owned by C. B. Woodhouse. All showed uniformity in type, were in good condition, and showed the results of good care and management. A pen of six Hampshire lambs was exhibited by one of the county sheep club members. Six Hercules Baby Beef club steers were also shown at this place.

At the Ernest Wilson farm were shown the lambs from the Blastock ewes, which Mr. Wilson is keeping on partnership basis. Mr. Blastock, president of the American Hampshire Breeders' association, imported a number of these rams from Europe. Part of them are kept at Filer, Idaho, and the rest on the Wilson farm at Ellensburg. The lambs were in excellent condition and a number of them had gained more than one pound per day for the first 100 days.

In order to avoid unnecessary delay with other stops some of the club sheep and pigs were exhibited at this farm as follows: Four Hampshire lambs owned by Carol Robinson; Chester White sow and five pigs owned by Florence Robinson; six pigs owned by Ward Rugh; sow and nine pigs owned by Helen Kreagre. Gene Wilson and Bill Walgren each showed their two head of Hercules Baby Beef club steers.

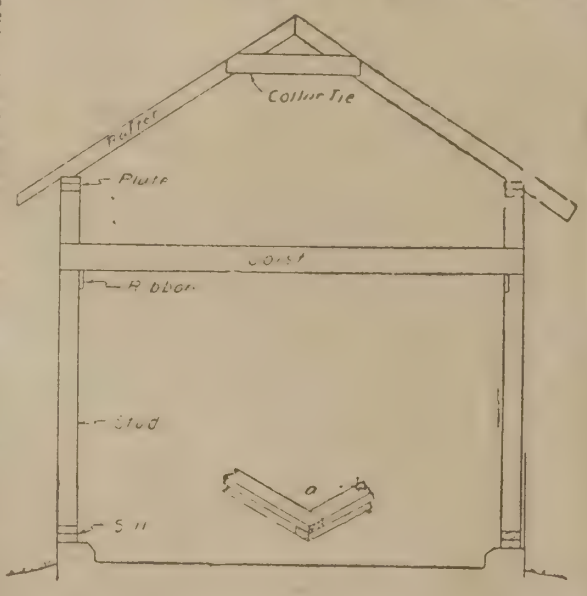
At the Nichols and Plunkett farm the entire Jersey herd was tied to the fence in order that the crowd could give each animal a close inspection. The 8-year-old herd sire, Brown Lad's Rioter, was the first in line. His grandsire has three daughters in the register of merit class, one with a record of 700 pounds of butter in 10 months. His dam has a record of 640 pounds of butter as a 3-year-old, which was the state record for the age at that time. The younger bull, Majesty's Cowslip Noble, a 4-year-old, is of Island breeding and carries a large per cent of Oxford blood, and also traces back to Noble of Oaklands. The bull has three half sisters in the register of merit class, one having a 711-pound butterfat record. While only four of the cows are of mature age they have made records of which any herd should be proud. Brown Lad's Cowslip, a 6-year-old cow, is the first gold medal cow for Kittitas county. She made 15,017 pounds of milk and 711 pounds of fat, milking as high as 60 pounds per day and averaged 50 pounds a day for six months.

After the picnic dinner and program at the farm of Mrs. Olive Sanders the crowd were made welcome on the Willow Wood farm and inspected the Shorthorn herd owned by Mrs. Sanders. There are 70 head of registered Shorthorns on the entire farm, some of which come from the Frank Brown herd in Oregon. One of the herd bulls, Diamond Perfection, is one that Frank Brown used for two years. The other herd bull is Sir Gainford Guard, sired by Gainford Guardian, also owned at the time by Frank Brown. All of the animals show excellent type. Mrs. Sanders expects to build up the herd to about 200 head.

Forty head of purebred Holsteins are kept on Lockwillow farm, which is part of the Willow Wood estate. R. L. Rutter, the owner, gives his entire time to the management of the herd and sells the milk for wholesale trade. One cow, Cascade Maggie, a 9-year-old, made 1107 pounds of butter and 26,600 pounds of milk, thus giving her 16th place in her class. Her best day's record was 110 pounds of milk, but made 704 pounds as a seven-day record. Daisy Blossom Fayne, a 4-year-old, was 17th in her class. The herd bull, Cascade Sir Blossom Fayne, was sired by the Todd bull, Sir Johanna Ruth Fayne. Mr. Rutter is doing some constructive breeding and expects to make further records by careful feeding and management.

Spokane Pioneer Picnic

The 30th annual picnic of the Pioneer Society of Spokane County will be held at Manito park, city of Spokane, on Saturday, July 15, 1922. "Come early and bring your lunch," says the announcement. "Ice cream and coffee provided by the society. A fine program of music and speaking has been provided. Come and meet your old friends of the pioneer days."



GET AT THE SOURCE.

The place to destroy flies is in the manure pit, slop pail or other places where they breed. Prevent them.

Construction of Small Buildings

By PROF. L. J. SMITH, W. S. C.

There is a lot of small building construction about the farm that the average owner should be able to do for himself at odd times. This work is not so difficult to pick up Implement sheds, work shops, garages and poultry houses are not so hard to build as they look.

A lot depends upon the attitude one takes in regard to work outside his regular line. The man behind the counter in our cities would be tickled to have a chance to mess around with tools and build some small building. His job at the same old little spot year in and year out gets pretty monotonous, and he enjoys the big outdoor life of other men.

The first thing in building is to know some of the principles of framing. The figure herewith will be of assistance. After the foundation is ready, the first wood laid down is the sill. It is bedded level in cement-lime mortar, the surface in contact with the cement being well coated with creosote to prevent rotting. In windy localities, the sill is bolted to the concrete every six or eight feet. At the corners, the sills are lapped as shown at "A".

For farm buildings, the studding are usually set up two feet from center to center. It will save time to mark the spacing for the studs on the sill. In a small building, the plate may be spiked to the upper ends of the studs, and the whole side set up on the sill at once and the lower ends well toenailed to the sill. Be very careful to get all studs the same length. Use one stud as a template; don't measure each one individually. The ribbon, or ledger board takes the strain off the joists, though each joist is well nailed to its stud. Often the ribbon is notched into the studs for greater strength.

The laying out of the rafter is the most difficult part of the job. Another article will explain this most important step in building construction.

In small buildings the collar tie is usually one inch thick. If there is to be no loft to the structure, the collar tie can be left out and the joist is then put up on the plate and acts merely to support the ceiling, if any.

Now let us spend a few moments on the slope or "pitch" of the roof. To get the pitch of a double slope or gable roof all you have to do is to divide the "rise" or vertical height of the roof by the "span" or the width of the building from outside to outside of studding. For example, if the span of a building were 16 feet and rise of the roof 8 feet, the pitch would be one-half. One-half, one-third, and one-quarter pitch roofs are most commonly used, though many like the three-eighth pitch roof. If the building were 16 feet wide, a three-eighth pitch would give a rise to the roof of six feet.

Watch for Professor Smith's discussion of the rafter in an early issue.—Editor.

Warped shingles on your roof?

Shingles exposed to drenching rains, hot sun and wind, soon lose the strength stored in them by nature, Oils and sap evaporate, the wood becomes brittle. Warping and cracking are sure to follow,—*unless shingles are given preservative treatment.*

The time to secure continued life and service for shingle roofs is before the natural oils dry out. ORONITE SHINGLE OIL penetrates the wood fibre and holds in their original strength. It keeps your roofs tight and firm—helps *prevent* warping. In the case of old roofs, ORONITE SHINGLE OIL renews their life.

You can mix ORONITE SHINGLE OIL with colors. We have an agent near you who will give you formulas—also show you how easily ORONITE SHINGLE OIL is applied, both to roofs and shingled side walls.

For Good Farming, Attractive Country Homes and Happy Country People

Farming Must Be Made More Profitable

N. B. Coffman, President of the State Chamber of Commerce, Outlines Undertaking of That Body

Upon his election as president of the Washington State Chamber of Commerce, N. B. Coffman of Lewis county announced that rural upbuilding would be made one of the chamber's leading objects under his administration. Recently the chamber held sectional meetings throughout the state at which representative farmers and business men were present to discuss the work of the organization for the ensuing year. President Coffman attended the meeting held at Kennewick and there presented in brief form his plan for the rural upbuilding work. The Washington Farmer is pleased to present herewith a condensation of his statement on that occasion.

This movement marks another step in the rapidly increasing acknowledgment of the fundamental principle for which THE FARMER has always stood, namely, that the state of Washington as a whole can prosper only as its farming industry prospers. To whatever degree the commendable movement launched by the state chamber of commerce abides by that principle, to that degree can the movement succeed and to that degree it has the unstinted support of The Washington Farmer.—Editor.

The ambitions of the state chamber of commerce is to work out a program for uniting all of the organizations of the state, aiming to work concertedly and in conjunction, so far as possible and acceptable, with the administration departments of the state and the state legislature in plans for betterment of agricultural conditions and in support of definite local and statewide irrigation, land clearing, land redemption and land settlement projects.

The need for such a united movement in this state at this time is a crying one. The state chamber of commerce assumes that it is the natural nucleus for such a movement.

The object of these meetings, therefore, is an appeal to all communities for enlistment—to fall in line—to back up the efforts of this organization.

It is a call to the whole state to speak as with one voice and act as with one purpose in support of a definite program for rural betterment through enlargement of vision and broadening of the scope of organized effort.

It can include study and work for betterment of farm marketing and for reduction of transportation costs, support of the Smith-McNary reclamation bill, indorsement of the Columbia basin irrigation project, tackling with renewed vigor the problem of clearing cut-over lands and the reclamation of swamp and tidelands, getting behind the big projects for hydroelectric power development and pushing along reforestation.

Increase of population in the state is almost at a standstill. The tide of immigration must be turned our way. We must have something big and outstanding in opportunity to attract and impel the people to come to Washington. The lure of the land is still the elemental call to the emigrant. The opening of large additions to our agricultural areas will supply the magnet which will attract settlers in swarms and renew and enlarge local sustenance to commerce, trade and industrial enterprises.

The Basic Problem.

But, after all, opening of new agricultural areas and increase of population does not go to the heart of the rural problem. The slogan adopted is "Rural upbuilding." Upbuilding contemplates soundness and permanence of foundation.

It is more important that agriculture prosper than that it multiply.

The primary place to look for betterment is on the farms that are now being cultivated.

Take the United States over, what is going on in the rural districts is not land development, but farm abandonment.

Farming must be made more profitable before there can be sound and permanent rural upbuilding.

The whole trend of population and wealth is increasingly toward the cities, and that trend is the result of rural failures, discouragement and dissatisfaction. The farms of the United States are not yielding adequate returns to those who till them. The farmers of the state of Washington can not be expected to become enthusiastic over projects looking to a large increase of new agricultural areas, fostered and made possible through government aid, so long as the products which they are now putting on the market yield but slightly more or even less than the cost of production.

We have not taken up the whole or most vital problem of rural upbuilding until we have included in the questions to be studied and solved those of marketing at a profit to the producer and of transportation that shall eliminate the flagrant waste of the unnecessary haul, measured by both miles and commodities.

These problems of marketing and transportation go back to the question of consumption of home products to which the educational department of the state chamber of commerce will give increased attention—problems that now contribute toward blocking the way to successful farming.

It is these problems that stand in the way of reducing the cost of living. They are keeping the economical development of the state out of balance. The condition of those now engaged in farming must be had in mind while we are providing for multiplying agricultural areas and the volume of farm products.

The welfare of the agricultural districts of the state which do not require irrigation, the districts given over to general farming, to dairying, poultry raising and small fruit raising must be included in the program of agricultural betterment, along with the orchard, alfalfa and arid land reclamation districts.

An agricultural movement that is planned to be made statewide must appeal from the standpoint of benefits to every part of the state and to all kinds of farming.

The Comprehensive Plan.

This, then, is the comprehensive plan of work laid out by the directors of the state chamber of commerce. To put it forward calls for cooperation arising out of faith and confidence—faith and confidence in each other united with a common effort to accomplish a big purpose. It calls for whole-hearted and generous support. It must be based on the conviction that each unit of the organization is best accomplishing its own upbuilding by working unitedly with all the other organizations to a centralization of effort for the betterment of all. Cooperation must be secured from the smallest and most remote and extend throughout the state until it ties in the biggest and most influential. It must bind together every city, town and rural community, and embrace the most remote farm, factory, mill and mine. Small differences must be buried beneath an effort to obtain big benefits.

Size of Apples

Affects Price on General Market

Figures computed by Yakima shippers show that Jonathan apples of the extra fancy grade averaged 30 cents more a box than did the fancy grade of the same size. This was 90 cents more than the same size apples of the C grade. As a comparison of sizes in the extra fancy grade, 96 to 125 apples per box sold for 80 cents more per box than the size of 175 and smaller. This indicates that thinning can be made to pay by increasing the size of the apples even at the expense of a larger number of smaller ones. In many instances it takes but a little increase in the size to make apples grade in the next larger pack and this can be accomplished by thinning. An increase of one-sixteenth of an inch in the diameter of the 175 size apples will put it into the 150 pack which has a greater value.

Estimates made in the Wenatchee district last year show that the cost of production of 348 boxes to the acre was $1.52 a box, while in orchards where the yield was 1000 boxes to the acre the cost was only 88 cents a box. While the larger size apples can be had by thinning, there are many other factors that enter into the game, such as careful pruning, spraying and irrigating. The soil also has much to do with the production of a profitable crop.

Many of the growers have come to the conclusion that the eastern consumer is paying all he ever will pay for the northwestern apples and the only way for the producer to increase his profit is to lower the cost of production.

Saved His Pig

To the Editor of The Washington Farmer: I want to tell you what The Washington Farmer did for me. Not long ago a neighbor told me of your paper, which I started taking. About five months later my pig took sick. I looked back through the veterinary questions in The Washington Farmer and I found just the way my pig acted, so I started with the prescription it gave, and today my pig is well. If I had not done this I do not believe I would have him today. E. MABBUTT.

Edmunds, Wash.

Combining With Motor

As Compared With the Ground Power Combine

R. N. MILLER, Specialist in Farm Management, Washington State College.

"A dollar saved is a dollar earned." The keynote of more economical harvesting was struck by progressive farmers of Adams county when they began to keep accurate records of the cost of harvesting wheat, comparing ground power combines and the combine with a motor. The extension service of the state college, through the local county agent, was asked to assemble and tabulate the figures.

B. B. Gillespie, Frank West, Frank Benwood, Henry Bauer, J. N. Wellsandt of Ritzville and Washtucna and seven others have observed the high cost of harvesting wheat and last year offered the records of their harvesting cost for comparison.

"The big question we want to settle," says B. B. Gillispie, who is the leader in the work, "is whether the motor on a combine is economical or not. In cooperation with N. C. Donaldson, county agent, we are going after the facts. We have asked that the records show the first cost, interest, depreciation, insurance, repairs, amount cut per day, efficiency in saving wheat, the actual pull of the different machines, and other facts necessary to get the real costs."

The records for the first year show that it cost $2.59 per acre to operate a combine, regardless of the power used, pile the sacks ready for handling and pick up the straw for winter use. For a 20 bushel per acre yield the cost per bushel would be 13 cents, for a 25-bushel yield 10.3 cents.

The average cost of the combine with motor was $3629, the average interest on the present value was $175.54, the yearly depreciation was estimated at $325.57; acres cut per machine, 694; acres cut per day, 39.2, and cost per acre, $2.81. The gas and oil cost was 7 per cent of the total, the man labor cost 33 per cent and the horse cost 19 per cent, leaving 41 per cent for interest, depreciation and overhead. No sum was added to cover the value of the farmers' managerial ability, for most of these men took a hand in harvest. This year an effort is being made to approximate this charge.

The ground power machines last year harvested an average of 653 acres apiece. They cut 30.2 acres per day and cost $2.09 per acre or at a saving of 25.6 per cent over the combines with a motor. For a 20-bushel crop the cost was 10.4 cents per bushel, for a 25-bushel 8.4 cents. The average first cost was $1800 as the machines were old, one being a "used machine" that cost the present owner $400.

A study of the records shows a wide variation in cost. The highest cost per acre was $3.36, the lowest $1.93, a difference of $1.43 or 7 cents per bushel on a 20-bushel crop. The use of a motor did not seem to reduce the number of horses used, but the machines may have pulled easier.

The farmers have asked the extension service for a dynamometer test of the "pull" of the two types and arrangements are now being made for this test. The interest taken is keen and 10 more machine owners have offered their harvest records for 1922. The work is being done on a five-year project and will be completed in 1926.

While results from a one-year study should not be considered conclusive, it would seem that the ground power combine can be operated at the least cost in the Ritzville section. Additional cost records will be followed closely.

Berry Festival

Elma Holds First Annual Event

Grays Harbor has started a new undertaking which is proposed to encourage strawberry growing. On June 27 the citizens of Elma held their first annual strawberry festival along one side of the paved street in the center of town.

Long tables were placed and the crowd was served with all the strawberries and cream they could eat, and plenty of cake to go with it. Everything was free to the visitor, but his attention was called to the fact that the climate and soil conditions in the vicinity were ideal for producing an extra quality of dark red, solid strawberries. Twenty crates of strawberries were furnished by the local berry growers' association, while 25 gallons of cream was supplied by the county dairymen's association. Seventy-five cakes were furnished by the ladies of Elma.

Since this district lies between the Puget sound section and the Harbor country there is very little foggy weather, and the berries are said to ripen more naturally, are uniform in size and have a very sweet flavor. Farmers of this locality were urged to plant more strawberries, as well as other small crops, all of which can be grown to a good advantage. The local berry growers' association has already shipped a number of loads of berries to the Seattle market.

Music and speaking completed the program for the evening, and the event was declared to be the first of a series of annual festivals of a similar nature. It is planned to have a greater display of varieties of berries and awards given for the best display for next year's festival. Much of the success of the festival was due to the efforts of J. J. Anderson, who was chairman of the committee in charge of the celebration. William Harding, William McBride and H. R. Solinger, all of Elma, did much to complete the program and to make the affair a success. Mrs. Leo France, Mrs. H. B. Dollar and Mrs. Dinsmore rendered valuable assistance in preparing the tables.

Will Hold Potato Show

The agricultural bureau of the Spokane Chamber of Commerce has approved the holding of the second annual potato show in Spokane, and referred the matter, with its approval, to the chamber of commerce.

Enough has been done in the way of growing seed potatoes in and around Spokane, especially in the counties to the north in Washington and Idaho, to show that a high quality of seed potatoes can be produced in this region.

Not only has the growing of seed potatoes been stimulated by the potato show last winter, but a better quality of table potatoes has been grown, for something of the same care required in growing marketable seed potatoes will produce a superior quality of table potatoes which will command a price in excess of the additional costs in raising them.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseasee in stock sold through these columns.

The Way to Lower Taxes

As pointed out by Manager Livengood of the Spokane County Taxpayers' league in a recent article in The Washington Farmer, the way to bring about lower taxes is to stop spending so much public money. We have become a nation of public spendthrifts, says Mr. Livengood. There is nothing too good for us to have, and it is seldom too high-priced for us to afford it.

It does no good for us to complain about the price of an article that we have ordered, after it is delivered to us with the bill for it. At the time of ordering we should perhaps think less about the desirability of the article and more about the difficulties we shall encounter in raising the money to pay for it.

The way to reduce taxes is to sacrifice a few of our desires and buy less with the public money.

The Dog and the Sheep Business

Although 48 states have dog laws designed to protect sheep, many of them are so poorly planned or so poorly enforced that dogs still do much damage to flocks, especially in the farming states where flocks are small and dogs are plentiful. There is need for improvement in these laws, but, says the United States department of agriculture, a poor law that is enforced with energy may produce better results in sheep conservation than a much better law that is half-heartedly enforced. Dogs keep many men from going into the sheep business, which is probably a greater setback to the industry than the actual damage done by them.

The Purebred Business

"One of the main differences between the business of running grade cows and that of breeding purebreds is the difference in the character of the main income producing product. In the one case it is milk, and in the other live stock," said A. L. Gile of Chinook, Wash., "and the problems of disposing of these two products are fundamentally different. Into that of selling purebreds the element of salesmanship largely enters, and production back of the animals is of paramount importance. The pure breeder is therefore almost compelled to show his animals from time to time in competition and to do official testing. He must maintain personal contact with his own world of breeders and he must study the art of selling. I am of the opinion that in the large majority of cases, at least, the pure breeder should first have been successful with grades, and I am coming to feel more and more that any well established breeder who can not show something in the way of definite type in his herd has a long way yet to go. On the other hand, we are a long way from knowing all about the science of breeding cattle, and sometimes when I hear this one or that one confidently air his knowledge of the subject, I think of the modest way in which the late Lathrop Ames, perhaps the most constructive breeder of Guernseys in the country, once told me that the more he studied the subject the more he was conscious of his stupendous ignorance. It would be well for the industry in general if we could have more of this recipient spirit, and of the feeling that all pure breeders are working toward the same general ends. I never think of a Holstein or a Jersey breeder as a competitor and I haven't time to argue with any one over the merits of his favorite breed."

Mr. Gile's Chicona farm herd is known among Guernsey breeders the country over as one of the good examples of constructive breeding in the Pacific northwest, and while his primary business is that of running a cannery, it is easy to see that a "horse of another color" occupies first place in his affections.

Iowa Eggs and Washington Wheat

Iowa farmers receive more for eggs than the wheat farmers of Washington receive for their wheat crops. Iowa claims to rank first as an egg-producing state. Its total income from that source last year amounted to about $51,376,000, according to State Food Commissioner Barney.

That is approximately what the wheat farmers of Washington received last year for their 54,652,000 bushels. But last year's crop was a heavy one. The state's wheat crop in 1920 was 41,665,000 bushels and the 10-year average from 1911 to 1920 was 43,000,000. With wheat averaging $1 a bushel, its yearly value in what we term the Inland Empire—that is, eastern Washington, northern Idaho and eastern Oregon—would about balance the value of the egg production of Iowa, for the $51,376,000 worth of eggs which Iowa marketed last year did not take into account the large number consumed on the farms in the state.

The average farm price for eggs in 1921 was 38.6 cents, which means that 133,100,000 dozens of eggs were marketed. In the 12 years from 1910 to 1921 inclusive the average price of eggs on the Iowa farm ranged from 12 cents in July and August, 1911, to 64 cents in November, 1920. In 1920 the average price ranged from 37 cents to 61 cents, and January, 1921, started off with an average price of 49 cents. Then came a slump, and the average price in April, 1921, fell to 18 cents.

While on this subject we note that President Barbour of the United Pacific Coast Poultry association and Professor James E. Rice of Cornell university are working at Washington for an 8-cent instead of a 6-cent tarif on frozen eggs, and 24 cents, instead of 18 cents, on dried eggs.

"We need a tariff," said Mr. Barbour, "not to keep Chinese eggs out, although it would not hurt our feelings if that resulted, but to make it safe and certain that the American egg-freezing and drying industry can come back to this country. There is a tremendous possible supply of eggs in this country. The poultry industry will easily expand to supply all our needs, and much beside, if we can have a market for the surplus through drying and freezing plants.

"Under free trade these plants have shut down and the machinery moved to China. We have been careful and conservative in our figures and estimates and we know that the industry can not be rebuilt here on the basis of a 6-cent and 18-cent tariff. The 8-cent rate and the 24-cent rate are not too high. We are insisting on these two changes."

Let the Train Pass First

Figures filed by the interstate commerce commission show that at railroad grade crossings in this country last year 1072 persons were killed and 4818 were injured.

The wise suggestion is made to observe the rule, "Let the train pass first." This is a pointer for every automobile driver.

State Farm News

Snohomish county is fairly provided with means to take care of a largely increased output from the soil and from the dairy farms, it is reported. There are four fruit canneries in the county and four big condensaries. The last census accounted for 16,000 Snohomish county cows and gave credit for the annual production of 85,000,000 pounds of milk. Poultry is raised everywhere, but the main center of the industry is at Alderwood, between Everett and Seattle, from which point a weekly average of three carloads of eggs are shipped.

The biggest pear orchard in the state and the largest privately-owned berry farm in the Pacific northwest are both located in Snohomish county.

* * *

A prune harvest festival will be held at Vancouver again this fall, with the Vancouver Prunarians sponsoring the show, which will exploit the prunes grown in Clarke county. Dr. Herbert C. Lieser, Big Prune, will appoint all of the necessary committees as soon as possible.

* * *

Fruit thinning demonstrations, under the supervision of M. D. Armstrong of the Washington State college, were held in the vicinity of Bellingham June 19 and 20.

Demonstrations were made on the farms of E. S. Cingmars, near Ferndale; C. C. Ireland at Mountain View; Arthur Rogers, Laurel, and E. W. Bays, Lynden.

At each farm two similar trees were chosen for the tests; one was thinned and the other was left with its natural crop. In the fall of the year the apples will be picked from each tree separately, sorted into grades, and the test made for the benefit of the county fruit growers.

* * *

Fifty Kittitas poultry raisers visited the Yakima branch of the Washington Egg and Poultry association June 23. It was said that future affiliation of the visitors with the association was likely, in which event they would market through the Yakima warehouse.

* * *

Prices announced late in May by the Washington Growers' Cooperative association for 1922 prunes range from 6 1-2 cents per pound for 80-90s to 11 cents for 40-50s, in 25-pound boxes f. o. b. Vancouver, Wash. The price will be uniform in Washington and Oregon, but charges for packing and freight will be deducted from the amount due grower-members on this basis. About 40 carloads had already been sold in advance of the announcement.

* * *

The people of Toledo June 25 held their annual cheese carnival to celebrate the organization and continued operation of the Cowlitz Valley Cheese association, which began operations three years ago as a cooperative plant owned by the farmers. Dr. E. O. Holland, president of the Washington State college, Pullman, and T. J. O'Conner, secretary of the state chamber of commerce and secretary of the Chehalis Citizens' club, were the speakers. During the first three years of operation, ended December 31, 1921, the association handled 8,145,371 pounds of milk produced by the dairymen, for which they received $225,003.71 net.

* * *

Excavation for three new concrete grain tanks, with a storage capacity of 30,000 bushels, has started at the Big Bend mill at Davenport, the work being in charge of James Scott of Davenport, who has a crew of 10 men at work. Manager T. A. Lantzy of the Big Bend Milling company stated that the tanks will be ready for use by August 1.

* * *

The Washington Growers' Packing corporation has a force of girls hulling small strawberries at the packing plant and packing them in paraffin-lined barrels with one part sugar to two parts berries, says a Vancouver report. These will be placed in cold storage for shipment to eastern sirup and jam manufacturers. This is the first attempt to dispose of the smaller berries in bulk and is more or less of an experiment. The number of crates disposed of through the association will not be known for some time, but the amount of berries handled will fall below the crop of last year.

* * *

The Maggie Johnson ranch, near La Center, composed of 80 acres, has been sold to Gustave Goodis, proprietor of the Orpheum restaurant at Vancouver. About 65 acres of the farm is under cultivation and well adapted to grain and hay crops.

* * *

Arthur Frank, plant pathologist of the western Washington experiment station, started experiments at the A. S. Caton farm west of Olympia recently to check the strawberry root weevil menace.

Heretofore no method to control the weevil has been discovered, and its prevalence has been halted only by plowing up strawberry fields, a "killing-to-cure" system, farmers declare.

* * *

Produce men estimate Walla Walla county will harvest and ship over 700 carloads of onions this year. This will be 50 carloads more than were shipped during 1920 and about 200 more than last year. The onion harvest will start about July 20.

* * *

Pacific cranberry bogs were hard hit by a late frost, C. A. Hunley, special cranberry inspector for the department of agriculture, reported to the department recently. Several bogs lost from 50 to 75 per cent of their crop, the majority sustained a loss of from 5 to 20 per cent, while a few escaped entirely, the report said. The temperature dropped to 32 degrees, according to the government observer there.

* * *

At the meeting of the Lewis county Guernsey breeders at Chehalis June 20 the Lewis County Guernsey Cattle club was organized and officers elected and bylaws adopted. The officers chosen were J. F. Saliger, Chehalis, president; P. H. Thomsen, Centralia, vice president; R. H. Taylor, secretary-treasurer; L. J. Pettitt, Centralia, and J. D. Haight, Chehalis, together with three first named officers, will constitute the executive committee. The bylaws provide that the annual meeting shall be held in Chehalis on the third Saturday of January of each year. Any owner of a purebred Guernsey sire is eligible for membership.

Holstein breeders of this county have a strong club, and the Jersey men have an active organization. The Holstein club will hold an annual business meeting and banquet in January of each year and an annual picnic at some time each summer. This year the picnic will be July 26 at Alexander park, at which time the better sires delegation, which will be touring the state, is to be entertained.

FARM BUSINESS AND MARKETS OUTLOOK

Receipts of cattle during June were considerably above the average for that month.

Interest in feeder market is keen as the corn belt is well supplied with feed, although the new corn crop is not yet assured.

Receipts of hogs at Chicago during June were the second largest since 1899.

Wool prices have receded slightly but growers are resisting the decline so that only small sales to dealers have been made at country points in the last two weeks.

Unofficial estimates on spring wheat are about 15,000,000 bushels higher than a month ago.

Exporters have been buying a good deal of corn recently and prices have been stronger than for other grains.

Egg market is fairly stable again after the recent decline.

Butter receipts are falling off in spite of the attraction of relatively high prices confirming the general belief that the peak of the flush period has been passed.

Receipts of dressed poultry at the four leading markets since January 1 amount to 90,669,188 pounds compared with 78,665,643 pounds to the same date last year.

Cattle Market Two-Sided

The cattle market promises to remain a two-sided affair during the next two or three months. Corn-feds advanced to a new high of $10.20 at Chicago last week under a dwindling supply which is likely to bring a still higher level before summer is over. In-between grades also advanced because of a light run influenced more or less by the national holiday and because of a higher dressed beef market.

Grassy steers on the other hand remain in a weak position and the price trend still appears to be downward. Steers from grazing sections reputed to put on "hard flesh" are a possible exception.

Butcher she stock is in much the same position as steers except that the upper crust of well-finished kinds which can be sold to good advantage is thinner. Canners and cutters become more abundant during the summer and fall. Bulls usually are most numerous at the inception of the range cattle movement.

Receipts of cattle during June were considerably above the average for that month, casting doubt on cattle shortage theories on the one hand and revealing a broad demand for beef on the other as good prices were paid for the supply.

The veal calf market has been in the throes of vicissitude, but has begun to recover, following improvement in the dressed trade.

Good Feeder Market Assured

July on the average is the month of smallest shipments of stocker and feeder cattle to the country and frequently it is the period of lowest prices. Demand generally increases 50 per cent during August, but during the range run, thin steers are numerous so that prices do not respond much to the increase in purchases.

Interest in the feeder market is keen as the corn belt is well supplied with feed, although the new corn crop is not yet assured. The satisfactory outcome of most feeding operations last winter will also help the demand for thin steers. Prices may go a little lower depending on the rate at which range producers sell, but prices probably are not far from bottom and an active market is assured right along.

Hog Market Remains Firm

Receipts of hogs at Chicago during June were the second largest since 1899. Other markets also were supplied. Prices on butcher and bacon grades continue to hover near $11 at Chicago, which has been the stopping point on numerous upturns in the last two months. The strength reflects the breadth of consumptive demand and the confidence of buyers that any surplus of hog meats and lard will find a good market a little later on. Receipts of hogs should taper off in the next few weeks and an upward price trend is quite probable.

Average prices at Chicago have been lowest since last March, but the loss has been due to lower average quality rather than to the general trend of values. Discarded brood sows are numerous.

Range Lamb Movement Starts

Although the range lamb crop was expected to be late, a number of loads of Idahoes have already arrived at Omaha and Chicago and rather heavy loading are being made in the first half of July. The advance guard sold at around $13 to $13.50 at Chicago with feeders out at around $12 to $12.50. The dressed lamb market has recovered its stride and prices are higher nearly all along the line in the sheep market. It is possible that lowest prices of the season have been uncovered as the balance of the native crop will be shipped more uniformly and westerns will not be crowded upon the market especially if the crop is 30 per cent short as reported from official sources some time ago.

Wool manufacturers appear to be playing a waiting game in the hope that the permanent tariff will be enacted in the next few months. Sentiment shows some revulsion against extremely high duties and this may show up in the wool schedule, although the Boston wool trade admits that the farm bloc is decidedly in the saddle when it comes to tariff making.

Wool prices have receded slightly, but growers are resisting the decline so that only small sales to dealers have been made at country points in the last two weeks. There is a keen demand for fine wools in foreign markets, but crossbreds are not moving so easily. About 35 per cent of the stocks of Merino wools in Australia were disposed of in the first quarter of the calendar year, whereas only 10 per cent of the coarser grades were sold in the same period.

In spite of the advance in prices, cloth markets are in good shape. Demand for worsteds, especially, has increased and there is relatively greater activity in combing wools as a result.

Good Wheat Crop in Prospect

The government's report on the condition of the winter wheat crop as of July 1 is expected to show a loss and may even fall below the final yield of last year. Comprehensive private reports now average about 40,000,000 bushels below the June 1 estimate. Threshing is fairly general and nearly all reports tell the same story of disappointing returns, although they run a little better than two weeks ago. Drought in the southwest last fall and winter, excessive rains during the blooming period and hot weather thereafter were the chief causes.

The loss in yield will be partly offset, however, by a gain in the estimated yield of spring wheat. Unofficial estimates on the latter are about 15,000,000 bushels higher than a month ago. The spring wheat is progressing favorably in practically all sections, although black rust has made its appearance as it does almost invariably at this season of the year. No serious damage has occurred thus far and the danger point will be passed soon. Canada has had heavy rains recently and a yield about 10 per cent larger than last year is predicted.

The spring wheat crop still must run the gantlet of a period during which dry weather frequently occurs and the black rust menace, but the excellent start thus far points to a fairly good final yield. It seems unlikely that the total yield of both winter and spring wheat will fall below the average of about 800,000,000 bushels. Private reports average about 825,000,000 bushels at present.

Europe Wheat Crop Smaller

Acreage of wheat in 12 countries of central and western Europe show a decline of about 3 per cent below last year. Owing to unfavorable weather the yield will not be generous, although damage from the same cause occurred last year.

Total shipments of wheat from exporting countries in the 12 months ended July 1, 1922, were 656,000,000 bushels. North America cleared 42,000,000 bushels, Argentina and Australia approximately 115,000,000 bushels each, the Balkans nearly 6,000,000 bushels and India 1,000,000 bushels.

Importing countries on the whole are expected to use about the same amount in the coming year.

Wheat is marking time at present as buyers are waiting to see how rapidly the new crop will come forward. Producers have not contracted much for future shipment, but a heavy movement direct from the threshing machine is quite probable. Mills are not buying ahead and foreign countries are not displaying anxiety, although both sorts of buyers must take large quantities in the next six months. The trend of prices depends largely on whether the movement to primaries exceeds or falls below the needs of buyers.

Rye Crop Looks Big

Besides a heavy carryover of old rye the new crop appears to be about 20 per cent larger than that of last year. The European acreage also is comparatively large. The harvest of the new crop in the northwest will begin in another week or two. Owing to the greater abundance of rye it is selling at a wider discount below wheat than its value for bread justifies. Unsettled political conditions in Germany are interfering with foreign outlets.

Although the oats crop is fairly good in some sections, most reports are unfavorable from Illinois, Iowa, Nebraska, Missouri, Ohio and Indiana, which are the chief surplus states. Unofficial estimates average about 100,000,000 bushels less than a month ago. Oats prices have responded to some extent to the poor outlook, but demand is not exceptional.

The corn crop prospect appears to be slightly less than the initial estimates last year. Exporters have been buying a good deal of corn recently and prices have been stronger than for other grains.

The range of cash grain prices for the week ending July 5 follows:

Chicago—Wheat: No. 2 hard, $1.16@1.19.

Corn—No. 2 mixed, 62 3-4@65c; No. 3 mixed, 62 1-2@64 1-2c; No. 2 yellow, 63 1-4@65 1-4c; No. 3 yellow, 62 3-4@64 1-2c; No. 2 white, 63 1-2@65 1-2c; No. 3 white, 62 1-2@64 1-2c.

Oats—No. 2 white, 38@42 1-2c; No. 3 white, 36 3-4@41c; No. 4 white, 35 1-4@40c.

Barley—58@67c.

Feed Markets Listless

Offerings of wheat feeds are comparatively light, especially from the northwest, but the demand is quiet and prices are unchanged. The cottonseed meal market is quoted lower in the east and gluten feed has declined about $2 a ton.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $17; standard middlings, $19.25; flour middlings, $25; cottonseed meal, 36 per cent, $47.50; 43 per cent, $51.50; hominy feed, $24; gluten feed, $28.85; old process oil meal, $46; tankage, $55.

Hay Markets Heavy

Only timothy hay is selling to good advantage at present. Pastures have become dry in a few sections, but thus far demand for alfalfa and clover hay has been limited. Receipts of new clover and mixed hay are fairly heavy. Unless the dry area spreads the trend is likely to be slightly downward until the movement of new hay has been fully discounted.

Prices per ton in carlots: Chicago—No. 1 timothy, $21@23; No. 2, $18@20; No. 1 light clover mixed, $18@20; No. 1 clover, $12@16; No. 1 clover mixed, $14@17; rye straw, $13@15; oat and wheat straw, $11@13 and $9@12.

Egg Market Steady

The egg market has become fairly stable again after the recent decline. Receipts at the leading cities have decreased 35 per cent or more from the high point of the season late in April and early in May, but there is still a surplus to be placed in storage, and such accumulation generally continues throughout July. Cool weather will help to maintain production during the summer, but under the most favorable conditions the supply is sure to decrease in the next 60 days, and prices on fresh eggs should take an upward trend before long. Whether they will advance enough to make the season a profitable one for cold storage operators is another matter.

Receipts of dressed poultry at the four leading markets since January 1 amount to 90,669,188 pounds compared with 78,665,643 pounds to the same date last year. Current arrivals are not sufficient to supply the entire demand, however, and cold storage holdings are being reduced.

Butter and Cheese

The butter market reacted moderately from the extreme levels reached when the recent order for low grades for export was being filled, but prices remain comparatively high. Receipts are falling off in spite of the attraction of relatively high prices confirming the general belief that the peak of the flush period has been passed. The supply is enough heavier than last year, however, to cut down steadily the shortage in cold storage holdings compared with a year ago. The net movement into storage continues at the rate of about one million pounds daily. Minor declines can be expected from time to time, but within a few weeks an upward trend should begin.

Prices on 92 score fresh butter July 5 were:

Chicago, 36 1-2c; New York, 38c; Boston, 38c; Philadelphia, 38c; San Francisco exchange, 42 1-2c.

Further advances were made in cheese prices recently due to strength in country markets, which have been setting the pace for the last month. Storage operators appear to have given up hope of being able to buy at lower levels and are purchasing rather freely. Storage holdings at the four leading cities are slightly less than at this time a year ago. Receipts are running about equal

Market Grades of Eggs

There are no official grades for eggs, but dealers' associations have adopted standards which are in rather general use.

There are three main classes, "fresh gathered," "storage packed" and "refrigerator" eggs.

"Fresh gathered extras" must be "packed in new, white wood, 30-dozen cases unless otherwise specified," must "be free from small and dirty eggs" and from February 15 to May 15 must contain 90 per cent of "fresh, reasonably full, strong in body, sweet eggs," 80 per cent from May 15 to October 15 and December 31 to February 15, and 70 per cent from October 31 to December 31. The balance may be defective in strength or fullness, but must be sweet. There may be an average total loss of one-half dozen per case from September 1 to June 1 and one dozen per case from June 1 to September 1.

"Fresh gathered firsts" must have from 45 to 70 per cent of eggs of the same quality as "extras," similarly packed, and be "reasonably clean and of good average size." The total loss allowable ranges from two to two and one-half dozen per case.

"Fresh gathered ordinary firsts" consist of current receipts in whatever kind of cases is specified.

"Storage packed" eggs are those prepared for storage and must meet special requirements as to kind of wood, method of nailing cases, fillers and padding.

"Storage packed extras" must be of "good size, fresh, full and sweet and must weigh 44 pounds average per case and the loss must not exceed one to one and a half dozen per case, of which not over three eggs can be "rots" and "leakers," the balance being small, dirty, checked, shrunken or stained eggs. The checked eggs are not to exceed an average of 14 per case.

If these requirements are not fully met the eggs classify as "storage packed firsts," and if still less desirable as "storage packed ordinary firsts."

"No. 1 dirties" must be packed in new white wood cases, show good quality and sweet flavor. They may be "storage packed."

"Refrigerator eggs" are those which have been in storage and of course were originally "storage packed." The month in which they are placed in storage must be specified when sold. They are graded in descending scale as "extras," "standards," which are packed only in March, April or May, "firsts" or "ordinary firsts."

"Loss" consists of rotten, broken (leaking), spots, broken yolks, frozen (split), hatched (blood veined) and sour eggs. Very small, very dirty, cracked but not leaking, badly heated, badly shrunken, salted and chilled eggs are counted three for one as "loss" except in "seconds," "dirties" and "checks."

LIVESTOCK AND DAIRY

More Money for Milk

The greatest convention of cooperative dairymen ever held in the United States convened at Utica, N. Y., June 17, when members of the Dairymen's League Cooperative association convened to hear reports on the first 11 months' operation of the plan for the collective marketing of milk. This great association had a membership on June 1 of 71,296.

President George W. Slocum of Newton, Pa., pointed out in his annual report that the average price of milk prior to 1915, before the old Dairymen's league became effective as a marketing agency, was $1.35 per 100 pounds.

Against that old-time record, he set the fact that the average price received during the last 11 months for all grade C milk in the 201-to-210 mile freight zone testing 3 per cent butterfat was $2.01 per 100 pounds.

Within these 11 months sales of milk and milk products totaled the tremendous sum of $62,000,000. Pooled milk handled by the association totaled 2,565,476,805 pounds.

Pooled producers received approximately $5,800,000 more than they would have received had the price been the same as the average price during the same period in all other organized territories.

"I believe that the cooperative association is working on principles which are fundamentally sound," said President Slocum. "There has been criticism by our enemies of our manufactured products coming into competition with the products of dealers who buy their raw milk of this association. This association would rather have the dealers operate all of the plants, and we have made it possible for them to do so. But when they fail, then the association must step in for its members."

The report of W. W. Hovey, general manager, showed that the total administrative expense for the fiscal year amounted to 29 cents per 100 pounds. Other items, including advertising, insurance funds to cover losses of uncollectable accounts and depreciation, totaled an additional 5 cents per 100 pounds.

The magnitude of the business done by the association is further shown by the fact that during the 11 months it exported its manufactured products to all parts of the world. The exports aggregated $1,327,500. The association is now operating 123 plants.

This is cooperation on a big and inspiring scale, and the results are in cheering contrast to the distressing conditions that were presented by our review of the dairying industry in New York and surrounding states a few years ago. The further fact is to be considered that all this was accomplished although the last year was one of the worst ever experienced in the dairy industry of the United States because of the general price depression.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

DIGESTIVE DISTURBANCES, ARTICLE I.

May I digress from my program and discontinue for the time being my series on "Contagious Diseases" and take up a subject that at this time of the year is of first importance, that is, the matter of digestive disturbances, which are so prevalent during the summer when the work is hard and the weather is hot and the feeds are new—a combination that is hard to reconcile.

I have purposely refrained from using the word "colic," as it is altogether too inclusive. It means any pain in the abdomen and may or may not arise from the digestive tract. Then, too, it is not sufficiently accurate to describe the specific trouble. It does not tell where the trouble is, whether it is stomach, small intestine or large one or whether the cause is gas, spasm, overloading or something else, and the one thing that we must realize first is that in all cases of digestive trouble an accurate diagnosis must be made. The location must be found out and the nature of the trouble ascertained. Then, and then only, can a rational treatment be prescribed.

My friends who treat "colic," as such, with a bottle of colic medicine are certainly fortunate if they get the desired results. They take a bottle of medicine without knowing it's contents and give it to an undiagnosed case and hope to cause the animal to recover. This kind of therapy always reminds me of the story of the old lady who, after 20 years, decided to clean the top shelf in the pantry and while doing so found a bottle of pills; the label was so faded that she could not read it, but she said the pills looked all right and she was taking one after every meal and believed they were helping her.

No Single Remedy.

It is obvious that no one remedy can be produced that will meet the requirements of all cases and for that reason all such should have careful attention to determine where the trouble is located and what had best be given to correct it. The term colic is so frequently used as to give the impression that it is not a serious thing, and while it is true that all cases do not die if given no treatment, we can not deny that there is a tremendous loss from this source, greater, I think, than the losses from many other noncontagious diseases combined, and yet we refuse to take it seriously. Many are the men who call us and say, "only a touch of colic," and pass it over lightly, as if there was no danger. But who can say when this symptom starts where the end will be? Is this to be one of the fatal cases or will the animals be quite well again in a few hours? We should regard every indication of abdominal pain with suspicions and realize that there is always danger to the life of the animal. Instead of being easy to diagnose, the abdominal troubles are frequently very hard; much harder, in fact, than a lot of other diseases. Pneumonia, pleurisy, milk fever and a long list of others are easy in comparison. It may be easy to determine that there is an abdominal disturbance, but just then the work begins to determine the where and what, and until that is determined a rational treatment is impossible.

Your veterinarian will make his decision after knowing what the animal has been eating, how long it has been sick and how it has acted. Then he will examine the abdomen through the side wall and probably examine some cases through the rectum to get additional information. He may also pass the stomach tube to get information from that organ. All suggests that it is no easy thing to make a certain diagnosis and one should regard all cases of digestive troubles with apprehension.

We often hear of the man who can tell at 100 yards what the trouble is. That man is a quack and an impostor and the story is pure bunk, because it can not be done. I would rather see an animal entrusted to the care of a consciencious owner than to one who pretends so much. Let us begin with the understanding that the subject is a serious one and one for the man who has made a special study of its treatment. Too often these cases are allowed to go day after day without the veterinarian, when every-day means so much in the treatment of them. If we would only treat them seriously the results would be better.

The next article will discuss the digestive system of the horse in relation to digestive troubles.

THE WORLD'S BEST KNOWN TREAD

The average motorist today, in almost any country, can identify the Goodyear All-Weather Tread at a glance.

But not every man who recognizes this famous tread realizes how scientifically it is designed to its work.

Examine the All-Weather Tread and you will see that it is made up of large blocks which overlap circumferentially, presenting a continuous ground contact, which lessens vibration and strain.

Being sharp-edged and keen, these blocks have no tendency to slide over slippery surfaces; on the contrary they cut deep and grip tight.

In snow and mud, in climbing out of car tracks, in starting and stopping, the All-Weather Tread digs in and clings, giving positive traction on almost every surface.

The diamond-shaped blocks always present a right angle to the direction of side-slip; against skidding they hold firm and true.

If you have the All-Weather Tread under you, you can motor in confidence, and with pronounced economy as well.

It is one of the important reasons why more people ride on Goodyear Tires than on any other kind.

POULTRY AND RABBITS

Full Directions for Caponizing

By H. W. BALDWIN.

In this second article by Mr. Baldwin details of the operation of caponizing are given.

It is important that the cockerels be starved from 30 to 36 hours before the operation is performed. They will stand the operation better if this is done, and the intestines will be empty, out of the way of the operator. Water, as well as food, should be denied the birds. The operation can be performed on a table placed at a convenient height for the operator, or the bird can be placed on a barrel top. Place the table or barrel in a good light, preferably strong sunlight. The bird is laid diagonally across the table or barrel top and held in place by means of weighted strings around the feet and around the wings near the body. One-half a brick makes a satisfactory weight. It is suggested that the strings be fastened by means of loops, thus making it easier and quicker to fasten or release the birds. All equipment should be conveniently near the operator. It is well also to have a small pan filled with a disinfecting solution in which to keep the instruments.

The operation can be performed from either side, although for the first few times it will be more convenient if the bird is placed on its left side with its back away from the operator. Moisten the hands in the disinfecting solution and pluck away the feathers from the last two ribs. If the surrounding feathers bother they can be moistened and will lay down out of the way. Before making the incision hold the skin taut, then make the cut about one inch long, beginning about one-half inch from the backbone. If the skin is held taut while making the incision it will slip back into place after the operation is over, thus preventing the incision in the skin and the one in the body wall from being directly over each other. Make the cut quickly with one or two strokes, always cutting away from the backbone. The bird will struggle a little, but this is the only time during the operation that it will bother.

When making the incision care should be taken not to cut deep enough to pierce the intestines. After the incision is made insert the spreaders to keep the ribs apart, being careful to see that each hook of the spreader is against a rib. If necessary to enlarge the incision so as to insert the instrument for removing the testicles, this should be done, taking care, however, not to cut more than necessary. After the incision is made a thin membrane will be found covering the intestines. This should be torn apart with the hook, being careful not to rupture the arteries or membranes. It is best not to make this tear in the membrane larger than the incision. The testicles can now be seen and will appear as two small yellow bodies attached to the back. The next step is the removal of the testicles and is the most delicate part of the operation. Care must be used at this point because of the close proximity of a large blood vessel. If this is cut the bird will bleed to death in a few minutes. Should this accident happen, however, the bird can be used for food, and should be picked at once.

Both testicles are usually removed from the same side, the lower one being taken first. It sometimes happens that the removal of the testicles is accompanied by a slight loss of blood. When such is the case, were the upper testicle removed first, the flow of blood would greatly hinder the removal of the lower organ. To one not familiar with the operation it may be very difficult to remove both testicles from the same side. It is suggested, therefore, that the beginner remove one testicle from one side and remove the other by repeating the operation from the other side. After a little experience, however, this will not be necessary. Grasp the testicles with the instrument, taking care to see that the whole organ is grasped and will be completely removed. One should also take care to see that the blood vessel or surrounding tissue is not included. Having firmly grasped the testicles, twist the instrument one or two times, and remove the testicles with a quick pull.

The importance of having a good light, especially at this point of the operation,

(Continued on page nine.)

Poultry Problems

BY W. D. BUCHANAN,

Extension Poultry Specialist, Washington State College.

Can you tell me what is killing my little ducks? They were very strong and seemed to be healthy in every way. When they were a week old four of them died in one night and two more are almost dead. They droop and refuse to eat and finally turn on their backs and die. I feed them wheat and plenty of water, keep them shut up in a pen with the hen. The pen is about four feet square. I had never put them on the lake. What should young ducks be fed and how soon should I put them on the lake? H. D.
Bridgeport, Wash.

Whole or cracked wheat is not a good food for ducks, especially for young ducks. This may be the cause of your trouble. For the first three days the feed should be equal parts bran, middlings and corn meal, mixed with 5 per cent sand, fed a little at a time about five times daily. After the first three days add 5 per cent sifted beef scraps to the mixture. This feed should be moistened with water. If ducks are confined to a small space, they should be fed plenty of green feed in the form of chopped clover alfalfa or lettuce. They should not be allowed in the water till they are nearly feathered.

OVER FEEDING TURKEYS.

Can you tell me what to do for my young turkeys? They seemed to do well until 3 weeks old, then they got weak in the legs. They hang around for a part of the day and die. They are free from lice and have green feed and lots of water. I feed cottage cheese, hard-boiled eggs and a little mixed scratch feed. S. R.
Yakima, Wash.

Your turkeys are probably dying from over feed. If turkeys are fed cottage cheese and hard-boiled eggs it should be in very small quantities. The safest feed is small, hard grains and water to drink.

IMPROPER FEED.

What is the matter with my ducks, about 3 weeks old? Sometimes they fall on their backs, stagger, their heads wobble and they act crazy. Sometimes they make a little noise, run a little, then fall over. What should I do for them?
Kettle Falls, Wash. E. E. L.

Improper feed, like whole or cracked grains, might cause the trouble you describe. Or, if fed ground grains, it might be due to a lack of grit, or to ptomaine poisoning resulting from spoiled or tainted milk. Feed ground feeds, mixed with a little sand, and see that they have plenty of green feed and shade.

These free booklets on Farm Sanitation

tell you how to prevent disease among livestock and poultry and describe in detail the many uses of

KRESO DIP No. 1

ORCHARD AND GARDEN

Orchard Troubles

By C. C. VINCENT.

What will rid my premises of ants? My orchard and garden is alive with them.
MRS. J. A. M.

There are several methods of getting rid of ants. A common method of destroying colonies of ants in their nests is to saturate the upper surface with a solution of cyanide of potassium made at the rate of one ounce to one gallon of water. Injecting carbon bisulfide into the nests is also very effective where the nests can be found and it can be used. In many other cases, kerosene, crude petroleum, or boiling water poured on the nest will destroy the colony. A favorite way of ridding pantries is to trap them on a sponge saturated with sirup or sugar solution. The ants will swarm through it and when it is well covered, the sponge should be dropped into boiling water after which it should be washed thoroughly of dead ants and the operation repeated.

Kindly give me formula for bordeau mixture. Do Bing and other sweet cherries need a pollenizer? A. G.

The formula for bordeaux mixture is: Bluestone, five pounds; lump lime, five pounds; water, 50 gallons. Dissolve the bluestone (suspended in sack) in 25 gallons of water. Slack lime in another vessel and dilute with 25 gallons of water. Pour these solutions in a third vessel at the same time.

Bing, Lambert and Royal Ann are not only stirile, but intersterile and require other sweet cherries as pollenizers. Good pollenizers for these are Black Tartarian, Black Republican or long-stemmed Waterhouse.

For the last two years I have noticed beetles that kill potato bugs. What are they? C. I.

There are several parasites which prey upon potato bugs. Many of our common lady bird beetles and their larvae check this pest by feeding upon the eggs. Several predaceous bugs closely resembling our common squash bug destroy many of the larvae by thrusting their powerful beaks into them. A number of ground beetles are also found preying upon the larvae and beetles by attacking them with their powerful biting jaws. One should not depend upon these parasites to hold the potato beetles in check. Arsenate of lead applied when the larvae are feeding upon the leaves will control them. Use arsenate of lead at the rate of one pound to 50 gallons of water or five heaping teaspoonsful in two gallons of water.

Kindly advise me what will kill a small black bug three-sixteenth inches long that is attacking my strawberry plants. This bug is of a black and bronze color and hops or jumps when disturbed. C. L.

The small black beetle is known as the flea beetle. This insect can be held in check by spraying with arsenate of lead and bordeaux mixture.

Will you please let me know if there is anything I can do for the worms on my strawberry plants. They are small white worms about a quarter of an inch long with a black head. They eat the leaves and also cause them to curl up. E. M.

The worm working on your strawberry plants is the strawberry leaf roller. There are two methods of controlling the leaf roller. First the plants may be sprayed with arsenate of lead, using from one pound to one and one-half pounds to 50 gallons of water. This is to kill the worms when they are feeding and is not effective after they have folded up the leaves. The second method is in destroying the old leaves on the bed as soon as possible after the crop is harvested. The leaves should be mowed and the bed burned off.

Orchardist Has Cows

"I have always maintained that an orchard is not complete without a few cows to furnish an income during the winter and to afford a source of fertilizer for the soil," said G. H. Blatdorf of Wenatchee, who has a five-acre orchard and keeps six cows. "I used to have nine of them, but I found that it was too much for one man to handle in addition to other work, so I sold some.

"I find a good demand for a special grade of milk and I can easily get a sale for all I can produce at 18 cents a quart or six for $1. Since there are four Jerseys in the herd and two Holsteins, the milk tests high and we keep the bacteria count well down."

The cows are kept in the feed lot the entire season and get alfalfa and grain the year round, with the exception of some green feed in the summer months. No hay is cut from the orchard, but it is all disked under in order to keep up the fertility. Both cow manure and henhouse litter is applied to the orchard in as large amounts as the supply will afford.

The hens are the White Leghorns and they have been culled out and mated for high production and the flock will lay better than 60 per cent.

"I will admit that the orchard is the main source of income of the farm," said Mr. Batdorf, "but by keeping a few cows one can find something to do about the place all winter. There is a good income from the cows and chickens and one should not forget the value of the manure to the orchard. I am going to breed up the herd and put out a special "baby" milk that will be even better than the present brand and I know there will be a good demand for such a product."

Moves Large Trees

In order to replace some of his apple trees in the main orchard and to thin down one corner where the trees were too close together, O. T. Clawson of Wenatchee, Wash., tried moving a number of half grown trees during the winter months. A heavy tripod was arranged with skids and the trees were lifted with a block and tackle after they had been loosened at all sides and at the bottom.

The work was started late in the fall and before they had all been moved the weather turned cold and a few trees had to be left until the ice at the bottom thawed out. This, of course, caused some loss of moisture to the tree and in checking over this spring Mr. Clawson found that the trees that had been thus exposed had not lived. The others that had been moved before the cold weather set in were growing in fine shape and it is estimated that from 5 to 10 years will have been saved in the operation.

No Law Against Bees

By A. B. SLOCUM, Extension Specialist in Agriculture, Washington State College.

Please tell me of some way to destroy pest bees that are a nuisance around the house. Is there a law against bees being too close to a person's property?
Kennewick, Wash. P. A. P.

Bees, as a general rule, unless sweets are exposed, are not a nuisance around the house. Possibly your home is in line with the flight of the bees as they are going to the field. If this is the case, speak to the beekeeper and he will very likely move his bees and thus change their line of flight. The most simple way of destroying bees is to locate their home and brimstone them.

There is no law which would prevent the keeping of bees too near another's property unless it is the one relating to the keeping of anything which is a public nuisance. Whether bees are a nuisance or not depends upon the negligence of the beekeeper. Where bees are kept properly and the proper precautionary measures taken bees cease to be a nuisance. Using the language of the supreme court in a decision handed down by them, "Neither the keeping, owning nor raising of bees is in itself a nuisance. Bees may become a nuisance in a city, but whether they are so or not is a question to be judiciously determined in each case."

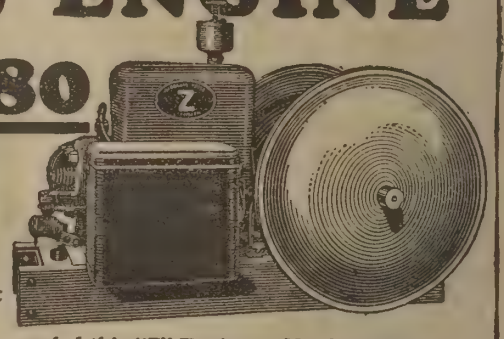
Lets Chickens Run in Orchard

Although the raising of chickens does interfere with the operation of an orchard there are some who believe it is well worth while to clean out a few ditches occasionally when irrigating and allow the birds to get a large part of their feed from the orchard.

O. T. Clawson of Wenatchee keeps about 60 mature Rhode Island Reds and has raised 350 young birds this spring. In order to get the maximum hatch, a number of sitting hens were purchased from wherever they could be found and the earliest ones were set on the ground in a cellar. All sittings were made on the ground and from 9 to 12 eggs were hatched from all hens. This is considered a good percentage and Mr. Clawson is well pleased with the results.

This flock won over 50 per cent of the awards for Rose Comb Rhode Island Reds at the state Rhode Island Red meet at Wenatchee last January. Among the prizes were: First, second and third cockerel; first, second and third pullet; first and second young pen; silver medal for best display and the silver cup offered by the Rhode Island Red association for the best display.

Use Up All the Apple



The thoroughness with which the apple is now worked over and utilized by some manufacturers makes it comparable with the packing house pig that leaves only a futile squeal. The apple is not transformed into such a variety of products as the pig, but all are useful, and when the last of the series has been made hardly a smell is left.

In many of the apple-using factories the apples are first pressed to produce cider, which may be sold as such or may be manufactured into vinegar. After thorough pressing the pomace is treated with hot water to remove the pectin, which, after purification, is sold in either liquid or solid form to manufacturers of jellies and similar products and to housewives. The much-wasted and squeezed residue is dried, ground and sold as cattle feed.

KEEP FARM ACCOUNTS.

Twenty-four northern and western states now have 30 specialists to devote full time to farm management extension work. County agents in 895 counties report that they distributed 51,083 farm account books in 1921; 519 counties reported 18,448 books kept and 444 reported that 8454 farmers were assisted in summarizing their accounts. County agents in 237 counties report that 2972 farmers made changes in their business as a result of keeping accounts. More than 800 farm-account schools, with an attendance of 20,000, were held in 1921, the United States department of agriculture reports.

NEW RACINE THRESHERS

WHEN you buy a reliable thresher you expect to pay for it out of increased profits from your crop. Has it occurred to you that without a thresher you pay the price for one anyway—in losses?

With a New Racine Thresher—20 x 32 or 24 x 40 sizes—you can do your threshing early and avoid all the losses of delayed and inefficient threshing. A light tractor will furnish plenty of power and your own help can handle the outfit. The New Racine is especially designed for individual and neighborhood service.

Ask your nearby McCormick-Deering dealer for information on this thresher and write us for our new descriptive literature.

Full Directions for Caponizing

(Continued from page seven.)

will be quickly appreciated; more so by the beginner. For the operation to be a success it is necessary that the testicles be completely removed. If even a small part is left the bird will not develop into a true capon, but will grow in the same manner as the uncaponized cockerel and, therefore, will not bring capon prices These birds are known as "slips." After the operation remove the spreaders and release the bird. Place the caponized birds in a small, clean coop by themselves. It is best to remove all roosts and other fixtures that the birds can fly up to, as the wound will heal much quicker if they are kept quiet. Supply them with fresh

Figure 4.

Figure 5.

water and soft feed at once, and this soft feed should constitute their ration for four or five days, after which they may be given their regular ration.

In about 10 days the capons can be placed with the other chickens, or put on range and handled in the usual manner. It is suggested that two or three days after the operation the birds be examined for wind puffs that may have formed near the wound. If any are found they may be reduced by pricking with a needle or a sharp-pointed knife. These wind puffs are due to the formation of gases and are not serious. Marking the capons in order to prevent them from becoming mixed with the remainder of the flock, or to prevent any "slips" from getting into the breeding pens, is advisable. This may be done by leg banding or toe punching.

320-ACRE DAIRY OR STOCK FARM WITH abundant free range; in best clover belt of Montana for sale or trade. H. J. Vaughan, E3807 2d ave., Spokane.

PIKE'S PEAK OR BUST

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. For three days they have been trudging slowly southwestward carrying out the determination crudely lettered on the side of the wheelbarrow, "Pike's Peak or Bust"

CHAPTER TWO.

Tramping the Santa Fe Trail.

Up till now the weather had been dry and cool—just the weather for traveling on foot. And it was the same when the two men fell asleep. But well on in the night they awoke, to find all completely changed. A raw wind was rushing down from the northwest, the sky was black with clouds and an icy rain was beginning to fall.

The travelers had a little tent with them—in halves, which could be buttoned together. Each used a half to cover his pack when traveling. They had not set it up since the first night. Just now they would have found it very useful. But before camping here they had passed a deserted log cabin. They had thought of camping in it, or by it, but had not done so because, at the time, there was no need of shelter. Now, however, as everything indicated a lengthy spell of bad weather, the two quickly decided to try to get back to the cabin.

Hastily the packsaddle was placed on the cow, without being girted, and the big pockets hung on the saddle. Part of the other things were loaded on Brindle and part on the wheelbarrow, all being covered over as well as possible. Then the travelers started. Besides leading Brindle, Orlando was carrying a chunk with fire on one end.

The cabin stood only a few hundreds yards away. But it was back in the woods from the road; and so dark was the night that the two men were 15 or 20 minutes finding it. By this time the cold rain was pattering down steadily, and any kind of shelter would be very welcome.

Stopping at the south end, where a blacker patch against a black wall indicated a shutterless door, they made ready to take possession.

"Dark as a stack of black cats in there, Lando! Dark enough out here. You'd better push in with your fire, I reckon, and try to rustle up a little light. We cain't do much without it."

"This chunk's pretty nearly rained out. But maybe I can blow up a blaze somehow. At least I'll try."

After thrusting in his fiery-ended stick till he could catch a faint glimpse of the interior, Orlando stepped over the low sill and into the cabin. Frisk was already in there, smelling about. Once the house had been floored, probably; but both the floor and the sleepers were gone. There was a chimney, however, and by the aid of his glowing chunk the young man soon located the fireplace. It was a foot deep in dry leaves, which the wind had swept in there from the surrounding woods. After some blowing, he was able to start a blaze among them. At once the whole inside of the cabin was lighted up brightly.

Now Orlando stood and gazed around. "Good big place. Room in here for all of us and everything, Esau. Hasn't we better bring Brindle in, load and all?"

"Cain't be done, with this door. We'll have to strip off her pack before she can squeeze through."

There being by this time plenty of light, Orlando hurried out to help get everything of theirs indoors. First Brindle's pack was stripped off and carried in, and then the cow herself was led through the doorway. After that the two men lifted the wheelbarrow over the doorsill. All their belongings were now inside.

While Orlando was tying the cow in a back corner and removing her packsaddle, Esau found a number of small sticks, scattered over the ground floor, and had soon started a more lasting fire with them. Now the two men stood in front of the fireplace and gazed about while they warmed themselves.

"Lucky thing for us we noticed this old shanty as we passed it," Esau remarked. "Looks like we're in for a spell of ugly weather. Sech a time as this it seems good to have a board or two over a body's head to turn the rain, and a log or two around a body to shet out the wind."

"It surely does, Esau. Yes, this is about as good a place to weather a storm as two wayfarers could have found."

By rolling them up, the men had managed to keep their quilts and blankets dry. These they now unrolled and spread down again on the ground in front of the fire; and on them they lay down to sleep. They had no timepiece, but surmised that the hour was not long past midnight. For a good while they lay talking and listening to the wind and rain. Finally both fell asleep.

Daylight, a dull gray, was shining in at the door when they awoke. Rain was still pattering on the roof, and the wind still dashing itself against the walls. And both wind and rain continued to rage for a day and a night longer. The two travelers, with their cow and dog, remained in their shelter. Blanketed, they sometimes ventured out into the surrounding woods for fuel; and once Esau visited the nearest farmhouse to buy feed for Brindle.

At some time during the following night the rain turned to snow. When morning came, the snow was at least four inches deep, and still falling. It ceased before long, and the sky cleared. But the air was now sharply cold—colder than it had yet been.

"Well, what do you think by this time, Lando? Will we stay housed up here another day? Or had we better strike the road ag'in?"

"That's for you to say, Esau. The weather's pretty sharp. We can soon warm ourselves, though, when we get to tramping. But the snowy road will make your wheelbarrow pushing harder."

"It's little a shallow snow like this will bother me. After being caged up two nights and a day, I feel the need of laig exercise anyhow."

"Do you? Well, I'm feeling the same way. So it seems to me we'd just as well pack up and jog along. If the sun happens to shine, it will soon thaw the road to slush. But we can camp if the slush gets too deep."

So, after feeding Brindle and milking her and cooking and eating their breakfast, the two travelers bundled up their things and got ready for the road. A little later they were out and trudging through the snow.

For a time it seemed that the sun, when it had climbed high enough, would start the snow to melting. But a thick haze gradually spread itself over the sky, and the air continued too cold for anything to thaw.

During the day the travelers came to the swift, muddy Missouri, and a steam ferryboat landed them on the north bank, in the town of St. Charles. After that their road led up the river, sometimes along or near the bank, oftener back against the foot of the bluffs.

All day long the little party trudged their way through the snow. As night was coming down they stopped at a farmhouse long enough to buy a sack of corn in the ear and some sheaf oats. Those were for Brindle; and they were fastened on top of her pack. Then the travelers moved on again.

Night overtook them in thick woods. They turned aside and stopped in the shelter of a huge log—a log almost as high as the men's heads.

"This ain't quite as snug a campin' place as what we had last night and the night before," Esau remarked, while helping Orlando to unpack and unsaddle the cow. "Reckon, though, we can manage to keep warm somehow."

"We'll be all right after we get the snow raked away."

With a short-handled shovel from the wheelbarrow, Esau fell to work by the south side of the log. Under the snow here was a deep litter of leaves, which made the snow easier to clean away. After clearing ground enough for their camp fire they lengthened it in one direction to make room for their tent, and in the other to have dry ground for Brindle to stand on and lie on.

Now, after starting a fire against the side of the log, the two men made use of the little light that remained to gather, out of the snowy forest, a big pile of fuel. With that they soon had such a camp fire as went far to dispel the gloom of this wintery night.

After feeding and milking Brindle, Orlando took their axe and cut two forks and a pole for their tent. The lower ends of the forks were sharpened, and with the back of the axe he drove them into the ground. When the pole had been laid in the forks, he put up the two halves of their tent and buttoned them together. That done, he stretched the tent over its pole, the whole tent being so placed that the light and heat from the fire would shine in at its open end.

By the time Orlando had the tent pegged down, Esau had supper ready. So they seated themselves by the fire and ate. After eating and giving Frisk his supper, they sat on their bedclothes in the mouth of their tent and rested. Both were wearier than usual. They had made a long day's march; and the snowy road had not been easy to travel. While they were still sitting there, snowflakes began to flutter down again.

"I'm anxious to discover Pike's Peak the first minute possible. But if much more snow visits us, I'm thinkin' we'd better lay by in camp till it melts off," Esau told his companion.

"That might be just as well. Snow won't be apt to lie on the ground long this time of year."

After sitting up till the heat from the fire had dried the ground in their tent, the two men made down their bed there and were quickly asleep. Brindle had already dropped down on the other side of the fire, on her bed of leaves; and Frisk had curled himself up in front of the fire.

From time to time during the night one or the other of the men crept out of bed and out of the tent to toss more wood on the fire. And every time they emerged from shelter they could feel snowflakes against their hands and faces.

Not only did snow continue to fall during the night, but it was still falling when daylight came. And it kept coming down, at intervals, till about noon. After that it ceased, and soon the air grew colder. Being comfortable enough where they were, the travelers remained in camp, by the sheltered side of their big log. And here they spent another night.

The morning that followed was coldest of all, but still and clear. The travelers lingered near their camp fire till about the middle of the forenoon. By this time bright sunshine was warming the air. Being well rested, the two men now packed up, and ere long they were following the road westward again. The snow was deeper than before—more than half a foot deep.

By noon the air had grown very mild, and the snow was thawing fast. Having started so late in the day, the travelers did not halt for dinner, but kept tramping till night. Again they camped in some thick woods; and again they kindled their camp fire against a big log. When morning dawned, Orlando complained of not feeling as well as usual. While wading the slush and mud the day before, he had caught a severe cold. However, he insisted that they keep traveling.

And keep traveling they did. But the road was so slushy in most places that they could not make many miles. They camped earlier than usual. By this time the young traveler was so nearly exhausted that he lay down as soon as they could get their tent up and a bed in it. Esau fed Brindle, and did the milking and the cooking. He also did the eating; for Orlando had no appetite, and only drank a few swallows of milk.

Morning broke and found the sick man far worse. His face was flushed with fever, and he declared himself past traveling. Esau felt greatly worried, though he did not say so. Their camp was in the woods, a few miles from the last house. How far ahead the next house would be he could only guess.

After waiting an hour or two in camp for somebody to pass by, he decided not to delay longer. He would try to get the sick man to a house and summon a doctor. After thinking the matter over, he decided upon a plan and proceeded to carry it out.

First he saddled and packed Brindle, adding to her load a few pieces from the wheelbarrow's load. After that, using a rope, he contrived some rude harness for the cow and hitched her to the fore end, close to the wheel. Having prepared a bed, he lifted the sick man upon the wheelbarrow. Stupefied by fever, Orlando now lay on his back, covered with blankets, with his feet and legs hanging down at the fore end. He was too sick to understand, or to care much, what was being done with him.

Everything being ready, Esau stooped and got the strap over his shoulders, thus raising the barrow's rear end, and grasped the handles. Luckily the cow had already learned to drive; and, when he spoke to her, she started back toward the road, then took the road and followed it. Though familiar with carrying a load, she had never pulled one before. Naturally she was somewhat awkward at first. But, being patient and good-natured, she soon became accustomed to her new task. Between Brindle's pulling and Esau's pushing, the wheelbarrow, doubly laden though it was, moved on well enough.

The sick man roused himself once or twice, to mumble some protest against what his fellow traveler was doing. Once he even raised himself to his elbow, for a look around. But he quickly fell back.

By and by the little procession came to a house. But it was only a one-room log cabin, standing some distance from the road. And so little prospect did he see of being taken in there that Esau did not even stop. A mile farther on he met a man riding a mule.

The stranger stared hard at the wheelbarrow. "Thunder and blazes! What you got there?" he reined up to demand.

"A sick pardner. And I'm doin' my level best to git 'im to a doctor. Can you tell me how fur ahead it is to where I'll run acrosst one?"

"You bet I can! It's about six miles. Doc' Ponder hangs out there."

"Reckon I'll be likely to find 'im at home?"

"Apt as not you will, mister. I seen doc' in the stoor door as I come through the little burg, about a hour ago. Wheelbarr' with a whole man on it makes a whale of a pushin' job, don't it?"

"I've handled lighter things. No use denyin' that. But, between me and old Brindle, we manage to keep the little shebang rollin'. We'll fetch up some'r's by and by, I reckon."

The mule rider spurred on east, and Brindle and the wheelbarrow continued their travels. The road was still muddy—very muddy in places; and the wheelbarrow's progress was slow and laborious. But Esau had plenty of determination and prided himself on the fact that nothing was too hard for him. So, in spite of mud and slush, he finally arrived at the village.

There an inquiry at the one store brought the information that the doctor had just ridden away, on horseback, to visit a sick woman. He was expected to return inside of an hour or two. Some of the villagers invited Esau to wheel his patient to their homes. But an old shed stood on the outer edge of the village, with plenty of dry ground under it. He

Bits of Fun for Everyone

Degree of Servitude.

Said a friend to the proud father of a college graduate who had just been awarded an A. M. degree:

"I suppose Robert will be looking for a Ph. D. next?"

"No. He will be looking for a J. O. B."—Life.

Too True.

"Of course there is no such thing as woman's supremacy." "Think not? From the time a boy sits under a street light playing with toads until he is blind and old and toothless he has to explain to some woman why he didn't come home earlier."—Cleveland Plain Dealer.

Ministerial Repartee.

Father Kelly and Rabbi Cohen were a banquet one evening at which ham was the best of friends. They were guests at served. Father Kelly smilingly whispered to Rabbi Cohen:

"Rabbi, when are you going to lay aside that old stuff and eat ham?"

The rabbi smiled back and whispered:

"At your wedding, Father Kelly."

Something New for Him.

Friends of the late Henry P. Davison of J. P. Morgan & Co., convalesing at a hospital one time, described how he jested with surgeons and nurses as preparations were being made for his recent operation, about which there were grave fears. As he was about to be shaved he was reminded of a story and halted the proceedings till he told it. It was about a visitor to a small town who had difficulty in find a barber. Finally the only one available made the visitor lie on a bed for removal of his beard. "Why did you do that?" asked the visitor on arising after one of the smoothest shaves he had ever had.

"Because," answered the villager, "I am the town undertaker. I never shaved a live man before."—De Laval Monthly.

Couldn't Be Otherwise.

An Irishman stood looking at an electrical contrivance, when an inventor walked over to him and asked: "Some machine; I wonder who the inventor is?"

The Irishman looked at him and replied: "Shure it was a son o' the sod. Can't you see his name there—'Pat Pending.'"

Wake Up—Then Get Called.

A New Yorker was spending a night at a "hotel" in a southern town, and told the colored porter that he wanted to be called early.

The porter replied: "Say, boss, I reckon yo' ain't familiar with these heah modern inventions. When yo' wants to be called in de mawnin' all yo' has to do is jest to press de button at de head of yo' bed. Den we comes up and calls you."

For Home Brew, Maybe.

Pat went to a druggist to get an empty bottle. Selecting one that answered his purpose, he asked:

"How much?"

"Well," said the clerk, "if you want the empty bottle it'll be 5 cents, but if you have something put into it we won't charge anything for the bottle."

"Sure, that's fair enough," said Pat. "Put in a cork."—The Western Fruit Jobber.

Baby's Wash Day

Many substances are apt to be present in baby's soiled garments which will set stains after the washing if a few simple rules are not available.

Milk stains are most easily washed out first in cold water; in hot they soon yellow the garment.

Oil stains, such as vaseline, come out best if first washed with warm water and soap. If vaseline has been boiled in, use kerosene or turpentine.

Urine should be rinsed out in cold water before the diaper dries and the garment then boiled, boiling being as frequent as three times a week. To avoid mildew, the well-rinsed diapers may be kept weighted in an enameled pail under water until the tri-weekly boiling day.

Do not let little flannel shirts remain long dirty, and be sure all stain is removed at every washing. Soak all woolens five minutes in warm suds of water and soap jelly and rub stains with the jelly. Wash wool quickly by dipping and then squeezing between the hands instead of rubbing. Rinse them in waters of nearly the same temperature, and instead of twisting them squeeze them dry or put them through a wringer. Dry them in temperatures near those of the rinising water to prevent shrinkage.

Remember not to use "fussy," unwashable things about baby's crib. Far better care consists in having everything about him pure and sweet than beribboned and possibly not admitting of frequent washing. Protect the pillow by a small pad inside the case that may be boiled occasionally.

Home Recipes

Hemstitching on Sewing Machine—Pull as many threads as desired, turn a narrow fold on the edge of the hem, place it at the top of the drawn space, stitch on the wrong side of the goods with a long stitch, then pull down to the lower part of the drawn space and it will look almost like hand hemstitching, and the machine stitching will not show on the right side. —MRS. E. M.

Hemstitching Number 2—I do hemstitching on a common machine as follows: I pull the threads same as if to hemstitch by hand; then if I am going to hemstitch at the edge of the hem I baste the edge of the hem over on the space where I pulled the threads, then stitch real close to the edge of the hem. When stitched I take the piece in both hands and by being careful I can pull the hem over where it should be. It looks very well and is much faster than to hem by hand.—MRS. R. B. D., Wash.

(Mrs. R. B. D. will make this clearer if any wish to have her. I will forward any letters if stamp is enclosed.—A. W. Barland.)

Ice Cream Without a Freezer: Mix your cream as usual and put into a pail with a tight cover. (I use a sirup pail.)

Use either fine ice or crusty snow and pack it with plenty of salt in a water pail or some other pail the right size. Put the pail of cream down into the salt and ice and pack the salt and ice well up to the top and then take hold of the bail of the sirup pail and twist and turn it around back and forth. It will soon begin to freeze in the bottom and around the sides. Scrape it loose and continue to turn and scrape alternately until it is frozen. It never takes more than 30 minutes.

Washington. MRS. A. J. M.

Custard to freeze: Two and one-half cups of milk, one and one-half cups of rich cream, three-fourths cup of sugar or more if preferred, two eggs and one tablespoon of vanilla. Beat the eggs with the sugar, scald the milk, mix with eggs and sugar and pour the mixture into a double boiler. Cook just long enough to set the eggs, but not to thicken the mixture. Remove from the fire and add the cream and vanilla. Leave till thoroughly cold, then freeze. This will make a gallon.

One can make fine ice cream without cooking. If you use cream and whole milk half and half with sugar and vanilla it is not necessary to add any eggs and not necessary to cook, saving much time. The cream will swell more than if it is cooked custard, so allow for that. Three and one-half quarts will usually make a gallon when frozen if the cream is nice and rich.

Raisin shortcake: One teaspoon salt, one-half cup milk, one tablespoon shortening, one and one-half cups flour, one and one-half teaspoons baking powder.

Sift the flour, baking powder and salt into a bowl, add the shortening by rubbing in gently with the tips of fingers, add milk enough to make a soft dough; put on a floured pie tin, smooth the top and brush with milk and bake in a moderate oven 20 or 25 minutes.

Raisins to fill: One-half teaspoon salt, one tablespoon cornstarch, one and one-half cups water, one tablespoon lemon juice, one heaping tablespoon sugar, one cup seeded raisins.

Wash raisins, put in a pan with cold water, bring slowly to a boil, add salt, sugar and cornstarch, which has been mixed with a little cold water; boil four minutes, then add lemon juice. Split the shortcake, fill with raisins, dust with sugar. The cake is best served warm and the filling cold.

MRS. CHARLES WATSON.

Washington.

Hemstitching Number 2—Seams can be stitched to represent hemstitching by inserting blotting paper between the two thickness of the goods with the face sides of the material together and the edges even. Insert strips of blotting paper between the two pieces at the edge, remove the sewing machine foot, loosen the tensions and stitch through two thicknesses of the material and the blotting paper. Tear the paper away, turn the raw edges of the seams away from each other and stitch each side of the seam. The hemstitching can be widened by using two or three thicknesses of blotting paper.—MRS. HENRY STROEBER, La Grande, Ore. Box 683.

Just Folks

Nature overdoes in order to do. A thousand seeds are produced in order that a dozen plants may grow; a thousand plants begin to grow in order that a dozen plants may bear fruit.

Likewise man must overdo in order to do.

There is no such thing as just doing. More often than not, just doing fails to reach the mark.

The man who is satisfied with the average never does the average.

For the so-called calculating individual about the most profitable thing for him to do is to cast bread upon the waters.

There are poor prospects ahead for those who work merely for the immediate reward.

In gaining an end, in accomplishing a purpose, in carrying out a program—just enough is not enough.

He who would provide for overcoming only one obstacle in the gaining of his purpose, will not get very far.

The misadventures of life are many. Your money may give out, your friends may fail, your health may be uncertain. Unless you are fortified, more or less, all along the line you will find hard sledding.

Prodigality of work, a few extra dollars —these may tide over possible contingencies—these are only incidents in the lives of those who do things.

I passed a man on the street a day or two ago. His face as well as his clothes looked sick. He had a bedraggled appearance. He looked as though he was on his last legs. I had not seen him for several years. He was then making good wages, much above the average. In a casual talk he gave me to understand that he did not believe in making too much preparation for the future. His theory was to live while you live; what you spend now you have; what you save for the future you may not have to spend. His was not the boast of the young man who was sowing his wild oats. He was in middle age, in the prime of life. Yet he did not believe in overdoing nor in giving extra thought to the future.

There was certainly a contrast in the man with whom I had a talk only a few years ago and the man whom I passed on the street the other day. I had passed him quite a distance before I could make myself believe he was the same man.

The boy or the girl who only gets his lesson does not get it. Sidelights of information on the lesson are needed and sidelights take extra time and extra study.

The man who knows only his specialty does not know it. The relations of that specialty to other specialties must be known.

The credit man must know human nature as well as the figures at command. Circumstances and conditions of life, family traits and neighborhood relations count.

There is always something on the side to be learned and all that is "overdoing." E A S

CHEMISTRY BEGINS IN THE MOUTH.

Two children, seriously within the danger line of underweight for their years and height, were brought to normal weight without change in their dietary habits when attention to their manner of eating forced itself upon the attention of nutrition experts. It was noticed that they were "bolters"; they did not take time to properly chew their food. Careful instruction as to the part chewing plays in nourishment, and a careful watch over their practice for a time, effected the needed improvement in weight and condition.

Aside from the more perfect digestion of the well-chewed food, thorough chewing tends to be a safeguard. It brings out the natural flavors of wholesome foods, lessening the demand for constipating condiments or sweetening. It satisfies the palate with a lesser quantity of food than had been previously bolted and ill-digested by the over-eater. On the other hand, it stimulates the appetite that is otherwise insufficient, owing to the hitherto undue effort required to digest ill-chewed food.

Small children may be induced to eat more slowly by giving them salt spoons, if they tend to bolt food.

FOOD FOR THE FAMILY.

"Where can I get a table showing the different elements of food for family use and what is required for a person?" writes H. R. H. of Moro, Ore.

His inquiry was referred to the school of home economics at Oregon Agricultural college, and the department's reply may interest other readers. A college bulletin, "A Week's Food for An Average Family" (No. 1228), gives the kinds of food needed, and other help may be found in "Food for the Family," O. A. C. extension department, Corvallis, Ore., and in "How to Select Foods," farmers' bulletin No. 808, department of agriculture, Washington, D. C. Any of these bulletins may be had free for the asking.

A PLANTING APRON.

A planting apron is another help at gardening time. This may be made of gingham or a square of muslin with deep pockets, in one of which the unopened seed packets may be carried, while the other may be used for holding the loose seeds while planting. It is almost as convenient to drop large seeds such as corn and beans.

A Bit of Advice.

If you save the pennies the dollars will take care of the lawyer who breaks the will.

Subnormal Children

The Parent-Teachers' association at Opportunity, Spokane county, has stood financially responsible for and has heartily cooperated in the effort to bring to standard weight the school children found to be seriously below normal weight for their age and height, reports Miss Inez Arnequist, county home demonstration agent, who is associated with Miss Mary Sutherland of the state college in state extension work along this line, with the cooperation of local organizations.

Mrs. Harry Raymond has been the community leader in charge of the child nutrition work, assisted by Mrs. Safranek and by the parents. The nutrition movement was organized and the hot lunch and optional milk twice a day were provided for four weeks before the close of the school for the year, during which time individual weights were systematically recorded. Not all the underweight children took the milk regularly, but all had the hot lunch.

At the end of the fourth week 18 of the 26 had gained weight at three times the normal rate. Miss Arnequist regards the fact that eight did not do so as significant of the fact that not all took the milk twice a day here, even more complete results having attended a few local campaigns under her direction in the county. Every child gained at Opportunity during the time it received the milk regularly, the score cards showed.

Working With Dress Forms

Seventeen communities have been working with dress forms in Grays Harbor county with the help of Miss Mabel Webber, the home demonstration agent. In the meetings that are being held this spring 18 dress forms have been made and their use explained.

When the beginners are taken into the classes they first work on decorative stitches, after which they take up such work as copying garments. The women have found the classes very beneficial in their home dressmaking and they have signified their intention of doing more work of this kind.

Health is wealth itself

—and depends more upon the selection of proper food than upon anything else.

The reason is simple—the *right* kind of food digests promptly and is absorbed into the blood for building sound tissue; while food that digests slowly may ferment and lead to serious conditions.

Grape-Nuts—the delicious cereal food made from whole wheat flour and malted barley—is so easy to digest that even delicate people and young children thrive on it.

This is only natural, because Grape-Nuts is baked for 20 hours, which transforms and partially pre-digests the starch elements, resulting in easy digestion and quick assimilation.

Served with milk or cream, Grape-Nuts is a complete food—and along with its nutritive qualities is that wonderful flavor!

"There's a Reason" for Grape-Nuts

Sold by grocers everywhere

High Points in News of the Week

The words of Patrick Henry, the patriot, uttered nearly a century and a half ago, might be repeated with considerable degree of accuracy after a survey of the leading news developments of last week. "Gentlemen may cry, 'Peace,' but there is no peace."

A railroad strike of 300,000 or 400,000 shop workers is in progress in this country, with a threat on the part of several other railway labor organizations to walk out.

The coal strike of more than half a million miners is still in progress after several months of idleness on the part of the coal mines of the country.

Ireland continues in a state of civil war.

Following the meeting of representatives of the allied nations in Europe at Genoa several months ago, adjournment was taken to The Hague for a continuation of the consideration of unsolved problems. While some progress is apparently being made toward the solution of vital problems at The Hague, the sailing is not smooth, and indications are that this conference may also adjourn with but a limited record of accomplishment on world problems.

The assassination a few weeks ago of Dr. Rathenau, German minister of foreign affairs, has thrown that country into a state of political turmoil that is believed by many to be leading to open conflict between the monarchist element and the republican government now in control.

Some reports indicate a grave fear that the present government of Germany will collapse under the strain of financial and political problems and that a chaotic condition similar to that in Russia during the last few years will follow. Other nations of the world make no effort to conceal their anxiety along this line, realizing that a collapse in Germany would be a tremendous menace to the peace and reconstruction of all Europe. In the meantime, Germany is making further effort to secure from the allies greater concessions in the way of extension of time for the payment of the huge reparations required by the latter for Germany's destruction during the war. There apparently is an increased tendency on the part of the allies to extend terms, in view of the fact that the failure of the Germany government at this time would not only render reparation payment impossible, but would place additional burdens on the shoulders of France, England and other nations involved.

General Bell, a leader in military affairs in this country, declared last week that the Polish situation was such as to indicate the possibility, if not the actual probability, of another war in the near future in which this country would be called to play a part. He denounced disarmament proceedings and reduction in military power, not only in this country but in the forces of the allied nations as well, declaring that we could as well abolish our police force and consider ourselves safe on the streets as abolish our armaments and consider ourselves safe among the nations of the world.

Even congress has continued to operate under conditions anything but peaceful. An attempt last week to put into force a regulation limiting the length of debate on the tariff issue now before the senate resulted in failure and left the doors open for an unlimited discussion of any or all phases of that question, which probably will postpone for an indefinite period of time the final enactment of the bill.

On top of it all, forest fires last week gained headway throughout nearly all of the timbered regions of this country, especially in the Pacific northwest. Steps have been taken under the leadership of fire wardens and state officials that have already gone far toward placing the fire situation under control. Nearly all logging operations have been suspended, not only to reduce the fire hazard, but to enable logging crews to join the fire-fighting forces.

* * *

Practically all of the railroad companies last week made definite announcement that they would employ any person qualified to work in their shops, whether nonunion or union men. Advertisement for such help was sent broadcast. Most of the roads announced that striking employees who returned to work immediately would be permitted to retain their seniority rights for promotions and pensions. Officials of the unions of shopcraft men declared that the strike was still 100 per cent effective, though the railroad officials expressed confidence that the shops would be operated on sufficient scale to keep the railroad equipment in condition for uninterrupted operation. No other organization of railway employees has as yet joined in the strike. Maintenance of way workers have been ordered by their officials to continue in their positions until opportunity has been given for a settlement of the questions involved after a thorough investigation.

While there has been little violence in any of the strike districts, the attitude of the strikers in some places has been one of defiance to persons desiring to take their places in the railroad shops. Picketing is reported at some shops and in a few instances trains have been canceled by the railroad companies because of inability to get equipment in and out of the roundhouses. In some states the national guard has been mobilized for whatever action might be necessary toward the protection of life and property should clashes occur between strikers and those taking their places, or should the strikers undertake to prevent others going to work.

* * *

Notwithstanding the disturbances in Ireland, reports from that country are encouraging from the standpoint of the advocate of peace. The regularly constituted goverment of the Irish Free State is apparently conducting successful operations against the revolutionary element under the leadership of De Valera. British forces are taking no part in the activities at this time other than supplying arms and munitions to the Free State government. It is a case of the Irish people's putting down their own civil revolution. A report late last week indicated that De Valera, the leader of the revolutionists, had disappeared from the scene of the actual fighting. It was believed that he had been wounded and had withdrawn to a place of safety for treatment.

Notwithstanding successes of the Irish government, the situation remains grave. Reports indicate that in the warring territory many residents are leaving their homes for places of safety, many of them emigrating to other countries, including America.

* * *

Secretary Fall of the department of the interior has gone on record as favoring the Poindexter bill in the United States senate providing for a federal investigation of the Columbia basin project. The senate committee on irrigation and reclamation is this week holding a hearing on the bill and is expected to report it back to the senate very early with a recommendation that it be enacted into law. General George W. Goethals, who made a survey of the project last winter, is among the experts called to testify before the committee.

* * *

President Harding again last week made an earnest appeal to include in the present tariff bill a provision giving the nonpartisan tariff commission greater authority over tariff rates. He takes the position that the tariff commission should have authority over tariff rates similar to the authority over freight rates exercised by the interstate commission.

* * *

Two men were hanged at the Oregon state penitentiary last week for complicity in the killing of Sheriff Taylor of Umatilla county in the jailbreak in 1920. Every possible legal step had been taken to secure the freedom of the two men. The actual slayer of Sheriff Taylor had been previously executed for the crime.

Profitable Marketing

To the Editor of The Washington Farmer: I desire to congratulate and thank you for the excellent editorial in The Washington Farmer of a few weeks ago, under the heading "Bedrock of Cooperation," which is addressed very largely to the apple growers of the Wenatchee district. This is the right kind of advice and I do not know of any community that should receive it with a greater degree of satisfaction than the Wenatchee district.

The Wenatchee tree fruit district is one of the greatest assets of the state of Washington. Their products are wonderful, but I do not know of any community that has suffered more from lack of constructive selling than the Wenatchee district.

Every citizen of the state of Washington is deeply interested in the success, not only of the Wenatchee district, but every other fruit growing section of our state. In fact, the prosperity of our state depends entirely upon our ability to produce commodities that can be marketed at a reasonable profit above the cost of handling. It is the money that comes into the state derived from the marketing of products produced by the state that decides whether or not we will be prosperous. The Wenatchee district can render a wonderful service to the balance of the state by marketing their products to the best possible advantage.

There is one other point that enters seriously into the successful marketing of our crop, and that is the transportation question, which at the present time is entirely out of line and will continue to remain out of line until there is an intelligent and determined fight made against the existing conditions. We must throw off the 40 per cent increase made during the war period based upon the then existing rate, and endeavor to put our rates on a fair basis with our competitors.

Puyallup, Wash. W. H. PAULHAMUS.

Farm Business and Markets Outlook

(Continued from page five.)

to the average for this season during the three preceding years.

The demand for white cheese has improved and small premiums have been paid recently on twins and daisies over colored cheese.

Prices on No. 1 American cheese on July 5 were:

Chicago—Twins, 20@21c; S. Daisies, 20@20 1-2c; D. Daisies, 20@20 1-4c; Young Americas, 20 1-2@21c; Longhorns, 20 1-2@21c; Square Prints, 21@21 1-2c.

POTATO PRICES LOWER.

Potato prices declined last week and the trend still appears to be downward. Receipts are slightly above the average for this time of the year and a relatively heavy supply looks probable right along. Old potatoes have almost disappeared from the market. New stock is coming from states as far north as Kansas. Bliss Triumphs No. 1 are quoted at $2.65 to $2.95 per 100 pounds sacked, with Irish Cobblers at $3.85 to $4.75 per barrel in middle western consuming markets.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, July 8.—Cattle—Choice steers, $7.75@8.50; medium to good steers, $7@7.75; fair to medium steers, $5@7; common to fair steers, $4@6; choice cows and heifers, $6.25@6.75; medium to good cows, heifers, $5.25@6.25; fair to medium cows, heifers, $4.50@5.25; common cows, $3.50@4.50; canners, $2@4.50; bulls, $3.50@4.50; choice dairy calves, $8.50@9; prime light calves, $8@8.50; medium light calves, $7.50@8; heavy calves, $5@7.50.

Toy Tractor 25¢

Everybody wants one—young and old. Strongly built of cast-iron. Miniature of big Avery Tractor—beautifully enameled with gold stripes and red rolling wheels. A dandy toy for boys—an interesting souvenir or table ornament for grown-ups. Send 25c and name of one live prospect for a Tractor, Motor-Cultivator, Thresher, Truck, Road-Tractor, or Road-Razer. If interested in Motor-Farming Machinery, ask for Avery catalog and reduced prices on Avery Machines.
AVERY CO., 3303 Iowa St., Peoria, Ill.
AVERY Tractors, Trucks, Threshers, etc.

WESTERN CANADA for Big Wheat Crops

Canada is the world's greatest producer of wheat—second only to the United States—yet only about 12% of the tillable area has been worked. Yields of 40 bushels of wheat per acre are not uncommon.

Oats have given as high as 100 bushels per acre, while 40 to 50 bushels per acre are ordinary yields; barley and rye in like proportion. Cattle and horses thrive on the native grasses which grow abundantly and corn and sunflower culture are highly successful.

Stock Raising, Dairying and Mixed Farming

secure for the industrious settler ample returns for his energy. Clearing the cost of one's farm with a single year's crop has an appeal, and has been done by hundreds of Western Canada farmers. Taxes only upon land (not on improvements). Perfect climate, attractive social conditions, good neighbors, churches, schools, telephones, excellent markets and shipping facilities make life happy as well as prosperous.

For illustrated literature maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write to

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

What do you know about the gall bladder and gallstones?

The gall bladder is a hollow sac, located under the liver and immediately in contact with it. Indeed, it is in reality a part of the liver. It is shaped like a pear, is three or four inches long and stands with the thick part upward. This sac is capable of holding about one ounce of fluid.

Dr. Copeland.

The contents of the gall bladder are discharged through a duct or canal about two inches long. This is not an open tube, but its lining is thrown into folds, making an arrangement not unlike a spiral stairway in a tower. This drainage canal joins with a similar canal from the liver, forming what is called the "common bile duct." This is the size of a goose quill, is about three inches long and empties into the intestine.

The bile accumulates within the gall bladder. During the digestive process the bile flows through the complicated drainage system I have described, into the intestine, where it has a part in digestion.

One of the normal constituents of bile is cholesterin, a white, glistening, fatty, crystalline substance. This is taken from the blood in which it is found normally, and the quantity then extracted depends on certain conditions. For instance, if there is marked congestion or inflammation of the gall bladder or its ducts, more cholesterin appears to be absorbed by the bile.

What causes such irritation or inflammation? The most common of the direct causes is the presence in the gall bladder of microbes or germs.

If you know anything about germs you will see at once that a warm, moist place, like the gall bladder, offers a splendid breeding place for microbes. If they once gain entrance here they multiply rapidly.

Of course, there are other things which assist in producing conditions favorable to the development of gallstones. Anything which interferes with the free escape of the bile is one of these.

Under this combination of conditions much more than the normal amount of cholesterin is extracted from the blood. One of the germs or a group of them in the gall bladder or the spiral canal may act as the nucleus, and upon and around this center gradually collects a layer and then other layers of the cholesterin. Just as any salt in a saturated solution will deposit on the neck of its bottle, so the cholesterin deposits and continues to do so until a good-sized grain or stone is formed.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4017. Juniors' dress. Cut in three sizes: 12, 14 and 16 years. A 14-year size requires 4 1-4 yards of 32-inch material. Price 10 cents.

3712. Girl's dress. Cut in four sizes: 4, 6, 8, and 10 years. A 6-year size will require three yards of 27-inch material. Price 10 cents.

3810. Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It will require 2 3-8 yards of 27-inch material for the guimpe, 4 3-4 yards for the dress for a medium size. The width at the foot is two yards. Price 10 cents.

4007-4013. Ladies' costume. Blouse 4007, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 4013, cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. The width at the foot is about 2 1-2 yards. To make the dress for a medium size requires eight yards of 40-inch material, without the bolero, which requires one yard of material. With flounces in straight outline three-fourths yard less is required. The foundation skirt if made of lining or contrasting material requires 1 3-4 yards. Two separate patterns, 10 cents for each pattern.

4025. Ladies' dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4 1-8 yards of 40-inch material. The width at the foot is about 2 1-4 yards. Price 10 cents.

4033. Boys' suit. Cut in four sizes: 2, 3, 4 and 5 years. A 3-year size requires 1 1-2 yards of 24-inch material for the waist and 2 3-4 yards for the trousers. Price 10 cents.

4032. Child's dress. Cut in five sizes: 1, 2, 3, 4 and 5 years. A 4-year size requires 2 3-8 yards of 36-inch material. Price 10 cents.

3807. Ladies' house dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 will require 5 1-4 yards of 36-inch material. The width of the skirt at the foot is 1 7-8 yards. Price 10 cents.

4021. Ladies' apron dress. Cut in four sizes: Small, 34,36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. The width at the foot in the medium size is two yards. It will require 5 1-4 yards of 32-inch material. Price 10 cents.

4024. Ladies' lounging or bath robe. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4 3-4 yards of 40-inch material. The width at the foot is about two yards. Price 10 cents.

2186. Infants' set, consisting of a cap, a sack, a night gown and a dress. Cut in one size: For the dress of flouncing it will require 1 3-4 yards of 36-inch material with 1 1-4 yards of plain material for yoke and sleeves. Of nainsook or lawn 36 inches wide it will require 2 1-4 yards. The gown will require 2 1-2 yards of 24 or 27 inch material. The cap, one-half yard of 18-inch material. The sack requires seven-eighths yard of 27-inch material. Price 10 cents.

3939. Men's shirt. Cut in seven sizes: 38, 40, 42, 44, 46, 48 and 50 inches breast measure, neck measure to correspond in sizes, 15, 15 1-2, 16, 16 1-2, 17, 17 1-2 and 18. It requires 3 1-2 yards of 36-inch material for a 17-inch neck size. Price 10 cents.

Pike's Peak or Bust

(Continued from page ten.)

preferred to go to that and camp. And so he did, pushing his one-wheeled vehicle over there and taking out the cow and unsaddling her under the shed.

Now he made a bed on the dry ground and helped Orlando to lie down on it. By this time the sun was shining brightly, the air being so warm that no fire was needed. But Esau kindled one, just out from under the shed, and proceeded to do some cooking.

Two or three hours passed before the doctor returned. Somebody told him that he was wanted, and where, and he rode over at once, with his pill bags rattling on the saddle behind him. Fortunately Orlando was better by this time. His fever was almost gone, and he felt able to sit up. He had also drunk some milk.

The doctor asked him several questions, expressed an opinion that his sickness would not prove serious and left him a few doses of medicine.

In the afternoon various people visited the camp, some to inquire how the sick man was, or if they could do anything, others to leave various cooked delicacies. On learning that Orlando was better, most of the visitors lingered to talk of the gold excitement and of how these two gold seekers came to be traveling so far on foot. When told that the trip was partly to dig for gold and partly in quest of health for Orlando, who was threatened with consumption, all agreed that it was a wise trip to take if the young fellow could stand the hardships. But of that most of them were doubtful.

The rest of the day and the following night, and another day and night, the two pilgrims remained in their camp under the shed. But on the second morning they made ready to travel. By this time Orlando was much better; so nearly well that he felt anxious to get on the road once more. Also, the snow was all gone, and the roads were pretty well dried up. So the two saddled and packed their cow and were soon trudging westward again.

Though still not strong, Orlando managed to tramp several miles before he and his companion halted for dinner. And, after a long rest, he traveled nearly as far in the afternoon. He ate a hearty supper and next morning, after a good night's sleep, declared that he felt nearly as well as ever.

After that the two continued their journey as before, the younger traveler growing stronger all the time. Every day they tramped except Sunday, when they were glad to lie by and rest. At such times they always attended preaching if there was anything of the kind near at hand. Otherwise they remained quietly in camp during the day.

At Boonville they crossed the Missouri again; and after that they traveled up the south side of the river. When near the stream, they often saw steamboats passing up and down. And when farther back they heard them and saw their smoke.

From time to time, as the travelers moved on, they heard much talk of the gold excitement in the Pike's Peak country. Many people were thinking of going into the mountains, and a few had already gone. But for days Esau and his partner saw nobody who was ready to start. At length, however, they began to notice covered wagons, all moving westward. Sometimes the wagons passed them. Oftener they passed the wagons. And the farther the two men journeyed the more numerous those wagons became.

At last the foot travelers arrived at Kansas City. This town had now about 3000 inhabitants. It stood on a high bluff, which sloped steeply down to the Missouri. A mile or two above the town was the mouth of the Kansas, or Kaw, river.

This new and bustling little city was the outfitting point for all the wagon trains that crossed the plains, whether bound for Santa Fe or for the gold diggings. Steamboats were unloading vast quantities of freight on the wharf, and the big wagons were being loaded with it as fast as possible and then rolling westward.

Just now, as the two foot travelers soon learned, the town was swarming with prospective gold seekers, all preparing to start for the Pike's Peak country. The time was about the first of May, and the gold excitement was already at its height. Many miners had gone, and the wildest rumors were flying about as to what they had found out there.

After passing through the little bluff-perched city, Esau and his partner went on and camped on the bank of the Missouri, not far above the town. Most of the wagons now about to set out westward were in camp between the town and the Kaw river, where their teams could find grass. There were hundreds of them, the whole country being dotted with their white tops.

In their camp on the river bank the two

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Aermotor Towers are Towers of Strength

Eva Cade writes about the picnic at Smith's grove given by the school at the close of the term. Everybody brought a lunch and in the afternoon there was a barbecue. There were sports and races and in the evening a marshmallow and wiener roast and fireworks and last of all a dance. Every one had a good time. Eva lives in Chelan county, Wash.

Anna Belcher, one of our new cousins, lives on a farm in southwestern Washington. Her father and mother have a large orchard, a big field of grain and fields of clover hay. Anna says she couldn't manage her pets if she didn't live on a farm. She has 25 little chickens to feed, a calf named Buttercup and two cats, Fluffy and Timmy. December 16, 1922, Anna will be 7 years old. She has a little brother 16 months old. Brother and she play together.

"I live on a big ranch where there are 50 cattle, most of them on the range," writes Carmyn Sherman of Okanogan county, Wash. "We have three dozen chickens and 14 horses—some dandy saddle ponies. One of them is mine. His name is King George. We have a nice shepherd dog and three kittens." Carmyn sent a poem she wrote about herself and her cousin, Dolly. Carmyn says she is going to write poetry when she grows up. Her cousin, Dolly, expects to be a moving picture actress. One day, when Carmyn and Dolly were washing dishes, they spilled the dishwater.

Birthday Greetings

THURSDAY, July 13—Inez Brown, 10 years old; Violet May Clark; Eva Lillian Hood, 11; Irwin Paulson, 11; Loretta Elma Zorneo, 11.

FRIDAY, July 14—Hazel Reeves, 10 years old; Edna Doris Melton, 9.

SATURDAY, July 15—Margaret Ames, 10 years old; Helen Demaris, 11; George Gugat, 11; Leona Tuisku, 10.

SUNDAY, July 16—Mildred Eaton, 11 years old; Patricia Ferguson, 10; Opal Jenkin, 11; Katherine Lund, 9; Mildred Stiles, 10.

MONDAY, July 17—Hilda Hamlett, 11 years old; Thelma Harry, 11; Edith McCarty, 11; Allison H. Towne, 9.

TUESDAY, July 18—La Vonne Elm, 8 years old; Chester Nicholson, 9.

WEDNESDAY, July 19—Dana Cleveland, 11 years old; Laura Esko, 10.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Georgia Jewett, Forrest Moore, Ruth Williams, Edward Harnelt, Lila Elliott, Keith Cyphert, Ellen Ludwig, Margaret Leibing, Marguerite Smallwood, Inez Brown, Agnes Maurer, Mildred Page, Melvina Williams, Stella Cade.

BEDTIME STORIES

By THORNTON W. BURGESS.

PETER RABBIT'S BIG COUSIN.

"Look who's coming!"

Jimmy Skunk pointed over toward the Green Forest. Johnny Chuck looked. Then he rubbed his eyes and looked again.

"Is there anything wrong with my eyes?" asked Johnny Chuck, turning to Jimmy Skunk. Jimmy laughed.

"They looked all right to me," he replied.

Johnny Chuck looked again over toward the Green Forest. "When did Peter Rabbit begin to grow?" he asked gravely.

"I don't know," replied Jimmy Skunk just as gravely. Then they looked at each other and began to laugh. It certainly was a funny sight coming across the Green Meadows from the Green Forest. Hopping on ahead was Peter Rabbit, looking very important and also very, very proud. Behind him came—whom do you think? You never will guess. It was some one who looks just like Peter Rabbit, only ever so much bigger. His ears are like Peter Rabbit's, only ever so much longer. He looks like Peter Rabbit. He sits up like Peter Rabbit.

Peter came hopping along up to Johnny Chuck's doorstep. "This," said he, "is my cousin, Jumper the Hare, who has come down from the Great Woods to make me a visit."

Johnny Chuck and Jimmy Skunk bowed politely and told Jumper the Hare that they were very glad indeed to meet him, and that they hoped he would like the Green Meadows so well that he would want to stay. Then Peter Rabbit bustled off with his cousin Jumper the Hare with his most important manner to call on all the other little meadow people.

Johnny Chuck watched them hurry down the Lone Little Path. Every few jumps Peter's big cousin would stop and sit up. He would look this way and look that way, just as if he expected to find some one in hiding ready to spring upon him.

"My, what a timid fellow!" exclaimed Johnny Chuck. "I'd like to steal up behind him and shout 'Boo!'"

Jimmy Skunk chuckled. Then he whispered to one of the Merry Little Breezes, who raced off as fast as he could go. He stopped at the house of Danny Meadow Mouse. Then Johnny Chuck and Jimmy Skunk saw Danny slip out of his back door and hide behind a clump of grass. A few minutes later along came

"This is my cousin, Jumper the Hare."

Peter Rabbit and his big cousin. Just as they passed the clump of grass Danny Meadow Mouse sprang out. Jumper the Hare jumped clear over Peter Rabbit's head and started across the Green Meadow at a rate that made those who saw him gape in astonishment.

"That big fellow afraid of Danny Meadow Mouse!" exclaimed Jimmy Skunk.

(Copyrighted by T. W. Burgiss.)

Pike's Peak or Bust

(Contniued from the preceding page.)

foot travelers rested and let Brindle rest for a few days, while they learned what they could of the journey ahead of them, and of the newly opened gold diggings. Almost every day a great wagon train rolled and rumbled away toward the sunset. While the trail to the Rockies led through an Indian country, so many people were traveling it now that there was not supposed to be much danger. None at all for the first week or two. So Esau and his partner made up their minds to travel alone. By so doing they could start when they wanted to, travel as fast or as slowly as they wanted to travel, and camp whenever they cared to camp.

However, they would soon reach the country where more or less danger lurked. Also they would have to depend on hunting for meat as they traveled. So they cleaned their weapons carefully and bought some additional ammunition. Each of them, besides his gun, was provided with a revolver. Orlando's gun was a rather long-barreled Kentucky rifle. Esau's was a double-barreled gun. It looked much like a shot-gun; but only the right-hand barrel was for shot. The other barrel had a smaller bore and was really a rifle. The travelers had powder and caps, and carried a supply of lead in small bars. They also had bullet molds—a pair for each weapon. While resting here they molded a good supply of bullets.

"Well, Lando boy, think you're ready for another long tramp?" Esau demanded of his traveling companion, late one day. "We've already covered nigh onto 400 miles of our journey. But we've got about 700 yit to travel—more than 700, I 'low. Does that make you feel wabbly in the knees?"

"Not a bit! Not even a little bit! I'm ready for the road whenever you are."

"Reckon you can take hand and foot and tramp it straight through?"

"Not a doubt of that. I've never felt better in my life, seems to me. And I know I've never felt as strong. I can not only tramp my way, but I've a suspicion that I can give you a boost now and then with your wheelbarrow."

"Don't 'low I'm apt to need that. But I'm tickled that you feel so—so husky-like. Back yander a good piece, when you got laid up, I begin to feel mighty juberous. I'm easy in my mind now, though. You'll stand the balance of the trip all right, I make no doubt. So, if you feel well rested up, I'm 'lowin tomorr' mornin' will be as good a time as any for us to roll out west."

(To be continued.)

NAIMA KUKKA, Rosburg, Wash.—We all like The Washington Farmer—every bit of it—and think it is the best farm paper printed.

JOHN INCH, Winlock, Wash.—I highly recommend The Washington Farmer. It has done me a lot of good along veterinary lines. I also like the stories.

Boys Lie in Wait

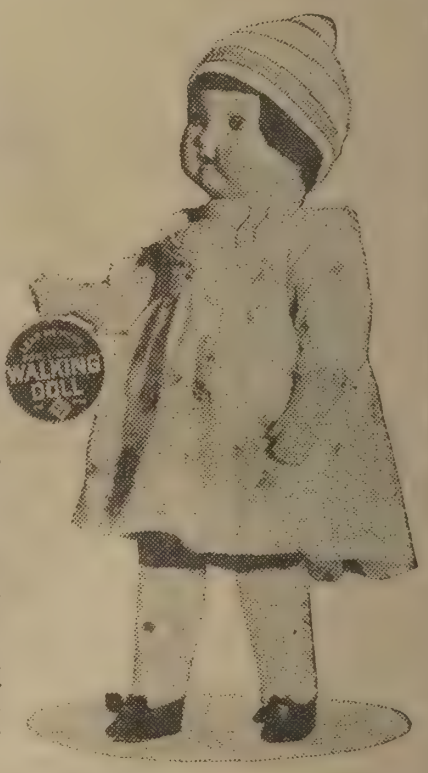
No more interested or attentive listeners than Herman Felber, Louis Nettleton and Edward Jamie, South Bend Poultry club boys, were in the audiences which gathered at Willapa, Menlo and South Bend to hear W. D. Buchanan, state poultry extension specialist, discuss this industry which is becoming of so much importance in Pacific county as elsewhere in the state. They were lying in wait, with their lunches ready, for County Agent J. R. Beck when he left South Bend soon after 8 o'clock in the morning; they investigated every new "wrinkle" at Charles Lambert's highly efficient poultry plant, sat through the lecture and then demonstrated the characteristics of a laying hen.

They had lunch at Menlo and heard another talk by Mr. Buchanan at S. Martin's that afternoon, and it would not be surprising, though history does not recount this particular, if they attended his lecture at the South Bend Commercial club rooms the same evening. There are three other members of the club, Melvin Raybell, George Hall and George Olson, and from this group the county agents expects to recruit material for a poultry team that will "clean up" all the other entrants at the Southwest Washington fair in August.

TO FIGHT THE LAWN ANTS.

To get rid of lawn ants entomologists of the United States department of agriculture suggest drenching the nests with boiling water or pouring in a small quantity of kerosene oil. Similar treatment may be applied to nests between or beneath paving stones. Spraying the lawn with kerosene emulson or with very strong soap wash is also recommended. For large ant nests disulphid of carbon injected into the nest by means of an oil can or a small syringe is recommended to kill the ants. The fumes of disulphid of carbon have a very disagreeable odor and are inflammable, but they are not injurious to higher animals in the open air.

Club Work Attracts



"It's a wonderful thing for club work that it attracts men and women like Mr. Alexander," said Miss Elmina White, assistant state club leader, after a day's work recently in Lewis county. "It gives dignity and standing to the work; it furnishes endless inspiration to the men and women officially engaged in it; and it gives the youngsters the benefit of valuable leadership." She was referring to J. T. Alexander, vice president of the Security State bank and owner of a large farm near Chehalis, who, as she expressed it, devoted his time to her that day as though he had nothing else to do, and promised continued assistance, which will be invaluable.

Mr. Alexander has accepted responsiblity as county representative of the national committee, and among other things plans to see to it personally or through friends that Lewis county representatives attend club week at Pullman in June and the Pacific International at Portland in November. He has also promised that every boy or girl who makes good in live stock work this season and who desires to obtain purebreds in 1923, shall have the opportunity, financially, to do so, and his bank contributed $100 toward prizes for club contests at the Southwest Washington fair this fall

You Can Win Walking Doll

Nothing will make any girl happier than one of our UNBREAKABLE WALKING DOLLS. The walking feature intensifies the attractiveness of the doll 100 per cent. Moreover, it is light in weight, has a soft body, and is well made from top to toe. It stands 13 inches high.

There are no springs or sharp edges in our walking dolls—the mechanism is all concealed in the body. OUR UNBREAKABLE WALKING DOLLS sleep, sit, stand, and when led by the hand they REALLY WALK WITH YOU.

A walking doll with sleeping eyes and real hair will be awarded to YOU in return for your services in securing nine 3-year subscription orders to your State Farm Magazine at the regular rate of 50 cents each, or $4.50 for the nine subscriptions. A little time spent securing subscription orders and one of these wonderful walking dolls will be your very own for keeps. Get busy now before some one else starts to harvest the orders in your neighborhood.

Van Tassel Ayrshires

Lady Stuart of Menie, a 17-year-old cow in the E. W. VanTassel herd of Ayrshires at Wenatchee, is expected to make a record all her own in the 300-day period. She has been producing at the rate of 15,000 pounds of milk and 550 pounds of fat and she was bred to qualify for the roll of honor, which requires her to carry a calf 180 days out of the 300. There is no other Ayrshire of the same age in the United States that is competing for the honor.

Mr. VanTassel has been doing official testing for several years and finds that it pays to keep the work going throughout the year. For the month of May there were 10 cows in the herd that showed an average of 70 pounds of milk a day when they were only being fed for a 60-pound production. One day they reached a 78-pound average. Grain is the only feed being fed throughout the summer, since there is sufficient pasture to supply roughage in the ration. The pasture is perhaps largely responsible for the high milk production, since it is a mixture of sweet clover, alsike and orchard grass, making a combination that is eaten readily.

One cow in the herd, Queechie of Wenatchee, has the honor of once being the second highest in her class in the United States. Stuart Robin, a daughter of the 17-year-old cow, finished her 300-day test as a junior 3-year-old and is on test again as a junior 4-year-old and milking at the rate of 17,000 pounds of milk with 4 per cent fat. A granddaughter of the old cow made ninth place in the United States in her class as a junior 3-year-old.

Other cows in the herd promise to make equally outstanding records and the farm has every facility for making records; plenty of feed, good shelter, proper management and a determination on the part of the herdsman as well as the owner to have the cows do their best.

The herd is a combination of the Robin Hood and the Peter Pan strains and the two have been crossed, with good producing offspring as the result. Mr. VanTassel has no particular choice between the two blood lines, but feels that they are about equal as far as production and type are concerned.

Late last fall Mr. VanTassel made an exchange with the state college for their herd sire, Queen Scottish Cavalier, a 4-year-old animal which was bred at this herd. The one taken by the college in the exchange was Robin Hood 16th, who won grand champion at the state fair last year and similar honors in other shows.

Uniontown Live Stock Show

Vareuse II., owned by the Uniontown Percheron Breeding association, was awarded the grand champion stallion prize at the third annual Uniontown Live Stock show recently.

Carl Greif's champion Shorthorn bull, Victoria Sultan, repeated his show winnings of last year.

Orange Blossom Lady, a Shorthorn in the state college string, was adjudged grand champion cow over all breeds. She won junior champion honors at the 1921 Pacific International.

McKay Brothers of Uniontown won champion honors on their undefeated Shire mare, Jolly B. Professor C. W. Hickman and Fred Bayliss of the University of Idaho judged the draft stock

Raises Rams for the Range

"We find an ever increasing demand for the Hampshire rams for range purposes and the buyers are looking for a ram that will put more wool on the mutton type wether," said S. P. Wipple, the veteran Hampshire breeder of Ellensburg, Wash. "By breeding a ewe to a Hampshire ram the lamb will have more wool on the face than its mother, one of the indications that the cross will make an increase in the amount of wool on the back.

"Since our main market for the pure-bred rams is with the range men, we are raising them so that they will stand up in good shape when they are put out for service. With this in view we have cut down on the amount of feed that is fed to the lambs. They get only a half pound of grain a day, while the ewes get more. In this way we keep them from getting too soft before being sold and they learn to be better rustlers."

Mr. Whipple wintered his ewes in good shape and got a 150 per cent increase at the lambing season. There were 45 per cent ram lambs and 55 per cent ewe lambs. One ram lamb made an average gain of a pound a day for 150 days, while there were others that made gains almost as outstanding. All of the sheep are registered, the stud ram being a son of Remesis, who was leased for one season for $1250 in Europe.

While there is a good demand for the ram lambs, Mr. Wipple makes no attempt to sell the ewes, but keeps them on the farm for breeding purposes and some years even buys more to add to the flock. A number of the best animals will be fitted for the county fair and will also be shown at the state fair at Yakima.

For $1 You Employ the Services of Scores of Workers for 5 Years

$1. Rock Bottom Subscription Price Due to Cooperation

When you subscribe to The Washington Farmer you employ the services of a big, hardworking organization devoted to your interests alone.

You hire these people to put in their best licks for you. They cover the entire state. They get accurate, up-to-date market quotations from the principal centers. They prepare careful crop and weather reports. They glean the news and views expressed at conventions, shows and farm gatherings of every sort.

Others in the organization conduct the departments. They comb the state for information of value to you. They answer your questions. They find out and report the experiences of hundreds of practical farmers whose problems are not those of some distant field, but of the same state in which you live. Then there are those whose pleasant task it is to find the stories which will give you the greatest enjoyment, to collect the household hints and helps which will prove most worth while, or to discuss for our great circle of thoughtful readers the many topics and issues of especial interest to Washington people.

For the expenditure of a dollar you secure the services of this great organization for five full years. This low price is made possible by the cooperation of our readers in sending in their subscription orders direct. Agents are expensive. Save their cost by sending in your subscription renewal at least sixty days in advance of the expiration date stamped on the wrapper of your paper and by including the orders of your friends and neighbors with your own.

Ruby Dell Guernsey Farm

Our herd has been in the winning wherever shown.

Senior herd sire, Francis May King (A. R.) he by Langwater Hambro (A. R.)

Junior herd sire, Rex of Willow Brook, he by Langwater Sunderland (A. R.)

Our herd matrons are cows with A. R. records from such noted sires as Langwater Hambro, Langwater Emigrant and first 5 daughters of Francis May King, to freshen with average records of 480.14 butterfat, at average age of two years and ten months; most of them double letter class.

Some splendid bull calves for sale of above breeding.

H. E. ANGEL, Mabton, Wash.

Registered Guernsey Bull

Tahoma of Bralee, 4 years, permanent holder cup best dairy bull, all breeds, Clarks Fork fair; great-grandson Glenwood Girl 6th, and King of the May; bargain, $150. Guaranteed sure breeder; t. b. tested; papers furnished.
FIR GROVE FARM, Clarks Fork, Idaho.

TWO YOUNG GUERNSEY BULLS

Sired by Lalla's Prince, a show bull with great winnings in middle west. Dams, Glenwood and Sequel breeding. Priced to sell.
W. S. STEELE & SON. Corvallis, Ore.

Guernseys Two splendid May Rose bull calves at farmers' prices.
H. W. BATEMAN, R. 2, Bellingham, Wash.
FEDERAL ACCREDITED HERD.

Best Jersey Blood Lines Combined

Young bull sired by a son of the grand champion and richly bred St. Mawes bull, Capt. Tristrom; dam, Sophie's Itelka; she by the great Pogis 99th of Hood Farm, and out of Lass 92d of Good Farm, 742 lbs. butter fat as junior 4-year-old. Good individual, dropped May 5; priced for quick sale.
RAYMOND W. WILLIAMS, Carlton, Ore.

Lynden Jersey Farm

offers young bulls of the famous St. Mawes and Golden Glow's Chief breeding. Prices reasonable.
F. MEENDERINCK. Lynden, Wash.

Registered Jerseys for Sale

Registered Jersey females, the best of blood lines. 1 bull, ready for service, at farmers' prices.
DAN P. LAW, Rt. 6, Box 56A, Oregon City, Ore.

Holstein Bulls at Farmer Prices

Sired by son of former world's champion and out of cows that make good at the pail.
S. D. CORNELL, Grandview, Wash.

Indian City Berkshires

Big type, superior quality.
DR. W. J. KEYES, 202 Fernwell Bldg., SPOKANE, WASH.

Every Poultryman

FINDS THIS "PAY-STREAK" SOONER OR LATER

EVERY good hen is a mine—a golden mine of eggs. This mine will yield a certain revenue even if you go at it hit-or-miss. But, you can never expect to get the greatest yield—to strike the real "pay-streak"—until you tap the right vein. *And that's feed!*

No matter how carefully selected your stock may be—no matter how good the housing and care you give them—sooner or later you will "dig down" to this rock-bottom fact: feed is the nub and the rub of the situation.

Even the big poultry operators who have been mixing their own feeds and have switched to SURELAY will tell you it's the "cheapest" feed in the long run—cheapest because it nets *more* egg-money in return for the feed-money it costs.

These seasoned poultrymen realize—as you must—that a hen uses more energy in converting poor feed into money than she does in converting good feed into money. And, at that, how little is the difference in cost between good feed and poor feed! But look at the difference in the egg-sheet when you're through!

SURELAY has helped to put many a poultryman on his profit-feet by proving two things to him: First—that cheap feeds lessen the profits of every hen in his flock; second—that our large scale production enables us to turn out a better and more economical feed than he could hope to.

Blended and balanced according to a true-to-test formula, SURELAY stands top-high as a uniform egg mash that will make your hens pay by making them lay. The best way is the find-out-way. Order a sack of SURELAY from your dealer—and see! See how this high-grade mash "assays" in feed value. See how our daily laboratory tests insure the same feed value every time. See how SURELAY actually "pans out" with your flock. See how it rids your mind of feed-worry for all time. For "what's on the tag is in the bag"—always!

Also, send for the new edition of our booklet, "Makes Hens Happy." It is by far the most complete and helpful book we have ever issued on poultry feeding. And it's free! Simply clip the coupon—and mail today!

Plan to attend the Poultrymen's Convention at Oregon Agricultural college, Corvallis, August 1, 2 and 3.

HARVEST POWER

Will Unify Wheat Exportation

Cooperatives Contract With Leading European Importer

Announcement is made by the Northwest Wheat Growers, Associated, with headquarters at Portland, that arrangements have been made whereby Heatley & Co., an old-time and one of the leading European importeds of wheat, becomes the exclusive distributing agent of the cooperative wheat growers of Oregon, Washington, Idaho, Montana and North Dakota. The contract for this service was completed at a meeting of the board of trustees of the Northwest Wheat Growers, Associated, in Portland, with K. A. Oswald of the importing firm's office. Mr. Oswald has returned to England to assist there in preparing to receive that part of the new crop of wheat which the cooperative growers will soon be ready to export. Wheat of the Pacific northwestern states will be handled through the Portland headquarters of the Northwest Wheat Growers, Associated, while the Montana and Dakota cooperative grain will be handled through the new sales office at Minneapolis.

"The new distributing firm for the Northwest Wheat Growers, Associated, has acted as agent for some of the largest American exporters at various times during its long history of dealing in American wheat," says the Producer, official organ of the cooperators, in announcing the arrangement. "It was the exclusive European connection of the Houser interests during the years when the former Coast dealer was handling more wheat than any other exporter. Heatley & Co. have representatives in every important milling section of England, Ireland and Scotland, and in all importing European nations.

"'The name of Heatley & Co. is excellently known in the world's wheat centers,' said George C. Jewett, general manager of the Northwest Wheat Growers, Associated. 'This arrangement, whereby the English firm becomes our exclusive distributors for Eureope means that the associations are definitely and permanently on the world's map. It is another move in straightening out the chain between the producer and the consumer, and as such it will result in greater returns for the members of the associations.

"'Heatley & Co. have the experience of many, many years to go on when they start to handle cooperative wheat only. They have been distributing American wheat practically since it first moved to Europe. They know the requirements of every importing vicinity, of every mill. They are known, and known well, by bankers and shippers. They form for us as strong an international connection as ever has been at the disposal of any business, no matter what kind.'

"Because of the new export arrangements of the Northwest Wheat Growers, Associated, the task of expanding the Minneapolis branch is being hurried to completion. With the additional bushelage being contracted in North Dakota and Montana there probably will be several million bushels to be exported through that office in addition to large domestic mill sales of hard wheats. The new middle western organization must be completed before the northern wheat starts to move, soon after the beginning of shipments of Pacific coast grain.

"The connection with Heatley & Co. for European wheat distribution will not alter present arrangements of the association for exporting to Japan and China, this part of the work being carried on as heretofore."

New Smut Preventive

Within the last few years a new method of treating cereals for smut has been developed which promises to supersede the bluestone and formaldehyde treatment in many parts of the country, in the opinion of state college experts. The new treatment consists in thoroughly coating the surface of the seed with a finely powdered carbonate, two ounces being used per bushel. This may be done months before seeding, at the farmer's convenience, for the coating does not injuriously affect the germinating properties of the grain, but, on the other hand, improve it. The copper carbonate has been found to control wheat smut better than either bluestone or formaldehyde. In many cases substantial increases in yields have been reported.

The grain treating machine.

In order to facilitate the use of the copper carbonate dust, a mixing machine has been developed by the college experiment station at Pullman.

Full details as to the method of treating grain with the new dust treatment and concerning the mixing machine are included in a bulletin No. 168, "The Dusting of Wheat for Smut and Stinking Smut," by F. D. Heald and L. J. Smith, which are now ready for distribution. This bulletin may be secured by writing Director E. C. Johnson, agricultural experiment station, State College of Washington, Pullman, Washington.

DOWDEN

THE PERFECT POTATO DIGGER

You harvest your ENTIRE CROP when you use the Dowden Digger. Does the work in half time and with half the help. Cuts labor costs in two.

Increases Your Profits

The Dowden Digger works in all soils, at all depths, on hillside and level. Noted for 30 years for its light draft and clean work. Simple, strong, durable. Low upkeep cost. Absolutely guaranteed.

Where Does Our Tax Money Go?

By LESTER M. LIVENGOOD, Attorney and Manager Spokane County Taxpayers' Economy League

The state of Washington is "tax-bound." It can not grow much because a wall of high taxes keeps out the only things that can make a state prosper and grow; people, capital and industries.

During the decade from 1900 to 1910 this state's population increased 120.4 per cent and the assessed valuation 281.45 per cent, but during the next decade (1910-1920) the population increase was only 18.79 per cent and the valuation increase 30 per cent. Such a change from phenomenal growth to almost stagnation in such a short period should invite our most serious consideration. An inkling as to what is wrong with us is found in a census advance report just off the press covering the years 1920-21. It shows that the taxes levied on property and other incidents for state funds in the state of Washington amounted to $17,755,-002, while the great state of California with three times our wealth and population got along nicely with only $11,696,226! Oppressive taxation is what is holding us back.

All over the state there is a protest against high taxes, but when we come to the question of how to reduce them it is every man for himself as to method. The problem is so vast and complex and the taxpayers can visualize so little of it that reducing taxes is many times harder than increasing them. Out of all the various opinions, however, there are two outstanding theories of tax reduction. The first is the course of least resistance, that is, shift the burden on some one else. Believers in this theory are not interested in the question of public extravagance or of living beyond our means, but are interested solely in finding new things to tax hoping that these new revenues will be used to reduce taxes on other things. They overlook the fundamental principle that unless we first get down to a basis of economy and efficiency with our present laws any new revenues will be wasted and new objects found to spend them on instead of using them to reduce the present taxes. Governments like people must live within their means. The only way we can afford to have all the desirable things that our standard of living has developed in recent years is to increase the production of wealth proportionate to the increase in our desires. But we have not done it. We want to keep the cake and eat it, too.

The second theory of tax reduction calls for a program of doing without the government luxuries added in recent years and which have largely caused the present tax burden. This is the only lasting and sound principle of tax reduction which will permit us to prosper. Cutting off unnecessary public expenditures must precede devising new sources of revenue because we can not know whether new revenue will be needed or not until we get down to an economical basis and buy only what we can afford.

Therefore, to reduce taxes materially we must do without things. But what shall be cut out and what not? To answer this question requires the taxpayer to know where the tax money is going and the relative importance of each object of expenditure. The tax problem is so big that it is hard to see it as a whole. Many taxpayers would like to know how the total tax money raised in the state for all purposes is spent, and, therefore, I have prepared the accompanying table classifying the taxes into the few larger functions and comparing the levies for several years. This table will show where the outstanding increases have been made during the last 12 years and point the direction for future investigation as to what can be reduced. Necessarily, all detail has been omitted, as the purposes of the table are only to give a general birdseye view of the total taxes in this state. Specific items will be taken up in detail in future articles.

Total taxes levied in state of Washington by functions.
(Collectible year following one designated).

	1910	1914	1918	1921	Per cent increase 1921 over 1910

6,220,000	bus.	4,275,000	bus.	27,000,000	bus.

While hot winds and a prolonged dry spell have done much to reduce all crop yields throughout the entire Pacific northwest, majority of the crops are up to the 10-year average, and will net the farmers good returns, according to the July government crop reports, which were made public during the past week.

The Oregon report was prepared by F. L. Kent of Portland, the Washington report by G. S. Ray of Spokane and the Idaho report by Julius H. Jacobson of Boise.

General Average Over 75 Per Cent.

Totaling the reports of the three agents gives 51,678,000 bushels as the estimated 1922 production of winter wheat, with the average crop condition estimated at 76.6 per cent. Total spring wheat yield is estimated the 32,746,000 bushels, and condition of the crop on July 1 over the three states at 73.6 per cent. This makes a total estimated wheat crop of 84,424,000 bushels in the three states, and a general crop condition average of 75.1 per cent.

Potato Average May Be Reduced.

The reports show a total estimate of 26,978,000 bushels of potatoes in the three states, and an estimated general crop condition of 88.3 per cent, but these figures may be reduced, especially in Oregon, if the present warm dry weather continues.

Hay tonnage is hard to compute, but the figures show a total estimated tonnage of 7,103,000 tons.

Apple Crop.

Washington will produce the lion's share of the apples, her estimate being placed at 27,000,000 bushels. Last year Washington's final production was estimated by the government at 29,062,000 bushels. Oregon's crop is estimated at 6,220,000 bushels, against 5,571,000 for last season, and Idaho at 4,275,000 against 4,400,000 for the previous year. This makes a total estimated 1922 production of 37,495,000 bushels in the three states, with Oregon the only state showing any gain.

Where Truth Is Better Than Fiction

Are you reading the new serial story by Lewis B. Miller, "Pike's Peak or Bust"? If not, begin this week. You can get the first part of the story from the synopsis.

With regard to this story, in a recent letter Mr. Miller writes:

"Should you care to so state, you may mention that 'Pike's Peak or Bust' is mainly and essentially true. Even many of the details are true. I have been hearing the story all my life; and I had the old Pike's Peaker in the house with me when I wrote it."

Farmers Visit Experiment Stations

Results of Many Studies Are Demonstrated to the Visitors

Farmers in western Washington are this week guests of the experiment station at Puyallup. Eastern Washington farmers had their innings last week, when field days were held at the main experiment station at Pullman, the dry land station at Waterville and the irrigation station at Prosser. Between 600 and 800 farmers spent the respective days on these three experiment farms under the leadership of President E. O. Holland, Director E. C. Johnson and other members of the faculty and experimental staff of the state college, together with Superintendent C. E. Hill of the Waterville station and R. B. Bean of the Prosser station.

The Waterville and Prosser stations are primarily interested in solving problems that must be met by the farmers operating under the conditions peculiar to these two sections. The station at Pullman, while solving problems of peculiar interest to Palouse farmers, is also doing experimental and research work of a general interest. One of the most interesting features of the field day at Pullman was the presentation of a hybrid wheat developed by crossing Florence and Turkey Red varieties. While this new hybrid variety is not as yet entirely satsfactory from the standpoint of yield, it possesses the long-sought quality of being almost entirely smut-resistant. Another feature of special interest at Pullman was the demonstration of the new method of treating wheat with copper carbonate dust rather than with formaldehyde or the more common bluestone treatment. While this new treatment is still in the experimental stage, results have been obtained from it that lead the experimenters to expect it to become an important factor in eliminating smut in the Pacific northwest.

At the Waterville station the greatest interest was manifested in the work of that station in demonsrating improved methods of soil tillage to overcome blowing and drouth that have in previous years greatly reduced the yield and are this year cutting the crop to a low point on many farms. In an early issue of The Washington Farmer an article by Superintendent C. E. Hill of the Waterville station will be given touching upon the tillage methods as practiced and the results that have been obtained from them.

Many problems in irrigation farming are being solved at the Prosser station, including tillage methods, the time of cutting alfalfa, methods of fertilization, suitable crops to be sown, methods of irrigation and so on.

The three field days occurring at Waterville July 8, at Pullman July 10 and at Prosser July 12, respectively, were among the most successful that have yet been held.

At the Waterville experiment station on Field Day.

Irrigation District Rule

An existing irrigation district at Greenacres, which it was proposed to include in a new and much larger district petitioned for in the Spokane valley, must first be eliminated from consideration, according to State Attorney General L. L. Thompson, even though the original petition included more than the requisite 50 signers both from within the old district and from within the newer portion of the proposed new district, severally. The attorney general's ruling answered the question submitted to him by the county commissioners of Spokane county on this point, it being matter of doubt whether provision existed in the statutes for the incorporation of a district organized under the law with unorganized territory. Failure of the petition for the enlarged district to mention the previous creation of the Greenacres district under the statutes had raised also the question whether the petition set forth all needful facts, as law requires. Furthermore, whether the commissioners were empowered to create a second corporation exercising identical functions with those already exercised by a previously created corporation, and in the same territory, was a point raised.

To the sufficiency of the petition the quantity and nature of the lands it is proposed to include are immaterial, except to determine the qualifications of the petitioners and the sufficiency of notice to be given to owners, rules the attorney general, for the petition does not fix the boundaries of the lands to be included in the district. That devolves upon the coun-

Subscription price: Five years, $1.00; three years, 50c; one year, 25c; Canadian, one year, 75c; Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Would Bar Orientals

Representative Albert Johnson of Washington state, chairman of the house committee on immigration, recently introduced a bill that should have the cordial support of every citizen who believes in preserving this country against Asiatic ownership and occupation. Representative Johnson's bill would bar from admission to the United States aliens who are ineligible for citizenship, thus excluding Japanese, Chinese and Mongolians.

Senator Poindexter is vigorously on record in support of this method of solving the difficult Japanese problem. He advanced that solution five years ago in a speech in the senate proposing then the same method of exclusion that is now applied in Chairman Johnson's measure.

The Washington Farmer congratulates Chairman Johnson and Senator Poindexter on their vision and courage. We have no prejudice against the Japanese race; on the contrary, we respect and admire its many virtues. It is not a question of the superiority or inferiority of one race or the other, but of wise precautions against dangerous commingling of two very different races. The greater the number of Japanese in this country, the more acute and alarming will be the Japanese problem. If there were no Japanese at all on the Pacific coast, we should have no Japanese problem. Misinformed eastern sentimentalists who express a fear that we may offend Japan and bring on a war if we attempt further exclusion will do well to get this truth into their minds. Unrestricted admission of Japanese would be the surest way of bringing on a war with Japan, because the presence here of Japanese in large numbers would lead to increasing friction.

Wenatchee Seeks New Outlet

The objection of Great Northern officials to the building of the proposed Wenatchee Southern railroad, that the region it would traverse "is only a jack rabbit country and would not originate enough business to warrant the building of the line," is irrelevant and wide of the mark. The purpose of the Wenatchee hearing is to provide a better outlet to the markets of the world for the products of the Wenatchee valley and the rich, productive region to the north of that fine city.

That region now has no competition of railroad service. It is bound exclusively to the Great Northern. Construction of the Wenatchee Southern, a short line of a few miles, would give the Wenatchee region a competing outlet over the Milwaukee, the Northern Pacific and the Union Pacific systems.

The need of this key connection is well understood by the fruitgrowers, stockmen, other farm producers and the commercial organizations of the long region from Kennewick on the south to the Okanogan country on the north. So far as that region is concerned the northwest has only one transcontinental railroad.

The Great Northern is a fine system and deserves credit for pioneering in that region. On the whole it has taken fairly good care of the Wenatchee country, but there have been years when it was unable adequately to serve that region and heavy losses were suffered by the people. As orchard and farm production increases, the need of increased railway service will be felt more and more in that region. The interests of the Great Northern should not be permitted to check the growth and restrict the prosperity of the communities that are longing for increased and competitive service.

Still No Need for That Big Debt

In opposition to the Carlyon $42,000,000 road-bonding bill of two years ago, The Washington Farmer told its readers that it was folly to incur so gigantic a debt when the state, from various sources, would have as much money as it could economically expend. We said then that there was no reason to doubt that the federal government would continue its policy of making large appropriations and this state could count upon its share from that source.

These predictions are fully verified. For the three-year period beginning July 1 this year, congress has made provision for $190,000,000 for federal aid. Fifty million dollars of that sum will be available for the first year.

At the same time the postoffice appropriation bill, signed by President Harding June 18, authorized an appropriation of $65,000,000 for the same purpose, to be expended during the fiscal year beginning July 1, 1923, and $75,000,000 for the succeeding fiscal year. The conditions are the same for all three years, and will bring the total amount expended during the period, if the states comply with the stipulation and expend like sums, to $380,000,000. These federal funds will be administered by the secretary of agriculture through the bureau of good roads.

Under the apportionment to be made to the various states for the fiscal year which began July 1, Washington will receive $735,806; Oregon, $788,443; Idaho, $625,691, and Montana, $1,031,257. The requirements of the federal government are that the state receiving aid must match the federal appropriation dollar for dollar, must maintain adequate highway departments, must maintain the federal roads when completed and must construct roads sufficient to the traffic anticipated.

It is estimated that the $190,000,000 appropriated by congress will result in the construction of more than 25,000 miles of road, which, added to the 46,000 miles that are expected from previous federal appropriations, makes a total of 71,000 miles, or nearly 40 per cent of the estimated 180,000 miles of good roads on the system of federal aid roads now being outlined.

We are in an era of extensive and expensive building of good roads, and THE FARMER is cordially in accord with that policy, but it believes in moderation in all things. It clearly foresaw that if the state of Washington, or any other state of the Pacific northwest, should make the mistake of laying out too much road construction it would pay dearly in excessive cost and slighted construction. In this state, in particular, we are going as rapidly as good judgment could demand. Out of various sources Washington has sufficient revenue for road building without contracting a big and unnecessary bonded debt.

Insurance Is Not Enough

It is a wise precaution for one to insure his destructible property against loss by fire, but insurance is not enough. The utmost precaution should always be used to avoid losses even though the property is insured to the maximum value. Property destroyed by fire is simply wealth wiped from the face of the earth. It often leaves the owner and his family in difficult and unhappy circumstances. At best it causes a great deal of trouble and inconvenience.

Most fires are caused by carelessness. It may be carelessness in the stove or furnace connections. It may be carelessness in electric wiring. It may be carelessness on the part of oneself or a hired man or visitor in dropping matches or cigarette stubs.

Insurance is indeed desirable in the large majority of cases. Care and caution are desirable in every case.

State Farm News

L. L. Bruning of Colfax was unanimously elected president of the Whitman County Pioneers' association at the annual meeting and picnic held recently at St. John. B. F. Manring of Colfax was elected vice president and Ivan Chase, Colfax, was named secretary-treasurer.

Among the early settlers at the meeting were Mr. and Mrs. S. D. Woodward of Colfax. Mr. Woodward settled in Whitman county in 1872. F. M. Clow, who came to St. John in 1876 and who was postmaster there for many years in the early days, told of handling the mail then. There was no stated place for the office and the early settlers say he often carried the mail around in his pockets, distributing it to the people as he met them.

Another interesting pioneer at the picnic was H. C. Harlow of Harrington, who settled on Pine creek in 1871.

* * *

A coyote, which is said to have killed $14,000 worth of lambs and $100 worth of poultry in Adams county, has been killed by Lee Land, according to Glenn R. Bach, federal predatory animal inspector.

* * *

At the end of the first week in July the total cherry shipments from Yakima to date in car lots amounted to 69 cars. The estimated total is fixed at 100 cars. Pear growers report a good crop and are looking forward to good prices.

More than 3000 tons of valley hay is said to have been sold in the Seattle market for $16.50 per ton. H. L. Hull, president of the Yakima farm bureau, says that one salesman contracted 1630 tons f. o. b. Yakima and that several farmers report successful sales.

Peach growers report the peach crop is about normal and the peaches in healthy condition. The apple crop looks promising.

* * *

Virtually all of the 1922 prune crop in western Clarke county, including Felida, Sara and Ridgefield, some of the heaviest prune producing sections in the country, has been contracted for at prices ranging from 9 to 11 cents a pound by the Washington Fruit Growers' association and outside concerns.

* * *

There are 300,000 hens in Lewis county, and the state college, through the extension service, aims with the cooperation of Lewis county poultrymen, to increase their production five eggs per hen annually for four years. This will add, it is estimated, $40,000 per year to the wealth of the county—and the poultry income is already larger than that from milch cows.

* * *

According to reports of railway officials Yakima's 1922 wool clip is all out of the hands of the growers and all but three cars have been shipped. Total pounds clipped is estimated at 1,800,000, which is 200,000 less than the 1921 clip. Prices this year averaged 26 cents a pound, which is practically double the last year's price.

* * *

At a recent election at Morton 80 per cent of the electors voted in favor of the $16,000 bond issue for the installation of the new Connolly creek gravity water system.

* * *

Fifty government and state agricultural research workers of the three northwest states will meet in Yakima July 24 for their annual conference, which will also be attended by some experts from Washington, D. C. A. E. Lovett, county agent, will arrange a number of orchard tours to enable the scientists to study and inspect pests at first hand.

* * *

The first carload of red raspberries to be shipped from the Puyallup valley for the 1922 season left the Puyallup & Sumner Fruit Growers' association tracks July 1 for Winnipeg, Manitoba, at $4 per crate, f. o. b. Puyallup. Three carloads were shipped east through the association. Each car carries 740 crates.

* * *

A meeting was held at Chinook recently by the executive committee of the Chinook school and community fair to arrange for the annual fair to be held on October 6 and 7. This committee was appointed by the Chinook Parent-Teacher association to have charge of the fair for this year.

The following chairmen of committees were selected to look after the details of the several departments:

Vegetable gardening, Mrs. Oscar Olsen; dairy products, Mrs. John Gile; farm products and grain, G. Raiser; poultry, Mrs. F. J. Metty; fruit and flowers, Mrs. Erick Lindstrom; fancy work, Mrs. F. O. Gaither; sewing, Mrs. Ruth Yeager; canning and preserving, Mrs. William Rees and Miss Henrietta Johnson; sports, Professor R. G. Johnson; live stock, Mrs. J. W. Phillips. The executive committee consists of L. C. Johnson, chairman; B. G. Johnson, secretary; Mrs. Edward Gardlin, treasurer; L. C. Fenn, advertising manager; Mrs. K. V. Jernstrom, member.

Coming Events of Interest

July 20-22—Community jubilee, Centralia.
July 21-22—Experiment station field days, Puyallup.
July 24-Aug. 5—Live stock tour, Vancouver, Bellingham.
July 26—Potato tour, Yakima.
July 26—County purebreeders' picnic, Chehalis.
July 26-27—International apple shippers, Seattle.
July 27-28—Whatcom Guernsey gallop, Bellingham.
July 27—Alfalfa growers' tour, Stevens county.
July 29—Peninsular beekeepers' meet, Olympia.
Aug. 14-19—Skagit county fair, Burlington.
Aug. 28-Sept. 2—Southw't Wash. fair, Chehalis-Centralia.

FARM BUSINESS AND MARKETS OUTLOOK

The number of business failures in June was the smallest since last September and total liabilities the lightest since October, 1920.

Dressed cattle trade is in a healthy state, with beef prices $1 to $2 higher in the east and the veal market steady to $3 higher.

The tariff makes for unsettlement in the wool market so far as the long distance outlook is concerned.

The trend of wheat prices in the next few weeks depends upon the rate at which the new crop is sold and the demand which develops for it.

Recent rains have improved the oats prospects to some extent, but a crop below the average of 1,250,000,000 bushels looks probable.

The hay crop is estimated at 107,000,000 tons compared with 97,000,000 tons last year.

Butter receipts have fallen off, but remain large enough to furnish a surplus over domestic consumptive needs.

Business Barometers Favorable

Although a few clouds have gathered on the horizon recently, most of the business barometers continue to forecast favorable weather.

The building boom is the biggest ever known and a long string of related industries such as lumber, hardware, cement, paints and oils are sharing in its benefits. The iron and steel industries are operating at above the pre-war level. Boot and shoe manufacturing, clothing, furniture, implements and drugs and chemicals all show improvement over last year, according to comprehensive surveys.

As a result the amount of involuntary employment has dropped down to the lowest level since the depression started and a shortage of skilled labor in certain lines and of unskilled labor in certain districts is reported.

With the turn of the tide, business failures have dropped off, the number in June being the smallest since last September and total liabilities lightest since October, 1920.

The demand for loans has increased in industries, which show most complete revival but, speaking broadly, the supply of capital is increasing more rapidly than the demand for it, so that interest rates are easing. Mortgage money is more abundant, savings deposits are rising and the demand for investment securities, as measured by the price trend of Liberty bonds, most of which sold at new high levels last week, is increasing.

About 700,000 men are out of work in the coal strike which started 15 weeks ago and stocks of coal are getting low enough to occasion alarm as to the maintenance of industrial operations. The federal government is taking a hand, however, and the prospects of settlement are becoming brighter.

The strike of rail shipment takes an additional 400,000 men from the payroll and reduces buying power for farm products by that much more. It is too early to form any satisfactory notion of the outcome of this clash, although serious trouble is not generally expected.

The worst of recent developments was the evidence of a new collapse of the German government and the headlong plunge of the mark to a new low figure of over 550 for $1, compared with slightly over four to a dollar in normal times.

Until foreign political and financial affairs become more settled, export trade in wheat, corn, cotton, hog meats, lard and other farm products will be restricted. Besides Germany the countries most affected will be France, Belgium and Italy, which were counting upon large reparation payments to help solve their own financial woes.

In the markets for agricultural products heavy receipts of live stock and of dairy products have been absorbed in recent weeks at highly profitable prices, cost of feed considered, and the grains have held comparatively stable. The trend in the latter in the next few weeks depends largely on developments in export circles. The general commodity price level seems to be moving upward. Bradstreet's index number advanced 1.7 per cent during June.

Holiday Helps Cattle Trade

Curtailed receipts of cattle, partly due to the holiday a week ago, have been felt in distributing channels and values on the hoof were advanced nearly all along the line. Dressed trade is in a healthy state, with beef prices $1 to $2 higher in the east and the veal market steady to $3 higher. Eastern shippers competed with local packers on middle western markets and exporters also took a small slice.

Prices advanced even more on intermediate grades than the rise to a new high for the year of $10.50 on prime steers indicates, putting some of the lower grades out of line again. An influx of grassers can be looked for at any time, however, which will widen the spread once more. Yearlings are not being dumped in an unfinished state as freely as a few weeks ago. Cows and heifers shared in the upturn on steers and veal calves gained 50 to 75 cents for the week.

Eleven dollars may be paid for steers at Chicago before summer is over, as but few feeders care to go into "fly time" when the finishing touches are hard to put on. All grain-feds and hard-finished grassers should share in this prosperity. Prices for the general run of steers from the grazing area will not be so buoyant, although the range supply is not believed to be heavy.

Feeders Favor Low Grades

In an effort to avoid high cost feeders are buying mostly common and medium grades of thin steers. This may be safe policy if they are not to be resold until next spring, but they must compete with an abundance of low grades from all grazing sections if disposed of this fall. The movement from the leading markets is holding up exceptionally well and will increase as soon as a larger supply is available, and farm work is a little less pressing. Shipment of stock calves from the southwest is expected to start about August 1.

New High for Hogs

The hog market at Chicago finally broke over the $11 line last week, reaching $11.15, the highest since last March. Receipts are declining slowly, although they remain heavier than usual at this season.

Under an early and heavy run of packing sows the price rage has widened decidely in the last two weeks. Extremes are about $3 apart. Likewise the average cost of droves has dropped considerably below the top of the market paid for choice lights, although it holds around $10 or above.

Low prices for lard have discouraged its production, nevertheless it keeps piling up. The stock at seven main packing points on July 1 was 111,763,000 pounds compared with an eight-year average on that date of 90,059,000 pounds. Stocks of hog meats on the contrary are only 266,684,000 pounds, the lightest since 1914 and about 21 per cent below the eight-year average. The gain in lard is partly due to lighter exports, while there is a keen domestic demand for smoked meats. Unsettled political conditions in Europe have restricted foreign buying recently.

Range Lambs on Schedule Time

Range lambs started to market at about the usual time. Several thousand head of Idahoes, Oregons and Washingtons have already landed at Chicago and Omaha. The movement from the southwest is relatively light, while the dressed trade is in splendid shape and prices on the hoof last week were the highest in a month.

The demand for feeder lambs is expanding. Thin range lambs are selling almost as high as fat ones, spelling prosperity for the producer. Buying of breeding ewes has started early and many more could be sold than are available.

Wool Market Dull

Recent inactivity in the wool market has been heightened by the advent of summer dullness. Some sales were made to mills at prices practically unchanged for the week and inquiries are increasing. Many of the big dealers are holding for higher prices, while the mills are awaiting the opening on spring lines of cloth. The tariff makes for unsettlement so far as the long distance outlook is concerned. Australian markets are reported firm, with British markets a little irregular.

Boston prices follow:

Scoured basis: Oregon—Eastern No. 1 staple, $1.30@1.35; fine and fine medium combing, $1.20@1.35; eastern clothing, $1.10@1.15; valley No. 1, $1.07@1.10.

Territory—Fine staple choice, $1.35; 1-2 blood combing, $1.10@1.15; 3-8 blood combing, 85@90c; 1-4 blood combing, 75@78c.

When Wheat Is Harvested

Wheat ripens in some important producing section of the world in all but three or four months of the year. Even in these months minor countries are harvesting so that the process is practically continuous.

Cutting of winter wheat begins in the southeastern part of the United States about June 10. It continues through most of July and is followed by the spring wheat harvest in August.

Canada, Argentina, Australia and India are the other prominent wheat exporting countries whose harvest dates it is well for the grower to keep in mind. Canadian wheat ripens in August and September or a little later than our spring wheat. By November cutting begins in Argentina and continues through December. Australian wheat matures in January, while India harvests in March and April.

About two months are required to move Argentine and Australian wheat to Europe, where most of the surplus is consumed. Whenever stocks of old wheat are well exhausted in the southern hemisphere, European countries must do the bulk of their buying in North America until late in February, by which time new wheat from Argentina begins to arrive. If an exportable surplus in the United States is carried into the late winter and spring months it must be sold in competition with whatever surplus the southern hemisphere countries have. The course of the market then depends upon whether the combined surpluses in all countries are larger than importing countries need.

The European harvest runs about a month later than in the United States. Mediterranean nations begin to harvest in June, but the process continues until October, when Scandinavian countries finish up.

Wheat Supply Same as Last Year

Although spring wheat failed to come up to trade expectancy, the government's forecast of a total wheat crop of 817,000,000 bushels was not much below the unofficial estimates. It is 22,000,000 bushels more than last year and 18,000,000 bushels more than the average from 1916 to 1920.

Farm reserves were 31,641,000 bushels which, with stocks in country mills and elevators unofficially estimated at 16,000,000 bushels and Bradstreet's visible supply, makes a total carryover of 68,000,000 bushels. Added to the new crop estimate the total supply would be 885,000,000 bushels compared with 887,000,000 bushels last year.

The trend of wheat prices in the next few weeks depends upon the rate at which the new crop is sold and the demand which develops for it. Producers are doing but little contracting ahead owing to uncertainty created by the rail strike, but total receipts at primaries are slightly heavier than usual for this season of the year and are increasing rapidly. On the average during the last 10 years receipts have more than trebled from the first week in July to the first week in August.

European Needs Are Large

Official predictions upon European yields are not available, but Broomhall, the British statistician, estimates the total European crop at 120,000,000 bushels less than last year. Ruesia presumably is excluded. The Italian crop is 40,000,000 bushels less, France shows a big falling off and Hungary reports a 20 per cent loss. The weather in France, Germany and Great Britain has improved lately, but a big increase in European import needs in the next 12 months over last year is indicated. This increase will be partly offset by smaller shipments to non-European countries and a larger rye surplus from Canada and the United States.

Based on present indications importing countries will need about 60,000,000 bushels per month. But little has been bought for fall shipments as the European harvest is on and buyers are in position to wait until the North American crop is moving in heavier volume. Unsettled foreign financial affairs and unfavorable exchange rates also tend to delay purchases. If the estimates upon import needs are correct, importers will be compelled to buy around 425,000,000 bushels from North America in the next eight months, which will take care of most of the surplus in the United States and Canada now estimated at about 475,000,000 bushels.

Corn Acreage Slightly Reduced

The area planted to corn was estimated officially at 103,234,000 acres compared with 103,850,000 acres last year, a decrease of .6 per cent. The yield was estimated at 2,860,000,000 bushels, a decrease of 220,000,000 from the final yield in 1921. With the heavy exports and rapid domestic disappearance in the last eight months and a reduction in the crop as large as shown by the government's forecast, the total supply for the next crop year would be about 400,000,000 bushels less than for the present crop year, although still larger than the average.

Severe Loss in Oats Crop

The government's estimate upon the oats crop was 1,187,000,000 bushels, showing a loss of 118,000,000, or 9 per cent, during June. Recent rains have improved prospects to some extent, but a crop below the average of 1,250,000,000 bushels looks probable. Harvest has already started along the southern border of the oats belt. Receipt at primaries for the last several weeks have been above the average for this season.

Good Yields of Lesser Grains

The rye crop estimate was 82,000,000 bushels compared with 58,000,000 bushels last year and an average of 68,000,000 bushels in the five years, 1916 to 1920.

Barley was estimated at 182,000,000 bushels, compared with a six-year average of 189,000,000 bushels.

Flax was forecast at 10,700,000 bushels against a six-year average of 10,500,000 bushels.

Cash Grain Markets

The range of cash grain prices for the week ending July 12 was:

Chicago.—Wheat—No. 2 red, $1.14@1.18 1-2; No. 3, $1.13@1.17 1-2; No. 2 hard, $1.15@1.20. Corn—No. 2 mixed, 62 3-4@64 1-4c; No. 3, 61@63 1-2c; No. 2 yellow, 63@65 1-4c; No. 3, 62 1-2@64 1-2c; No. 2 white, 63@65c; No. 3, 62 1-4@64 1-4c. Oats—No. 2 white, 36@42 1-2c; No. 3, 34 1-2@39 1-2c; No. 4, 34 1-2@39 1-4c. Rye—83 1-2@87c. Barley—62@68c.

Feed Markets Weak

An ample supply of most by-product feeds together with very light country buying keeps the feed market weak. Tankage is the only important exception. Dry weather would increase the demand, otherwise there is little prospect of change until fall buying develops. The season's low point may be reached soon.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $16.50; standard middlings, $18.25; flour middlings, $24; cottonseed meal, 36 per cent, $46; 43 per cent, $50; hominy feed, $23; gluten feed, $28.85; old process oil meal, $47.50; tankage, $55.

Good Quality Hay Scarce

Good quality hay, especially timothy, is in demand, but receipts of low grades, particularly from the new crop, remain heavy and are hard to move. The crop is estimated at 107,000,000 tons, compared with 97,000,000 tons last year.

Prices per ton in carlots: Chicago—No. 1 timothy, $24@26; No. 2, $22@24; No. 3, $12@18; No. 1 light clover mixed, $22@24; No. 1 clover, $14@18; No. 1 clover mixed, $18@20; upland prairie, $13@18; midland prairie, $13@16; rye straw, $13@15; oat and wheat straw, $9@12.

Egg Holdings Set High Record

Cold storage holdings of eggs on July 1, according to the preliminary official report, were 9,763,000 cases, compared with 7,534,000 cases last year and a five-year July 1 average of 7,022,000 cases. The highest record in any previous year was 7,850,000 cases on August 1, 1919. The supply figures point to a small additional increase during July. Prices have changed but little during the last week. Receipts are falling off and fresh eggs will

(Continued on page twelve.)

LIVESTOCK AND DAIRY

Dehorning Cattle

"Animals of any age can profitably be dehorned," says B. W. Cooney, Douglas county agent, "but, like all other practices, there is a right time and right age at which the work can be done, with the least possible shock to the animal."

Mr. Cooney adds that 20 years' experience, after having dehorned thousands of head of cattle in the feed lot and on the range, has convinced him that the best results are secured if the animal can be dehorned at about 16 months of age for the beef breed and five months less for the dairy breed.

The time of the year when the work is done is of more importance than the age of the animal. He finds that the animal is in the best condition for this work about June 4. The blow fly problem has been solved by a paint which acts as a repellent to the flies.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

DIGESTIVE TROUBLES, ARTICLE II.

The digestive system of the horse is very complicated and for the purpose of understanding the diseases to which it may fall heir we must consider its parts briefly. The stomach is small, considering the size of the animal, and holds only about three and one-half gallons, so one can readily understand that the foods and fluids that are taken in must pass on rather rapidly; especially is this true of the fluids when the animal isthirsty. The opening from the gullet to the stomach is such that it forms a kind of valve, which quite prevents foods or gases from being passed backward into the stomach or nose. We very seldom see the horse vomit or belch because of this construction, and when either occurs it is generally a sign of rather serious condition.

The small intestine which leads from the stomach is about 75 feet in length and is arranged in irregular folds in the left side of the abdomen. The foods remain in the small intestines only a very short time, as they pass through quite rapidly. Fluids, especially, pass very rapidly and may be heard at times when the animal has drunk quite a quantity of water. Next on the digestive tube is the blind pouch called the caecum, about four feet long and 10 or 12 inches in diameter, the inlet and outlet to this pouch are only about four inches apart and both in the large, posterior end, so that materials that enter this portion of the digestive tract must make their way toward the blind end and back again to get out. This is one cause of difficulty, since there is danger of the foods becoming packed together here and becoming unable to get out. This sack is apparently intended for a water reservoir principally, but solid materials also pass into and out of it, as they must on the way to the next portion. Foods may accumulate in the blind end of the caecum and remain there for a long period, while oils, etc., given to dislodge it passes only through the base and out again. This may give the animal the appearance of having an open digestive tube when in reality there is an obstinate obstruction in the caecum.

From the caecum the foods go through a short passage into the great storehouse of the horse, the large colon. This portion is about 14 feet long and varies in diameter from four inches to about 12 or 14. It is folded upon itself twice in order that it may be contained within the abdomen. The great bulk of food that the animal eats remains here for a time, and because of the great amount of food and its prolonged stay there are many difficulties that arise in this portion, where the final stages of digestion take place.

From here the food leaves and enters a smaller tube, the floating colon, which is about 12 feet long, and from there what remains enters the rectum to be expelled from the body.

Not only are the various portions of the digestive tube very different, but their actions are different also and we may have a very serious disturbance of action as well as of placement or size, so that if the organs are all in proper place and not overfilled with gas or food we may still have serious troubles from improper action of the parts. Unless there is perfect harmony of action as well as proper relation of parts the machine can not operate properly.

Aside from the above there are other things concerned in digestion. For example, there are the various fluids that are thrown into the tube from the nearby glands to assist in the preparation of it for assimilation. Numerous bacteria inhabit the tract and at times get too active and cause an unusual amount of gas that distresses the animal. Then there are numerous kinds of parasites that are more or less frequently found here and they are capable at times of causing distress. Foreign particles taken in with the food or water may be responsible for trouble, so that altogether there are many factors that must be considered when an animal is found with abdominal pain. All are serious and some are incurable, even if taken for treatment at once.

The next article will discuss symptoms of trouble in the digestive system.

WATCH FOR DEATH CAMAS.

Death camas, of which there are four principal species in the range country of the west, although causing heaviest losses among sheep, are also poisonous to horses and cattle. Under range conditions cattle are seldom poisoned. Horses are frequently made sick, but deaths are rare. A few cases are known where persons have been fatally poisoned by the weed. Children have eaten the bulbs out of curiosity and adults have gathered the plant, mistaking it for the edible sego. The United States department of agriculture has not found a remedy for poisoning by death camas, but the deadly species are now recognized, and ranchers may safeguard their flocks.

DAIRY AND POULTRY PRICES.

Prices of dairy and poultry products suffered the least in the rapid deflation of prices of farm products which began in 1920 and continued through 1921, according to the United States department of agriculture.

FEEDING ROOT CROPS.

The main difference between roots and ensilage for winter feeding is in the problem of storage. It is much more expensive to store roots, but they make great feed for the small herd.

AS TRUE AS IT USED TO BE.

With what measure ye mete it shall be meted to you again.

What's the Answer to "How do you do?"

THINK it over carefully—and then answer frankly. Face the facts. Do your nerves and digestion stand the jolting of the coffee drug? Can they *go on* standing it.

There's charm and complete satisfaction in Postum—and freedom from any harm to health.

Thousands of sensible people who have seriously looked for the answer to "How do you do?" have turned from coffee to Postum, and are doing so well, in satisfaction and health, that they wouldn't think of turning back.

You can begin today, with an order to your grocer.

Postum comes in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for fully 20 minutes.

Postum for Health
"There's a Reason"

Made by Postum Cereal Co., Inc., Battle Creek, Mich.

TARX
SOLIDIFIED DISINFECTANT

A Better Dip in a Handier, Cheaper Form
Comes in cube-marked cakes instead of cans. Solid like soap. You simply cut off and drop one of the handy Tarx cubes in a gallon of water and you have 1 gallon of the best dipping and disinfecting solution you ever used.

Each Cube Makes 1 Gallon
No guess work—no waste—no bother—no leakage—no breakage. You pay nothing for bottles, barrels or cans. No freight on factory water which you can just as well add at home. Easily shipped anywhere. Packs in small space. Keeps indefinitely.

Order Direct from This Ad
Send only $2.50 (check or M. O.) for 5-lb. package. Makes 150 gallons. Shipped prepaid. If you are not pleased your money will be refunded. You take no risk. Send today.

POULTRY AND RABBITS

Poultry Questions

By W. D. Buchanan,
Extension Poultry Specialist, Washington State College.

BROODY HENS.

We have 470 hens and about 75 of them are clucking. These are S. C. White Leghorn. Is it usual for this breed to do so? What causes it? Does it pay to keep them? A number of others are molting. Should these and the cluckers be sold at once? R. & M'I.
Kennewick, Wash.

It is not usual for so many Leghorns to go broody at once. You probably feed them without making them work enough, and the ration may have been lacking in protein and green feed. I would advise plenty of exercise and green feed. If your stock is of a good strain it might pay to keep them. Otherwise send all moulters and broody hens to market.

MAY HAVE TUBERCULOSIS.

Can you tell me what is the matter with my chickens and what to do for them? They seem to get lame in one leg and just sit around getting weaker and weaker. And as time passes they seem to be only able to drag their legs, seeming to have lost all use of their toes. They also lose their appetites. R. G. C.
Rice, Wash.

If the lameness which you mention is due to a stiffness in the joint and the hens get thin for some time before they die, it is probably due to tuberculosis. Examine the liver of a dead hen and if you find it covered with hard, raised nodules, this is most likely the cause. If, however, the hens are in good condition, and the lameness seems more like paralysis, the trouble is more likely to be indigestion. If this is the case, give them one-half ounce of baking soda in one gallon of drinking water, and follow this a few hours later with one ounce of epsom salts in one gallon of water. If the trouble is T. B. kill and burn all sick hens.

RAISING TURKEYS.

Will you please send me any information you can concerning the raising and care of turkeys and chickens? Also where could I get a ready market for all surplus stock in the fall about Thanksgiving time? G. R. M'C.
Prescott, Wash.

The first requisite for successful turkey raising is have strong, vigorous breeding stock. Keeping the stock pure, but do not inbreed. Give plenty of range and feed the young stock very sparingly. Send to the United States department of agriculture for farmers' bulletin 791. For information on raising chickens visit the experiment station at Puyallup. You will probably find a ready market for all surplus stock in Seattle.

EYES SWELL SHUT.

What can I do for chickens having sore eyes? Their eyes swell shut and the lids look white. I have cured a few with weak salt water, but most of them die in a few days. It is just the young chicks that are affected. MRS. A. B. G.
Spangle, Wash.

It is almost impossible to prescribe a cure without fuller details. Bad colds or roup will close the eyes as you describe. So also will chickenpox; but the latter is always accompanied with raised nodules or scabs. I would suspect the trouble which you describe as being a bad cold. If so, give the chicks plenty of fresh air, especially at night. Keep the premises clean and put a little epsom salts in the drinking water, about one ounce to four gallons of water for half a day.

Value of Milk for Poultry

A cow's freshening, with the consequent surplus of skim milk for feeding a small flock of laying hens, made all the difference between 120 and 180 eggs per day for A. G. Dundas of Pacific county, who is running 275 birds of several different breeds on a five-acre tract near Frances. This surprising illustration of the value of milk in feeding for egg production was brought out at the Dundas "ranch" during one of the May meetings held in Pacific county by W. D. Buchanan, poultry extension specialist. A small group of interested neighbors gathered in the new brooder, which Mr. Dundas had built for the oncoming "crop," and listened and questioned for two hours while the college expert brought out the good and bad points about various methods of feeding. The Dundas flock was being fed germinated oats in the morning, with 20 pounds of grain (one-third corn and two-thirds wheat) at 5 p. m., and with dry commercial mash before them at all times. This grain ration, Mr. Buchanan pointed out, was a little light, the usual recommendation being 10 1-2 pounds to each 100 birds. The hens were then laying 165 eggs, and it was in this connection that the owner recounted his experience with milk. This is his first venture on a farm, he having been in the mercantile business practically all of his life, in the middle west. He professes a liking for it, however, and a desire to make the combination of berries and chickens pay. He has made real progress in clearing up the logged-off land, and the poultry are making good use of that which is still in stumps.

Club Boy's Chickens

"Edwin's mother used to keep chickens, but his competition got too strong and she went out of business. Now he has all the hens on the place and is figuring on a new hen house."

No one who could see the careful accounts which Edwin Halvorsen of Menlo keeps and the earnestness with which he absorbed every word of advice offered by W. D. Buchanan, poultry extension specialist, would doubt for a moment that what County Agent J. R. Beck said of him was true. Edwin raises Rhode Island Reds and has been very successful with them under very ordinary conditions. He is president of the Menlo Poultry club, and late in May he had 250 chicks 4 weeks to 2 months old and 107 old birds. Here is the way his account books stood for four months this spring, though, of course, they were much more carefully worked out, with all the entries for feed, eggs and dressed poultry in the right columns:

Expenditures.	Receipts.

GMC

No Excessive Strain on Springs and Axles

Among the sound reasons why the G. M. C. truck, with its tremendous stability, flexibility, power and endurance, is the first choice of thousands of growers and farmers is its equipment with

Radius Rods

For use over the rough roads and uneven ground so generally encountered in farm or orchard use, these radius rods which deliver the driving thrust from the rear wheels to the frame add greatly to the life of the truck as they prevent excessive strain on the springs and rear axle, leaving the springs free to perform those functions for which they were intended.

The G. M. C. radius rods are fastened with a universal connection so that they can not be twisted or cramped by driving stresses. This is an example of the attention to every detail which increases durability and efficiency distinguishing G. M. C. construction and making these trucks unequaled for the heavy work required of them.

Think what an advantage this one feature gives you. Yet it is only one of the big features of the G. M. C.

25 Madison Avenue New York

Wheat and Clover

Some farmers continue to raise wheat at little or no profit, because a stand of clover can be secured in it if it is rightly fertilized. No crop responds better to POTASH FERTILIZATION than clover. For wheat to be seeded to clover insist on having a fertilizer containing

6 to 8% POTASH

and you will have a profitable clover crop, as well as a better wheat crop. In this as well as in other ways

ORCHARD AND GARDEN

Cover Crop

Tries Red Clover and Alfalfa

In the hopes of finding some cover crop that will be easy to handle in an orchard, Captain R. G. Graham of Cashmere is trying red clover on five acres of his orchard near town. There are two five-acre tracts which are almost identical as to soil, size of trees, and land conformation. The second half of his orchard has been seeded to alfalfa in order to compare the results with the clover crop.

"We find that clover is a very convenient cover crop to have in an orchard," said Captain Graham, "since it is not as tall and does not entangle ladders and workers as does alfalfa. Clover affords a quick method of building up the soil. On the other hand, the alfalfa roots go much deeper, and the soil is opened up and allows for the water to go deeper into the ground. As a fertilizer the alfalfa seems much more efficient and the results are more convenient since it does not need to be planted from time to time.

"Our plan is to seed clover this fall or spring as conditions permit, and disk the rows slightly the first year. The second year thorough disking will be needed. We hope to be able to compare the results with the adjoining field of alfalfa. It may be that the clover will give almost as good results from the first two years as will alfalfa, but it is doubtful if the same results can be obtained in the long run.

"It is my opinion that the most economical plan will be to seed clover for the first two years, disking it thoroughly at the end kill the crop. The following spring, alfalfa will be seeded which will remain as a permanent crop."

Captain Graham has used alfalfa for almost 10 year, and in fact he was one of the first ones to adopt its use as a cover crop in orchards. Such a method of fertilization is much better in the long run than by the use of commercial fertilizer, according to Captain Graham. Alfalfa produces a steady food supply, and also gives an abundance of humus. There is practically no danger of an oversupply of plant foods, as is sometimes the case when commercial fertilizers are applied. Captain Graham believes in making a specialty of his orchard and finds that it is better not to attempt any side lines. "I believe that a man can better watch his eggs if he has them all in one basket. Too many baskets require divided attention and there is greater chance for a loss." Captain Graham has been 12 years away from the sea, being retired from active duty.

Fertilizes Orchard

Although the growing and discing of an alfalfa crop in the orchard has been carried out for a number of years on the E. Remy farm near Yakima, a heavy application of barnyard manure was put on this spring as an experiment. This was done to a part of the orchard where the alfalfa had thinned down and there was a need of something to take the place of it and to add humus.

"I put the manure on at the rate of 100 tons to the acre and some of it could not be plowed under. It will not be hard to disc under this fall and I expect to get the benefit of it all," said Mr. Remy.

"The trees are getting almost too close in this part of the orchard since they were planted 25 feet apart. I believe, however, that by careful pruning and proper fertilization, they can be left as they are, at least for a few years longer.

"I have heard of the value of sulphur for alfalfa and I applied some with the manure on part of the land to see if it would make any noticeable difference on the trees or the fruit. I also used some hen manure and sheep manure in other parts of the orchard. Both of these are good for the soil, but they do not usually have the humus that is contained in the barnyard manure."

Mr. Remy told how he believed that a few hens could be handled to a good advantage in an orchard, but that it was difficult to keep them up during the summer and if they were allowed to run at large they would scratch up the irrigating ditches and the whole orchard would have to be gone over by hand and the ditches opened before the water could be run down the rows. It is better, he said, to keep them up and feed them green feed every day than to give them their liberty in an orchard. After the water has been run in the ditches for a few times there is less danger of the hens filling them up, but they will scratch more or less litter in them and make a lot of trouble.

Orchard and Hens

Although a five-acre orchard affords enough work to keep one man busy the greater part of the year, Bert S. Fenton of Wenatchee plans on keeping from 1000 to 1500 White Leghorn chickens, as soon as he can get the flock established. He intends to build a modern laying house, 60x20 feet, which will be protected by four inches of straw placed on wire netting stretched at the same height as the ceiling. The ventilation will be provided for by vents leading through the roof.

By keeping the birds housed the greater part of the time they will do no damage to the orchard and very little extra work will be required for looking after them. This, of course, will interfere with no work during the winter months, and Mr. Fenton says there is no reason why he can not spare enough time to do all necessary work during the busy season.

The orchard itself consists of Stamen Winesaps, Jonathans and Winter Bananas. He is using the continuous alfalfa crop, which is disked under each spring. He intends, however, to clean-cultivate between the rows except for a strip between the trees, and apply an abundance of stable manure to maintain fertility. Five carloads of manure will be used this fall if it can be obtained. Next year a heavier application will be made, and still more the following year until the fruit begins to show the effects of too much fertilizer, at which time the application will be cut down.

THE CUCUMBER BEETLE.

A dust mixture of nicotine sulphate, for which the United States department of agriculture will supply a formula upon application, will keep the striped cucumber bettle from cucumbers, melons, squash and pumpkin vines.

Cellar Seepage

Is Sometimes Hard to Overcome

By PROFESSOR L. J. SMITH, W. S. C.

During the last six months the writer has had many letters from the irrigated sections telling of water leaking into the cellars and wanting to know how to keep it out.

When the land was first settled it was dry and people naturally put in deep cellars, often putting their homes too near the irrigation ditch. Later, after the water was put on the land, the underground water level slowly rose until it came above the level of the cellar bottom.

It is possible to build a cellar wall and floor water tight, but it is very hard to waterproof it after it is built. Ordinary seepage may be stopped by digging the dirt away from the outside of the wall clear down to the bottom of the foundation, and cleaning the surface very thoroughly, then coating with hot tar or asphaltum.

It is better if the outer surface be given a thick coating of lime-cement motar and then asphalted. This should keep the water from coming horizontally through the wall; but still it may seep up through the cellar floor or where the floor joins the inside surface of the wall. In such a case the trouble might be overcome by putting in a new concrete floor of one part of cement to three parts of sand, right over the old one, in which case it would be well to slope it toward the side where the seepage was worst and then have a little shallow pit concreted where any slow seepage might collect and be pumped out from time to time.

It may be that a great many building houses in ditch-irrigated sections will have to give up the idea of having cellars under their houses, and build an above-ground vegetable and fruit storage cellar just off the back porch, as is commonly done in older settled districts of the subirrigated type where the water level is within four or five feet of the surface of the ground.

Sugar Beets in Yakima Valley

L. D. O'Donnel of Billings, Mont., one of the best known sugar beet and alfalfa producers in the Pacific northwest, has been in the Yakima valley to cooperate with the Washington State College extension service in making a survey with particular reference to the place of sugar beets in the general agriculture of the region.

"In our section we are working to a rotation, as we figure that is what is going to make our farming pay," said Mr. O'Donnell. "We are growing beets for the sake of the land and the other crops in the rotation, as otherwise we could not get the yields of grain and potatoes that we do.

"We are turning all the byproducts on our farms and what would otherwise go to waste into beef, pork and mutton, and I find that the utilization of these byproducts and the waste is my profit. The fence corners, the fence rows and the ditch banks are pastured off in the fall and the beet tops are utilized. It is surprising how much this amounts to in beef, pork and mutton when it is all gathered up."

EASY TO KILL THEM.

Common dust will kill tree slugs.

Farmers' Want Ads

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

NEW, UP-TO-DATE CAFE AND CONFECtionery; in good location; to sell for cash or trade for good farm. W. J. Scott, Pomeroy, Wash.

PIKE'S PEAK OR BUST

By LEWIS B. MILLER

Copyright 1921

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. For three days they have been trudging slowly southwestward carrying out the determination crudely lettered on the side of the wheelbarrow, "Pike's Peak or Bust." Rain and snow impeded their progress, and Orlando falls sick and requires a couple of days to rest before proceeding. Then, with the village that is now Kansas City passed, they follow the Santa Fe trail westward, being but one of scores of outfits of various kinds headed for the fields of golden riches. Once again they stop for a good rest before plunging into the real wilderness, 700 miles of which is still ahead of them to be conquered by foot, cow and wheelbarrow.

CHAPTER THREE.

A Whole Family of Gold Seekers.

Sunrise the following morning found the two foot travelers almost ready to start. Brindle was saddled and packed, and the wheelbarrow had its full load. As usual, Esau's gun was under the ropes that held down the cover of his wheelbarrow. Orlando, having little to do but drive or lead his pack-cow, still carried his rifle on his shoulder. Also, being about to plunge into the wilds, each now had his six-shooter belted on.

"Well, here goes for Pike's Peak!" cried Esau, after thrusting his head under the supporting strap. He seized the handles of his wheelbarrow and gave it a vigorous push.

Soon the two had reached the broad, well-beaten road and were moving on at a steady gait. Now something like a thrill ran through them, and especially through the younger traveler, as they realized that at last they were on the great wilderness road of which they had been hearing all their lives—the far-famed Santa Fe trail.

From time to time during the day—their first day on the Santa Fe trail—Orlando, to show how strong he had already grown, insisted upon taking the wheelbarrow's handles and pushing it several hundred yards. Esau, tramping along close by, protested that he had become so accustomed to his load that he felt rather lost without it.

At this time there were many travelers on the big trail; so many that the two men were not often out of sight of some of them. A few of these, pushing ahead rapidly, overtook Esau and Orlando and passed them. Those were the horse teams. But the ox-wagons crawled along at a slower, creepier pace, and the two foot travelers easily left them behind.

But there were other travelers besides those in wagons. Numerous men were mounted, each riding one horse and leading a pack horse. Others, leading pack horses, were themselves on foot. There were also men with wheelbarrows—usually a party together—and other men with handcarts. And still others, hardiest of all perhaps, were not only tramping their way, but were carrying their packs on their own backs. And good-sized packs those were, too, many of them.

Now Esau and his partner tramped along steadily, day after day. Though the country was very thinly settled, they saw so many people that there was little time to become lonely. The weather continued mild and the grass grew green; and, though they had no feed for Brindle, she did well enough, and furnished as much milk as the two men needed to drink. Like most of the travelers, they camped a good while before night. That was to give the cow time to fill herself with grass and then take a good, long rest. This was important, especially if she was to carry a pack and give milk at the same time.

Usually they camped on the bank of some creek or smaller stream, where both wood and water could be found. The nights were cool, and they enjoyed sitting by their camp fire after dark. They had bacon with them, but were saving that for emergencies. So they did some hunting every day, either before starting in the morning or after camping for night. Because of the much travel along the trail, all the big game had been killed or frightened away. But there was an abundance of small game, such as rabbits and squirrels and prairie chickens, with a few wild turkeys; and, using the shot barrel of Esau's double-barreled gun, they killed all the meat they and Frisk needed. Sometimes they shot game while traveling. When camping by a creek, they always did some fishing and left their hooks set out over night. In this way they were able to vary their diet.

For several days after leaving Kansas City, Esau and his partner found the weather all that could be desired. But at length came a change.

One night they went to bed with the air unusually mild and pleasant, and with everything indicating that the following day would be good for traveling. But, some time during the night, they were awakened by a blustering wind from the northwest, and glanced upward to find the sky black with flying clouds.

"Looks for all the world like we're in for another spell of bad weather, Lando boy!" Esau exclaimed, after sitting up and gazing around.

"It does that!" was the drowsy, shivering answer. "We might have known—There! I felt a drop of rain! We'd better get to pegging down our tent!"

Up they sprang. And while one buttoned the two halves of the tent together, the other was chopping forks and a pole. The tent was small; but, when stretched, it had room for their bed and for Brindle's pack, and also for the wheelbarrow and its load.

For Brindle there was, of course, no room in the tent. But she was not to go without shelter. Among the travelers' bedding was a heavy, rain-proof horse blanket. Ordinarily they used this to go under their bed, as a protection from damp ground. But now Orlando took it and covered the cow with it, tying it in place.

By the time Brindle had been blanketed, and the little tent ditched around, an icy rain was beginning to fall. The wind was still blustering overhead, but the camp was in a patch of timber and brush, by a little stream, and the tent was sheltered from the wind.

"Chances air we're in for a right smart spell of this," Esau remarked, after the two had sought shelter in their tent and were about to get into bed again.

"Sounds that way. Not much traveling we'll do tomorrow, I'm thinking."

Both were quickly asleep. When daylight came the wind was still blowing and the rain still spattering the tent. While up, the campers had piled wood on their fire, and that was now burning briskly in spite of the rain. Looking out, they saw Brindle at the edge of the prairie, grazing as usual. Protected from the rain by her blanket, and from the wind by that patch of woods, she did not seem to mind the storm. For a good while she had not been tied at night. Instead, her fore feet were hobbled and she wore a bell.

"Jest as we 'lowed, Lando. It's little travelin' we'll do this day, unless we're bold enough and hardy enough to splash through mud and slush."

"Yes, and face that northwest wind. We'd better lie by, I say. There'll be more good weather for traveling."

Now the two, well blanketed, got out and gathered wood for their fire. After that Orlando milked Brindle and helped to cook breakfast. Later they sat in the open end of their tent, near the fire, and ate. The meal ended, they leaned back and talked, speculating first on what their friends were doing at home, and then on what was happening in the Pike's Peak country.

From where they were sitting, they could gaze out through the woods at the trail, only a few hundred yards away. About the middle of the forenoon they heard rumbling, and saw a long string of wagons rolling westward in spite of the stormy weather.

"Those fellows must be anxious to reach the gold diggings," Orlando commented.

"I wonder if—if they air. More likely, though, this cold, wet spell su'prised 'em out on the high prairie; and they're jest rollin' ahead a few miles till they can find a campin' place that's sheltered from the wind."

This surmise was doubtless correct; for no more wagons passed during the day. Rain and wind continued to rage, and the two travelers, with Frisk, remained in their tent, sometimes chatting and sometimes napping. Just after nightfall the rain ceased; but the wind was still blustering when the campers fell asleep.

Morning came, and there was neither wind nor rain. The travelers were up at daylight, cooking and eating their breakfast. Before going down, the wind had dried things. Brindle, with her blanket still on, was lying comfortably in the grass. Orlando had to drive her up to milk her.

Their breakfast ended, the two men bottled their milk for carrying, then took down their tent, packed their things on the cow or on the wheelbarrow, and started back toward the trail.

They found the great road—it was nearly a hundred feet wide in most places—still wet. But there was not mud enough to cause them serious inconvenience. The trail continued muddy till the afternoon by which time the sun, now shining from a cloudless sky, had dried it except in the lowest places. Orlando relieved his fellow traveler no wand then, sometimes by pushing the whole wheelbarrow, and sometimes by merely holding one handle.

Now the numerous tribe of gold seekers, having abandoned their various sheltered camps, were rolling westward again; and the great thoroughfare was as busy a place as ever. When night came, the foot travelers camped near more than a dozen big wagons. Those wagons were heavily loaded, with six yoke of oxen in each team, and they did not cover many miles in a day's journey.

After that spell of rain and wind, the weather was all that could be desired. Orlando was growing stronger every day. And both he and his partner declared themselves in love with life on the trail.

One afternoon, not long before sunset, the two went into camp near a little prairie stream. On the far side of the stream was another camp, with a lone wagon in it. Several oxen, three cows with their calves and a pony were grazing not far from the wagon.

A few minutes after the foot travelers had camped, Orlando took their water keg and went down to the branch for water. And scarcely had he started when he noticed a girl coming from the other camp, with a bucket in her hand. Soon the two met on the banks, with only the stream between them.

The young man raised his hat; and the girl, whose age was 16 or 17, nodded shyly,

They met with only the stream between them.

without speaking. But she looked friendly, and Orlando said:

"On your way to the land of gold, I suppose."

"Yes, sir." The answer was in shy, soft tones. "That is, we hope to find it a land of gold. We're on our way to see what's there."

"Where did you start from?"

"From Missouri—Boone county."

"My partner and I are from Illinois. Our home is about a hundred miles southeast of St. Louis. We came through Missouri."

"Are you— You seem to be traveling on foot."

Orlando nodded. "We've footed it the whole way."

"And you expect to walk all the rest of the way to the mountains?"

He nodded again. "That's what we started out to do."

"It's a long, long road to tramp. I should think you'd wear yourselves out before you get there."

"Hard part came first. The first few days were very hard for me. Since I've got used to tramping I rather enjoy it. I wasn't very strong when we started; but I'm growing a little stronger every day. Of course I'm having an easier time than my partner. He's trundling all his things along on a wheelbarrow. I've got a cow to carry mine—a big cow."

"I'd noticed that. But it's a strange way to travel. I never saw a cow carry a pack before."

"Neither did I. But she beats a horse badly enough. She not only carries my pack, but she furnishes us milk."

"Do you actually milk her?"

The young man nodded. "Twice every day. And she gives as much milk as my partner and I care to drink."

"We have some cows with us, but they're not giving any milk to speak of; not more than enough for their calves. My brothers drive them all behind the wagon. We've got one pony, and they take turn about riding him."

"You appear to be traveling alone. With no other wagons, I mean."

"Yes, sir. My father prefers to travel that way. If it's safe, we may travel alone all the way to the mountains. That's not likely to be safe, though. When we strike the Indian country, we may have to join a wagon trail. But—but I must hurry back They're waiting for me to come with some water."

She began to look for a sloping place. But Orlando hurried down, sprang across the narrow stream, took her bucket and filled it, then handed it up to her. She thanked him and moved away toward the wagon.

The young man climbed the bank, then stood gazing after her. She was bareheaded, and her face was very pleasing to look at. Finally he went down again, dipped his water keg into the stream, held it under till it was full, and then returned to camp with it.

By this time Esau had a fire blazing, and was busy with supper. Brindle, with her bell and her hobbles on, was grazing close by. Orlando got a cup out of his pack and went to milking her.

"Whole family over yonder on their way to the gold country."

"Yeh. They're from Missouri."

"How did you know that, Esau?"

"The man told me. I went down the branch to them big trees yonder for an armful of wood. And he was there, pickin' up wood, too, him and his boys. He invited us to his camp. I told 'im we might step over after supper."

"Good! That's just what we'll do. Whoever that Missourian is, he's got a strikingly pretty daughter."

"How do you know that?"

"Why, I saw her—and talked a little with her. Down at the branch, when we both went for water."

"I see. No wonder it took you so long to fill your kag."

Night came on while the two men were eating. After supper, leaving Frisk to guard their camp, they crossed the branch and approached the other camp fire, by the big wagon. As they appeared in the light, a bearded man sprang from his seat by the fire.

"Come round! Come round and sit down!" he called out, heartily. "We're a little short of chairs, but we'll do the best we can for you!"

"Cheers? We've forgot how to set in 'em," Esau assured him. "Keep your seats, everybody!"

"Yes, we're so used to sitting on the grass, we feel more natural that way," Orlando remarked. As he spoke his eyes were running here and there, in quest of one member of the family.

Soon he discovered her, well back in the darkness. She and her mother had been making down beds under the big wagon and putting the youngest children to sleep there.

"Cooper's my name," the head of the family was saying, as he advanced to meet the visitors with outstretched hand. "What might be yours?"

They told him while shaking hands; and then they seated themselves on a box which he urged them to take.

While the visitors were chatting with the immigrant, Cooper's wife and daughter appeared in the firelight. They greeted the visitors and seated themselves. There were no introductions. The woman soon joined in the conversation, but the girl was content to listen.

Before long whimpering was heard back in the darkness. Now the mother said:

"Hazel, go and see what's the matter with that child, won't you?"

Without a word the girl arose and went. Orlando's eyes followed her to the wagon. Just at this time Esau was saying to Cooper:

"How comes it you're takin' your whole fam'ly with you to the gold diggin's? This is the first fam'ly we've run acrosst sence we left home. The first fam'ly on the way to the Rockies, I mean."

"Well, I was thinking some of coming by myself; but my wife and daughter, they wouldn't agree to that. They said if any of us made the trip we'd all make it. If we didn't like it out there, it wouldn't be any further from the Rocky mountains to Missouri than it was from Missouri to the Rocky mountains. We could turn around and come rolling back."

"It will be an interesting trip for all of us," the woman spoke up. "My husband had traveled through this country. And we'd all heard him talk so much about it that we wanted to see it—were eager to see it for ourselves."

"You've been out here before? When was that, Mr. Cooper?" questioned Orlando.

"Oh, 20 years ago, before I was married. I made a trip to Santa Fe in the spring of '39; and then another trip the following spring. A teamster, I was. I liked the country out there, and I liked to cross the plains. The Santa Fe trader I was driving a wagon for—his name was McKnight—begged me to stay with 'im longer. I was half in love with plains life; but I was heels over head in love with a certain girl back in Howard county, Missouri. So, of course, I threw up wagoning, married the girl and settled down at farming. And I've stayed settled down ever since—till now."

"We still own our farm, back yonder in Boone county, Missouri," Mrs. Cooper here explained. "If we don't like the Rocky mountains country, we'll turn round and roll for home."

And the man added, "Yes, we rented our farm before we started on this trip. Rented it to one of our neighbors for two years. That is, if we want to stay two

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: THE FARMER just came and as usual I took a few minutes off to look at the Family Circle. The verse you quote is a favorite of mine.
bP

"Three things a man must learn to do
If he would make his record true.
To think without confusion clearly,
To act from honest motives purely,
To love his fellow men sincerely,
To trust in God and Heaven securely."

If we follow the rule in the last line to the letter we need never fear anything. I thoroughly believe that cleanliness is next to godliness, but I believe that cleanliness should be in the mind as well as the body. If our minds are clean we will desire to have our surroundings clean and the clean mind will reflect the clean body and clean home. Hateful, resentful or unloving thoughts are sure to react upon the thinker and will cause bodily ailments sometimes and unfit one for clear thinking and careful acting, thereby causing accident often.

Kindly thoughts result in good deeds and react in like kind, proving the truth of the Bible verse, "With what judgment ye judge ye shall be judged and with what measure ye mete, it shall be measured unto you."

I love the twenty-third Psalm. It has given me more strength to do and be what I ought to be than any other one thing. It only emphasizes the last line of your verse, "To trust in God and heaven securely."

I am not what might be called religious and many people think I am irreverent because they say I make God seem common by using him for the trivial things of life. I feel that if God is then he is not unmindful of the least thing which concern his creatures.

Most of the mothers' and homemakers' lives are made up of the little things which taken singly seem small, but having to be borne day after day roll up into greatness like the snowballs the children make. And what terrible results follow and what scars are sometimes made on women's souls and bodies when she carries her burdens unaided and has no help in overcoming the constant worries which make up her days!

"To trust in God and heaven securely" is the surest way I know of putting the true value on trifles and overcoming them.

M. S. D., Wash.

Dear Mrs. Barland: I receive so many helps from this page that I will try to add a few.

To make ink for the children at school dissolve a piece of lead one-fourth inch long from an indelible pencil in warm water. This will make an ink bottle full.

Paste the "Home Recipes" in note books arranging each in its proper division. They make nice presents.

Make the Bedtime Stories into a volume. My little one of scarcely 4 years loves her "Bedtime" story book. If you can not afford to buy the note books to paste the various clippings in you can make a scrap book by using the leaves of the magazine. You will find if you classify your clippings and paste them accordingly they will be more available because so much easier to find.

MRS. J. C. G., Oregon.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

HAVE ALL BOTTLES LABELED.

Where do you keep your household remedies?

What sort of bottles and packages do they fill?

Is every bottle labeled?

Dr. Copeland.

You couldn't hire me to take medicine out of an unlabeled bottle. For 25 years there has been a rule in my office which is never violated. Every unlabeled bottle or package of medicine is to be dumped into the sink as soon as it is discovered. The bottle should be supplied with a proper inscription before it is filled.

Without a label, a bottle is like a pistol. More men and women have been killed by pistols which they or others did not know were loaded than have been destroyed by some wars.

Almost every drug and remedy is in some degree a poison. In sufficient quantities they will kill adults. Much smaller doses will destroy children.

Every community should have a law against distributing "samples" of any sort of medicine or other article which is capable of doing harm if taken into the stomach. No chance should be taken of an improper use being made of the sample.

In many a bathroom or medicine closet is a row of bottles. Sometimes they are labeled and sometimes not. The third bottle on the left is supposed to contain, let us say, argyrol; and the sixth iodine. Another has carbolic acid, and still another a fluid of similar color. How easy it is to transpose the bottles or to mistake one bottle for another.

There is a call in the middle of the night for this or that remedy. You get up in a daze, have no glasses on, and are really incompetent to select the proper bottle. No wonder mistakes occur.

Aspirin and bichloride of mercury tablets may be the same color and the same size. How terrible it is to take the mercury by mistake!

One way to guard against mistakes is to have a needle inserted, business end up, in the cork of every bottle of poison. This may be an uncomfortable, but a definite reminder that the contents of that bottle are dangerous.

There are various inventions of odd-shaped bottles, rough or stippled bottles, and other devices to give warning through the sense of feeling that you are holding poison.

But never fail to read the label. Always make sure what the package contains.

Make it a rule never to put medicine into a bottle which has on it the label of another article. In short, have the label mean exactly what a stranger would understand it to mean.

One of the habits everybody should form is to read the label—no matter whether it is medicine, external application or food. The federal, state and municipal laws are strict as regards labeling, and if you would be safe, read the label!

Know what you are taking and never trust to anybody's knowledge except your own. Many a life will be saved when labels are read and when labels read as they should.

Just Folks

In the quiet hour what are the things of life that make the strongest appeal, what are the things to be thought about?

These questions have been answered by the wise throughout the ages. Here is one answer:

> Finally, brethren, whatsoever things are true, whatsover things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report, if there be any virtue and if there be any praise, think on these things.

You and I may not practice these things, but in the quiet hour are they not worth thinking about?

One does not have to preach a sermon about truth. The very word truth is a sermon in itself.

All our lives we have heard honesty discussed. Just what is our own idea of honesty?

Purity not only strengthens the heart, but it clears the mind in its search after truth.

If you are just you will give a square deal so far as it lies in your power.

What are the lovely things of life? Is it the affection of an Evangeline that endures and is patient until it is enveloped in the light that never was on sea or land? Is it the protecting care of fatherhood or the abiding faith of motherhood? Does it culminate in the golden wedding?

I was in a florist shop the other day when the young man waiting on me said that there was nothing he liked to do so well as to fix up a bunch of roses for a golden wedding.

Moral teachers are always contrasting reputation and character; and yet what is there of import in a good reputation? Things of good report are to be desired. They are worth while. You may undermine a good reputation, but a good reputation remains one of the prized possessions of life.

If there be any virtue anywhere; any phase of virtue, any flavor of it, any spirit of it manifested in any of the dealings between man and man—that is worth thinking about.

Finally and as a climax, if there be any praise, if you can smile, if you can approve, if you can say a good word, if you can encourage and hearten—that is to lay up treasures for the quiet hour at eventide.

Who are they who can most easily think of those things? Not the rich, not the mighty, not the learned, but those who pursue the even tenor of their life with common folks, those who belong to the kingdom of breadth, those who share the common joys, the common sorrows and the common hopes of plain people. More or less of a smoke screen is always thrown around riches and honors and learning when it comes to measuring the values of the things of life.

EAS

Care for your Teeth

In regulating an incubator, running a tractor, or cleaning dairy utensils, great care must be taken to do the work in the *right way*.

It's just as important to clean the teeth the *right way*. A good farmer would no more buy a gritty, soapless dentifrice for his family than he would use a gritty soap to wash the high polish of his car. Nor would he give the children a "druggy" tooth paste with strong chemicals any more than he'd use a spraying material so strong as to burn the foliage of his orchard.

COLGATE'S

Cleans Teeth the Right Way

"Washes" and Polishes—
Doesn't Scratch or Scour

The U. S. Public Health Service tells us that diseases of the heart, blood, kidneys and joints are often caused by neglect of the teeth. Cleaning the teeth twice a day with Colgate's is a common sense investment in health.

Colgate's Ribbon Dental Cream has just the combination you need—

(1) Its specially prepared chalk with *rounded* edges cleans and polishes safely.

(2) Its "washing" quality gently cleans the teeth and inside of your mouth.

If your store doesn't carry *all* the Colgate products listed below, send in the coupon.

W. F.

Good Teeth - Good Health

High Points in News of the Week

At this writing there is little information upon which to base a prediction as to early developments in the railroad strike situation. The railroad companies and the organized employees are standing firm in their original positions, the railroad executives declaring their determination to stand by the awards of the railway labor board and the 400,000 striking shop craftsmen declaring they will not return to work under the terms laid down by the board.

A significant feature in last week's development was the issuance by President Harding of a proclamation directing "all persons to refrain from all interference with the lawful effort to maintain interstate transportation and the carrying of the United States mail." This proclamation followed reports of a number of minor acts on the part of strikers in a few railroad shop districts tending to prevent nonunion men from being employed in their places and endeavoring to prevent the handling of trains. A number of trains, in a few instances, were reported to have been canceled by the railroad companies owing to their inability to operate them.

"These activities (referring to interstate transportation and the carrying of the mails) and the maintained supremacy of the law are the first obligations of the government and all the citizens of our country," said the president in his proclamation. "Therefore, I invite the cooperation of all public authority, state and municipal, and the aid of all good citizens to uphold the laws and to preserve the public peace and to facilitate those operations in safety which are essential to life and liberty and the security of property and our public welfare."

Later in the week President Harding authorized the war department to provide military protection wherever necessary to insure the operation of trains and to prevent any possible destruction of property where there was likelihood of striking workmen refusing to abide by their officers' instruction to do no violence to railroad property or nonunion workmen.

There has been comparatively little activity on the part of the military forces, though guards have been placed at some of the railroad centers.

The railroad companies have continued throughout the week to endeavor to secure enough help to operate the shops sufficiently to keep railroad equipment in operating condition.

While trains might be operated successfully for an indefinite time with only the shop workers out on strike, the gravity of the situation lies primarily in the possibility of other railroad workers' organizations striking. The maintenance of way union has already been authorized by its membership to call a walkout, but its officers have refrained from doing so, in the hope of reaching an agreement either with the railroad owners or through the action of the railway labor board. A significant event of late last week was a conference between President Harding and the heads of the maintenance of way employees. The conference was reported to have been a constructive one, offering some hope of an agreement whereby a strike of the 400,000 maintenance of way workers would be avoided.

Steps have been taken by the postoffice department looking forward to the possibility of carrying mails by motor trucks in case the strike reaches a point where mail handling would be interfered with.

In the main, railway train service has been little interfered with up to the present time.

Pacific Poultry Producers

Change in the management of the Pacific Cooperative Poultry Producers has been announced in a circular letter, which the executive committee has mailed to all members.

The letter says:

"The executive committee, at its meeting on July 10, relieved Mr. Upson from further duties as manager of the association, effective at once, his salary continuing until August 15. President F. C. Schroeder was placed in full charge of the association temporarily, pending the selection of a permanent successor to Mr. Upson, his per diem being fixed at $12.50 for each working day."

It is also stated that a motion was carried declaring it to be the policy of the association to select a permanent manager as quickly as possible from sources other than the board of directors.

The executive committee adds:

"We feel warranted in assuring you that there is no alarm over the situation. There will be a meeting of the board of directors on July 21, at which time the actions of the executive committee may be fully reviewed.

Farm Business and Markets Outlook

(Continued from page five.)

become less plentiful right along.

BUTTER PRICES WEAKEN.

Demand for butter fell off sharply last week and prices weakened. Storage operators bought freely as long as a June mark could be obtained, but their purchases declined sharply at the end of the mouth. Also the export demand, which absorbed about 1,500,000 pounds a short time ago, has dwindled away. Receipts have fallen off, but remain large enough to furnish a surplus over domestic consumptive needs. Storage holdings in the United States on July 1, according to the reliminary report, were 67,848,000 pounds accumulated mostly in June. A year ago they were 61,991,000 pounds and the five-year average is 60,759,000 pounds. They generally continue to increase until around the first of September.

Prices for 92 score fresh butter on July 12 were:

Chicago, 35c; New York, 37c; Boston, 37 1-2c; Philadelphia, 37 1-2c.

CHEESE MARKETS REACT.

Cheese markets both country and distributing opened strong last week, but buyers refused to follow and the close was weak with the immediate trend downward. Eastern points were less affected than Chicago. Production is falling off, but rains recently in both New York and Wisconsin will clip to sustain it. Total cold storage holdings of American cheese in the United States on July 1 were approximately 32,941,000 pounds, compared with 34,948,000 pounds last year and a five-year average on that date of 33,263,000 pounds.

Prices for No. 1 American cheese on July 12 were as follows:

Chicago—Twins, 19 1-2@20c; S. Daisies, 20@20 1-2c; D. Daisies, 19 3-4@20c; Longhorns, 20@20 1-2c; Square Prints, 20 3-4c.

FRUITS AND VEGETABLES.

The potato crop was estimated as of July 1 at 429,000,000 bushels, compared with 347,000,000 bushels during the preceding five years. If this year's promise is fulfilled it will be the third largest crop on record. Shipments of new potatoes have been a little lighter recently and prices are not expected to change much in the immediate future.

The sweet potato crop is estimated at 111,000,000 bushels compared with an average during the six preceding years of approximately 90,000,000 bushels. If this year's crop lives up to the forecast, it will be the largest on record.

The apple crop was estimated at a total of 190,000,000 bushels with a commercial crop of 31,400,000 barrels. The boxed apple states have a slightly smaller crop than last year, while the barreled apple states have a much larger crop. Shipments of new apples to July 10 were 1366 cars, compared with 128 cars to the same date last year.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Ore., July 15.—Cattle—Choice steers, $7.75@8.50; medium to good steers, $7@7.75; fair to medium steers, $6@7; common to fair steers, $4@6; choice cows and heifers, $6@6.50 medium to good cows and heifers, $5.25@6; fair to medium cows and heifers, $4.50@5.25; common cows, $3.50@4.50; canners, $2@4.50; bulls, $3.50@4.50; choice dairy calves, $9@9.50; prime light calves, $8@8.50; medium light calves, $7.50@8; heavy calves, $5@7.50.

The Grain Drill With Double Run Feed.

You can plant treated or dry seed of every size or kind without bruising or cracking it, in the desired quantity per acre, in trenches of uniform width and depth by using the

JOHN DEERE
VAN BRUNT GRAIN DRILL
WITH DOUBLE-RUN FEED

Van Brunt features compel accuracy and provide a wide range of adjustment. The adjustable gates of the Van Brunt double-run feed, together with the multiple gear construction, make it possible easily to adjust drill to plant 48 different quantities of grain—wheat, 16 to 258 pounds per acre, and other grains in proportion. No wire reducers or other contrivances are required.

Kernels of every kind and size are planted at regular distances apart—there are no vacant spots. All the seed is properly covered so that it establishes root connections easily and receives the nourishment from the soil necessary to make deep roots and strong stalks. The result is a crop better able to withstand excessive heat and blighting winds.

Operates on steep hillsides without axle end-play, and the grain cannot shift to one side, leaving part of the box empty. *The grain box will not sag*, even after years of use—it is trussed to the frame and axle at five points. *The frame is angle steel, reinforced.* The Van Brunt is built like a steel bridge—it cannot buckle or sag. Frame is supported on long, strong wheel hubs.

Gears always in mesh—no sudden jerks to strip them. They are self-aligning, dirt-proof, and are provided with spring relief—obstacles pass through without breaking or damaging the gears.

Guaranteed disc bearings; tilting levers for adjusting position of furrow openers to cut deep or shallow; single discs, double discs or hoe furrow openers.

Sold by John Deere dealers.

(Continued from page ten.)

years. If we go back sooner, the man we rented to will vacate at the end of one year. And if we don't go back at all—don't care to go back, he'll buy the place."

"A pretty safe arrangement, that," Orlando commented. "You've left the gate open, whichever way you want to travel. I suppose you're like all the rest of us gold seekers: expecting to journey back to civilization some day with a good-sized bag of gold."

"Well, as to that, I don't know what my wife and children are looking forward to. I'm hoping to dig up gold enough to pay for our trip, and maybe a few dollars besides. And then, of course, there's always the possibility of 'striking it rich' out there. That, together with what we'll see on the way and in the mountains, is what makes the trip interesting. Even if we don't have anything but the journey, that will be well worth while, in my opinion. The children will always have the recollection of it, as I have of my trips to Santa Fe. I'm old enough to know that it's worth something to have interesting experiences to look back to, and to think about and talk about."

"I'm not old enough and haven't been away from home enough to have had much experience; but I'm sure you must be right," Orlando answered. "At any rate, I've always been as much interested in the trip itself as I have been in what we may dig out of the mountains. This is already a wonderful experience to me."

"So it is to all of us, I think." Mrs. Cooper was speaking. "And the most interesting part lies still ahead."

"We Coopers come by our love of pioneering honestly," the man remarked later. "I mean this particular family of Coopers. My grandfather, Captain Sarshall Cooper, was one of the first settlers in the Boone's Lick region. That was before there was any country called Missouri. My grandfather and his brother, Colonel Ben Cooper, were leaders in the movement to settle what is now Howard and Cooper counties, Missouri. That was in 1810. And when the war of 1812 broke out with England, they were leaders in organizing a band of 200 riflemen, and in defending their settlement against the Pottawatomies and other redskins that the British sent against 'em. For six years theirs was the outermost, westernmost settlement in America. My grandfather and his brother, with 40 or 50 other men, built Cooper's fort, 10 miles or thereabouts northwest of where Boonville now stands. And during that war my grandfather was killed—in Cooper's fort."

"Inside of the fort? How did that happen?" Esau wanted to know.

"It was a stormy night in April. He was sitting in front of the fire, with his youngest child on his lap. The back wall of his cabin made the wall of the fort—the outside of the fort. While grandpa was sitting there, unsuspicious of any danger, a redskin gouged the mud out from between two logs, poked a rifle barrel through and shot 'im dead. Or, anyhow, he died in a minute or two."

"Why, I've read about that," Orlando hastened to say. "And I've read a lot more about the Coopers and the Boone's Lick settlement, and what happened there during the war with England. It was all very interesting."

"Yes, it's thrillingly interesting, especially when you hear the old settlers tell about it, as I have so many times. My wife's people were pioneers in the Boone's Lick country, too. She was an Adair before I married her. Her father, Rollin Adair, traveled all the way from North Carolina to Boone's Lick in a canoe. He and an old friend of his, a gunsmith named Thompson, made the trip together. They drifted down the French Broad and the Tennessee and the Ohio to the Mississippi; and then they paddled up the Mississippi and the Missouri to Boone's Lick. They spent a winter hunting and trapping there, even before the Coopers came to stay."

"And Rollin Adair's wife, my grandmother, traveled farther in a canoe than he did," Hazel Cooper now spoke for the first time to say. "Grandma Adair and her father came all the way from the St. Lawrence river, in New York state. After reaching the headwaters of the Allegheny, they drifted down that and down the Ohio in a birch-bark canoe. And then they worked their way up to Boone's Lick. I've heard her tell about it so many times. At the mouth of the Tennessee she first saw the man she afterwards married—my grandfather, Rollin Adair. You ought to hear those two talk if you want to listen to thrilling experiences."

"And they're still alive?" asked Orlando.

"Indeed they are—very much alive!" the girl assured him. "Grandpa's getting close to 80 now. He's 77. Grandma's 12 years younger—only 65. Grandpa's white-headed, but grandma has only a few gray hairs. They're both cheerful and lively."

Now Mrs. Cooper spoke again, "All the old settlers say that Hazel is the living picture of her grandmother at Hazel's age. Those who knew my mother when she was Rosalie Tucker of Cooper's fort, say that Hazel looks strikingly like my mother did. My grandfather, Cicero Tucker, lived on an island in the Missouri river, and made powder there before the war with England; also a little during the war, as long as he could get materials. He was half French, and had black hair and black eyes; and so had his daughter, my mother. Those skipped me, but Hazel got them. She looks like her grandmother, but not a bit like Mr. Cooper or me."

There were many things for the travelers to talk about, both of what had happened to the Cooper family's ancestors in the Boone's Lick settlement, and of what had happened to the head of the family on his youthful trips to Santa Fe. So it was late when Esau and Orlando returned to their own camp.

As usual, the two foot farers slipped out of bed at daybreak next morning. And they were ready to travel not long after sunrise. But the campers beyond the branch had not yet begun preparations for the day's march. Cooper's work cattle, with their big bells ding-donging, were still grazing quietly, a quarter of a mile from the wagon they were accustomed to pull.

For some reason Orlando was rather reluctant to set out, even after he and his partner were ready. First he made the excuse that Brindle needed to graze an hour or so longer. And when the cow had filled herself with grass and lain down, he still objected.

But—but it seems a—a little unneighborly to—to rush off and leave those folks over there by themselves."

"Oh, does it?" laughed Esau. "I'm glad that's the reason you're so slow pokey this mornin'. If you hadn't up and told me better, I might ha' been gump enough to believe that little Cooper gal had somethin' to do with holdin' you here."

Orlando blushed. "Well, even if she did, where would be the harm? Haven't I a right to get interested in the little Cooper girl if I want to?"

"Why, to be shore you have, Lando boy! To be shore! From what I saw of her last night, I think purty well of her myself. She's certainly all up and a-settin' for looks. But we didn't start out here on any gal-hunt, me and you. Not by a long shot! We're out for yaller gold—all we

(Continued on page sixteen.)

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3850. Lady's Dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 5 yards of 36-inch material. The width at the foot is about 2 1-4 yards. Price, 10 cents.

4039-4049. Lady's Costume. Waist 4039 cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 4049 cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. A medium size requires 8 3-8 yards of 40-inch material, if of one material. If made as illustrated, 7 yards of figured will be required and 1 7-8 yards of plain material. The width of the skirt at the foot when finished is about 2 1-8 yards. Two separate patterns, 10 cents for each pattern.

4042. Child's Play Suit. Cut in four sizes: 2, 4, 6 and 8 years. A 4-year size requires 3 1-2 yards of 32-inch material. To trim as illustrated requires 5-8 yard of contrasting material 32 inches wide. Price, 10 cents.

4053. Misses' Dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires 5 3-4 yards of 32-inch material. If collars and puffs are made of contrasting material 7-8 yard of 40-inch material will be required. The width of the skirt at the foot is 2 5-8 yards. Price, 10 cents.

4060. Girl's Dress. Cut in four sizes: 4, 6, 8 and 10 years. A 10-year size requires 3 1-4 yards of 32-inch material. Price, 10 cents.

4059. Girl's Dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires 4 yards of 40-inch material. Price, 10 cents.

4054. Lady's House Frock. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 6 1-8 yards of 32-inch material. Collar of contrasting material requires 1-2 yard. The width at the foot is 2 5-8 yards, with plaits extended. Price, 10 cents.

4068. Lady's Apron. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; and extra large, 46-48 inches bust measure. A medium size requires 4 1-2 yards of 27-inch material. Price, 10 cents.

3858. Junior's Dress. Cut in three sizes: 12, 14 and 16 years. A 14-year size will require 3 yards of 38-inch material. Price, 10 cents.

3619. Girl's Dress. Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size requires 4 yards of 36-inch material. Price, 10 cents.

3863. Child's Set. Cut in five sizes: 6 months, 1, 2, 3, and 4 years. The dress requires 2 1-4 yards of material; the petticoat requires 1 7-8 yards, and the drawers 1 yard for a 2-year size. For ruffles of embroidery on petticoat and dress, 2 1-4 yards for each will be required. Price, 10 cents.

3549. Boy's Play Suit. Cut in four sizes: 2, 3, 4 and 5 years. A 4-year size will require 2 1-2 yards of 36-inch material for the overalls and 1 1-2 yards for the blouse. Price, 10 cents.

Easy Now to Rid Your Place of Flies

Widely Known Scientist Discovers Wonderful Chemical That Is Fatal to Flies. Not a Poison—Harmless to Stock.

Flies are one of the most dangerous and annoying things with which the farmer has to contend. Now, through the discovery of E. R. Alexander, widely known scientist, you can rid your house and barns and live stock of these pests almost instantly, and with no trouble at all. This discovery is in the form of an organic chemical that is fatal to flies, and similar pests, such as chiggers, mosquitoes and moths.

This new discovery, which is called Alexander's Rid-O-Fly, is not a poison. Though it kills flies like magic, farm animals and human beings are not affected by it at all. In addition to killing these insects, Rid-O-Fly is a strong repellant. Flies will not come near stock or buildings where Rid-O-Fly has been used. Rid-O-Fly is particularly valuable for cows and horses, as it is a known fact that flies do untold harm to these animals.

So confident is Dr. Alexander that his discovery will rid your house, barns and live stock of these pests that he offers to send a $2.00 supply for only $1.00 on the guarantee that if Rid-O-Fly does not solve your fly problems it will cost you nothing. Two big Kansas City banks guarantee the reliability of this offer.

SEND NO MONEY—Just your name and address to the Alexander Laboratories, 1508 Gateway Station, Kansas City, Mo., and this introductory offer will be mailed at once.—Adv.

Dolly Gifford, 9 years old September 10, 1921, lives on a big dairy ranch in the Methow valley, Okanogan county, Wash. Every night she goes after the cows on her pony named Alcatraz. Dex Carlo, the dog, goes with her. Once Dolly and her cousin, Carmyn, went with Dolly's brother, Gilbert, after some range stock. Dolly rode Wrangle that day and Wrangle tried to buck her off, but she stayed on. Dolly has freckles and says she doesn't like them.

Just before school closed Clara McCloy went with her schoolmates for a hike down the river. Some went swimming and some went wading. Then, after eating a good lunch they all went down the river two miles. About 4 o'clock they returned to the schoolhouse. This year at school domestic science and music were taught. Clara enjoys every copy of The Junior Farmer. She lives in Walla Walla county, Washington, near the mouth of the Snake river.

Our cousin, Zoe Ludwig, lives in southern Washington, east of the Yakima Indian reservation. Zoe is 10 years old. July 11, 1922, she will be 11. She has a calf for a pet.

Birthday Greetings

THURSDAY, July 20.—Frederic Albert, 10 years old; Helen Miller, 11.

FRIDAY, July 21.—Ruby Bailey, 10 years old; Gladys Lucile Barcelow, 10; Arthur Cartwright, 10.

SATURDAY, July 22.—Stuart Duncan, 11 years old; Bonnie Belle Hood, 6; Beatrice Olsen, 11; Wilbur Stiles, 9; Thelma Woodland, 10.

SUNDAY, July 23.—Nina Bean; Elizabeth Coby, 10 years old; Gladys Page, 10.

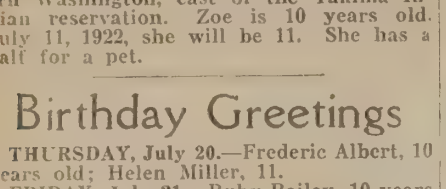
MONDAY, July 24.—Inez Eck, 10 years old; Alma Laurene Stensaa, 9.

TUESDAY, July 25.—Frances Haxton, 10 years old; Blanche James, 11; Virginia James, 11.

WEDNESDAY, July 26.—Helen Howe, 9 years old.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:



Frances Fishback, Archie Hansen, Catherine Atkinson, Esther Simila, Henrietta Pinster, Ruth Carlin, Elizabeth Reykjalin, Norma Rogers, Alice Sargant, Marion Lovelace, Hazel Helmo, Margaret Hunter, Goldie Mae Green, Verna Stevens, Eva Quesnell, Gladys Stone, Donald DeHart, Blanche Didra, Elga Wing, Florence Uhlrich, Grace Cockley, Helen Richardson, Lydia Granwahl, Dale Early, Edith McCarty, Blake Jones, Katherine Scott, Howard Swift, Alma Leola Dicfe, Gaylus Adams.

BEDTIME STORIES

By THORNTON W. BURGESS.

WHY JUMPER IS TIMID.

Jumper the Hare had come a long distance to visit his cousin, happy-go-lucky Peter Rabbit. He had come out of the Great Woods of the north; in fact, the very same Great Woods out of which Prickly Porky had come. But the little meadow people and those who live in the Green Forest on the edge of Green Meadow knew nothing about where he came from nor what kind of a place it was. They simply saw that Jumper the Hare, who was twice the size of Peter Rabbit, was twice as timid as he, and every one knows that Peter has been known to try to run away from his own shadow.

"No one is a coward, Peter, who runs away from those bigger and stronger than he."

So while all were polite to Jumper the Hare, they smiled behind their hands when he had passed, and behind his back called him a coward. He jumped at every shadow and at every little noise. If any one spoke to him unexpectedly he would jump so that it seemed as if he really might jump right out of his skin. Even Peter Rabbit had to admit that appearances were very much against his cousin—that Jumper seemed very, very much like a coward. Finally Peter told Jumper the Hare what the others thought of him. Jumper just smiled.

"Peter, who are you afraid of?" he asked.

Peter thought for a few minutes. "The fur hunter's son when he has a gun and Granny Fox when I am a long way from the old brier patch, and old Whitetail the Marsh Hawk if there isn't a hiding place handy."

"Is that all?" asked Jumper.

"Yes," said Peter.

"And usually you can see them a long time before they can get near you," said Jumper.

"Yes," replied Peter.

Jumper munched a mouthful of sweet clover. "No wonder you don't understand," said he finally. "Why, if that was all I had to be afraid of I wouldn't—why, just wouldn't be afraid, that's all. Now, up in the Great Woods where I come from live Mr. Panther and Mr. Wolf and Mr. Fisher, and Mr. Bear, and Tufty the Lynx, and each one is very fierce and strong. Each one would rather dine on fat hare than anything else under the sun. While some of them try to catch me by day, the others spend their nights looking for me. So I have had to live always ready to jump at the least sound, hiding in dark places most of the time, and with my heart in my mouth whenever I came out into the open. Here on the Green Meadows it is all open and I have not got used to it. Every sound I head I think is Mr. Wolf or Mr. Fisher stealing up, and I jump. No one is a coward, Peter, who runs away from those bigger and stronger than he."

Peter thought it all over. Then he hastened to tell Johnny Chuck, Johnny told Jimmy Skunk, and Jimmy Skunk passed the story along. But still there were a few who called Jumper the Hare a coward and one of these was Reddy Fox.

Irrigation District Rule

(Continued from page three.)

ty commissioners, after they have determined the sufficiency of the petition. If a petition otherwise meets the requirements of the law, the fact that it includes lands which can not be legally included in the district will not of itself invallidate such petition. If it were otherwise the board could never exclude lands it was proposed by the petitioners to include, without the withdrawal of the petition and the filing of a new one, whereas the commissioners are expressly authorized to determine what lands will be benefited by the project and to exclude such as will not be. When it has so fixed the boundaries of a proposed irrigation district the matter is submitted to a vote of the land holders involved, in the manner prescribed by law.

Attorneys for the petitioners declared that, under those circumstances it would be needful only to eliminate the names of signers within the Greenacres district, and proceed under the original petition. An extension of time has been granted them for the purpose of determining and setting forth that it is still the will of the needful number of signers outside the Greenacres district that the dry land involved be created an irrigation district. Elimination of the already watered territory will presumably somewhat increase the cost per acre of the new project, and hence the extension of time for determining the pleasure of the dry land holders originally favoring the district.

Large holders in certain sections of the dry lands concerned had strenuously opposed the creation of the new district, charging that the total acreage represented by the signers of the petition was but 2541 of the 10,500 acres involved, so that the bonded burden would fall heavily on the now dry lands for the improving of the Greenacres irrigation system. It was proposed by the newer district to replace the partially pumped water in the Greenacres ditches with an all-gravity system.

Guernsey Week

Guernsey breeders of western Washington are going to have a real Guernsey week and visit the herds in three counties in the northwestern part of the state. The tour will begin July 25 in Whatcom county, where two days will be spent under the direction of County Agent H. B. Carrol Jr. This trip is known as the annual Whatcom county Guernsey gallop and includes some of the best herds and club members' animals in the northwest. The next move will be a boat excursion to Island and San Juan counties on July 27, 28 and 29. The steamer Potlatch will take the visitors to all points where Guernsey herds may be found on the islands and make one or two stops in Clallam county.

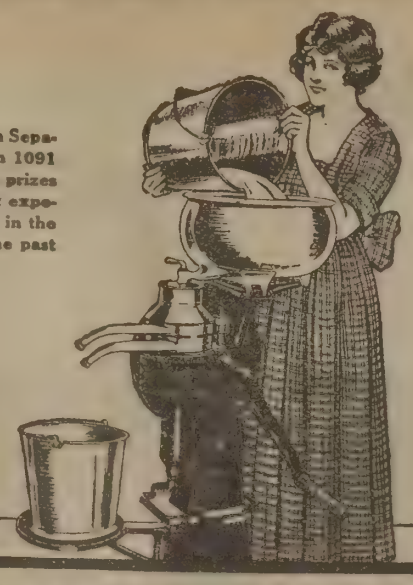
The rates on the boat will be $6 a day, which will include fare, state room and meals. There are state rooms for 64 persons, but since there is room on the boat for about 400 passengers it may be necessary for the late comers to secure sleeping quarters at night stops.

PICNIC AT NOTED JERSEY FARM.

About 150 persons enjoyed a picnic Saturday, July 15, at Waikiki Jersey farm on the Little Spokane river, north of Spokane. Among the speakers were Dean E. J. Eddings and Professor F. W. Atkeson of the University of Idaho and Dr. S. B. Nelson and Professor E. V. Ellington of the Washington State college. In addition to the regular herd of Jerseys at Waikiki a carload of purebred Jerseys recently purchased in Tennessee and a new imported bull were inspected by the Jersey men and their families.

REPRESENTS NORTHWEST.

E. W. Van Tassel was elected as one of the directors of the National Ayrshire association at their recent meeting at Devon, Pa. There are 12 directors in all, most of whom are located in the eastern states. Mr. Van Tassel is now the only director in the Pacific coast district. He is one of the leading Ayrshire breeders of the west, having an excellent herd on his farm at Wenatchee, Wash.



ELIGIBLE TO ENTER SALE.

There are only 33 cows in Washington, three in Oregon and one in Idaho whose sons will be eligible to entry in the auction sale of Holsteins at the Pacific International this fall, under the rule that only bulls whose dams have yearly records of at least 800 pounds of butterfat will be admitted. This is the standard recently established by George Gue, who manages the sale.

De Laval Cream Separators have won 1091 grand and first prizes at all important expositions and fairs in the world during the past 40 years.

De Laval butter has won first prize at every meeting of the National Buttermakers Association, with but one exception.

51% ARE DE LAVALS

The overwhelming number of De Laval Cream Separators in use is proved in a striking and forceful way by three recent investigations conducted by disinterested people, covering most of the principal butter-producing states:

(1) From an investigation conducted by the **Purdue Agriculturist (Indiana), Iowa Agriculturist, Cornell Countryman (New York), Agricultural Student (Ohio), Penn State Farmer, Tennessee Farmer,** published by the students of the various agricultural colleges in question, and their readers, who received the questionnaire, are either graduates or former students:

64.8% use cream separators of the following makes:

50.6%—De Laval.
16.8%—Nearest competitor.*

(2) Sixty-two per cent of the cream separators on 388 representative Minnesota dairy farms, selected at random and over a wide area, are De Lavals, according to a survey recently made by **The Farmer,** of St. Paul.

De Laval—62%.
Nearest competitor—6.4%.*

(3) From the Dairy Farm Survey of **Hoard's Dairyman** (the foremost dairy paper in the world, having a circulation of approximately 85,000 at the time of this investigation).

Have you a cream separator?
80.00%—Yes.

What make?
41.18%—De Laval.
16.74%—Nearest competitor.*

51.26%—average number of De Lavals, based on the foregoing, which confirms the well-known statement that there are about as many De Lavals in use as all the rest combined.

The only reason there are so many more De Lavals in use is that it is the best separator—skims cleaner, lasts longer, and is easier to clean and turn.

*Names of all separators used and percentages given on request.

EXPERIMENT STATION
PULLMAN

Pike's Peak or Bust

(Continued from page thirteen.)

can rustle up. And the faster we hump ourselves t'wards the Rockies, the better chance we'll stand to git there before somebody else totes it all off."

Ere long the wheelbarrow and the pack cow were moving toward the trail. After crossing the branch, the foot travelers stopped for a few words with the people at the wagon.

"Well, from what you boys told us last night, I rather reckon you'll peg along faster'n we care to drive," Cooper remarked.

"Yes, guess maybe we will." Esau was answering. "It stands us two in hand to git to the mountains as soon as ever we can. Sorry, too, I am. Wisht us and you uns could ha' crossed the plains together."

"So do I—so do I," Cooper assured him. "But even if we cain't do that, we're likely to run onto you boys again after we arrive at our journey's end."

"Yes, and we'll keep a sharp lookout for you there," Orlando spoke up. His words were addressed to Cooper, but his glance ran back to Cooper's shy little daughter, who was now standing near the wagon. She blushed slightly, and her eyes went down in a modest way.

A few minutes longer the two traveling parties stood talking together. Then Esau put his head under the strap, and caught up the handles of his wheelbarrow. Orlando took a closer grasp on the rope reaching to Brindle's horns as he called out:

"Well, good-bye to you, all of you, till we see you again at the gold diggings!" His eyes swept around to the whole family, but rested on Hazel last and longest.

As the foot travelers trudged away over the dusty trail, Orlando turned his head from time to time to gaze back. And he kept doing the same thing as long as that lonely camp was in sight. One look showed him Hazel's two younger brothers, one mounted and the other on foot, driving the oxen toward the wagon; and the last look showed Hazel's father putting the yokes on his work cattle.

After a few miles Esau and his companion saw numerous still-smoking camp fires not far from the trail. And from the next high point they could make out many white-topped wagons crawling over the prairie, far ahead. From every elevated position Orlando gazed back, hoping to catch sight of a solitary wagon—the Cooper wagon. But he was always disappointed.

Day after day the two men journeyed on, alone. Every few miles they passed a string of wagons, from three or four to a dozen. For they were out-traveling all the work cattle. On the other hand, wagons drawn by horses or mules sometimes passed the wheelbarrow party. However, most of the teams were oxen.

Late one day, not a great while after Orlando and his fellow traveler had gone into camp, Esau stood gazing eastward along the trail for a little while, then called out:

"Lando, what do you reckon that spot is on the road back yander?"

The young fellow addressed, who was busy milking while the cow cropped the grass, now stood up and gazed in the direction his partner was gazing.

"That's more than I can tell yet, Esau. It's moving this way, though. Wait till the thing comes closer. Then we can make it out."

A little later Orlando said: "Now I can guess what your moving spot is. It's a—seems to be a—handcart. And I see several men pulling it—and pushing it."

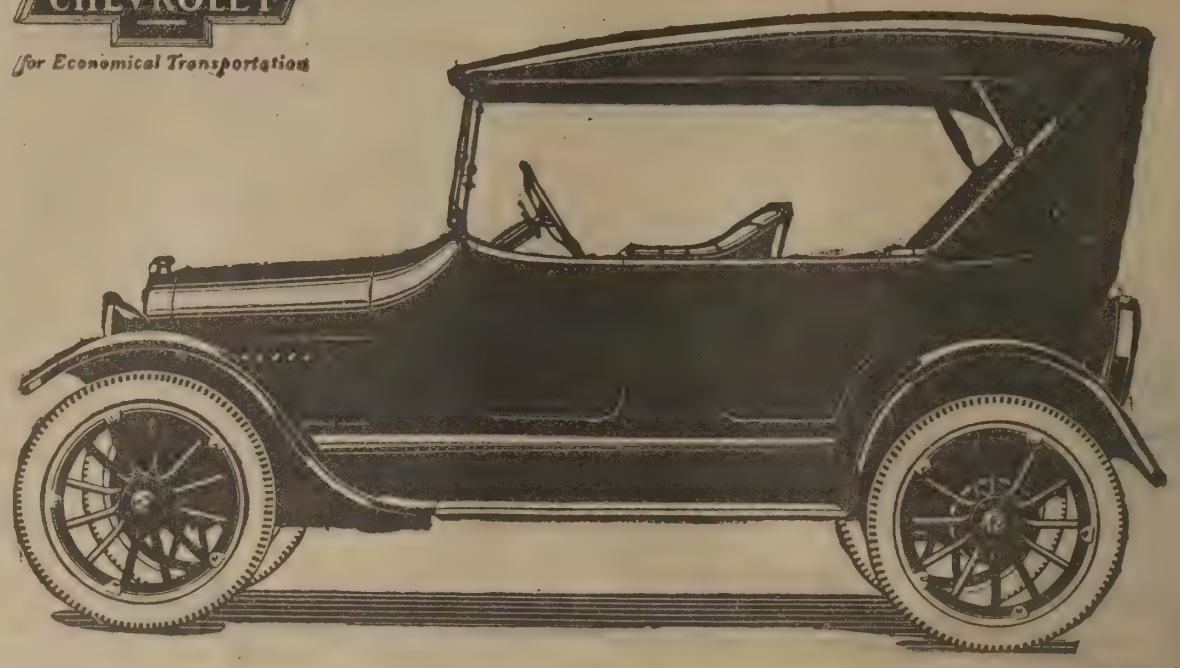
"Yes, reckon that's what the funny shebang must be—a pushcart."

In a little while the cart and its crew were close enough for Frisk to run out and bark at them. When nearing the camp, the travelers slowed down somewhat, and one of them sang out:

"Hello! Hello there! Can you tell us how fur ahead it is to water and grass?"

"Water a plenty right down yander in that little holler!" Esau called back.

"And there's grass enough around here, if you're not too hungry," Orlando told them, with a grin. "Better turn out and camp with us!"



The handcart stopped, and the men with it could be seen consulting together. While they were thus engaged, Orlando and his partner were observing them and their traveling outfit.

(To be continued.)

BRAND QUITS BLUE GOOSE.

Announcement is made by the department of agriculture that Charles J. Brand, who was organizer and first head of the federal bureau of markets, has resigned as vice president of the American Fruit Growers, Inc., and will, on July 1, return to the department of agriculture as consulting specialist in marketing. Mr. Brand resigned from his former position with the bureau of markets a few years ago and affiliated himself with the J. S. Crutchfield interests in the formation of the American Fruit Growers, a producing and marketing organization. This concern is probably best known by its blue goose trademark.

CHEVROLET
for Economical Transportation

The World's Lowest Priced QUALITY Automobile

$525 f. o. b. Flint, Mich.

New Superior Model Breaking All Sales Records of Standard Fully Equipped Cars

This leadership has come only from sheer superiority in value per dollar of price. Price, operation and maintenance considered, your dollar buys the most transportation in a Chevrolet.

Equipment and accessories considered, Chevrolet is the lowest priced car made.

You buy it all at one time, because Chevrolet is *ALL THERE* as sold—nothing more to buy but the license, gasoline and oil.

Chevrolet Invites Comparison Because Comparisons Sell Chevrolet

Consider What Chevrolet Equipment Means:

Standard Rear Axle Construction. The New Superior Chevrolet has the strong, quiet Spiral Bevel Gear Axle that "stands the gaff" without breaking.

Standard Transmission—three speeds forward and one reverse.

Standard Braking System—foot service brake, hand emergency brake.

Standard Electrical System: Starter, storage battery, Remy ignition, electric lights front and rear, on battery circuit.

Standard Cooling System—pump circulation, large, honey-comb radiator and fan. This means a cool, efficient engine, saving gasoline and oil and ensuring driving comfort.

Standard Doors—two on roadster and coupe, and light delivery, four on touring and sedan.

Standard Instrument Board, containing speedometer, ammeter, oil pressure gauge, lighting and starting switch, and choke pull.

Standard Type of Carburetor, with exhaust heater—one reason why you get most miles per gallon of gasoline with a Chevrolet.

Powerful, Valve-In-Head Motor. The same type as used in successful cars selling at much higher prices.

Demountable Rims—extra rim on rear. No trouble to change tires on a Chevrolet.

Many Other Advantages which will be noticed on inspection, comparison and demonstration.

No matter what car you own or think of buying, see the New Superior Model Chevrolet.

Sweet Clover

Proves a Good Crop on Poor Land

Land in the Wenatchee valley is considered too high priced for the raising of dairy cattle, but E. W. Van Tassel, one of the leading Ayrshire breeders of the west, has solved the problem by raising sweet clover on a piece of rocky land that would not be suited for an orchard. This field contains 11 acres and was seeded to a mixture of sweet clover, alsike and orchard grass. The seeding was done in the fall and since part of the field is subirrigated, the crop got a good start the following spring.

While the alsike and orchard grass are showing up in spots, the sweet clover has far the greater stand and grows among the large boulders where the other grasses will not take hold. The cattle will eat the sweet clover readily since it is one of the first crops to come through the ground in the spring and in this way they become accustomed to the peculiar taste.

"We find that the sweet clover is one of the earliest pasture crops that we can grow and it will also hold on until late in the fall," says Mr. Van Tassel. "Last fall it was green until November 15 and it was growing enough to pasture by April 1 this spring. We are pasturing 18 head of cows on the 11 acres and they do not begin to keep it down. It is my opinion that the field could handle almost double the number that we are now running.

"As it is now we do not have to reseed the field, but if the plants were kept down it would pay to reseed every fall to keep the crop from thinning down. Fall seeding seems to produce a better stand in this climate, although we have had good results from seeding clover in the spring. In any case, the crop must have plenty of water, especially while the young plants are getting a start, but we have noticed that the sweet clover will stand up much longer than the other grasses when the land gets a little dry. The alsike will begin to fail long before the sweet clover has shown any signs of needing water."

At one corner of the field is a small patch of alfalfa, but Mr. Van Tassel turns but a very little water on the part of the pasture since there is danger of the animals bloating. No such effects have been experienced where the cows have fed on the sweet clover alone. As for milk production, it has proved satisfactory and there has been no noticeable effect in the milk from the peculiar taste of the sweet clover.

The Cover Page

This is a great week for Washington Guernsey breeders, especially those living in the island counties of Puget sound and in Whatcom county. A three-day Guernsey tour of leading farms on which are found this breed is being made by boat and auto. The illustration on the cover page of this week's issue shows a Guernsey of prominence and a lover of the breed—La France of Bralee and Mrs. A. Macrae Smith, respectively, both of Bellingham. La France won second place in the 4-year-old class at the Pacific International last fall, after a battle royal with a heifer from the Woodbury herd, and early this year became a double letter class leader with a year's record of 10,537 pounds of milk and 594.58 of butterfat, started at 3 years 8 months of age.

Look for
CORRECT CONSTRUCTION
in the next tire you buy

The Savage Cord was built to give remarkable performance on stage lines and other hard runs. It is not built by any so-called secret process, nor is it freakish in its construction, but it does embody the best known practices and latter-day attainments in cord tire construction. It has been built to be the world's foremost cord tire—built to endure long and to serve well.

In it are seventeen features of design and inbuilt strength that appeal particularly to motorists who travel country roads; making a remarkable tire with

Extra heavy construction throughout;

Generously heavy sidewalls, of the same rubber and as tough as the tread to protect against rut wear;

A scientifically efficient non-skid tread, so soft that it does not "cut" or "chip" and yet so tough that it wears extremely well—a rare combination.

The Savage Cord will pound out thousands upon thousands of miles of good, hard service, and in doing so, eliminate to a large extent, tire trouble, needless expense and delay. You'll find it a paying investment.

Other good makes of tires may use one or more of the seventeen constructional features we have incorporated into the Savage Cord but no other tire that we know of begins to embody them all.

WE GUARANTEE

that not an ounce of shoddy or adulterants is used in the building of the

Wallace Is Alert on Freight Rates

Writes Letter to Washington Farmer Regarding Rates on Purebred Breeding Animals

Department of Agriculture, Washington.

To the Editor, Washington Farmer: Receipt is acknowledged of your letter of June 22, 1922, enclosing a discussion in The Washington Farmer of reduced freight rates on purebred breeding stock.

The discussion has been read with interest. The late James J. Hill was a far-seeing man. The development of the west following the building of railroads has shown the wisdom of his policies. It does not follow, from the fact that the interstate commerce commission now regulates rates, that a special rate on live stock to be used for breeding purposes can not be made. The commission should, of course, determine a general policy applied without favoritism.

I am very much interested in this subject, in fact, in the whole subject of the relation of railroads to agriculture. You may be interested in the enclosed material, which has been issued from here relating to the subject. I would suggest that you present your case to the interstate commerce commission with all the facts that you are able to bring together in support of your proposition.

Sincerely yours,

Secretary.

Secretary Wallace.

The foregoing letter from Secretary Wallace is interesting in itself, but it is more significant that the secretary of one of the government's most important departments is sufficiently interested in this farm problem to write this letter as a part of The Washington Farmer's program to bring it before those with power to influence action upon it. Secretary Wallace is keenly alive to the crisis through which agriculture is passing and the part that high freight rates is playing in it. In a recent address he said:

"Agriculture is our greatest industry; transportation our second greatest. These two industries are dependent upon one another, and the national well-being is dependent upon both. The failure of either to function efficiently results in widespread inconvenience, financial loss and quite possibly national disaster."

Looking into the future he summarized his thoughts as follows:

"To discuss in detail the effects upon agriculture and industry in general of the advances in freight rates of the last four years would require hours and days rather than minutes. In brief, if the present high rates are continued for any length of time their probable effect will be:

"First, to favor the farmers of South America and Australia at the expense of our own farmers, and all the more so because of the substantial decreases in ocean rates.

"Second, to keep prices of farm products in the large surplus producing states at figures lower than are justified by the investment in land and equipment and cost of farm production, except during years of short crops.

"Third, to prolong the period of dissatisfaction among farmers and encourage advocates of economic fallacies of all sorts.

"Fourth, to improve the position of eastern truck and fruit growers, but add considerably to the cost of production of milk and dairy products, because of the advanced prices of hay and coarse grains necessarily shipped in from the west.

"Fifth, to gradually shift industrial enterprises westward, nearer the surplus food producing territory.

"Sixth, to promote sectional rather than national spirit and make more and more difficult large national policies with respect to international affairs.

"No good citizen can find comfort or satisfaction in contemplating such results."

Progress Is Made Toward Better Credits

Congressman J. Stanley Webster of the Fifth district of Washington, in a speech in his home city of Spokane recently, spoke in congratulation over the absence of fears of a financial panic and the upturn in business and industrial conditions. He reminded his audience that government bonds are now at par or better, while only a comparatively short time ago they were down to from 83 to 85 per cent of par.

Undoubtedly a large part of the confidence that has brought about these improved conditions is due to a belief in the minds of the American people that this country now has the best financial monetary and banking system that it has ever had, and that there is a growing disposition at Washington to look out for the credit needs of the farmers as well as those of the business man.

MONEY IS CHEAP ON PACIFIC COAST.

The fact is that money is cheap at the source on the Pacific coast. The Federal Reserve bank at San Francisco lowered its rediscount rate on July 8 to 4 per cent, from 4½ per cent. The San Francisco bank is the third institution of the 12 in the federal reserve system to cut its rate to the 4-per cent level, New York and Boston having previously announced similar reductions.

It should follow that every time a federal reserve bank lowers its rediscount rate the member banks of that district should lower their interest rate correspondingly to their customers. The federal reserve bank does not do business with the public in the same sense that banks usually do. It has better been described as a bank of banks. A member bank wanting more currency to loan to its customers can get it in the form of federal reserve notes by depositing with the San Francisco Reserve bank as security a given quantity of notes of its customers. That is called "rediscounting," and the borrowing bank gets the money at 4 per cent interest. In turn, it loans that money to its customers at whatever rates the customers are willing or may be forced by stress of circumstances to pay. Anything the member bank may get from its customers above 4 per cent and the cost of doing business is profit to itself.

FARM MEMBERS ON RESERVE BOARD.

Farm organizations and other leaders, feeling that the agricultural interests have not been taken care of as well as the commercial and manufacturing interests, have demanded that a farmer be appointed as a member of the federal reserve board, which has nine directors. President Harding has acknowledged the justice of that demand and has promised to make such an appointment.

Unfortunately, under the law the federal reserve system can loan money only in a limited way to farmers. The system was constructed primarily and essentially to take care of business men and manufacturers. To remedy that injustice, temporarily, congress extended and increased the powers of the war finance corporation and gave it an additional credit of $1,000,000,000 with which to take specific care of agriculture and live stock.

The war finance corporation resumed operation in January, 1921, and since that time has authorized loans aggregating $363,000,000, of which $53,000,000 was to assist in financing exports and $310,000,000 for agricultural and live stock purposes.

AGRICULTURAL BLOC GIVES GOOD AID.

Here, again, the government does not do business directly with individual farmers or live stock owners. It provides freer credits by making these loans to banking and financial institutions, including live stock loan companies and cooperative marketing associations. Of the loans thus advanced up to June 30 last, Managing Director Eugene Meyer reports that $289,000,000 was authorized to financial and banking institutions, including live stock loan companes, $64,000,000 was to cooperative marketing associations and $9,000,000 was to exporters.

This more just and liberal policy of dealing with the great agricultural interests is due chiefly to agitation and the powerful influence of the agricultural bloc in congress.

We venture the prediction that never again in the history of this country will our farmers be compelled to deal in an uncurbed and unprotected way with banks and mortgage companies.

Credit henceforth will be easier and the interest charges more reasonable. That does not mean that farmers or others lacking credit will be able to get it at a low rate of interest. It does mean that the farmer who is entitled to credit and wants it will get it, and at a reasonable rate of interest.

It means, moreover, that the farmer who goes it alone and does not identify himself with a cooperative marketing organization will not be in a position to get as good treatment as will be extended to the members of all worthy cooperative associations. This is an era of organization—in business, in finance, in manufacturing, in mining, in lumbering, in the field of labor. If the farmers would have their share of influence and recognition, they, too, must find it in strong, well directed organizations.

Artesian Water for Irrigation

The Cold creek artesian basin, 20 miles from White Bluffs and Hanford and 40 miles from Yakima, is in the limelight just now, says the Yakima Herald. The reclamation of 10,000 to 20,000 acres by artesian wells has aroused much discussion. Its success of two artesian wells, which, it is said, together will irrigate about 600 acres, has started the ball rolling. A Yakima real estate firm has contracts covering 15,000 acres and is making arrangements to put down a well immediately.

The main question is the extent of the field and the permanency of the supply. Two theories seem to prevail as to the source. One holds that somewhere many miles above the basin the Columbia is diverted through a crevice in the rocks and flows in an underground channel beneath the Cold creek basin at a depth of about 600 feet. On this basis they argue that the supply is inexhaustible, but the field is of limited range. They hold that, perhaps, a series of wells may be brought in, but will all be in line with the Brown and Lemcke wells.

The other theory is that the Cold creek basin is a well marked artesian field and that while depths may vary water will be struck when the impervious strata are pierced. Those who hold to this theory give the field a larger scope and maintain that 30,000 to 35,000 acres is susceptible of being reclaimed from this source of supply. There seems to be an inexhaustible supply of water in the White Bluffs-Hanford section. Out of the 60 wells sunk for the soldier settlement projects all but two were successful and met the state requirements, a pumping capacity of 350 gallons a minute.

Where the two wells failed, others sunk in the vicinity were successful, so the failure is not attributed to a lack of supply, but to some local cause.

Traffic Problems

Handled by Wenatchee Association

During the apple shipping season there are always more or less details that can not be handled through the regular channels. Such information as the possible production of the entire district, the number of cars needed for the season's crop, and all data pertaining to rates, can be easily handled by some organization, which can spend its entire time with this kind of work.

It was for the purpose of working out such details that the Wenatchee Valley Traffic association was organized in 1918, and has been producing results for all apple shippers in the district. At first the officers of the association worked without pay, hiring only such office help as was necessary. The results obtained demonstrated that still greater returns could be realized by establishing the organization on a larger basis.

At the present time many phases of shipping are covered by the traffic association, and it handles the work for nearly all growers and shippers in the valley. It assists the shippers in getting the proper number of cars at the time when they are most needed; it helps him to obtain lower freight rates, and in many cases has prevented them from going higher. In fact, the association handles almost any problem which is of interest to the growers and shippers, but is in reality out of their jurisdiction.

In order to carry on the work the association first collected one-quarter of a cent a box on all fruit shipped, and 50 cents a car from shippers. The fee has been reduced to one-eighth of a cent a box from the growers, and 50 cents a car from the shippers; the latter charge is estimated to pay the running expense of the office. The growers' payment finances all details, such as rate hearings, supplying cars, working against hurtful legislation, and fighting pests.

A year ago very little publicity was given to the growers, since no means of doing so was available. Since the office has been established, however, a publicity man has been secured, who furnishes information to the local newspapers, and also gets out a weekly bulleting which is sent to all growers. It is his duty to keep all members posted. Practically all growers in the district feel that this small payment of one-eighth of a cent per box is none too much for the returns secured through the association. Last year the association operated on less than $16,000. The saving on car supply alone is estimated at $3000, while a reduction of the freight on apples to points east of the Missouri river amounted to 16½ cents a box. This reduction affected approximately 8000 cars last year.

Practically all growers and shippers in the valley are represented in the traffic

(Continued on page fourteen.)

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseasee in stock sold through these columns.

Smoking in the Fields

Cigars and cigarette stubs are the causes of many fires and are probably the most difficult to combat. In some cases the owner of the grain smokes in the field himself and allows the men to do likewise. Many fires are started by the careless throwing away of cigar or cigarette stubs or from the lighted match. Smoking should at all times be discouraged in the harvest field, the dry-land pasture, the hay field, the forests and everywhere that combustible material is present.

A Fundamental of Immigration

Congressman Albert Johnson and Senator Miles Poindexter of Washington are on the right track when they declare that the immigration laws should grant admission for permanent residence only to aliens who would be eligible for citizenship. That would close the gates against Japanese, Chinese and Mongolians. Congressman Johnson, who is chairman of the house committee on immigration, has introduced a bill to that end in the house, and Senator Poindexter has been advocating the same method in the senate.

V. S. McClatchy, publisher of the Sacramento Bee, who is regarded as the outstanding advocate of more vigorous restriction of Japanese immigration, commends Representative Johnson and Senator Poindexter. In a letter to the senator, Mr. McClatchy says:

"I have read with great interest your speech concerning proposed exclusion of ineligible aliens. There could be no better or more effective way of disposing of the Japanese question without friction than through the passage of a provision such as has been suggested."

The gist of Senator Poindexter's speech, referred to by Mr. McClatchy, is in the following extract:

"Our people, engaged in the ever-intensifying struggle for existence, should not be put to sharp competition by a horde of aliens who have not the essential elements which will enable them ultimately to become merged into the currents of American citizenship. If we can not make them citizens, has not the time come to prohibit their immigration and permanent residence in the United States? I am of the opinion that it has. I think we ought to be able to say, and we ought to say, that all those who come to our shores to reside permanently and to make their homes here, to enter into our industrial life, should be such as ultimately may be accepted into full citizenship in our great national republic. The house of representatives have adopted that principle, as I said before, and it is a wholesome principle."

The FARMER finds itself in thorough accord on this question with Mr. McClatchy, Congressman Johnson and Senator Poindexter. Ultimate citizenship should be the rigorous test of admission of immigrants to the United States. If certain races are not such material as we want to put into the building of the great temple of the republic, they should be excluded from our shores. We have problems enough, and shall have them increasingly, perhaps, in future, without further complicating our present difficulty of making citizens out of a great deal of undesirable material that is already in the United States.

Regional Farm Problems Are Important

The state is the logical unit in the dissemination of agricultural information. Through its public school system, the state farm papers, and the state press generally, this agricultural information can be spread most effectively.

The state agricultural colleges do their best work as teaching institutions, including extension work, together with local experimentations and demonstrations.

It yet remains that important regional problems of agriculture are not now being solved efficiently in this country.

Most of the important agricultural problems of any single state are common to adjacent states. In other words, the regional farm problems include many of the big farm problems of the separate states included in the region.

The growing of apples is a regional problem in the four states of the Pacific northwest—Washington, Oregon, Idaho and Montana. While local conditions are different in the different states, and in the different portions of the same state, yet there are important apple-growing problems common to the four states. The same is true of the potato-growing industry, of the grain-growing industry, of the various live stock industries. A lot of these big problems belong to the region and can be solved regionally better than by the separate states.

The great agricultural problems are not so much national problems or state problems as they are regional problems. The 10 or 12 states of the cotton belt form a distinctive agricultural region. So does the agricultural corn belt. The bulk of the great wheat-growing industry also can be divided into one or more regions, including several states in each region.

The southwestern states reaching to the Pacific are a region of their own agriculturally; so are the northwestern states reaching to the Pacific a region of their own. The big farm problems of New England can be easily included in a region of their own.

The agricultural industries of these several regions may overlap and interlay. That does not disturb the proposition that a great agricultural industry, carried on largely in several contiguous states, forms an agricultural region, and that the problems of that region can be more effectively solved within that region by concerted action than by the states separately.

A single agricultural research establishment in each region, under a director having proper executive authority, will do better and more work than is done by the several research establishments in the several states of the region.

Farm Bureau and Grange

Recently there was held in Chicago a joint meeting of the executive committees of the National Grange and the American Farm Bureau federation. Both President Howard of the federation and National Master Lowell of the grange were present. The meeting was a significant one, indicating a high degree of harmony between these two leading farm organizations. Following the meeting, President Howard wrote the following letter to Master Lowell, stating the case succinctly:

"The executive committee of the American Farm Bureau federation appreciates very greatly the associations with your executive committee during the past three days. We feel that the work of our organizations is on very similar lines and that our ideals are practically identical.

"It is the desire of the American Farm Bureau federation to cooperate with the National Grange in the largest possible degree. Our work is the building of American citizenship through the medium of better farm homes, schools, churches and community centers. We together have an important function in the maintenance of personal initiative and the preservation of the rights of the common people.

"The farm bureau has always recognized the great work of the grange along these lines, particularly in building of community centers. Our executive officers have always advised county farm bureaus to cooperate with the grange in the promotion of this important community work and this will be our continuing policy.

"We feel that this conference should be but the beginning of a closer cooperation and a better acquaintance between our various leaders."

State Farm News

C. A. Taylor, Charles Kletch, William Beck, Al Bray and J. W. Taylor of Kelso, Wash., and Max Whittlesay and George Barker of Portland have purchased the mill and equipment of the Linco Log and Lumber company at Lindberg, Wash., near Morton, on the Tacoma & Eastern.

They are organizing the C. A. Taylor Log and Lumber company, with a capitalization of $150,000. C. A. Taylor, William Beck, Al Gray, Charles Kletch and George Barker are trustees and Mr. Taylor will be president and manager; William Beck, vice president, and Max Whittlesay, secretary-treasurer.

The prices of milk for the Seattle markets has been raised as follows: July, $2.40 per hundredweight; August, $2.65, and September, $2.75. This, of course, applies only to milk which goes for the city trade and is based on a 3.6 test.

* * *

Eastern capitalists, according to reports from Portland, have decided to underwrite the $32,000,000 bond issue of the Horse Heaven irrigation district, in southeastern Washington. This is said to insure the beginning of work this year on a project second only to the Columbia river basin project in importation, doubling present irrigation in the state.

* * *

E. D. Hillis has recently moved onto the old Hargerty farm near Monroe. Mr. Hillis comes from Victoria, B. C., and brings 40 head of purebred Holstein females, including 28 cows and 12 calves. While in Canada Mr. Hillis carried on some record of performance testing which corresponds to A. R. O. or R. of M. work in this country. He is planning on fitting some of his herd for the county live stock show at Everett, and may possibly send some to the larger fairs.

* * *

The new highway being constructed at Porter is fast nearing completion, a night crew having been put on recently. The bluff near the Northern Pacific water tank is being cleared away by use of a steam shovel.

* * *

Noel Bakke of Peshastin expects a normal crop of apples from his 10-acre orchard near town. There are 250 trees of Stayman Winesaps and 250 Spitzenburgs, while the remaining varieties are Rome Beauties and Jonathans. Mr. Bakke's orchard is located just below the pipe line and his home water supply comes from his spring on the side hill, where a large reservoir is being installed.

* * *

Fire blight, a new pest, has broken out in the Wenatchee district, especially on the more elevated locations. It attacks the Jonathan and Spitzenburg trees worse than any others, apparently. It is similar to pear blight in many respects and can be treated only by cutting out the infected parts of the tree. District inspector Neilsen warns all growers to disinfect all cutting tools thoroughly while at work to prevent the spread of the pest.

* * *

J. H. Latham sold 10 acres of prune orchard in the Felida district to J. E. Deako of Sara for $9000, retaining this year's crop. Latham has two other orchards in the district and Deako owns property in the Sara district.

* * *

A carload of grade Holsteins was purchased in the Hannaford valley, northeast of Centralia, recently by Charles Fisher, a Seattle buyer. The average price paid was $90. According to Mr. Fisher, it was the best lot of stock he ever shipped out of the county. Those disposing of cows were Jess Rector, Marion Jackson and R. C. Allbritton, six head each, and A. W. Thompson and C. A. Beaver, two head each.

* * *

The North Pacific Cooperative Berry Growers' association has put up more than 1000 barrels of strawberries this season, most of which will be held for future sale. The association has found that they can in this way take care of a large quantity of surplus fruit and prevent its being dumped on the market at a low figure, or becoming a total loss. The season was very short this year and in spite of the fact that prices were low the entire crop of the membership was handled satisfactorily.

Coming Events of Interest

July 27-28—Whatcom Guernsey gallop, Bellingham.
July 27-29—Guernsey cruise, Puget sound.
July 27—Alfalfa growers' tour, Stevens county.
July 24-Aug. 5—Western Washington live stock tour.
July 27—Farm bureau meeting, Lopez.
July 28—Farm bureau meeting, Shaw island.
July 29—Peninsular beekeepers' meet, Olympia.
Aug. 3—Skagit county pioneers picnic, LaConner.
Aug. 10—Pierce county farm bureau picnic.
Aug. 10-12—Old settlers' picnic, Ferndale.
Aug. 14-19—Skagit county fair, Burlington.
Aug. 19-20—Ninety-first division reunion, Seattle.
Aug. 28-Sept. 2—Southw't Wash. fair, Chehalis-Centralia.

FARM BUSINESS AND MARKETS OUTLOOK

Cattle markets have continued to absorb the supply at prices favorable to the producer.

In spite of a drop in average quality of hogs and lower average prices, the latter are holding above $10 at the principal middle western markets, making an unusually profitable outlet for corn.

Purchases of feeder lambs are expanding and the range supply has not been sufficient thus far to fill the orders. Prices being paid are nearly as high as for fat lambs.

Although export buying of wheat is a little more healthy and millers are moderately active, the wheat market is decidedly unsettled because of strike conditions and shows no decisive trend in either direction.

Widespread rains over most of the corn belt have provided a supply of moisture which will carry the corn crop through most of the critical period.

Prices of oats are holding in a narrow range and following the trend of wheat and corn.

Demand in the feed markets has broadened, as some of the larger users of bran are accumulating supplies for fall and winter use, in the belief that prices will not go much lower.

The egg market has not yet risen far above the lowest levels of the season.

Butter scoring 90 or below has moved indifferently recently and prices have declined, while fancy butter is slightly higher.

The potato market has declined sharply.

Good Cattle Market Continues

Cattle markets have continued to absorb the supply at prices favorable to the producer. Prime steers sold at $10.80 at Chicago last week and a large number crossed the $10 mark. The actual advance was confined to grain-feds. Grassers and those fed corn or grass, which have been too high compared with top grades at Chicago, weakened and declines were in vogue at other points.

Steers from the northern ranges are beginning to show up and the movement from Kansas and Oklahoma is steadily gathering volume. The supply for slaughter will probably increase 35 per cent in the next 60 days, so that it is doubtful if values on the lower grades will be maintained, although settlement of the coal and rail strikes would expand outlets for beef. Choice and prime steers are in a class by themselves and appear to be in a secure position by virtue of scarcity, although the advance may not carry much further.

The trends in the butcher cow and heifer markets are the same as for steers. Bulls are generally most plentiful during midsummer, when the range first begins to ship. Light veal calves are advancing, as they were out of line with other meat animals, and the seasonal trend is upward. Heavy grass calves are an exception, as they will become more numerous later on.

Big Feeder Demand Expected

The prospect of a generous crop of corn, hay and rough feed, with profitable results for cattle feeders in the last five months and advancing prices on fat steers promise to maintain a broad outlet for thin cattle during the fall. July curtailed buying as usual, the movement from 12 leading markets in the first week in the month declining 50 per cent compared with the last week in June. As more range steers become available and the busy season on farms passes, buying will expand, but it probably will not lift values much, if any, and the plainer light weights are apt to work gradually lower during the late summer and fall.

Hog Market Reacts Again

The hog market has crossed the $11 mark twice recently, but the run expanded each time and part of the advance was lost. Receipts are holding up surprisingly. Conditions in Germany are unfavorable for the export trade in hog products, although a big Chicago packer displayed his faith by starting a big shipment for that country during the week, and other continental countries were buying. Heavy foreign buying of hog meats and lard and lighter receipts of hogs are the two factors which generally boost the market during the late summer.

The spread between common and choice bacon hogs is about $3.50 at Chicago and even wider at other points. In spite of a drop in average quality and lower average prices, the latter are holding above $10 at the principal middle western markets, making an unusually profitable outlet for corn. As production is being increased rapidly it has been suggested by officials of the department of agriculture that it would be well to dispose during the summer of part of the sows bred for fall litters in order to prevent overproduction.

Range Lambs Run Below Normal

Receipts of range lambs are not quite up to the usual number at this season, probably reflecting the 30 per cent shortage in the crop. The dressed trade is healthy, the eastern trade is again being forced to resort to middle western markets for supplies and total receipts are not burdensome, so that prices are holding well.

Purchases of feeder lambs are expanding and the range supply has not been sufficient thus far to fill the orders. Prices being paid are nearly as high as for fat lambs.

Horse Trade Is Slow

Seasonal dullness pervades the horse markets. Lower prices were necessary to effect a clearance of a moderate run at Chicago last week. Resumption of coal mining and delivery would improve outlets for heavy chunks.

Chicago: Good and choice drafters, $175@275; common and medium drafters, $75@165; chunks, 1450 to 1600 pounds, $75@160; wagon horses, $40@180; farm chunks, $50@135.

Wool Dull but Steady

This is "between seasons" in the wool market as the mills are waiting to see the volume of orders for spring goods at the openings started this week. Cloth prices made by the leading factor were about 5 per cent below the level established during June. Wool prices are steady, as most of the new clip is in manufacturers' or dealers' hands and the possibility of passage of the permanent tariff, with lower rates on raw wool before next January, now looks remote. Mills are inquiring for supplies, but are proceeding with caution. Seaboard markets are receiving large shipments from the west at present.

Wheat Needs Abroad Run Larger

All estimates upon the import requirements of European and non-European countries combined during the coming 12 months run larger than for the last 12 months. There is a disagreement of 50,000,000 to 75,000,000 bushels as to the total amount.

Conditions have improved in Europe during the last few months, but the yield in France and Italy is estimated officially at about 15 per cent less than last year, so that an increase in wheat substitutes has been authorized in France and Italy is removing the tariff on wheat imports. The German government is reported to be making plans for provisioning its people by requisitioning a part of the crop from the farmers and by extensive purchases abroad. Broomhall recently estimated that the Balkan states, Rumania and Bulgaria would have an export surplus of 40,000,000 bushels. Last year, however, they exported only 6,000,000 bushels and official estimates upon their yields this year do not indicate a big increase.

On the other hand, the crop in the orient is better than a year ago, the yield in China being estimated at 175,000,000 bushels, compared with 150,000,000 bushels last year. Also, Russia is expected to take care of most of her own needs unless recent press dispatches were purely propaganda.

In spite of the large estimated import requirements, but little has been bought. Apparently the European buyers will not rush the market during the early part of the shipping season, as they did in greater or less degree each of the two preceding years, only to have the market decline considerably later on.

Although export buying of wheat is a little more healthy and millers are moderately active, the wheat market is decidedly unsettled because of strike conditions and shows no decisive trend in either direction. There is more or less anxiety lest shipment from the producing sections or from terminal markets to mills and the seaboard be interrupted and the shortage of coal is being felt, not only in the movement of freight, but in the supply of fuel for threshing. A few sections in the southwest report a shortage of cars, with local elevator space already filled. In addition, black rust is present over a large area in the northwest. While it has done only a limited amount of damage thus far, there is apprehension and will continue to be until about August 1, when the crop will be out of danger.

Good Corn Crop Assured

Widespread rains over most of the corn belt have provided a supply of moisture which will carry the corn crop through most of the critical period. It now seems highly probable that a crop as large as or larger than the July 1 estimate will be matured.

Export buying of corn has increased again recently as weather has been unfavorable for drying out the Argentine crop, upon which European countries usually depend at this season of the year. Receipts at primary markets are above the average, but prices have held within narrow limits.

Oats harvest is on in a large part of the central section of the belt and primary receipts which have been above the average for weeks will begin to increase soon. Prices are holding in a narrow range and following the trend of wheat and corn.

Cash Grain Prices

The range of cash grain prices for the week ending July 19 was as follows:

CHICAGO.—Wheat: No. 2 red, $1.12 1-2@1.18; No. 3 red, $1.12 1-2@1.17 1-2; No. 4 red, $1.11@1.13 3-4; No. 2 hard, $1.14@1.20 1-4; No. 3 hard, $1.13 1-4@1.18 3-4; No. 4 hard, $1.14 3-4. Corn: No. 2 mixed, 64@65 1-4c; No. 3 mixed, 63@64 3-4c; No. 2 yellow, 64 1-2@65 3-4c; No. 3 yellow, 64@65c; No. 4 yellow, 63@64 3-4c; No. 2 white, 64 1-4@65 1-2c; No. 3 white, 65c; No. 4 white, 63@64 1-2c. Oats: No. 2 white, 35 1-2@43c; No. 3 white, 34 1-4@39 1-2c; No. 4 white, 33 3-4@37c. Rye: No. 3, 85c. Barley: 59@69c.

EAST ST. LOUIS.—Wheat: No. 2 red, $1.12@1.15 1-2; No. 3 red, $1.08@1.11; No. 2 hard, $1.12@1.13 1-2; No. 3 hard, $1.10. Corn: No. 2 mixed, 63@64 1-2c; No. 2 yellow, 66 1-2@67 1-2c; No. 3 yellow, 65 1-2@66c; No. 4 yellow, 65@66c; No. 2 white, 63 1-2@64 1-2c; No. 3 white, 63c; No. 4 white, 62 1-2c. Oats: No. 2 white, 38@39 1-2c; No. 3 white, 37@39c; No. 4 white, 36 3-4c.

Feed Markets Slightly Higher

Feed markets moved a little higher recently. Demand has broadened as some of the larger users of bran are accumulating supplies for fall and winter use, in the belief that prices will not go much lower. Widespread rains recently will tend to reduce purchases by dairymen and flour mill operations are likely to increase decidedly in the next month or two, so that wheat feeds will be more abundant.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $18.50; standard middlings, $20; flour middlings, $26; cottonseed meal, 36 per cent, $45.50, 43 per cent, $49.50; hominy feed, $25.75; gluten feed, $28.85; old process oil meal, $45; tankage, $55.

Old timothy is still selling at a premium of $4 to $6 over new hay. Low grades of all kinds are hard to sell. Demand is small for new clover and only fair for new alfalfa. The rail strike is restricting receipts.

Prices per ton in carlots: Chicago—No. 1 timothy, $25@27; No. 2, $24@25; No. 3, $14@20; No. 1 light clover mixed, $24@25; No. 1 clover, $15@19; No. 1 clover mixed, $20@22; upland prairie, $14@19; midland prairie, $13@17; rye straw, $13@15; oat and wheat straw, $9@12.

Eggs, Butter and Cheese

The egg market has not yet risen far above the lowest levels of the season. Receipts are larger than at this time a year ago, but there is only a small surplus over consumptive needs to be placed in storage. Stocks of frozen poultry in the United States on July 1 amounted to 34,751,000 pounds, compared with a five-year average on that date of 35,824,000 pounds.

Butter scoring 90 or below has moved indifferently recently and prices have declined, while fancy butter is slightly higher. Export buying was expected, but it failed to develop as British markets weakened. Receipts have been falling off, but rains have revived pastures and an increase in production is expected, or prevention of a further decline for the time being. The daily surplus for storage at the four leading markets remains rather heavy, but the total storage surplus is not yet excessive.

Prices for 92-score fresh butter on July 19 were:

Chicago, 33 1-2c; New York, 36c; Boston, 36 1-2c; Philadelphia, 36c.

Cheese distributing markets were weak in the last few days, as the supply has been too large for immediate consumption and speculative buying for storage was negligible. Widespread rains are expected to increase production again. New York state cheese has had the preference in the east. Stocks in storage are only moderate, so that prices are not apt to sag much lower.

Prices for No. 1 American cheese on July 19 were:

Chicago—Twins, 18 1-2@19c; Daisies, 19 1-2@20c; D. Daisies, 18 3-4@19c; Longhorns, 19 1-2@20c.

Fruits and Vegetables

The potato market has declined sharply in the last 10 days. Shipments from producing sections are running about 40 per cent above the average for this season of the year. The Caldwell, Idaho, district has 11,000 acres, compared with 4500 last year, and condition is rated at 90 per cent, compared with 93 per cent last year.

Butter Classes and Grades

Butter is classified on the markets into seven different kinds: Creamery, centralized creamery, held butter, renovated, ladles, packing stock and grease butter.

"Creamery" butter must be made in a creamery from cream either separated from the whole milk at the creamery or received by team or motor direct from the farm.

"Centralized creamery" may be hade from cream gathered direct from the farmer or shipped in by rail from individual shippers or cream stations.

Both the individual states and the United States have cold storage laws which define when butter becomes "cold storage" or "held."

"Ladles" consist of butter collected in rolls, lumps or whole packages and reworked or rechurned, resalted or recolored by the dealer or shipper.

"Packing stock" consists of butter without additional moisture or salt, from a creamery or dairy, which has been collected in any quantity and packed in tubs, barrels or other containers. It must be fit for human consumption as food and free from adulteration.

"Grease" butter consists of all grades below thirds.

Creamery and held creamery are commonly graded as "extras," scoring 92 points or better; "firsts" scoring 88 to 91, "seconds" scoring 84 to 87 and "thirds" from 79 to 83. Centralized creamery butter is graded as extras, firsts, seconds and thirds. Renovated and ladles are graded into firsts and seconds and packing stock as No. 1, No. 2 and No. 3.

LOOKING INTO OTHER FARM FIELDS

Practically the entire supply of domestic carrot and lettuce seed in the United States is produced in California.

* * *

The 1922 potato crop promises to be the largest since 1917, when a bumper yield of 442,108,000 bushels was harvested. The 1922 crop is estimated at 428,607,000 bushels.

* * *

The Texas Farm Bureau Sweet Potato Growers' Exchange, which met in Dallas recently, laid plans for increasing the annual sweet potato crop of Texas from 1,000,000 bushels to 5,000,000 bushels.

* * *

The French chamber of deputies recently passed a law authorizing the government to fix by decree the percentage of wheat in flour and the addition of substitutes in preparation for the expected shortage in this year's wheat crop. The crop is variously estimated at from 50,000,000 to 100,000,000 bushels short of requirements.

* * *

More than $4,000,000 will have been returned to California apricot growers for their 1921 crop of dried apricots when final payments to the growers are completed by the California Prune & Apricot Growers' association. The prices paid during the past season ranged from 11 1-3c to 23 1-2c, according to size and quality. The average price paid to growers was slightly more than 16 1-2c.

LIVESTOCK AND DAIRY

Summer Feeding

There are two factors concerned in profitable milk production whether the season be summer or winter. They are:

1. The milking capacity of the cow.
2. The kind and amount of feed consumed.

The pasture season is always welcome, for it brings relief from much labor and expense and there is also an increase in the milk yield. Cows give more milk at this season because their ration is:

Palatable
Balanced
Succulent
Abundant.

The closer we can maintain these conditions throughout the year the greater will be both milk yield and profit, says E. B. Fitts, dairy extension specialist of the Oregon Agricultural college.

The ordinary cow needs no other feed while on good pasture. The high producing cow, however, must have some grain even on the best of pasture. It is impossible for a cow producing two pounds of fat or more daily to digest enough of the bulky succulent grass to meet her requirements. She will get thin in flesh and soon drop in milk yield. Such cows pay well for grain, usually $2 to $3 for each $1 expended.

What Grain to Feed.

When pasture is abundant there is nothing better than rolled barley and oats. Barley alone gives good results, as does also a mixture (2 to 1) of corn meal and millrun. Later in the season when pasture gets short a different mixture is necessary. Some oil meal or cotton seed meal should then be added.

How Much Grain to Feed.

Feed whatever grain is needed to keep the cow from getting thin. A good cow will need 4 to 8 pounds daily and an exceptional one considerably more. Keep the cows up in flesh, for it is always expensive to allow them to become thin.

Soiling Crops.

Pastures in the average section seldom remain good longer than four to six weeks, after which they become short and unsatisfactory. Green crops may be grown for supplemental feeding. A succession of crops might be rye, clover, vetch and oats, second crop clover, corn, kale, roots. A rotation using other crops can easily be worked out.

The Summer Silo.

The summer silo greatly simplifies the problem of supplemental feeding. A crop of clover or vetch and oats or other early maturing crop run into the silo will provide splendid feed for the summer. Under most conditions it is cheaper, requires less labor and is quite as satisfactory as a succession of green crops fed direct to the cow. The silo can be filled again in the fall with corn for winter feeding.

Milk Production Pointers.

Breed—High producing cows are necessary. Use only a registered bull from exceptional ancestors.

Feed—Liberal and intelligent feeding is necessary to develop the heifer and to secure greatest profits from the cow. DON'T SKIMP.

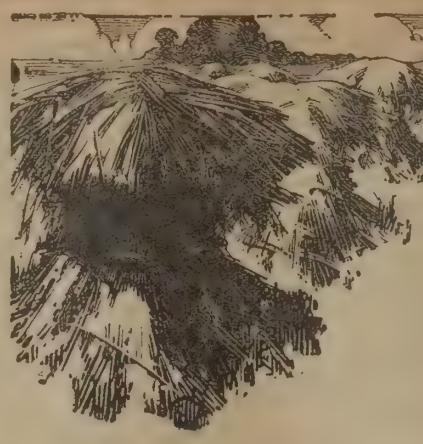
Weed—Apply the milk scales and Babcock test to every cow. They are impartial judges.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

DIGESTIVE TROUBLES, ARTICLE III.

The symptoms of abdominal troubles are supposed to be very commonly known,



but we must keep in mind that the principal symptom is a manifestation of pain and this is common in some other troubles. I have seen animals go through all the manifestations of pain, common in digestive troubles, when the pain was in the shoulder, so that the mere evidence of pain does not necessarily locate it.

The common symptoms are pawing, getting up and lying down, turning the head around to the side and placing the nose on the side wall of the abdomen, sitting up on the haunches like a dog and sometimes raising the head at the same time to stretch the abdomen, standing with the hind feet far back and stretching the abdomen in that way. This last symptom sometimes causes the owner to believe that the animal is trying to urinate and is unable to do so, when it is only trying to assume a position that will give a little relief from the pain within. Sometimes the animals lie for a long time on the side, stretched out, or lie up on the breast in a natural position. In cases of very severe pain that comes on like cramps the animals may trot in a circle with the head lowered and the knees slightly bent, dropping down at frequent intervals to roll. When in severe pain the animals may sweat profusely, the water dripping from the abdomen and legs.

Aside from the above there may be distention of the abdomen if there is an accumulation of gas, or there may be louder sounds than normal from the abdomen or, in other cases, there is a suspension of movement and an absence of sound. The breathing may be fast and labored and this has caused many to think that the trouble was in the chest and the patient was treated for pneumonia. This happened recently when, in the absence of a veterinarian a doctor was called upon for advice and his diagnosis was pneumonia. I do not consider this any reflection upon the ability of the physician, but he was unfamiliar with the manifestations of animals. A good veterinarian would not have made such an error, because he is accustomed to translating the language or actions of animals. The animals can not talk our language, but they tell by their actions how they feel. If you can understand and translate those actions, you can arrive at quite an accurate understanding of their condition. They never lie about their feelings, but tell an honest story for all to know, because they live honest lives and are not ashamed of what they have done, as some human beings are.

The veterinarian is in much the position as the child doctor whose patient can not talk and tell how it feels. The veterinarian is sometimes misguided by the owner, but by his patient, never. Owners sometimes give medicines or other treatments and for reasons of their own refuse to say anything about them or even admit that they have done anything. This is very misleading and causes the veterinarian no end of trouble at times. I recall an instance where the veterinarian was trying to find out what had been given and the owner insisted that he had given nothing; the actions of the patient belied the statement, but the owner refused to admit his guilt. On the second day's visit the veterinarian asked: "How much coal oil did you say you gave this horse?" and the owner responded, "About a pint." All of these things are a part of the day's work when treating animals and the symptoms that the animals manifest are various, but they always agree with the animal's feelings. Sometimes they are very difficult to translate and the man who is not well trained to this work usually sees very little of what the trained one sees. He may also lay a lot of stress upon a very unimportant thing and ignore important features. Many times he does not recognize the signs of approaching death and sends for a veterinarian when the animal has only a few minutes or hours to live.

Next article will take up the causes of digestive troubles.

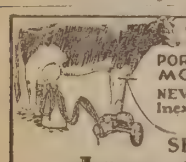
Back to the Grain Fields For Health

Grape-Nuts is a regular "three bags full" of the best food qualities of whole wheat flour and malted barley, carefully mixed and slowly baked—

To develop all their appetizing flavor,

To preserve all their wholesomeness,

And to provide nature's "broom" that keeps the digestive system spick and span.



There's not a bit of artificial sweetening in Grape-Nuts—it just *becomes* sweet of its own accord in the long baking.

And that enticing flavor—how good it is with good milk or cream! Fruits, too, fresh or cooked, add to the delight of a dish of Grape-Nuts, morning, noon or sundown.

It is a compact, ready-to-eat food—no cooking needed. Why not try it for tomorrow's breakfast?

WESTERN CANADA for Stock Raising

Vast stretches of undeveloped fertile agricultural land of the highest productiveness await the settler in Western Canada. The land possesses the same character of soil as that which has produced the high quality of cereals that have carried off the world's premier honors so many times. Native grasses are Rich and Abundant. Cattle fattens on them without any grain being fed.

The place for the man with limited capital to overcome difficulties of high priced land or the burden of heavy rents is in Western Canada—where *land is cheap*, where a home may be made at low cost, and where *dairying, mixed farming and stock raising are particularly profitable.*

Homestead of 160 acres in the more remote districts **FREE to settlers.**

POULTRY AND RABBITS

Quick Cooperation

It was at the farm of August Hippi in the Vader district of Lewis county that W. D. Buchanan, state poultry extension specialist, received one of the surprises of his life. This is how it happened. For the benefit of the small knot of poultrymen who turned out late in May for the poultry specialist's demonstration, Mr. Hippi had corralled one of his so-called laying birds for Mr. Buchanan's inspection. The latter went over her point by point, calling attention to her non-laying characteristics, and concluded with the judgment that while she might possibly pay for herself, the evidence was overwhelmingly against her. "All right, here goes," said Mr. Hippi, and stepping to the edge of the platform, with two or three twists of a powerful arm put the hen forever beyond any use to man save what he might get out of her as fricassee. For a moment Mr. Buchanan was speechless, but he recovered to say that if he obtained as quick cooperation as that from all poultry owners, he could put the industry in Washington on a highly profitable basis in very short order.

"I want to commend the condition of the litter in this house," he approved. "Litter does cost a little money, but it's worth the cost to have it for fertilizer. There is none better, and in some places they are willing to pay $20 a truckload for it. It is rich in superphosphate and very valuable for the farm. I would also commend the healthy activity of these birds. There are very few on the roosts, and practically all of those on the floor are busily interested in something. You know one of the best times to cull the flock is at feeding time, and I can almost always tell as I approach a laying house, even without seeing the birds, whether they are well and happy."

Poultry Questions

By W. D. Buchanan,
Extension Poultry Specialist, Washington State College.

PTOMAINE POISONING.

What is the matter with a laying hen when she stands a minute looking down, her head working convulsively, then backs up a step or two and runs around in a small circle? Her eyes look O. K., but sight seems poor. She has difficulty in finding her feed. SUBSCRIBER.
Manson, Wash.

The trouble may be due to ptomaine poisoning, resulting from putrid milk or meat, or it may be due to a partial paralysis of the nerves controling the eyes and head, due to this or some other digestive trouble. It might be due to something lodged in the throat.

PREVENTING A WINTER MOULT.

We have 700 February hatched pullets and would like to know if it is possible to get them through the winter without them moulting. How and what should they be fed? W. H. P.
Charleston, Wash.

It is difficult to keep February hatched pullets from moulting and it is next to impossible if they are allowed to lay too early. If they are kept from laying till they are 6 months old, then fed plenty of green feed, kept very busy by scratching in a deep clean litter, fed wholesome grain composed of wheat, corn and oats, and any good egg mash fed regularly and without change, they can be carried through without moult.

TROUBLE WITH EYES.

I bought 100 White Leghorn chicks, hatched on May 22, and they have white diarrhoea. Their eyes are sore and it seems they can not open them. The eyelids are somewhat swollen. They don't seem to eat any kind of mash, wet or dry. What can I do for them? O. H.
Napavine, Wash.

Your trouble seems to be about the same as that described by Mrs. A. B. G. and answered in last week's issue of THE FARMER as follows: "Bad colds or roup will close the eyes as you describe. So also will chickenpox; but the latter is always accompanied with raised nodules or scabs. I would suspect the trouble which you describe as being a bad cold. If so, give the chicks plenty of fresh air(especially at night. Keep the premises clean and put a little epsom salts in the drinking water, about one ounce to four gallons of water for half a day."

Hints for Poultrymen

The following points and hints on the raising and care of poultry were gleaned from the recent poultry demonstrations and lectures conducted in western Washington by W. D. Buchanan, poultry extension specialist from the Washington State college:

The only secret in getting eggs from healthy, vigorous birds lies in how one feeds. They must be kept always busy and always happy.

No hen is good enough to be used as a breeder unless she has laid at least 150 eggs, and a minimum of 180 is better.

A purple comb indicates that the wearer is suffering from ptomaine poisoning or indigestion—the severity of the attack being shown by the amount of the discoloration.

Applying sodium fluoride is the one really good way to get rid of lice—eight or 10 finger-pinches of the powder can be quickly applied to the hen's body, or if the days are warm a solution of one ounce of fluoride to one gallon of water may be used for dipping the birds. This is the most effective method, for you can dip three hens while you are powdering one. The solution is poisonous, but there is no danger to the birds if you keep it out of their eyes and nostrils.

Dependable heat, fresh air and cleanliness are essential to successful chick brooding.

The 54-inch hover advertised as of a 1000 capacity usually will not hold to advantage more than 600 babies, and more chicks will mature if only 500 are put under it.

Compare with competitors, its merits and measure for hand washing and hardware, by weighing and washing with it.

VANCO SOAP

If you wish for the most and best when buying
Of a Soap for all Pitch and Paint and Grease.
You will find that VANCO after trying
Saves great time and then your washing troubles cease

For Farms, Shops and Houses it's Superior
And the Kitchen where you bake, fry and stew.
If you have been using anything inferior
Get a can of VANCO and see what it will do

Can be dissolved in water instantly to any strength.
Red round tin cans, near 3x3 inches, 13 ounces gross weight.
Sold by Grocers, Druggists, General Mdse., Variety, 15c per can.

J. E. ALDEN, State Agent, 902 Post St., Seattle, Wash.

Quality

How our farmer friends have helped us ⤷ Our shoes are worn by men in mines, factories and in practically every other occupation—and for dress. But the men who have helped most to make Washington Shoes so popular for the field, forest and mountains are the farmers. Their work tests shoes most severely. And for years they have used an increasingly large proportion of our output. Such an indorsement from our friends on farms has helped us sell shoes to other workers practically without effort. ⤷ Are you wearing Washington Shoes yet? ⤷ They possess features found in NO other shoes. ⤷ They offer value that can NOT be excelled. The plant producing them operates under the most favorable conditions. It's located near at hand. Your dealer can do business with these shoes with a minimum investment. "Fill ins" for his stock are ofttimes but a matter of hours—not months. Thus, the customary margin which must be added to cover a large reserve stock and the attendant interest, insurance and miscellaneous costs, is eliminated. ⤷ In offering Washington Shoes, dealers give the biggest possible run for the money—and also do well by themselves.

KLIMATICALLY KORRECT SHOES FOR MEN

ORCHARD AND GARDEN

Tank on Wheels

Also Carry Large Spray Pump

By O. M. MORRIS,
Head Department of Horticulture, Washington State College.

The best spray producing machine that I have seen in operation this season is working in an orchard above Selah, Washington. The outfit belongs to S. M. McKee, who has arranged to set a 400-gallon spray tank on wheels, which carry also a large spray pump. The engine ordinarily used to run the pump has been set aside and by his own ingenuity and work, Mr. McKee has connected the pump with the drive shaft of the tractor used in the orchard. The connection is provided with knuckle joints and a slip rod and socket so that turning around and uneven ground causes no trouble with the pump. This connection is also fixed with a clutch whereby the pumps may be thrown in or out of gear independent of the action of the tractor engine. When I saw this machine in operation the pressure gauge was standing above the 300 mark.

The pump was supporting two spray guns and throwing a fine, strong spray from each gun so that the men could reach 20 to 30 feet from the end of the gun with force enough to turn the leaves and small twigs. After one of these guns had been used on the tree no dry surface could be found. The men with the nozzles kept moving at a good pace and were doing splendid work. A very interesting feature of this was that the tops of the trees were apparently sprayed as thoroughly as the lower parts and the center as well as the outside.

I was told by one who knew that the idea of connecting the pump with the tractor and the memchanical work was all done by Stuart McKee, the son of S. M. McKee. Stuart McKee is a young man who has been brought up on the farm and orchard and appreciates thoroughly the value of good machinery.

Orchard Pests

By O. M. MORRIS,

How can we destroy the little mole that burrows along rows of vegetables?
Charleston, Wash. A. BeM.

The best method of destroying the moles that work in the garden is to poison them by using raisins. Carrots or pieces of potato can be used but with less success.

Split each raisin and place a very small quantity of strychnine (alkaloid strychnine is best) in each raisin, then close together and open a hole straight into the burrow with a stick about the size of a lead pencil, push your raisin down to the burrow and cover it with earth. Plant two or three of these in each burrow and go over the ground two or three days later. If any burrows appear plant a new supply of poisoned raisins.

Could you tell me of something that would kill the little black bug that eats all the leaves off the radishes, turnips and cabbage? Just as soon as the leaves are out, those little bugs start eating them, which kills the plants. I have tried salt, pepper, ashes and louse powder, also a spray of kerosene and fly chaser.
Colville, Wash. MRS. R. K.

The little black bug which you mention as destroying the foliage of the garden plants is probably the potato flea beetle.

The best method of destroying this pest is to spray the plants with Bordeaux mixture. This probably is not poisonous in extreme degree to these insects, but is a very efficient repellent. The results are usually quite satisfactory.

The Bordeaux mixture can be made by dissolving one pound of copper sulphate in a gallon of water. Use one gallon of milk of lime which may be prepared by slacking one pound of fresh lime in a gallon of water. Pour the two solutions together and add about five or six gallons of water. Spray or sprinkle this mitxure over your plants.

What can I do for my gooseberry bushes? They have green worms with black spots, that eat all the leaves off. Also our snowball tree has some kind of small black bug on the leaves, underside, and they are drying up, curling into a roll and getting black. How can I get rid of these pests? E. M.
Deep River, Wash.

The green worm which is attacking the gooseberry bushes can very easily be controlled by spraying with lead arsenate or paris green. The first named material is best.

If your crop is not yet harvested and you feel that you must spray before harvesting, then use white helebore, one ounce to two gallons of water. This is not as effective as the arsenate of lead, but will not be poisonous upon the fruit when it is gathered.

The best method of control is to spray very early, before the fruit is well formed, using at that time the lead arsenate spray. One pound of the powdered lead arsenate is sufficient to 25 or 50 gallons of water.

The bugs that are on your snowball plants are evidently aphis and can best be controlled by using black leaf 40, one ounce to 1000 ounces (about 8 gallons) of water. This material is a nicotine extract of tobacco. It will be most effective if thrown upon the plant with a spray pump and thrown with a good deal of force, otherwise it will not reach the insects inside of the curled leaves.

Head Lettuce Planting

By O. M. MORRIS,

Will you please tell me all about growing head lettuce for fall market? What variety and when to plant in this locality?
Pasco, Wash. G. J.

You should plant your material in two or three plantings running through the month of August. It will require from 60 to 90 days for your crop to produce marketable size heads.

If your land can be well watered one of the best methods is to plant the seed in the field where the plants are to grow, thinning your crop so that the plants will stand about nine to 12 inches apart in the row with the rows from 12 to 18 inches apart. The thinning must be done very early so that the individual plants will have an opportunity to grow rapidly and vigorously from the start.

The most important thing in growing a good crop of head lettuce is to have a thoroughly rich soil. This can best be prepared by turning under a heavy dressing of well rotted manure. Do not attempt to grow a fancy crop of lettuce on a soil that is just rich enough to grow ordinary farm crops in good condition. Head lettuce that grows slowly is not fit for market and you must have your soil in a very high state of fertility and very fine tilth. Thorough and frequent working with disk and harrow are probably the best forms of preparation for planting. The thorough, frequent, shallow tillage in order to maintain sold tilth, fertility and freedom from weeds is a necessity.

Fertilizer for Orchard

"The experiments on the use of fertilizers for orchard soils has saved me a considerable sum of money in knowing what kind of fertilizer to use on my own orchard," said Ted Lucian of Cashmere, who has 10 acres of Winesaps, Black Bens and Yellow Newtowns.

This orchard is one of the experimental orchards upon which a number of fertilizers were tried out by Roy Larson, who has charge of the Chelan county bureau of soils. Although a number of fertilizers were used in this experiment it was found that ammonium sulphate was the best and cheapest application that could be used.

"I was so well pleased with the results of the experiment that I covered 10 acres of my orchard with ammonium sulphate last fall," said Mr. Lucian. "I find the trees are making better growth, have better color, the leaves are larger and there is a slight increase in the size of the apple, provided the trees are properly thinned. I feel that such a work is a great thing for the farmers because it saves them doing experimentations of their own, which would necessarily involve greater time and expense than if done by the county and experiment stations, as it is now being done."

Wants Medium Size Apple

C. B. Fly of Cashmere has a 15-acre orchard, most of which is Winesaps. He believes that he can keep the size up to 150 by properly thinning early in the season.

A few Rome Beauties are growing here and there about the orchard and are considered among the best paying varieties that can be grown in this district. Mr. Fly feels that he should make an attempt to keep this variety from attaining too large a size, since the general demand calls for a medium size apple.

The orchard is disked thoroughly each spring in order to keep out the blue grass which gets started if not given proper attention. The disk, however, does not injure the alfalfa roots and it seems almost impossible to kill it out by means of a disk. Alfalfa is one of the best crops that can be returned to the soil, and makes as good or better fertilizer than anything that can be purchased, according to Mr. Fly. It is a simple matter to incorporate it into the soil, and is very easy to grow in this climate.

ESTIMATES LOW CROP YIELD.

A recent issue of the Producer, the official organ of the Farmers' union and the cooperative wheat growers, summarizes an investigation of crop conditions in an estimate of a yield of from 60 to 90 per cent normal, depending on weather conditions from now to harvest time.

No scars—no blemishes

GOMBAULT'S CAUSTIC BALSAM does the work better than firing. Hair positively grows back natural color

A reliable remedy for Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Windpuffs, Skin Diseases, Thrush, Spavin, Ringbone, Throat or Bronchial Troubles. Will not scar or blemish. Supercedes all firing and cautery.

As a human liniment it is unsurpassed. $1.50 per bottle at druggists or by parcel post.

The LAWRENCE-WILLIAMS CO.
Cleveland, Ohio

GOMBAULT'S *Caustic* BALSAM

THE Northwestern Bell Telephone Company uses Red-Tops on all its cars, because "not alone do they give a greater amount of service, but because they give it without interruption."

Their men, who have to do the greatest part of their work in the worst kind of weather, when the telephone lines are down, always where the roads are roughest, feel certain when they go on these trips that no Red-Top is going to blow out or be punctured.

Last year this telephone company bought $15,000.00 worth of Red-Tops for one district—and put them on every car it used.

The extra ply of fabric and the heavy tread of the Red-Top will carry any small car over the roughest road, under any weather conditions and with heavy loads, for a longer mileage than any other tire we know.

There's a Fisk Tire of extra value in every size, for car, truck or speed wagon.

FISK RED-TOP CLINCHER TIRE

Extra Ply of Fabric *Extra Heavy Tread*

Engine Lubrication

By PROFESSOR L. J. SMITH, W. S. C.

Not many users of cars are careless in the matter of keeping enough oil in the crank case of the motor. We all recognize the fact that the engine will not run without oil. There is a danger, however, in being satisfied merely with the fact that the indicator shows plenty of oil in the crank case. That is not necessarily a sure sign of good lubrication for the bearings of the motor or the walls of the cylinders.

Each time one starts the motor some of the heavier parts of the gasoline recondenses in the cool cylinders and leaks past the rings down into the crank case. This in time so dilutes the crank case oil that it is more like kerosene than a high grade oil. A highly diluted oil does not properly lubricate the motor bearings and cylinder walls. There is no "body" to the oil to make it stick to the wearing surfaces.

What is the result? Why, loss of compression and power and an undue loosening of the bearings. The thing to do is to drain the crankcase, wash it out with kerosene and refill it with a good quality of cylinder oil. Use a grade heavier oil in summer than the winter months. If the pistons are getting pretty loose use a heavy grade in the summer and medium in the winter.

Many who drive a good deal make it a practice to flush out the crank case once a month and put in fresh oil. The next time you drain the motor let the old oil settle a few hours, slowly pour off the oil nearly to the bottom of the pail, then examine the sediment left at the bottom, and you will wonder how the motor ever stood up under such lubrication.

Truely a tractor or automobile motor is a wonderful piece of mechanism.

NOTE: For cars using a considerable amount of lubricating oil it is wise to keep a two-quart or a gallon can of spare oil under the hood alongside the motor.

Dairy Tour in Pacific County

In connection with the Pacific county Pomona grange meeting which was held in June at Long Beach, grangers and community dairy project leaders cooperated with County Agent J. R. Beck in arranging a dairy tour which had for its main objective a study of breeding results in the famous Chicona farm Guernsey herd of A. L. Gile at Chinook. The various families of cows, their sires and records, which the 1921 Guernsey Gaieties found so fascinating, were on display, and Don G. Magruder, state dairy extension specialist, and two men from the United States division used them as texts for lectures on the subject of herd improvement. No better illustrated "textbook" on the subject could be found in the state, and much profit was derived from the study. Incidentally a big crowd of people enjoyed a fine holiday just before haying set in.

Willapa Harbor people interested left South Bend early in the morning and were joined at the Naselle river crossing by a delegation from that district. Residents of the peninsula joined them at Chinook and picnic lunches were eaten at Chicona farm. After the breeding demonstration the crowd spent the rest of the afternoon and evening at Long Beach, where entertainment was furnished by local residents. At the regular grange lecture hour there was a fine program of talks and music, and many members of the party remained over night at the beach, returning home Sunday.

J. L. BRUNE, Ione, Wash.—I find a great many things in The Washington Farmer to help me along on the farm.

GUARANTEED BETTER BUTTER WRAPpers: 100, 60c; 250, $1.25; 500, $2.25; 1000, $4; printed to order. Home Specialty Co., Middleton, Idaho.

HANDSOME BUTTER WRAPPERS, FIFTY cents per hundred. Try sample order. Eagle, Eden, Idaho.

MATERNITY HOMES 497

MATERNITY HOSPITAL; STRICTLY PRIvate; doctor in attendance; prices reasonable. Mrs. Elizabeth Peel, matron, W1324 Broadway, Spokane.

BUILDING MATERIAL 588

TO PATCH A HOLE OR BUILD A HOME, use Perfection Plaster wallboard. Easily handled with hammer and saw; fireproof, waterproof. Western Wallboard Co., Seattle, Wn.

BUILDERS, CONTRACTORS, HOME OWNERS, write for free 1922 catalog. Tacoma Sash & Door Co., Tacoma, Wash.

SEEDS. 620

SEEDS FOR SALE—VETCH, FALL RYE, gray oats, black oats, clovers, rye grass, pasture mixtures, rib grasses, etc. Shipments anywhere, promptly. Brownsville Warehouses, Brownsville, Ore.

NURSERY STOCK 621

GROW BUREAU OF PLANT INDUSTRY'S new pedigreed variety Washington asparagus; best in the world. Ask for literature and terms. Home Nursery, Richland, Wash.

CABBAGE PLANTS, LEADING VARIETIES, 500, $1.50, postpaid; 1000, $2.25, express; satisfaction guaranteed. Ray Parks, Bancroft, Idaho.

FARM LANDS FOR SALE 651

7000 ACRES SEQUIM LAND SETTLEMENT project, containing the finest berry and dairy land in the state, now offered for settlement at attractive prices and terms. Free booklet. Thos. G. Mortland, Sequim, Wash.

FARM LANDS FOR SALE (Continued) 651

IRRIGATED FARMS FOR SALE—160-ACRE farms, improved or unimproved; 30 to 160 acres irrigable land on each parcel; near Lethbridge, in sunny southern Alberta, can be bought for $15 to $40 an acre. No need for pioneering. Well settled country, good roads, railways, schools, telephones; agreeable social conditions; fertile land; success of irrigation farming here already demonstrated; irrigation system being constructed under government supervision. Water available in 1923. Write for information concerning crops grown and description and location of farms to the province of Alberta, Irrigation Council, 12 Provincial building, Lethbridge.

CUTOVER LANDS, EASY TO CLEAR; $8 TO $20 per acre; 25 miles north of Spokane; on hard-surfaced highway; Great Northern and Milwaukee railways; excellent opportunity for dairying and stock raising, with Spokane markets and creamery near at hand. Will help the man who will live upon this land and agree to clear a part each year by giving lumber to help start his buildings, and a purebred Jersey bull to groups of farmers. Interest and payments low. Write Milan Farms Development company, Dept. T, Old National Bank bldg., Spokane, Wash.

BIG OPENING SALE OF YAKIMA VALLEY farm land, under an assessed state and government approved irrigation project; good, deep soil; close to town, railroads and state highway. We sell in tracts to suit purchaser at $25 per acre and up, on easy terms. Our many sales to farmers show that this land is a good investment. Western Lands, Inc., owners, 918 Green bldg., Seattle.

LOGGED-OFF LANDS IN STEVENS COUNTY, Washington, at greatly reduced prices. Most of land sells at from $5 to $20 per acre; thickly settled community, good schools, hard surfaced and paved roads to Spokane; best county in state for dairy and stock raising; most places water can be found at shallow depths. Write for folder. Phoenix Lumber company, Dept. T, Spokane, Wash.

THURSTON COUNTY—5000 ACRES, VERY fertile, level; fruit, berry and poultry lands; right at beautiful state capital. No extremes of temperature; no storms or floods, no irrigation; bumper crops; fine markets. 5 or 10 acre tracts; low prices and long term payments. Send for our valuable pictorial booklet. Norpia Realty Corporation, Olympia, Wash.

174 ACRES, ON KOOTENAI RIVER AND Great Northern; 94 bottom, 8 pasture, 18 fenced and cross-fenced; 3 plowed, 15 ready; ½ acre fruit, 4 cabins, team, harness, wagon, plow, harrow, tools, etc.; 2000 ft. lumber, 14 bales roofing, 6 windows, fine cattle or chicken ranch; fine government range. $4000. Chas. R. Scholz, owner, Ural, Mont.

DAIRY AND GRAIN FARM, 480 ACRES; 200 under plow; school adjoins; lots outside range, with running water; eighteen head milch cows and young stock; six head horses, all farming implements. Price $5000, half cash, balance easy. R. C. Wightman, Quincy, Wash.

960 ACRES AT $22.50; ALBERTA GRAIN AND stock ranch; northwest of Lacombe, on railroad under construction; no fall crops; full set good buildings; 190 acres broken; will subdivide; school, church, station, postoffice 1½ miles. Irving Jayne, Edwall, Wash.

BIG LUMBER CO. LAND SALE IN SKAGIT county; 40 acres, $1400; 20 acres, with new house, $1500. Lumber furnished for building. Lots of work for the settler; splendid district, roads, schools and towns. H. C. Peters, 726 3d ave., Seattle.

BEST BEAVERDAM SOIL IN AMERICA; sold in small tracts, by Long Island Gardens Co., Brownsmead, Oregon; reasonable prices, easiest terms; wonderful berry land; best shipping facilities, schools. Write for particulars.

290-ACRE FARM IN NORTHERN WHITMAN county; 160 summer fallow; fair buildings; water under pressure; family orchard; on county road; 1 mi. to warehouse. $17,000 will handle. P. O. Box 1034, Spokane.

BEAUTIFULLY LOCATED 153 ACRES BOTtom land; on county road; 50 in crops, timber, orchards; 8-room house; team, cow, chickens, implements. $6000; reasonable terms. Owner, Daniel Wilson, Boyds, Wash.

180 ACRES, MOSTLY ALDER CREEK BOTtom land; 30 clear; 1½ miles from Lane, on state highway; grows all crops. $16,500; 80 acres, $7500. C. M. Robison, Lane, Idaho.

15-ACRE POULTRY FARM, CHEAPLY IMproved; $1200; terms, or will sell 55-acre poultry and dairy, with or without stock. C. O. Johnson, R. 1, Medical Lake, Wash.

SELL YOUR PROPERTY QUICKLY FOR cash; no matter where located. Particulars free. Real Estate Salesman company, 501 Brownell, Lincoln, Neb.

HIGHLY IMPROVED 80-ACRE FARM; NEAR Tekoa, Wash.; level, first-class soil; 5 good springs; water in house. Owner, E604 21st ave., Spokane.

FOR SALE — RICH 226-ACRE, FULLY equipped, central Willamette valley farm. Price $18,080; good terms. 399 Beach street, Ashland, Ore.

A PRETTY 10-ACRE HOME OF BEARING fruit; overlooking beautiful Clear lake; snap at $5500. Write Box 135, Lakeport, Cal.

160 ACRES, ¼ MILE ADDIE; GOOD BUILDings; 10 acres cleared. $3000. $1200 cash, balance easy. Box 20, Addie, Idaho.

FARM LANDS—Wanted 654

WANT TO HEAR FROM OWNER HAVING farm for sale. Give particulars and lowest price. John J. Black, 80th street, Chippewa Falls, Wis.

FARMS WANTED — SELL YOURS QUICKLY for cash, no matter where. Particulars free. R. A. McNown, 310 Wilkinson bldg., Omaha, Neb.

FARM LANDS FOR RENT 657

300-ACRE PALOUSE FARM; EQUIPPED; terms. Owner, Box R, Latah, Wash.

FOR SALE OR EXCHANGE 702

FOR SALE OR EXCHANGE—200 ACRES stock and wheat ranch; fully equipped; stock, implements, growing crop; for small irrigated ranch. Anna Reynolds, Arbon, Idaho.

320-ACRE DAIRY OR STOCK FARM WITH abundant free range; in best clover belt of Montana for sale or trade. H. J. Vaughan, E3807 2d ave., Spokane.

NEW, UP-TO-DATE CAFE AND CONFECtionery; in good location; to sell for cash or trade for good farm. W. J. Scott, Pomeroy, Wash.

TO EXCHANGE—640-A. FARM IN ALBERTA, for small place or city property. E. M. Broughton, Kennewick, Wash. Route 1.

320-ACRE FARM, GOOD CROPS; SELL AT bargain, or trade for coast property. Ed Green, Soda Springs, Idaho.

FOR SALE OR TRADE—160 ACRES, PART irrigated; North Platte valley; cheap. B. S. Brown, Lingle, Wyo.

PIKE'S PEAK OR BUST

By LEWIS B. MILLER

Copyright 1921

SYNOPSIS.

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. For three days they have been trudging slowly southwestward carrying out the determination crudely lettered on the side of the wheelbarrow, "Pike's Peak or Bust." Rain and snow impeded their progress, and Orlando falls sick and requires a couple of days to rest before proceeding. Then, with the village that is now Kansas City passed, they follow the Santa Fe trail westward, being but one of scores of outfits of various kinds headed for the fields of golden riches. Once again they stop for a good rest before plunging into the real wilderness, 700 miles of which is still ahead of them to be conquered by foot, cow and wheelbarrow. After several days' tramping, they pitch their tent across a little stream from the camp of a family by the name of Cooper, also headed for the gold diggings. In the party is the daughter of the Cooper family, Hazel, whom Orlando by chance met when both went to the stream for water and in whom he became at once greatly interested. He reluctantly joined Esau next morning for the day's travel, leaving the Coopers to follow later, but with the expressed hope that they would all meet again at the gold fields. It was several days later that Esau and Orlando met up with another strange party on the trail, several men with a push cart to haul their belongings to the diggings.

CHAPTER FOUR.

One Handcart and Its Crew.

The cart's two wheels were similar to wagon wheels, but not so heavy, more like buggy wheels. Balanced on the axle was a rather long, but not very deep box, which contained all that the party were carrying with them. Five men were in charge of the cart.

At its front were two short shafts, with a crosspiece connecting their ends. One man was between the shafts, grasping the crossbar and pushing against it. When going down hill he would hold back. Two other men were in front of the crossbar, pulling in harness. They had straps over their shoulders and around their breasts, and reaching back to the crossbar. A fourth man was on the cart, riding, and the fifth walked behind it, to push.

"Reckon we might as well spend the night here as somewheres further on," the man between the shafts presently announced. And the handcarters left the trail and moved toward the camp. The cart came to a standstill not far from the wheelbarrow.

"Well now, jest how fur has that two-wheel contraption traveled?" demanded Esau, as he stood with his hands on his hips, gazing at the cart.

"All the way from Michigan," answered the man who had been between the shafts. His name would prove to be Sanders.

"Oh, Michiganders, are you? From what part of the state?" Orlando inquired.

"Southern part, not very far from the Indiana line."

"And have you footed it all the way?" Esau wanted to know.

Sanders shook his head. "Not quite. We've footed it four-fifths of the way—and a little more. One of us rides all the time—except at hills. That is, we take turns at riding. Each of us rides about a fifth of the time."

Soon the newcomers were preparing to kindle another campfire, near their cart. But Esau stopped them:

"No use of that, as I can see. One fire will do for all. We'll be through cookin' by the time you boys gits ready to put on, anyhow."

"All right, then. We'll use your fire if you say so," a handcarter answered. "We'll hunt up some more wood for it, too."

"A little there. Help yourselves to that. And you'll find more dead wood down yonder along the branch," Orlando told them.

Some time later Esau turned to the men on the other side of the campfire. "Well, our bite's ready to be et, I believe. Won't you boys come around and have a snack with us?"

"No, we're obliged to you," Sanders answered. "We'll have supper cooked now in a few shakes of a sheep's tail. Put on the coffeepot, boys, some of you, and let's start that to boiling."

While Esau and his partner were eating, and the handcarters were cooking, they all chatted at a lively rate. Of course most of what they had to say was of their experiences since leaving home. Like nearly everybody else now traveling these prairie trails, the party from Michigan were on their way to the gold diggings.

"What! What's that you're drinking?" demanded Sanders, on seeing Orlando pour something from a big-mouthed bottle into a tin cup.

"We're milk drinkers, both of us," Esau informed him. "We fetched old Brindle along as much to give milk as to carry a pack. And we're both tickled to death that we brung her."

"That we are!" spake up Orlando. "And if you folks will get your cups ready, we'll divide with you."

"No, no! We're all pot-drainers here. It's little any of our crew cares for milk to drink when we can get some black stuff. But if you could spare us a little to put into our coffee, we'd pay you for it."

"Brindle belongs to Lando here—" Esau was beginning, when the cow's owner broke in:

"No milk to sell in this camp. But reach me a cup, if you've got a cup not in use."

One of the handcarters passed over a not very large tin cup, and Orlando filled it from a bottle. Not to be outdone in generosity, the handcart party now tried to divide about everything they had to eat with the wheelbarrow party.

Night soon came on, and Esau and Orlando sat up much later than usual, chatting with their fellow campers.

"How many miles a day do you boys commonly make?" Sanders inquired next morning while both parties were packing up and getting ready to travel.

Esau told him. And then one of the handcarters remarked:

"You two seem to be joggin' along at about our gait. What's to hinder us from all travelin' together?"

"Suits me to a dot, that does," Esau answered. And, after several others had approved the suggestion, Sanders announced:

"So it's start together, stop together, camp together, bunk together, hang together from now on to the end of the trail. And if your young partner here has another sick-abed spell, like the one you and him told us about last night, you won't have to push 'im along on your wheelbarrow. We'll take 'im aboard our cart."

"But I'm not expecting to have any other sick-abed spells," Orlando hastened to say. "Fact is, I wasn't more than half well when we started from home. Hadn't been very well all winter. I had the slow fever last fall, and didn't seem to get over it. But I'm feeling hale and hearty now. And I'm growing stouter every day of my life."

"He's right about gittin' stouter," his partner assured the others. "What did he up and do yisterday but grab a holt and push my wheelbarr' five or six miles before I could make 'im turn loose?"

Now one of the handcarters stepped between the shafts, and two others stationed themselves in front and buckled on their harness. Then the cart moved away toward the trail, with two men at its hind end, pushing. And close in the rear followed Brindle and the wheelbarrow. When the cart had reached the smooth road, where it ran easily, one of the pushers behind sprang upon it to ride.

After riding an hour or two, the man on the cart jumped down to relieve Sanders, who, this morning, was one of the team pulling in harness. But instead of mounting the cart, Sanders turned and called back:

"Hey there, you man with the one-wheel wagon! You've pushed harder than I've pulled this morning! So I want you to bounce up here and ride and let me try shoving your load along. I always did like to trundle one of those one-wheel concerns."

"You can trundle my wheelbarr' all you want to, and welcome, Mr. Sanders. But no ridin' for this boy, thanky. I started out to hoof it every step of the way from Illinois to Pike's Peak. And I'm jest bound to do it or bust! Only ridin' I've done so fur was on ferryboats, while we's crossin' streams too deep to ford."

When the wheelbarrow had overtaken him, Sanders put the strap over his head and grasped the handles. Esau tramped along by his side. A few miles farther on Orlando took the wheelbarrow's handles, leaving Esau the not very arduous task of driving Brindle. Esau grumbled sometimes, his grievance being that they were robbing him of the right to brag that he had pushed a wheelbarrow all the way from Illinois to the Rocky mountains.

When dinner time came, the two parties camped together by a little stream.

"Before long we'll arrive at Council Grove, on the Neosho. And that's the last ragged edge of civilization, so I've been told." All the party were sitting on the grass and Sanders was talking. "From there on we'll be journeying through a wild country, and there'll be more or less danger from redskins, I suppose. Then we'll have to decide whether to attach ourselves to some wagon train, or to brave it through on our own hook."

"To my way of thinkin', we'd better stick most awful tight to some long chain of wagons when we git as fur out as that," was the opinion of another handcarter. "Seven of us in this bunch, and all purty well armed, too, I'm guessin'. But we'd cut a shabby figger if a whole razzle-dazzle of redskins was to come whoopin' and swoopin' down on us."

"That we would!" spoke out Orlando. "And a big wagon train would be a lovely thing to have around us about that time. I've read how those plains Indians make their attacks. It must be something frightful, the way they circle a white party at full speed."

"They go at the business in their own savage way. But there'll be time a-plenty to decide how to travel when we reach Council Grove," Sanders remarked. "That's the place where the wagon trains all elect their captains—so they tell me."

"No ridin' for this boy, thanky."

Day after day the two parties continued their journey together. The whole seven agreed well enough. And the men from Illinois pronounced their tramping trip far more pleasant than when traveling by themselves.

At last they all arrived at Council Grove. Here they found a few trading houses, but little besides. A wagon train camped near by. It was from Santa Fe and on its way east. Plenty of wagons were traveling west, but there were usually no fewer than a dozen in a string. However, the party from Santa Fe reported everything peaceful along the wilderness trail. The plains Indians seemed thoroughly intimidated by the thousands of white people swarming across their hunting grounds.

But a question came up as to what the foot travelers should follow from here on. Most of the wagons went by way of the Santa Fe trail, which led southwestward till it struck the Arkansas. Afterward the gold seekers would follow up the Arkansas to the mountains. That insured them plenty of water.

However, there was another road, which split off from the big trail about a day's travel ahead. This new trail connected the Santa Fe trail with the Smoky Hill route. It ran almost due west to the Smoky Hill river, then followed up that stream.

After gathering all the information obtainable concerning the new route, the party returned to their camp to decide the matter. They were camped in some woods on the bank of the Neosho, not far from the trading houses. Sanders was provided with a traveler's guide—a book with folded maps in it. Spreading the map of the plains country on the grass, he invited all to approach and inspect it. At once the six men gathered around him. When everybody had examined the map, Sanders said:

"As you've all learned, I suppose, there's a road leading from Council Grove to the Kansas river. It crossed the river not far above Junction City, here, and there intercepts the main Smoky Hill trail."

"But that would be out of our way, wouldn't it? Junction City looks to be more north than anything else," said a handcarter.

"It is north—far north of where we want to go. And it would be at least a hundred miles out of our way—maybe a hundred and fifty. So I don't think we'd better consider that. But the road that branches off from the Santa Fe trail somewhere west of here is more on our course. I'm told that it leads nearly due west till it strikes the Smoky Hill river, here where the river bends farthest south. After that it follows up the river. It finally connects with the main Smoky Hill route five or six days' travel west of here. If we think it prudent to try the new route at all, that's undoubtedly our best way to get to it. But the first question to decide is: Shall we abandon the Santa Fe trail and try some road that we don't know anything about, and that nobody seems to know much about?"

"What's your opinion, Abe?" asked a handcarter.

"It's easy to be seen that this new road up the Smoky Hill river is a whole lot nearer than the Santa Fe trail," Sanders pointed out. "It appears to be almost a bee line from here to Pike's Peak."

"And the Santa Fe trail is anything else but a bee line," Orlando observed.

"That's right. If we follow the big trail we'll have to travel far south of our true course to touch the Arkansas, down here. And then, after winding as the river winds till we get to the mountains we'll have to travel north a good distance along the foot of the mountains. By heading due west from here, we save ourselves all that winding."

"Must be a safe road to travel, that Smoky Hill road," Esau remarked. "I'm told that four wagons left here a few days ago with the intention of follerin' that route."

"If there are four wagons on that road I'm in favor of trying it ourselves," Sanders now announced.

"We can tell for shore about that when we come to where the Smoky Hill trail branches off from the main trail," a handcarter suggested. "Tracks will tell the tale—the wagon tracks."

"Then, seems to me like, we'd better let the question rest till we come to the forks of the road," was Esau's opinion.

All agreed to this. And the matter was still in that shape when the handcart and the wheelbarrow rolled away from Council Grove next morning.

West by the Smoky Hill Route.

When at length the foot travelers came to where the Smoky Hill road branched off from the right-hand edge of the main trail they halted to decide which fork to follow. An examination of the new route convinced them that several wagons, doubtless the ones they had been told of, had recently traveled it. That decided the matter, and off the wheelbarrow and the handcart started, on this shorter route to the mountains.

Now the seven men found themselves in utter wilderness. And instead of the wide, hard-tramped Santa Fe trail, where one was seldom out of sight of a covered wagon, they were following only a dimly-marked, little-traveled road across the prairie. However, this was the only road from here to the mountains, and there was no great danger of missing it. Also the country was comparatively level, and the lack of a well-beaten trail, though it retarded the party's progress more or less, did not seriously interfere with their traveling.

Day after day the men with the handcart and the wheelbarrow pushed on into the desert-looking country. Since leaving the Santa Fe trail they had met nobody; nor had anybody passed them. And they saw few animals. Even the game seemed to have deserted this sun-parched region.

One morning the travelers started from a water pool by which they had camped. Till noon they pushed ahead, with only the gray-and-brown desert around them. When the time came to halt for dinner they looked in every direction for water, but could make out no sign of any stream. The country seemed very high, and as dry as ever—drier if possible.

All the party were somewhat thirsty from hard tramping. And there was no water in their water kegs. Never until now had they needed to carry water. And they fought shy of all unnecessary weight. Orlando and his partner had some milk in a bottle. That they shared with such of the handcarters as cared for milk. But there was not enough to quench their thirst.

It was a rather silent group of men that lay on the grass and rested after eating—what little they cared to eat. Brindle, too, seemed to be suffering from thirst. She cropped only a few bites of the dry grass, then dropped down with a sigh to rest.

"Well, boys, time for us to be on the march!" Sanders sat up to exclaim, ere they had been resting very long. "We must keep hoofing it as fast as possible,

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I am always interested in the Circle letters and those concerning the "raising" of children especially appeal to me.

There are so many problems to meet training children and one is hardly met before another arises in its place.

I use what I call the credit system with my girls, age 7 and 9 years. I make a chart blocked off like the good health charts to cover a period of six weeks. I give credits for doing dishes, brushing teeth, washing thoroughly, hanging up garments, obeying quickly, not quarreling and dressing neatly. At the end of the period the one having the most marks receives a prize and you can guess it is a pretty close race.

I was nearly disheartened with picking up clothes before I tried this system, but now it has become a habit for the children to hang up their clothing. The quarreling is the hardest of all habits to break and they get fewest marks for not quarreling of anything.

My baby of 20 months is inclined to be constipated and I find that a half cup or more of warm water relieves her in a little while. Some babies wouldn't take it, but it is such a simple remedy I thought to pass it on to other mothers. With kind regards to you and the Circle,

MRS. H. M. E.

Granger, Idaho.

Dear Mrs. Barland: I live out 150 miles from Spokane on a 3600-acre farm and stock ranch and I do get lonely sometimes.

We have a country club and meet Wednesdays all winter, taking our lunch with us. Each woman takes two kinds of food, so you see it isn't much work to get ready and sometimes we go 10 miles and stay all day.

The hostess prepares two warm dishes and coffee, and we meet at all the houses in the country and young and old attend, but when spring work begins we can't keep them going.

On one of our meetings a quilting brought us together, dinner at 1 o'clock and the quilt off the frames at 4 o'clock.

I wish you could have been with us and heard us discuss our experiences pro and con.

I lived in town eight years before I came here and I do miss the lodges, church and aid societies and such things very much.

MARGARET STONE.

Ephrata, Wash.

Dear Mrs. Barland: I wonder if all the readers appreciate the good things on the Circle page as much as we do. My husband asked me the other day what I did with all the good recipes that are printed from time to time. I told him I pasted them all in a note book and keep them with my other cooking recipes.

I came west a few years ago from Chicago when I was married, but I have not had time to get lonesome for my people back there. My little boy, a little past a year, is good company for me and with him it is impossible to get lonesome.

Having been raised in the city it has been somewhat hard to get used to the ways of the country, especially the cooking. I am trying to be as economical as I can and instead of buying new flannel for my baby's night gowns I make them out of old undershirts and they are nice and warm. I make rompers out of the backs of his daddy's overalls and sometimes out of old shirts. I make him nice warm caps out of old woolen socks. I never did these things in Chicago, but went to the store and bought new material.

MRS. G. W. J.

Idaho.

Dear Mrs. Barland: I see the request of Mrs. S. C. N.'s for instructions how to smoke hams and bacon without a smokehouse.

I think if she would try a bottle of liquid smoke to be had at any drug store, directions on the bottle, she would never want a smokehouse.

Home Recipes

To make rose beads: Gather as many rose leaves as you can pack into a five-pound lard pail and select fragrant roses. Put the leaves twice through a meat grinder, using one of the coarse disks. Select a very rusty old tin pail or can and put the ground leaves in it and set away, covered lightly for a couple of days, stirring them from the bottom several times. On the third day put the leaves through the grinder again a couple of times and set away for another couple of days, stirring as before. On the following day put on the very fine disk and grind the leaves three times and set away till the next day, when they should be like black putty. If they are not like putty, so you can mold, grind them again and leave another day, but they should not need any more time. The rusty can or pail supplies the necessary iron needed to make the mixture black and it will not become so unless the iron is supplied.

When the leaves have become black and like putty they are ready to mold into beads. They must be measured in something carefully if one is to have beads uniform in size; a very tiny thimble is the best. One should have long hatpins or fine knitting needles ready and after measuring a thimbleful of the mixture remove it and roll in the palm of the hand till perfectly round, then pierce it evenly through the middle with a hatpin and slide it along to make room for the rest and continue till all your paste is made into beads. If you don't have time to mold all of them at one time cover the mixture and do it later. Do not cover air tight, though, as the leaves may mold. Just cover with a paper or a cloth to keep the air from drying the surface into a crust.

The beads will shrink about three-fourths and should be left alone till they are quite hard, then move them gently along on the pin, as they will rust and stick fast. If you keep your rose beads in a box with a tight cover when you are not wearing them they will retain the fragrance for years.

ALICE W. BARLAND.

Salt beads: One quarter pound of cornstarch thoroughly blended with an equal amount of water and into this put a bit of dye or water color paint. Use the shade desired and care must be taken about getting the beads too strong in color, as the dye cooks up darker than it seems to be. Having this mixture in readiness, pour into a bright pan one-half cup of table salt and heat it. Gradually stir the cornstarch mixture into the hot salt, stirring constantly till stiff.

Have a pincushion and plenty of pins convenient and as you mold the beads stick on the pins, not allowing to touch.

Boles, Idaho. E. J.

Maple nut ice cream, made with canned milk: Five cans of milk, two eggs, two tablespoons of mapleine, two full cups of fine sugar, one cup of English walnuts, cut fine, one-half can of water.

Break eggs into one can of milk, beat three minutes, add sugar and flavoring, stirr well, then add the rest of milk and freeze. Put nuts in after cream starts to freeze. This makes one gallon of ice cream.

MRS. D. W. F.

Just Folks.

Popularity is a mixture.

Make Doubt a servant.

Comparisons are dangerous.

Overdoing is not doing more.

Delay often cures an easy belief.

The best is costly; the poorest yet more costly.

Say what you will, but will to say it.

Discount the loudest calls.

There may be more satisfaction in not understanding.

Naming discouragement encourages discouragement.

A score of years or so ago two men in a similar line of industry came into one of the cities of the Pacific northwest. One was skilled in his business, was a master workman at his trade and turned out a superior product and the other had not mastered the details of the trade. He frankly admitted he could not personally make an article as good as his competitor.

Today the man who had personally mastered the details of his trade is hanging onto the fringes of his business. For all I know, that business may be on its last legs. The second man, who could not personally compete with his rival in the production of the article, has built up a great institution that is growing with leaps and bounds. The second man had the executive ability to employ personal masters of detail under him. The first man did not have that ability.

I have no reason to doubt the soundness of the requirement that every future executive should be conversant practically with the details of the business, should, in fact, if possible, be a master in the making of the article, and yet here is a case where a man has made a great success without being a master of the details.

Penetrates, Pulverizes and Packs - Better -

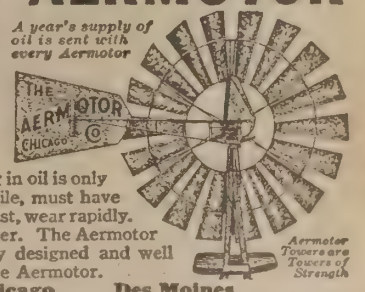
It's Flexible -

John Deere Disc Harrows are noted for keen penetration and thorough pulverization, and, in addition, **they pack the soil better** than any other disc harrow **because they are flexible.** Soil packing fills up the air spaces and conserves the moisture.

JOHN DEERE
MODEL "B" DISC HARROW

It's flexibility makes it do a better job of disking —the gangs are independent of each other. By means of a third lever, pivoted yoke and **unusually powerful** spring, the inner ends of the gangs of the John Deere Model "B" DiscHarrow can be given light pressure for soft ground or ridges; heavy pressure for hard ground or for going down into dead furrows and depressions. Each gang can be angled properly to prevent harrow from crowding to one side when working on hillsides and when overlapping hard and soft ground.

Unusually strong. All steel main frame; double bar gang frames; riveted; convenient grease cups and spring steel oscillating scrapers.



A way to save money. Buy a Model "B". Use it with your horses. Later on, if you buy a tractor, you can convert the Model "B" into the popular John Deere Pony Tractor Disc Harrow by buying only a rear section and the proper hitch. Then you will have a harrow that you can use with either tractor or horses—an advantage that often saves much time and money.

FREE BOOK. Write today, address John Deere, Moline Ill., and ask for a copy of free booklet describing the John Deere Model "B" and Pony Tractor Disc Harrows. Ask for Booklet DB717

JOHN DEERE

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Aermotor Towers are Towers of Strength

A LITTLE "WANT AD" FREQUENTLY OFFERS A BIG BARGAIN. MAKE IT A PRACTICE TO READ OUR "WANT ADS"

High Points in News of the Week

The situation with reference to the railroad and coal strikes continued to be the center of interest in the United States last week. Up to this writing comparatively little progress has been made in the attempt to settle either. President Harding has taken a hand in the negotiations for settlement of both the railroad strike and the coal strike and, while he has probably succeeded in laying ground work on which settlements may sooner or later be effected, up to the opening of this week there was little tangible evidence on which to base a prediction of early peace.

No important railroad in the United States has ceased to operate, though in many instances branch and local passenger trains have been taken off in order to permit the more regular operation of the main line and through trains. While the situation in the Pacific northwest in a general way is better than that in the middle west or east, a considerable number of local and branch trains have been canceled. The actual operators of trains and workmen employed in keeping the tracks in condition have not gone on strike. Cancellation of trains is made in order to conserve equipment for the use of the main lines. The railroad shops where engines and cars are repaired and kept in running condition are nearly all closed or running with small crews of nonunion help. Some of the railroads report adequate help to keep their main line trains in operation for an indefinite period.

In some cases freight and express shipments of perishable products have been refused. The Great Northern has placed an embargo on fruit for long hauls in the Spokane district.

Hardly second in importance to the railroad situation is the coal situation. Nearly all of the principal coal mines of the United States have been closed since April or operating on a small scale. The available supply of coal is reduced to such a point that government authorities are taking steps to ration the remainder of it with a view to supplying railroads and essential industrial plants. Steps have been taken to increase the importation of coal from foreign countries, especially England, and sufficient is believed available from this source to serve certain of the Atlantic coast industrial centers. Last week President Harding urged all operators to reopen their mines and apply to the public for either union or nonunion help to work them under the protection of the government. This plan is being tried out for a period of two weeks, though it is apparent that there is little hope of being able to mine adequate qualities of fuel. President Harding had previously urged the coal mine owners and the striking workmen to submit their case to a board of arbitration composed of members selected by the workers, the employers and the government. This offer was refused by a sufficient number on both sides to make it impractical up to this time.

The president has had in conference with him during the last week leading members of his cabinet and leading representatives of both the striking workers and the operators of railroads and mines. It is probable that early this week, on the basis of the information that he has received from these sources, definite action will be taken under his direction looking toward the settlement of both strikes.

* * *

Statistics compiled by the department of agriculture indicate that the wheat crop of the entire world, exclusive of Russia, where reliable estimates are unavailable, will be a little larger this year than last year, though a little less than the average crop. The total for this year is estimated at 2,753,000,000 bushels. Last year it was 2,724,000,000 bushels, while the five-year average was 2,557,000,000 bushels. The 1922 acreage for the entire world is less than for 1921, being about 191,000,000 acres.

* * *

The Wisconsin state supreme court last week upheld the constitutionality of the Wisconsin law prohibiting the sale of filled milk. The decision was in a case brought by the Carnation Milk company to test the validity of the law, which was aimed largely against a product of that company in which coconut oil is substituted for the butterfat in milk. The court held that the law was valid on the ground that the legislature had power under the police clause of the constitution to prohibit the sale of a food product believed to be detrimental to the welfare and health of citizens of the state.

* * *

Whether or not Germany shall be granted a further extension of time for the payment of reparations installments is a question that still threatens to disrupt the harmony of the allies. Leaders in Great Braitain apparently are convinced that Germany is unable to pay and requires the extension to permit her to place her industrial life in a prosperous condition. France, on the other hand, apparently believes the request to be but a misrepresentation on the part of Germany and is standing firm in her demand that Germany be compelled to make immediate payment.

* * *

The records of the war finance corporation showed that on June 30 it had a total of $237,000,000 in loans outstanding, the greater part being for various agricultural purposes.

Plan Live Stock Reporting Work

A tentative program for the new live stock reporting service for range states under the United States bureau of agricultural economics and agricultural statistics was drafted recently at a session in Denver of statisticians, bureau chiefs, railroad men and agricultural and live stock men from virtually every state west of the Missouri river.

The new reporting service is one provided by a recen act of congress. Details for the manner of gathering and disseminating information by the bureau are now being worked out.

Information to Be Gathered.

Reports month by month and an annual report are proposed.

The annual report in January will show the head of live stock on farms and ranches, by age and class, with average farm value for each class. This is a continuation of the annual report heretofore made by the bureau, but giving further details.

Estimate of number of cattle and sheep (including lambs) in feed lots.

Revised final estimate of calf and lamb crop in range states for preceding year.

Revised estimate of wool production for preceding year.

Estimate of live stock losses from all causes for preceding six months.

Monthly reports will show railroad movement of stock.

Pasture and feed conditions.

Condition of live stock expressed in percentage of normal, and available contract prices in territory where there are no central market reports.

The July report will estimate the number of grass fat cattle coming to market from Kansas, Oklahoma, Texas, Montana, Wyoming, Oregon, Washington, western North and South Dakota; losses of cattle and sheep from all causes during preceding six months; number of California and Idaho lambs shipped; lamb crops of range states, and average weight per fleece and preliminary estimate of wool production.

The plan in general as developed by the conference includes a division of the range country into producing sections and the placing of a live stock expert in each division to assist in gathering information for the reports.

Farm Business and Markets Outlook

(Continued from page five.)

LATEST QUOTATIONS.

The Livestock Market.

SPOKANE, July 22.—Cattle—Prime steers, $6.75@8.00; good to choice steers, $5.75@6.75; medium to good steers, $5.25@6.50; fair to medium steers, $4.50@5.25; common to fair steers, $4.25@4.50; choice cows and heifers, $5.25@6.50; good to choice cows, heifers, $4.25@5.25; medium to good cows, heifers, $3.75@4.25; fair to medium cows, heifers, $2.75@3.75; canners, $1.50@2.75; bulls, $3@4.75; light veal calves, $7@8.50; heavy veal calves, $5@7; stockers and feeders, $4.75@5.

FAST THRESHING—AND GOODYEAR BELTS

When he thinks of the belt troubles he put up with before he got his Goodyear Klingtite Belt, George F. Gerk, of Hillsboro, North Dakota, says he sometimes wonders how he ever got his threshing done.

Those ordinary belts—he tried many kinds of them—slipped and lost power, had to be limbered up every morning. They were short-lived, expensive and bothersome.

His Goodyear Klingtite Belt holds the pulleys in the slipless grip of its friction surface, works just the same one day as another, and distributes the load evenly. It requires no dressing, eliminates engine resetting, and needs no breaking in.

Goodyear Klingtite Belts are reliable, trouble-free and economical; they are made in endless type for threshing, silo-filling, feed-grinding, wood-cutting and other heavy duty, and in suitable lengths for lighter drives, like churning, cream separating, water pumping, wash machine and electric light plant drives.

They are sold by Goodyear Dealers everywhere and by many progressive hardware merchants. For further information about them, write to Goodyear, Akron, Ohio, or Los Angeles, California.

GOODYEAR

KLINGTITE BELTS

Bits of Fun FOR Everyone

Dear, Dear!

"So that's the picture of the horse you used to ride to see your best girl, in the pre-flivver days, eh?"

"Yep, that's my sparkplug."

An Important Position.

Neighbor: "They tell me your son is on the college football team."

Proud mother: "It is quite true."

Neighbor: "Do you know what position he plays?"

Proud mother: "I'm not sure, but I think he's a drawback."—The Mill.

A Little Too Late.

The station master, hearing a crash on the platform, rushed out of his room just in time to see the express that had just passed through disappearing around the curve and a disheveled young man sprawled out perfectly flat among a confusion of overturned milk cans and the scattered contents of his traveling bag.

"Was he trying to catch a train?" the station master asked of a small boy who stood by, admiring the scene.

"He did catch it," said the boy happily, "but it got away again!"

A Young Plucker.

The old 'un: "Pluck, my boy, pluck; that is the one essential to success in business."

The young 'un: "Yes, of course, I know that. The trouble is finding some one to pluck."

Wouldn't Be Bullied.

"Here, boy," said the man to the boy who was helping him drive a bunch of cattle; "hold this bull a minute, will you?"

"Na," answered the boy; "I don't mind bein' a director in this company, but I'm darned if I want to be a stockholder."—Cartoons Magazine.

Rather Go Without.

Mr. McNab (after having his lease read over to him): "I will not sign that. I have na' been able tae keep Ten Commendments for a mansion in heaven, an' I'm no' gaun tae tackle about a hundred for twa rooms in the High street!"—London Opinion.

Wait a While Longer.

Charley Neidel: "The doctor says I will have to give up smoking."

Mrs. Charles: "Oh, dear! Can't you hold out until I have enough coupons for the parlor clock?"

Some Little Bossie!

This advertisement appeared in a newspaper the other day: "Wanted, a steady, respectable young man to look after a garden and milk a cow who has a good voice and is accustomed to sing in the choir."

Not Well Acquainted.

First Irishman: "And so yer name is O'Hare. Are yez related to Patrick O'Hare?"

Second ditto: "Very distantly. I was me mother's first child and Patrick was the 13th."

Engagements in France.

"Did you participate in many engagements while in France?" asked the interested old lady.

"Only five," replied the ex-A. E. F.er with becoming modesty.

"And you came through them all unhurt?"

"Not exactly," he returned sadly. "I married the fifth."

Doctor's Orders.

A tramp knocked at a kitchen door and said: "Please, kind lady, I'm a sick man. The doctor gimme this medicine, but I need something to take with it."

The lady was ready to help. "Poor fellow," she said, "do you want a spoon and a glass of water?"

The tramp answered: "No, mum, I wouldn't trouble you, but this medicine haster be took after meals. Have you got a meal handy?"

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4055. Junior Dress. Cut in 3 sizes: 12, 14 and 16 years. A 14 year size requires 4 yards of 32-inch material. The width of the skirt at the foot is 2¼ yards. Price 10c.

4038-3761. Lady's Costume. Waist 4038 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 3761 cut in 7 sizes: 24, 26, 28, 30, 32, 34 and 36 inches waist measure. The width of the skirt at the lower edge is 2½ yards. To make this dress for a medium size requires 4¾ yards of figured, and 2 yards of plain material 32 inches wide.

Two separate patterns 10c for each pattern.

4052. Lady's Dress. Cut in 7 sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 5 yards of 40-inch material. The width at the foot with plaits extended is a little more than two yards. Price 10c.

4043. Child's Dress. Cut in 5 sizes: 1, 2, 3, 4 and 5 years. A 3 year size requires 2¾ yards of 36-inch material. Price 10c.

4057. Girl's Dress. Cut in 4 sizes: 8, 10, 12 and 14 years. A 10 year size requires 4 yards of 32-inch material. Price 10c.

3867. Miss's Dress. Cut in 3 sizes: 16, 18 and 20 years. An 18 year size requires 3¾ yards of 54-inch material. The width of the skirt at the foot is 2 yards. Price 10c.

3821. Lady's Apron Dress. Cut in 4 sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 5 yards of 36-inch material. Price 10c.

3848. Lady's House Dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 5 yards of 36-inch material. The width of the skirt at the foot is about 2 yards. Price 10c.

June 18, 1922, Margaret Stockton was 11 years old. She took fifth and sixth grade work at school last term and next term she will take sixth and seventh grade work. Margaret lives in southeastern Washington, Walla Walla county.

Anna Mae Tarter of Grant county, Wash., also had a birthday June 18. She says she had a disappointment, too. She was going to Soap lake and then had to stay home. Anna Mae has a bantam hen with eight little chicks. Her cat ran away from home.

Idella Bernice Johnson has been helping her mother since school closed. She says she has picked six quarts of wild strawberries and mother has made four shortcakes. Her father gives her 5 cents for every glass full that she picks. Idella has good times on the beach of Whidby island, Washington, where she lives.

Wilbur Scott, an eastern Washington boy, wants to become a Corner cousin. Walter has a sister named Myrtle and a brother, Archie. He says there are 33 horses and several cows on their farm. We shall be glad to hear from Wilbur again.

When school starts again, Vernie Maurer will be in the fourth grade. Vernie was 9 May 8, 1922. She has a new baby sister named Marcella Ruby. Little sister has blue eyes and long brown hair. Marcella is an eastern Washington cousin. She thinks The Junior Farmer is the best paper she ever read.

Birthday Greetings

THURSDAY, July 27—Viola Mabie, 11 years old.

FRIDAY, July 28—Rolland Day, 10 years old.

SATURDAY, July 29—Zoe Ludwig, 11 years old; John Albert Malone, 10.

SUNDAY, July 30—Thelma Leonard, 11 years old; Ivan J. Putnam Jr., 10; Robert Parks, 9.

MONDAY, July 31—James Dicken, 11 years old; Constance Robinson, 11.

TUESDAY, August 1—Lottie McHargue, 8 years old; Floyd Sollie, 11.

WEDNESDAY, August 2—Mary Hofmeister, 11 years old; Doris Jackson, 11.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Velzia Stevens, Mida Plummer, Kathleen O'Meara, Wilma Johnson, Sibyl Keith, Hattie Johansen, Mildred Medley, Andy Koski, Alice Smith, Verona Martin, Edith Shaw, Mildred Eaton, Ruth Brown.

Gertrude Osterburg, Grace Swanson, Freeda Emert, Ruth Treadwell, Charlotte Treadwell, Martha Smith, Jessie Manis, Edith Case, Alvira Case, Billy Case, Leona Case, George Earhart, Violet L. Rees, Irene Clark, Carol Simerman, Lillian Dunning, Genevieve Gooby, Louise Vorla, Edna Amend, Marjorie Fike, Pauline Forsman, Ruth Otterstedt.

Irene Ione Torpa, George Davis, Mary Aharn, Melba Johnson, Isabell Ford, Winnifred Goodard, Astrid Larsen, Howard Swalling, Alice Bromley, Della Bromley, Alice Vance, Linnea Gord, Florence Fry, Ruth Hay, Melvina Hume, James Miller, May Dickenson, Alma Schneider, Elizabeth Cook, Harriet Cook, Carol Spencer.

BEDTIME STORIES

By THORNTON W. BURGESS.

BOBBY COON GETS A DUCKING.

Bobby Coon was strolling along on the bank of the laughing brook. He was trying to decide whether to go fishing or not. He dearly loves to fish, does Bobby Coon, and he sometimes goes fishing when he ought to be attending to other things. Now, while Bobby Coon loves to fish, he isn't like Billy Mink or little Joe Otter, who spend all their time in the water and catch fish by swimming faster than the fish can. Bobby has a long coat and he isn't any too fond of getting it wet. He catches fish from the shore. There isn't anything much quicker than Bobby's little black paw, when he sees a fish within reach.

But if Bobby Coon doesn't like to go in swimming he does like to play in and around the water, and so this bright, beautiful morning as he came down the laughing brook he stopped at every little pool to play. By and by his sharp eyes spotted something bright and shiny on the bottom of a tiny pool.

Now Bobby Coon can no more pass anything bright and shiny than he can pass a good meal when he sees it. He simply has got to have it. It doesn't make any difference what it is, he has got to have it. So, when he saw this something glittering and shining up at him from the bottom of the tiny pool he forgot all about fish.

First he plunged one arm in way up to the shoulder. It was of no use at all. The shiny thing was too far out from the bank. He waded in a little way, but still he could not reach it. Jolly, round red Mr. Sun, looking down from the blue sky, laughed at Bobby Coon's efforts and when he laughed the bright thing glittered more than ever, and the more it glittered the more Bobby Coon wanted it.

Bobby sat down on the bank to study how he could get his heart's desire, for it seemed to him now that he wanted that shiny thing more than anything else in the world. Presently he noticed an old log, half in the water and half on te shore. Bobby's eyes brightened. "If I get out on the end of that perhaps I can reach that shiny thing; I believe I can," said he to himself.

Very cautiously he crawled out on the old log. It wasn't a very big log and it was smooth and very, very slippery. As he got out toward the end of it it began to sink lower and lower in the water. Bobby's feet were wet, but he didn't mind that. eH was right over that shiny thing now. Hanging to the old log with his feet and

And right then the old log gave a sudden lurch.

one hand, he reached down, down till the tips of his fingers just touched the bright, shiny thing. And right then the old log gave a sudden lurch and, with a tremendous splash, in went Bobby Coon, head first.

Up on the bank Peter Rabbit and Jimmy Skunk and Unc' Billy Possum shouted and danced and threw up their hats. They had come along just in time to see Bobby Coon crawl out on the old log. Then one of them had slipped down and given the old log a push at just the right minute.

At first Bobby Coon was too mad to speak, but by the time he had blown all the water out of his nose and shaken it out of his ears and his eyes, he began to see the joke. Besides, he didn't know which of the three little scamps on the bank to blame, and he didn't want to quarrel with all three. So presently he joined in the laugh, too. And then, being in all over, there was nothing to prevent getting that bright, shiny thing. What was it? Why, nothing but a scrap of tin.

Traffic Problems

(Continued from page three.)

association. Even buyers who come to Wenatchee points to purchase fruit for the eastern markets pay their commission voluntarily because they feel well paid in being relieved from worry about such details as the association handles. All growers as well as shippers are kept informed as to the number of cars which can be had throughout the season, the condition of the markets, and the crop and storage reports from different parts of the country.

"In fact we aim to give an all-around service to our members," said E. S. Booth, assistant secretary of the association. "But we handle no claims for shippers. Last winter we carried on a general rate inquiry through the help of O. B. Shay, one of our members who has had wide experience as a public accountant. Mr. Shay made a complete and clear analysis of the apple industry of the district, mainly for the purpose of determining the cost of production.

"The figures obtained showed the average production of apples in the valley to be 348 boxes to the acre. The average cost, including 8 per cent interest on investment, was found to be $1.40 per box. This estimate allows the grower a salary of $100 per month.

"Practically all of our officers are men who have either had experience in orcharding or are fitted for some particular line," continued Mr. Booth. "Our president and vice president both hold managerial offices in commercial fruit concerns here in the valley. Bert L. Baker, our secretary and treasurer, was formerly with the traffic department of two of our large railroads. All of the shippers or members either own orchards or are indirectly connected with the orcharding game in some way."

The affairs of the association are conducted by seven trustees, all of whom are members of different organizations in the valley, no two, however, being from the same concern. These trustees control the policy of the association and make all important decisions, especially in regards to spending the money. All technical work is handled by committees, made up of men especially fitted along certain lines. The traffic committee, for instance, is made up entirely of railroad men who are now in the fruit business. The claims committee is made up of men formerly in the claim department of different railroads. The water transportation committee comprises men who have made a special study of the export business, including the refrigerating of ships handling fruit.

"It is sometimes difficult to estimate the exact saving that has been made," said Mr. Baker, secretary of the association, "since a large part of the figures are based on the conditions as they might have been had the association never been organized. We are preparing for the worst this season, however, and we predict a shortage, which will be as bad as, or worse than the car shortage last year. Our greatest competitors for cars are the grape growers of California. Grape shipments come at the same time as do our apples of this district, and it makes a big difference in the number of cars we are able to obtain.

"It is our aim to ship the apples at the proper time in order that each variety may be consumed at its best stage. There are only a few large storage houses in the valley, and we are not fitted for holding our crop at home until it is ready to use."

Officers of the association are H. S. Crowl, president; C. T. Haskell, vice president; Bert L. Baker, secretary and treasurer; Edwin S. Booth, assistant secretary and treasurer.

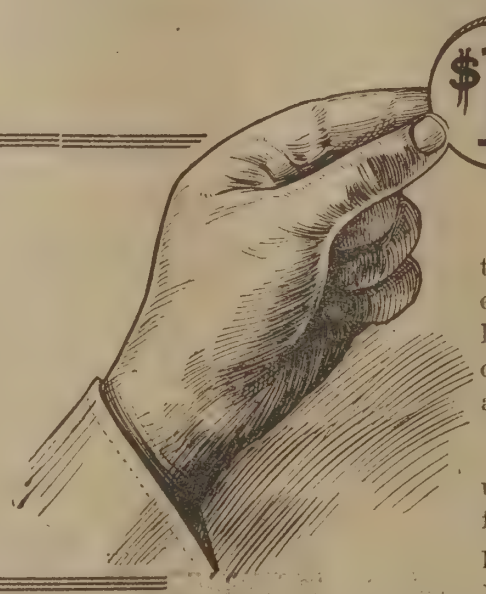
The board of trustees are made up of the following men: H. S. Crowl, C. T. Haskell, J. M. Wade, J. A. Warman, S. H. Andrews, D. L. Oliver and J. H. Auvil.

LOWER WHEAT HANDLING RATE.

Announcement was made last week by the Portland dock commission of a reduced rate on wheat handling through the elevator at terminal No. 4.

Wheat received sacked and piled to be loaded on a vessel will be charged 90 cents a ton, instead of $1.10; wheat received in sacks that goes into the elevator to be bulked for loading takes a rate of 70 cents, as against 75 cents, and wheat received in bulk and loaded in bulk will be charged 50 cents a ton, whereas the charge has been 60 cents.

Cuticura Soap Clears the Skin and Keeps it Clear



Soap, Ointment, Talcum, 25c. everywhere. Samples free of Cuticura Laboratories, Dept. U, Malden, Mass.

DAISY FLY KILLER PLACED ANYWHERE ATTRACTS AND KILLS ALL FLIES. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Sold by dealers, or 5 by EXPRESS, prepaid, $1.25.

HAROLD SOMERS, 150 De Kalb Ave., Brooklyn, N. Y.

For $1 You Employ Scores of Workers for 5 Years

$1. Rock Bottom Subscription Price Due to Cooperation

When you subscribe to the Washington Farmer you employ the services of a big, hardworking organization devoted to your interests alone.

These people get accurate, up-to-date market quotations from the principal centers, prepare careful crop and weather reports, or glean the news and views expressed at conventions, shows and farm gatherings.

Others in the organization conduct the departments, comb the state for farm facts, and answer your questions. They find out and report the experiences of hundreds of practical farmers whose problems are not those of some distant field, but of the same state in which you live. Then there are those whose pleasant task it is to find the stories which will give you the greatest enjoyment, to collect the household hints and helps which will prove most worth while, or to discuss for our great circle of thoughtful readers the many topics and issues of current interest.

For the expenditure of a dollar you secure the services of this great organization for five full years. This low price is made possible by the cooperation of our readers in sending in their subscription orders direct. Agents are expensive. Save their cost by sending in your subscription renewal at least sixty days in advance of the expiration date stamped on the wrapper of your paper and by including the orders of your friends and neighbors with your own.

$1.00 for 5 Years

50 cents for 3 years, 25c for one year.

THE WASHINGTON FARMER.....1922
Review Bldg., Spokane, Wash.

I desire to take advantage of your cooperative plan in securing new and renewal subscriptions.

I enclose herewith $..... for a ..... year subscription to THE WASHINGTON FARMER.

Name.....

R. F. D. .....Box .....State .....

If your subscription is already paid in advance it will be extended from the date to which it is paid July 27, 1922.

Doctors Like the Guernseys

Ever notice what a grand little lot of doctors are breeding Guernseys in Washington? S'pose their observations of the value of Guernsey milk and their desire to increase the longevity of the race have anything to do with it?

Be that as it may, Dr. Park Weed Willis of Seattle is one of the best known Guernsey breeders in the Pacific northwest, and his herd has produced, among other notables, Sammamish Topsy, formerly northwest champion of all ages. Dr. A. Macrae Smith of Bellingham has not been in the game long, but he has been notably successful in the show ring, and recently made a class DD leader out of LaFrance of Bralee. Dr. W. E. Fordyce of Sunnyside owns a number of outstanding show winners and is doing splendid work in official testing. Dr. H. A. Wright of Seattle and his son, a graduate of Johns Hopkins university, are much interested, not only in breeding Guernseys, but also in some laboratory experiments to determine the relative value of Guernsey milk.

Two recent recruits to the ranks of Guernsey fans are Dr. J. F. Scott and Dr. Paul B. Cooper of Yakima. The former recently founded a herd for his lower Yakima valley ranch, and the latter intends to build up one on the old Schuler ranch, in the Naches valley. Both were buyers at the April sale of Wisconsin stock at Outlook, Dr. Cooper paying the top price, $700, for the 4-year-old Jewel of Elmwood, a great-granddaughter of Governor of the Chene. G. N. A.

A Good Sheep District

The Ellensburg district has long been known as well adapted for the raising of purebred sheep. Ernest W. Wilson is one of the many that find sheep raising a profitable combination with an alfalfa and grain farm.

Upon hearing of his success with the raising of Hampshire rams for range purposes, Albert Blastock, president of the American Hampshire association, decided to place part of his imported ewes at this farm.

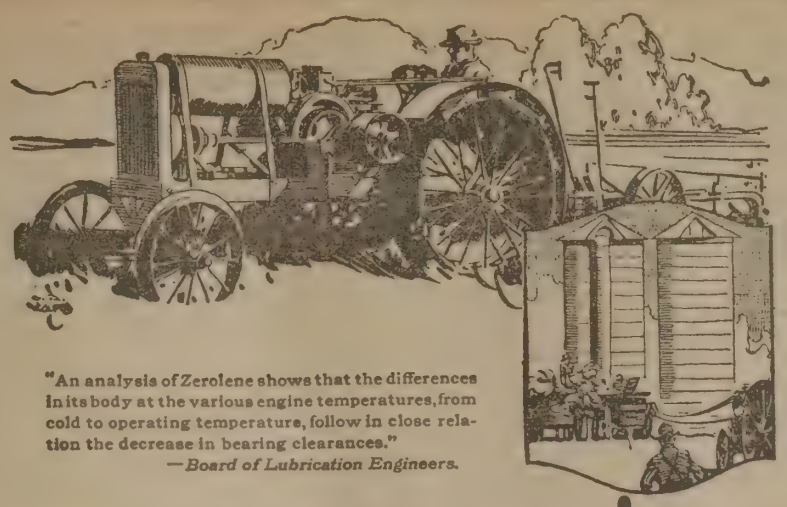
Mr. Wilson has wintered 32 of these ewes and was successful in getting 150 per cent of lambs. Since they are being raised on a share basis Mr. Wilson will receive half of these lambs as his own stock. A heavy grain ration was fed as soon as the lambs were inclined to eat, and they were given plenty of hay and put on pasture as soon as it was ready. Five of the ram lambs averaged 119 pounds at 116 days old. Five ewe lambs averaged 101 pounds at 107 days. Practically all of the young animals made similar rapid gains and are expected to be in excellent condition in time to be sold for range purposes this fall.

Mr. Blastock keeps some of his ewes at two other farms in the United States on a similar basis, one in Kentucky and the other at Filer, Idaho. It is doubtful, however, if either of the other locations can show any better results than Mr. Wilson has shown on his 80-acre farm in Kittitas county.

Live Stock Fertilize the Farm

The value of raising live stock is not always measurable in dollars and cents, but is often shown in the increased productivity of the farm on which they are being raised. This is the case on the I. L. Jones 40-acre farm near Sunnyside, where 23 head of registered Shorthorns are kept and fed from the crops raised on the farm.

While alfalfa is the main crop, none is baled for market, but it is fed to the cattle. A 12-acre patch of corn is responding to the heavy application of manure from the feed lot. Although Mr. Jones has a 55-ton silo, only 2 1-2 acres were required to grow enough corn to fill it last year, the rest of the crop being allowed to ripen for feed as grain and as stover. No feed has been purchased for the last five years, with the possible exception of a few concentrates, and very little hay or grain has been sold.



A feed lot is fenced off next to the barn lot, where the animals can feed from a large feed rack. Two pasture lots are located near the barn and house lot and are about two and three acres in size. The herd sire is a Gainsford Perfection bull and comes from the Hercules stock farm at Sprague.

A DEVELOPED PROJECT.

Of a total of 32,000 acres of land in the Yakima-Tieton irrigation project, there are only about 300 which have not been improved, according to Secretary Floyd Foster of the waterusers' association. The project has been for several years the leading one in the United States reclamation service in unit per acre production, and this report shows it to be more nearly fully developed than any other. Water rights remain to be applied for on only 14.6 acres, and the total farm area under water is about 30,000 acres. There is a net increase in area cropped this year of about 250 acres.

IN THE LONG RUN.

You can't get something for nothing.

"An analysis of Zerolene shows that the differences in its body at the various engine temperatures, from cold to operating temperature, follow in close relation the decrease in bearing clearances."
—*Board of Lubrication Engineers.*

FLEXIBILITY!

Zerolene maintains always the right lubricating body—

When your tractor engine "warms up" to a stiff job of plowing or belt driving, be sure there's an oil in the crankcase whose "body" will adjust itself properly to those decreasing bearing clearances caused by heat expansion.

Zerolene, being flexible, helps to keep bearings cool, and maintains always a perfect piston seal—gets more work done, with greater ease and speed.

Among other advantages Zerolene has these three:

Stability—the ability to resist engine heat.

Oiliness—the ability to cling evenly to bearing surfaces, at the same time offering in itself a minimum of internal, frictional resistance to the engine power going to the traction wheels.

Purity—Zerolene oils are pure. The Standard Oil Company has always considered the removal of all detrimental properties and compounds as essential in making Zerolene.

Consult the Zerolene Correct Lubrication Chart for the correct grade for your tractor, truck or automobile.

U OF C
EXPERIMENT STATION
URBANA ILL

Pike's Peak or Bust

(Continued from page ten.)

so as to find water before dark overtakes us. If we don't run across something to drink by camping time we'll have a mighty uncomfortable night."

"Umfortable's no name for it!" declared Esau. "Yes, let's be up and off."

In spite of the uneven road, the whole party were traveling faster than usual. The wheelbarrow was harder to push, and Orlando relieved Esau at its handles from time to time.

From the top of every rise all gazed ahead eagerly, in the hope of discovering some stream. But again and again they were disappointed. Everybody was suffering very much from thirst. That and the fact that they had eaten sparingly at noon caused some of the men to complain of a weakness in the knees. But, so far from stopping, they only pushed ahead the faster on that account.

"If we don't run across water anywheres else we ought to find plenty of it when we strike the Smoky Hill river again," Sanders called back, after examining his pocket map.

"How far before we strike it again?" Orlando called to know.

"That you can't prove by me. According to my map, the river makes a big bend to the south here. When we've crossed that bend, our road will follow along near the stream, I imagine. If it does that, we ought to strike the river by night."

They did come to the river, and that while the sun was still more than half an hour high. But only another disappointment met them. Up here, a good many miles above where they had first crossed it, the Smoky Hill river was only a dry channel. Till dusk the party followed the trail, which led usually not far from the river bank. Some hopes they had of discovering water. But all they found was a waterless channel, as dry as any desert.

A very gloomy and discouraged set of men went into camp on the river bank. They gathered a few sticks of driftwood and kindled a little fire, for warmth. So thirsty were they by this time that nobody cared for anything to eat.

When the men sitting around the little campfire had been silent for a good while, Sanders roused himself and said:

"Well, boys, there's something we've got to decide soon, and that is what to do next. Hasn't been any rain in this part of the country for nobody knows how long. The river has dried to dust, and all the other watercourses with it, perhaps. This route depends mainly on the Smoky Hill for water. And now that that has failed us, this is a dangerous road to venture on."

"What a pity we didn't foller the Santa Fe trail right on from Council Grove, instid of vencherin' off on this little-known and less-traveled route," remarked another of the handcart party.

"This is the very route for us," Orlando insisted. "I mean it would be if a protracted dry spell hadn't turned this whole country into a desert. One glance at the map will show anybody that we're on the shortest route to Pike's Peak. For foot pilgrims like us, cutting out 150 or 200 miles is well worth while."

"Oh, it's a way yonder the shortest road we can find. Not a doubt of that," spoke up a handcarter. "But sometimes the shortest road is the longest. And this is one of the times, I do believe. That old Santy Fe trail was a mighty smooth road, you recollect. Pullin' a cart or pushin' a wheelbarr' over it was dead easy. This road does fairly well in level country, but if we run afoul of some broken ground we may lose more time than we gain. These vehicles we're pullin' and pushin' will wear the life out of us. Even at the best we can't travel as many miles a day as we could ha' traveled on the big road. So we may be longer gittin' to the mountains than we would ha' been if we'd follered the crowd."

"Seems to me we'd better push up the river a piece," said another handcarter. "Even if we don't find water in the river itself, we're apt to run onto some spring-fed crick makin' into it. Anyhow, I'm willin' to risk it."

"So am I." Another of the handcart's crew was speaking. "Them wagons ahead of us must know of water, or they wouldn't keep on."

"If we're to go fu'ther, I'm for restin' a spell, and then travelin' sever'l miles tonight," Esau told them.

"Might be a good idee, that might," a handcarter remarked. "We could rest and sleep a few hours, and then crawl out of our blankets and hoof it ahead as long as we could stand the strain."

"That's the thing—the very thing to do," declared Orlando. "Moon rises about midnight now. After that we can see how to follow this dim road. We'd be apt to lose it in the dark."

"What do you say, boys?" demanded Esau. "I'm for quilin' down on our pallets and gittin' what sleep we can till moonup. After that we can roll ahead till we come to water."

"Suits me well enough," Sanders agreed. And, as none of the others had anything better to propose, that was the plan decided upon.

The night soon grew uncomfortably cool, and doubtless relieved the sleepers' thirst somewhat. They had to cover themselves well to keep warm. Finally the red moon stole up out of the dark prairie and began to shed some light.

Before the moon had climbed very high Sanders awoke. And at once he aroused the others. Almost in silence the whole party crept out of their beds. Shivering in the chilly night air, they began their preparations to travel.

Brindle was lying down, and Orlando drove her up. He and Esau soon had her saddle on and her pack on the saddle.

"Well, boys, if you're all ready to be movin', we air," Esau now called out.

"Roll on wherever you like! We'll soon be at your heels!" answered Sanders.

As the thirst-tortured, miserable foot travelers toiled on their way some of them called attention to the fact that the whole country seemed to be lifeless. Not a night bird uttered its cries, and no wolf could be heard to howl. Now and then, however, Brindle broke the midnight silence of the desert by lifting her head and pouring out a dreary bawl of distress.

At first the travelers shivered more or less from chilliness. But before tramping far they had warmed themselves. After resting and sleeping, everybody felt stronger. And they were traveling rather faster than they had been accustomed to travel.

"Boys," Sanders broke a lengthy silence to call out, "I'd feel lots better satisfied if I knew just how far this trail is leading us from the river—from that river bed." He was between the shafts of their cart, pushing against the crossbar.

"So would I," a member of the cart's crew answered, one of the two men pushing behind.

"My guess is that our road won't lead us any great distance from the river channel," Orlando called back. "People who've been traveling along here must have known where the water was."

"Yes, safe to say, they did. We all know thunderin' well where the water was! But who in blazes knows where it is?" growled a toiling handcarter, one of those in harness.

"Anyhow, we wouldn't dare part company with this road, with my wheelbarr' and your cart," Esau reminded them.

Sanders agreed with him. "Road's rough enough, without trying to roll these cumbersome contraptions across raw prairie."

But another handcarter said: "I'm half in favor of leavin' this cart by the side of the road while we strike out on a water hunt."

"We cain't afford to leave all our supplies unguyarded. No tellin' what would happen to 'em before we got back," Esau protested.

"Little good any cartload of stuff will do us after we've left our pore bones to bleach in this desert," grumbled another man.

"And little good it would do us to reach water if we found it only to die of starvation afterwards," commented Sanders. "We're traveling in the best direction to find water. And we're making pretty good progress just now. So I'm thinking we'd better keep pegging along. If we don't stumble upon something to drink by daylight we ought to discover it not long after sun-up."

Nobody answered. And for a good while the party trudged on in silence. But after an hour or more some of the men began to complain of feeling weak and weary. Now they called a halt, and threw themselves down on the grass by the roadside to rest.

(To be continued.)

Not even USCO ever touched this value before

30 x 3½ - $10.90

WHEN you look at a 30 x 3½ USCO at $10.90 think back for a minute as far as you can remember USCO.

The truth is that men have *always* found USCO an outstanding money's worth no matter what its price.

Today at $10.90 USCO maintains its established standard of quality.

And because of the new price, it sets a *new index of tire value.*

* * *

Men who have used USCO have never been inclined to measure its value by the general run of tires.

Since last fall when USCO established the $10.90 price range they have recognized it as a value beyond *any possible comparison.*

A still greater money's worth than even USCO itself had reached before.

30 x 3½ USCO $10.90

Poultry and Orchard

Make an Excellent Combination

BY RALPH ERSKINE.

Those who have the impression that a flock of hens do not go well with an orchard should visit the F. E. Fairbanks 10-acre orchard at Selah Heights, near Yakima.

His entire 10 acres are planted to orchard, but he has erected his own type of commercial laying house between two rows of trees. The building is 12 feet wide and 75 feet long, has an open front, low windows at the back, board floor, and most other conveniences of the modern laying house. The fact that it is built very narrow seems to have little effect on the flock of 250 White Leghorn hens, which are confined at all times.

"I believe the hens do better if kept up," said Mr. Fairbanks, "and it is much better for the orchard. They have shade in summer and can be let out occasionally in the evenings to pick up a few bugs, but it is not necessary and we prefer to cut their green feed and feed it to them in the house. I estimate that they produced a net income of $300 last year, and we bought all feed for them.

"It would pay to keep a flock of hens just for the manure, and I would prefer to get the fertilizer in this way than to buy commercial fertilizer. It is better for the land since the straw makes an excellent mulch. The dropping board must be cleaned daily, and the floors given new straw every two weeks."

Mr. Fairbanks has three registered Holstein cows, which he keeps in a feed lot, and only tethers them out occasionally. One of these cows, Diana, is of the Ormsby strain. He has a senior heifer calf from her which promises to be an outstanding individual. The herd bull, Sir Bessie, is from the former Marks herd, and he won first in his class at the Pacific International as a 2-year-old. He is now 4 years of age.

"I think that every orchardist should have from two to four cows," said Mr. Fairbanks, "since they can be kept in a small enclosure, and fed hay, and a small amount of green feed during the summer with but very little trouble. I also believe in raising my own calves, and have sold some for as high as $200, which more than pays for the expense of raising them."

Two Stamps for a Hide

To the Editor of The Washington Farmer: It would perhaps be interesting for some people to know how fast a farmer can make money. Therefore, I thought I would like to explain one instance that happened to me a few days ago.

I had a misfortune of having a cow bloated on green alfalfa, so I had to kill her. I had two men half a day to skin her and I sent the hide to a firm of Seattle. [illegible] days ago I received the returns and [illegible]ment for same. It reads as follows: Weight of hide 37 1-2 pounds at 3 cents per pound, $1.11; freight, $1.07. Enclosed please find stamps covering above. Regretting that the freight amounted to so much on the shipment and thanking you for the business."

Now it cost me to skin that cow, two men half a day, $4. I salted it and took it to town and received only 4 cents in stamps for the same, so you can figure out for yourself how profitable it is to be a farmer. The hide was O. K. and not one cut in it.

At that rate, how many hides will it take for a farmer for one pair of shoes? Something is wrong somewhere and there ought to be some way to handle those profiteers, and it looks like some of our representatives in office should help us farmers who need their help for protection so we can continue production, and there would be plenty for all of us to live on. MARTIN JOHNSON.

Neppel, Wash.

Dairy and Fruit Growing

L. H. Corle of Wenatchee is operating a small dairy in connection with a few acres of soft fruit on his 20-acre farm at Wenatchee. Mr. Corle first started operations with his eight acres of peaches, a small garden and three milch cows. He found that there was a good demand for milk for the city trade and he began increasing the size of his herd. It now consists of seven purebred Jersey cows, one Ayrshire and two grade cows.

"I find there is some demand for good milch cows among the orchardists of the valley," said Mr. Corle, "and I sometimes find it profitable to sell one of my fresh cows, since I am raising my heifer calves and adding them to the herd as they mature.

"I am selling 100 quarts of milk daily, but find it necessary to keep the cows in an enclosure, since I have no pasture for them. The cows do fairly well under the circumstances and we feed them plenty of grain and hay. We also cut green alfalfa and feed it to all the animals every morning."

One of the cows in the Corle herd, Queen Ruby, gives an average of 40 pounds of milk daily. She is 7 years old and was once sold for $500. Easter, another cow, who came originally from the Pool herd, is valued at $400. One purebred Ayrshire, Snow, comes from the VanTassel herd, and was at one time taken out with the show herd. The herd bull, Rachlyn Pilot Pedro, a well-proportioned Jersey, came from the J. C. Dilworth herd at Spokane. He is 8 years old and his calves show trueness to type and good conformation.

"We find that a small dairy pays well under such conditions," concluded Mr. Corle. "But there is an awful lot of work attached to it and a man has very little time to attend to an orchard as a side line. I am thinking some of selling either the cows or the orchard and spending my entire time on one line."

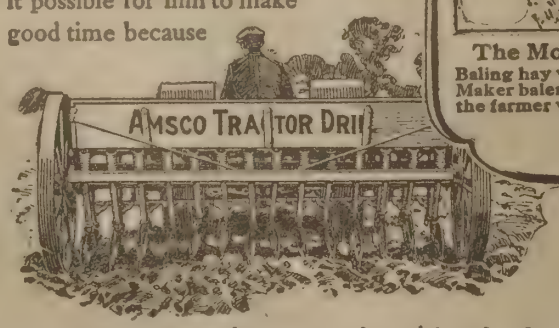
MRS. S. H. COTTLE, Quilcene, Wash.—We don't want to miss one number of the story running in The Washington Farmer.

SET NORTHWEST FRUIT SHOW DATE.

According to tentative plans, the Northwest Fruit exhibition, the first show of which was held at Seattle last year, will be held this year in that city, October 28-November 5. John Gellatly of Wenatchee is president of the exposition. It is announced that Mrs. Winnie Braden, who has been working throughout the state in the interest of better fair exhibits, will have charge of the exhibit of the fruit exposition.

Why We Now Have Fast-Time Farming

If necessary, a farmer must sacrifice speed to get thoroughness. In the new system of farming, speed and thoroughness are both to be had.



IT was once thought that it would be impossible to do farm work thoroughly if the tools traveled over the land any faster than a good team of horses could walk. However, the fast-running Fordson, coupled with Standard Fordson Equipment, does all kinds of field work much more thoroughly and at a higher rate of speed, and so this equipment has been responsible for the new term, "Fast-Time Farming."

To make full use of the high speed of the Fordson, it was necessary to use entirely new ideas in making tools. Take the AMSCO tractor drill, for example. The American Seeding Machine Company of Springfield, Ohio, had sixty years of experience to draw upon, but it was necessary to use entirely new principles in building this drill.

First, the frame had to be made so strong and durable that the rapid rate of travel could not overstrain it. Castings had to be made of tougher material. Each part had to be designed with a scientific accuracy that only years of practical experience could give.

The feed mechanism is so positive that there is practically no danger of inaccurate dropping, even when the tractor is operated at high speed or when the seed boxes are nearly empty. Furrow openers are designed to meet all soil conditions.

The man who drives a tractor is inclined to hurry through his work and the AMSCO tractor drill makes it possible for him to make good time because

every adjustment and every part is so carefully made that there is little likelihood of anything going wrong.

Everything considered, the designing of a drill for the fast-running Fordson was a more difficult task than designing a slower-moving tool, but it is safe to say that the results justify the statement that the AMSCO tractor drill fills its requirements perfectly. Its nation-wide popularity is based on its successful performance.

The World Famous Oliver No. 7
On thousands of farms, the world famous Oliver No. 7 has been the plowing partner of the Fordson from the beginning.

Oliver Single Bottom Sulky
For deep mouldboard plowing in trashy conditions with the Fordson. Similar in construction to world famous No. 7 gang.

Fordson Disc Plowing
Oliver Fordson special disc plows have set a new standard. They penetrate the toughest soils, yet are light running.

Roderick Lean Automatic Harrow
Fitting the Seed Bed the Fordson way with the Roderick Lean Automatic Tractor Disc—a special Fordson Harrow.

Good Work With Roller Pulverizer
Final Fitting of the seed bed with Fordson power and the roller pulverizer has meant more bushels for many farmers.

Roderick Lean "Cutmore" Mower
Attaches without changes to the Fordson. Power taken direct from drive worm. Makes a one-man outfit with Fordson.

The Amsco Two-Row Cultivator
Cultivating corn is easy for the Fordson farmer with the Amsco Cultivator—special for the Fordson. Made for hard work.

Money-Maker Ensilage Cutter
Fordson silo filling with the Money-Maker done quickly and cheaply. Strength and scientific design give perfect work.

The Money-Maker Hay Press
Baling hay with the Fordson and Money Maker baler is an important operation to the farmer with large hay acreage.

Wood Bros. Individual Thresher
The Wood Individual Humming Bird Thresher and Fordson make short work of threshing. All grain is saved.

World Shippers of Apples Meet at Seattle

"The development of a system by which your apples can be loaded on a boat in Seattle and shipped through the Panama canal direct to European ports is of great importance to the industry," said J. L. Gibson of Liverpool, England, who was in attendance at the twenty-seventh session of the International Apple Shippers' association in Seattle last week. "It brings the fruit to us in better condition because there is less handling than when the boxes are shipped across the country by rail and then loaded on a boat at an Atlantic port. Water transportation also should be cheaper and that is one of the elements which must be considered in extending your market. We have been hearing a great deal about quality production, but that is becoming less of an element in marketing apples, because everybody is learning how to produce quality. The thing, then, that is going to have a large bearing on the marketing of apples will be the price at which the fruit can be delivered to the consumer.

"But, on the whole, properly regulated, water transportation is going to do a great deal to extend your apple markets. By proper regulation I mean the distribution of the shipments so that several boatloads of apples will not arrive in port at the same time and in such quantities that the markets can not absorb them."

W. T. Clark of Wenatchee gave an address on "How the Apple Industry Became Possible in Washington," and by Stephen I. Miller of the University of Washington school of business administration on "Economic Distribution." Mr. Clark emphasized the fact that the human element had been the greatest factor in the development of the apple orchards of Washington. It meant nothing to construct the irrigation plants and turn the water into the ditches, said Mr. Clark, until the settler went on the land and began to cultivate it. Most of them, he said, came with too little capital and were compelled to submit their wives and children to untold hardships of the desert while the orchards were being developed. The reason so many fine orchards are in Washington today, said he, is that the settlers were so poor they couldn't get away and had to stay and work.

Dean Stephen Miller of the University of Washington discussed "Economic Distribution." He said the evolution of marketing in the last 50 years points to the fact that successful marketing means bringing the producer and consumer closer together. Production, said Mr. Miller, is not ended until the product is delivered to the consumer, and great economic forces are forcing a recognition of that principle. He said the more intimately the producer is associated with the agencies which market his produce the better will be the quality and the greater the quantity. Natural conditions, he said, preclude the possibility of a monopoly of products of the soil because of producers' organizations, and those who fear such conditions do so without recognition of facts.

Raymond G. Phillips of Rochester, N. Y., secretary of the association, discussed in detail the result of a comprehensive survey of wholesale distribution of fresh fruits and vegetables made for the joint council of the National League of Commission Merchants of the United States, the Western Fruit Jobbers' Association of America and the International Apple Shippers' association.

The survey was conducted to ascertain the wholesale selling price of representative fresh fruits and vegetables, the amount paid for freight, the relation between freight charges and the wholesale selling value of the commodities handled and to show the importance of the factor of freight rates in both production and distribution.

Phillips said the rail tonnage of fresh, dried and canned fruits and vegetables increased from 4,582,573 tons in 1899 to 19,726,069 tons in 1919, or 4.3 times. Then the tonnage decreased to 17,252,471 tons in 1920 and to 16,468,498 tons in 1921, due to deflation in farm commodities following the World war and business depression coupled with inflation in transportation costs and other high fixed charges, according to Phillips.

"Freight rates as one of the most important of the fixed charges could not expect to remain pegged to the highest level in the history of modern railroading in this country, at what might be termed wartime levels, while price levels and other fixed costs were returning to prewar levels," said Phillips. "Freight charges must bear their share of deflation. The railroads, capital and labor must expect and be willing to bear their part in the readjustment."

J. A. Swalwell, president of the Union National bank, Seattle, gave an address on "Finance and Business." Mr. Swalwell spoke principally on financing farm crops and referred in a general way to international credits and finance.

In connection with farm produce marketing and financing, Mr. Swalwell said one fact which should be brought home to growers is that the cooperative producers' organizations should devote their energies first to provide facilities for the proper storage of their crops rather than trying to deal direct with the producer. One difficulty with farm marketing and finance, said Mr. Swalwell, is that there are insufficient facilities for storing crops, the result being that the farmers are forced to go on the market regardless of the demand for a particular commodity. Proper storage, he said, would make it unnecessary to force all the crop on the market at one time.

Mr. Swalwell pointed out that it is no longer possible for individuals or communities to live for themselves if there is to be permanent prosperity. The same principle, said he, applies to foreign relations, and the full degree of prosperity will not come until this country cooperates with and loans money to foreign countries worthy of credit so that more active trade relations may be opened.

"Scientific marketing of food products, connecting the producer and the consumer, will come eventually through college training of young men to be food distributors," F. William Morf of Chicago declared. He was elected president of the International Apple Shippers' association at the closing session of the shippers' convention.

"Farmer boys are going to college and coming out trained agriculturists," President Morf pointed out. "The same is true of the coming generation of food distributors. The boys who will take our places are getting scientific training for the job. With trained men on the producing and distributing ends of the food business, we ought to be able to evolve an efficient method of performing the service that must be given to link farmer and consumer.

"I believe so thoroughly in the food supply business that I am in hopes my son will decide to make that his life work, either in the producing or distributing end."

Other officers included A. R. Curry, Seattle, vice president; George W. Davidson, New Orleans, treasurer; William L. Wagner, Chicago, E. T. Butterworth, Philadelphia, E. W. J. Hearty, Boston, E. E. Sampson, Yakima, and J. J. Castellini, Cincinnati, members of the executive committee.

Members of the International Apple Shippers' association represent a business of approximately $250,000,000. The largest delegation present at the Seattle Meeting, consisting of about 200 members, arrived by special train of 15 cars seven days out from Chicago, making stops at the apple-growing centers of this state. Upward of a thousand persons were in attendance at the meeting.

Delegates were present from all parts of the United States and from Canada and Great Britain. This was the first convention of the association held on the Coast. The convention was called to order by President E. T. Butterworth of Philadelphia.

The most striking event of the 27th annual convention of the International Apple Shippers' association, which closed Friday at Seattle, was the adoption of an international apple advertising campaign. This was brought about in connection with the announcement of the district advertising campaign started by the growers of north central Washington, under the name of "Eat Wenatchee Apples."

When the publicity division of the convention met Thursday afternoon Chairman Chester Franzell stated that in his opinion the most important thing for international apple shippers to do was to institute a persistent and intelligent campaign to increase the consumption of apples over the world. He called attention to the wonderful exhibit made by the Wenatchee district and to the advertising campaign which will be conducted by the growers of that vicinity. Mr. Franzell's suggestion met with unanimous approval and support on the part of the members of the publicity division. A large number of delegates supporting the proposition on the floor. It was the general opinion that the best thing for the association to do would be to organize an advertising department under the management of a competent and experienced advertising expert. A motion was unanimously adopted by the publicity division asking for an appropriation of $15,000 for that bureau.

Completion of the advertising plan by the Wenatchee growers was announced at the convention and included a systematic campaign covering three years, the money is coming in, and the apple growers are ready to go on what is said to be the first systematic attempt to give publicity to the apple industry, and the biggest growers' advertising campaign of the kind ever attempted. The campaign is being promoted by an organization known as "Eat Wenatchee Apples, Inc.," and one of the slogans is "You can eat 'em in the dark," an assurance of quality.

Three thousand five hundred apple growers in the Wenatchee valley, owning 40,000 acres of the best apple land in the world and producing more than 10,000,000 boxes of apples annually, have pledged their support to the advertising campaign. Finances are to be provided by contributions of three cents a box. The money is to be paid when the apples are marketed. Enough money is in sight now to start the campaign this fall.

Officers of the corporation are J. M. Wade, president; Conrad Rose, vice president; C. A. Leedy, treasurer; John Peterson and David McCoy, trustees. The move to organize the million-dollar campaign was started early in the year. Assisted by business men of Wenatchee, committees of growers worked through the valley from Wenatchee to the Canadian line, interesting virtually every apple producer in the effort to increase consumption of apples. The greater part of the money will be spent in newspaper and magazine advertising. As production in the Wenatchee district increases it is proposed to increase the advertising fund by 3 cents for each additional box.

One feature of the advertising program is an educational campaign among the dealers. They will be shown what varieties make the best sellers during different seasons in the year and the trade will be liberally supplied with recipes for cooking apples.

"Over in Wenatchee valley we think we have set a mark for the other communities to shoot at," said President Wade. "Never in the history of the agricultural industry has a group of growers attempted such a colossal publicity campaign. It is a community effort entirely and includes all the growers in the entire valley. The fact that 3500 growers from Wenatchee to the British Columbia line have been able to get together in this organization indicates something of the community spirit and pull-together attitude of the valley farmers. You can't beat a combination like that."

To Ship Breeding Stock

Law Permits the Giving of the Special Rates

When The Washington Farmer started its crusade for reduced freight rates on shipments of blooded stock for breeding purposes, intimations were heard in some quarters that the railroads were powerless to foster the live stock industry because they were prevented by "restrictive legislation." The truth is that there is nothing in the law to prevent their giving the desired special rates tomorrow if they were so disposed. We state that on authority of Chairman Charles C. McChord, of the interstate commerce commission, in the following letter to U. S. Senator Miles Poindexter of Washington:

Honorable Miles Poindexter, United States Senate: I have your letter of the 26th ultimo enclosing a letter addressed to the editor of The Washington Farmer, and clippings from that publication. You request that information be furnished which may be of use to the farmers who are interested in the shipment of blooded stock to Washington state.

This commission has no authority to prescribe reductions in rates except after a formal investigation, and any order issued by us after such a formal investigation can not be made effective within 30 days from the date of our order.

Carriers, however, may establish reductions in rates on the 30 days' notice required by section 6 of the act without prior approval from us. This notice may be waived, but any action looking to the establishment of rates on short notice must be made by the carrier.

I might add that if the carriers in this instance file applications requesting permission to establish reduced rates on blooded live stock effective on short notice, such applications will be given immediate consideration.

CHARLES C. McCHORD, Chairman.

Two courses of action are outlined in Chairman McChord's letter. The first contemplates the possibility of an application to the interstate commerce commission by a shipper. In that case the commission could prescribe reductions in rates only after a formal investigation.

The second course of action would be a voluntary reduction of rates by the railroads. As the chairman of the commission points out, the roads "may establish reductions in rates on the 30 days' notice required by section 6 of the act without prior approval from us."

If the railroads want to, they can post 30 days' notice of their intention to grant the desired special rates for the benefit of the live stock industry, and at the expiration of the 30 days can put the reduced rates into effect without prior approval from the interstate commerce commission. This last action undoubtedly would be satisfactory to the live stock men of the Pacific northwest, so there is nothing to intimations that "restrictive legislation" is preventing the railroads doing the broad, far-seeing and beneficial thing of fostering the live stock industry.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Our Taxes Must Come Down!

Attention is directed to the article by L. M. Livengood this week dealing with the excessive burden of taxation in Washington. Mr. Livengood's statistics emphasize what we have been saying for many months—that there is urgent need of retrenchment all along the line, from the smallest districts to the state government.

In that connection, we reiterate—the way to retrench is to retrench—to cut down expenditures and reduce appropriations and not to hunt for new methods of extracting additional taxes from the public. It would be dangerous for our people to begin a tit-for-tat conflict to lay additional tax burdens upon this class or that class of producers or business men.

Some persons in the towns and cities are saying, unwisely, that the thing to do is to tax the farmer more and thus reduce the burdens of the city taxpayer. But the farmer can say, with equal or greater force, that his tax burdens are more than he can bear and that heavier taxes should be laid upon the towns and cities.

Relief is not to be found in that manner. What is needed is retrenchment that will trim down the taxes of all classes of producers and business men, rather than the searching out of new ways of providing additional tax money to be expended by the legislature and other tax spending bodies.

"Splitting" of the Dollar

The "splitting" of the dollar in the boxed apple industry is explained in an interesting way in Part Three of the report of the joint commission of agricultural inquiry. This federal commission made a survey of 9476 cars of various fruits and vegetables arriving at the great markets of New York, Chicago, Philadelphia, Boston and Pittsburgh. The survey included 1406 cars of boxed apples. This fruit brought at wholesale $2,829,245. Of that sum, $1,022,388, or 36.23 per cent, went for transportation charges; $197,229, or 6.99 per cent, went for miscellaneous handling costs. The receiving distributors' gross profits were $67,388, or 2.14 per cent; and the shippers received $1,542,240, or 54.64 per cent.

This does not mean that the producers received that sum and that percentage, for out of them must be deducted the unknown profits of the apple buyers or brokers who were the shippers.

Unfortunately the commission's report does not show what these apples brought at retail and therefore fails to disclose the total price paid by the actual consumers.

These figures do show, however, that after the loaded cars were turned over to the railroad company, a little more than 43 per cent of the wholesale price went for freight rates and miscellaneous handling costs. The receiving distributors' gross profits of 2.14 per cent do not seem excessive and are surprisingly low in view of the prevailing belief that much higher profit was taken by wholesale distributors and commission men.

The foregoing deals only with the 1406 cars of boxed apples. As to the total of 9476 cars of various products, the report shows that the shippers got 59.64 cents of the dollar, the railroads 32.76 cent, the various handling incidentals 4.43 cents, and the distributors 3.17 cents.

Establishing a Sales Agency

A statement by President J. R. Howard of the American Farm Bureau federation in connection with the recent merging of the farm bureau's cooperative fruit growers' organization and the North American Fruit exchange expresses some sound reasoning. In part he says:

"After a thorough examination of the field the Federated Fruit Growers decided that, rather than go through the dangerous and expensive early processes of getting together from various sources men with thorough knowledge of and experience in the various departments of marketing, and welding them into a cohesive, capably functioning organization, it would be far better if they could acquire as a nucleus some of the few national distributing companies now successfully operating."

It is, indeed, a difficult matter to get together a group of men who are at once honest, capable, experienced and cooperatively minded for the formation of a marketing agency. There are, to be sure, instances in which this has been done successfully. Often cooperative ventures have failed, or nearly so, because of failure to get together this class of men in a "capably functioning organization."

One of the most successful cooperative marketing organizations in the west is the United Dairy Associations of Washington, headed by President J. A. Scollard. This organization followed what President Scollard pleases to term "diluted cooperative methods." That is, it utilized outside capital and outside experience in launching its marketing activities. It wisely put into its agreement a provision that as soon as the farmers themselves developed their organization sufficiently and acquired adequate experience in the intricate problems of selling, the "diluted" feature of the organization would be eliminated and its future activities conducted along purely cooperative lines.

There is much in the new fruit marketing merger to give courage to the fruit growers of the Pacific northwest and of the United States as a whole. As those closely connected with the deal say, the North American Fruit exchange has been operating as a nation-wide nonspeculating sales service for many existing growers' exchanges for more than 10 years. It has approached the same ideals of service and economy that actuated the American Farm bureau in forming the Federated Fruit Growers. It is a successful marketing organization and if properly directed in the future should do much toward placing the fruit marketing business of the orchardists of the United States on a sound, stable basis.

Look Out for Barn Fires

Sometimes in his anxiety to get his crop of hay into the mow before it is properly cured, especially if it contains clover or alfalfa or while it is in a wet or damp condition, the farmer is willing to take a chance with the inviolable laws of nature, hoping that it will not heat. It is an acknowledged fact that combustion will take place in hay not properly cured and this is the cause of many barn fires. Do not build hay or straw stacks near the farm buildings so that in case they do catch fire they will endanger your property.

State Farm News

Everett will stage something new in the history of county fairs in Washington. A live stock show, which will include over 100 purebred animals, will be held under canvas in Everett October 12, 13 and 14. The only other exhibits that will be shown at this event will be the special tent where industrial products will be displayed by different concerns of Everett. This, of course, is a side issue, but the townspeople as well as the entire county intend to make this event an annual affair.

* * *

Chinook Segis Pontiac Jay, a young Holstein bull of Washington State college dairy herd, has been sold to the new bull association at Preston, Idaho, which is undertaking to raise the standard of dairy stock in that district. His dam's record was 555.33 pounds of butterfat.

* * *

The Skagit county fair will be held this year at Burlington from August 14 to 19, inclusive. The live stock men, dairymen, poultrymen, potato growers and seed producers are all cooperating to make this the biggest and best fair yet held in the county. Practically all of the above organizations are organized and have expressed their willingness to do their share to help the event along. A good racing program has been secured and the concessions promise to be of the better type.

* * *

The Farmers' Union Warehouse company of Colton has elected John M. Reisenauer, Charles Semler, A. J. Reisenauer, George Druffel and B. F. Druffel as trustees. The officers are J. M. Reisenauer, president; George Druffel, secretary, and J. E. Block, manager. The company has made extensive improvements in the elevator.

* * *

Pierce county club members have organized a county-wide association for the purpose of unifying the work of all clubs in the county. Special emphasis will be placed on the program to be held for club members at the Pierce county farm bureau picnic at American lake August 10. They expect to get 80 per cent of all club members to complete the year's work and complete a report for same. Morril Delano was elected president; Lens Sanders, treasurer, and Wilfred Orly, secretary.

* * *

One hundred acres of wheat burned on the V. H. Rogers farm, near Mayview, July 22, the fire originating from a hot box on the header of a combined harvester. The machine was destroyed. It was owned by J. L. Horrell, who farms the place. The estimated yield was 30 bushels to the acre.

* * *

Five cows owned by Thomas Cunningham of Castle Rock produced over 50 pounds of butterfat during the last month, and 13 of his cows produced more than 40 pounds, his herd making one of the best records of any of the herds in the Lewis-Cowlitz Cow Testing association. Other Cowlitz county cows producing more than 40 pounds of butterfat were those owned by H. A. Tyrell, four; C. S. Houpt, two, and J. G. Smith, two.

* * *

The Snohomish county fair will be held at Granite Falls October 28, 29 and 30.

* * *

That the use of water on gravel soil will increase strawberry production has been demonstrated by F. W. Nye of Grand Mound, who harvested 250 crates of berries to the acre, while the crops on adjacent farms ran from 75 to 150 crates to the acre. Nye used a sprinkling system to keep his land moist.

* * *

For a reported consideration of $20,000 Judge W. M. Pemberton of Bellingham has purchased the Ira H. Hunsaker ranch, five miles west of Prosser, through the Yakima Ranches company. Eighty acres of Bellingham property figured in the deal as part payment.

* * *

There are nine spray machines being used by potato growers in Skagit county for the prevention of late blight. These are mostly the four row, traction-power type and the Bordeaux mixture is used for spraying.

Five growers are leaving a few of their rows for a trial with dust spray, with which C. H. Bergstrom is working to ascertain the difference between that and the liquid spray. Some interesting results should be ascertained when the crops are harvested this fall.

* * *

A stock company has been formed at Chelan, capitalized at $7550, to hold a Chelan county fair. This will be a permanent organization and the first fair will be held next fall. It is planned to make apples the main exhibit, but there will be all kinds of farm produce and live stock, and it is hoped to hold a race meet.

* * *

Further damage from beaver colonies has been reported from the Touchet district, where they are reported to be damming streams and causing fields and gardens to overflow.

* * *

Fred Hill, a 10-year-old club boy of Elbe, Pierce county, has an exceptional garden which produced $7 worth of green onions from three rows 80 feet long. His pea vines are nine feet high. The entire garden is irrigated from a near-by creek, which Fred dammed up himself. Aside from the garden Fred owns a fine stand of bees and Toulouse geese.

* * *

The amount of cherries from the Wenatchee station greatly exceeds the estimate made at the beginning of the season and by the close of the season will be double the movement of cherries from this point last year. It was estimated that 140 cars of cherries would be shipped from Wenatchee this season, but, according to the record of Great Northern Car Inspector Mickel, 107 cars of fruit have moved from there so far. The best offer one local dealer said he had obtained this season was $1.75 f. o. b. Wenatchee, which would not net him a profit after the initial cost of the fruit, labor, boxes, shrinkage and brokerage charges had been deducted.

Aug. 10—Pierce county farm bureau picnic.
Aug. 10-12—Old settlers' picnic, Ferndale.
Aug. 14-19—Skagit county fair, Burlington.
Aug. 19-20—Ninety-first division reunion, Seattle.
Aug. 28-Sept. 2—Southw't Wash. fair, Chehalis-Centralia.

FARM BUSINESS AND MARKETS OUTLOOK

The rail strike is the factor of biggest potential importance in the markets for farm products at the present time.

Combined receipts of cattle at seven markets during the last eight years have increased from an average of 150,000 head during the second week in July to over 300,000 head during the second week in October.

Choice and prime steers trended higher last week, reaching a new top of $10.85 at Chicago.

A ten-year average shows that combined receipts at the 11 leading markets have declined rather steadily from 462,000 during the third week of July to 312,000 head during the second week in September.

Trade sentiment has it that the range lamb movement is behind schedule, but the figures give the contrary impression.

Wool dealers who hold most of the supply not yet in manufacturers' hands are not making concessions because their stocks can not be replaced in the country on a lower basis.

The long awaited export buying of wheat has started at last with sales of about 8,000,000 bushels in three days recently. Great Britain and Italy were the chief purchasers. A shortage of empty cars is reported in the southwest and in parts of the middle west.

Corn exporters have bought freely in the last few days and domestic shippers to the deficiency states have been active.

Although feed markets are quiet, the heaviest movement of wheat feed for months is reported from Minneapolis.

Egg receipts are falling off, but weather has favored production and arrivals remain heavy enough to provide a small surplus for storage.

Butter prices have again declined, reaching a new low point for the season.

Rail Strike and the Markets

The factor of biggest potential importance in the markets for all farm products at the present time is the rail strike. Thus far it has exerted but little effect beyond slowing down the movement and increasing the time in transit. The immediate trend of prices will be uncertain as long as this cloud overhangs. With the government taking a hand the dispute will be brought to a head sooner than otherwise.

A transportation tieup will mean low prices for farm products in producing sections and high prices in consuming centers where but few producers within trucking distance can take advantage of them. Commodities of which large amounts are now in storage would be least affected. Severe losses on live stock and other perishables would occur similar to those which took place in April, 1920. Any advance at the central markets will be more than compensated for by a severe drop later on when the products backed up on the country begin to move.

Increase in Cattle Supply

Combined receipts of cattle at seven markets during the past eight years have increased from an average of 150,000 head during the second week in July to over 300,000 head during the second week in October. The number slaughtered does not show such great expansion since feeders take a bigger slice, but October cattle and calf slaughter at all markets on the average exceeds that of July by 20 to 25 per cent.

In spite of alleged cattle shortage receipts in the last three months have been running above the average. Last week approximately 210,000 head arrived at the seven leading markets compared with an average of 180,000 head for the corresponding week. Kansas City reported the heaviest run in eight months indicating a rapid movement from Kansas and Oklahoma pastures and also from Texas. Scattered reports from the northwest have indicated that range cattle would move later than usual, but such observations are not comprehensive enough to be final. A few rangers have shown up already at Chicago which is earlier than they appeared last year or two years ago.

Choice and prime steers trended higher last week, reaching a new top of $10.85 at Chicago with an $11 sale expected at any time, but other grades, which means practically everything selling below $10, worked slightly lower. The spread widened likewise in cows and heifers, but she-stuff will become plentiful during the fall and is encountering more competition right along from grass beef. Bulls are numerous at present, especially bolognas. Good butcher bulls are benefiting by relatively high prices for finished steers. The dressed veal market declined during the last week and calf prices sagged toward the close.

Lower prices on grassy steers have made fleshy feeders a more attractive purchase and a few are going out to be fattened for the fall market. Feeder values this fall will average much higher than last year although there may be some decline from the prevailing level. With rangers coming the selection available is better.

Decrease in Hog Receipts Due

After running above the average since the last of April, receipts of hogs at the leading markets dropped down to normal proportions for a short time, but have increased again in the last few days. A ten-year average shows that combined receipts at the eleven leading markets have declined rather steadily from 462,000 during the third week of July to 312,000 head during the second week in September. If a similar decrease of approximately 30 per cent occurs this year it is logical to expect higher prices for good hogs.

Packing sows now compose a large proportion of the supply with an unusually wide spread of $4 between common packing sows and choice light hogs. The average cost of droves at Chicago has been pulled down to the lowest since last February with the top still in the vicinity of $11. Apparently many sows bred for fall farrow are coming to market now.

Foreign buying of hog products and lard picked up decidedly in the last week, suggesting that an increase may take place as usual during the late summer and fall. Clearances are moderately heavy and a larger movement abroad can be looked for later. Stocks of hog meats in storage in the United States on July 1 were 20 per cent below the five-year average. Stocks of lard were about 12 per cent above the average for that date.

Lamb Run Exceeds Expectations

Receipts of sheep and lambs last week were approximately 20 per cent above the average for the corresponding week, and largest for that week with one exception in the last eight years. Trade sentiment has it that the range lamb movement is behind schedule, but the figures give the contrary impression. On the average, receipts of sheep at the seven leading markets have more than doubled from the end of July to the first of October. The percentage of feeders increases, but an increase of 20 to 25 per cent in the supply for slaughter occurs also. Dressed lamb prices declined last week and values on the hoof followed suit.

Feeders are buying about as many thin lambs at nearly as high prices as they did two years ago when disastrous losses resulted. Many lambs are already contracted for at $10 per hundred pounds on the range compared with $8 to $9 earlier in the season. This year the range lamb producer is getting the velvet, reversing the situation of last year when their lambs went into feedlots at prices much less than subsequent developments indicated they were worth.

Horse Run is Lighter

The run of horses declined about 30 per cent at Chicago last week, but demand was indifferent and prices were unchanged. Rugged workers find the broadest outlets, although strike developments were not encouraging to buyers. Scarcity of choice drafters insures a good reception for all that arrive. Blemished stock moves at ridiculously low prices considering marketing costs.

Wool Prices Holding Firm

A dull period in the wool market generally results in a material decline in prices, but such has not been the case recently. Wool dealers who hold most of the supply not yet in manufacturers' hands are not making concessions because their stocks can not be replaced in the country on a lower basis. The fact of a prevalent scarcity explains the behavior of the market. The London auction opened firm to higher last week while the recent sale at Hull was slightly lower on merinos, but higher on crossbreds than the preceding auctions.

Buying of lightweight goods at the opening of the American Woolen company has been leisurely, but it is reported that the output of 12 of its mills has been sold.

Exporters Buying Wheat

The long awaited export buying of wheat has started at last with sales of about 8,000,000 bushels in the last three days. Great Britain and Italy were the chief purchasers. Germany is making a start also.

According to the department of agriculture the total yield in 13 countries of Europe and one of North Africa, for which estimates are available, will be 889,714,000 bushels, compared with 1,016,083,000 bushels last year, and 1,040,606,000 bushels during the five pre-war years 1909 to 1913. The crop in other European countries is known to be light so that the requirements of importers in the next eight months are large. If buying for this purpose reaches the volume expected it will mean the purchase of an average of 1,500,000 to 2,000,000 bushels daily in North America right along. Besides the foreign demand, mills are absorbing a fair share.

Conditions varied from fair to good in Russia and were slightly below average in Spain, while they were poor in Africa. Crop failures were reported in South Africa and Egyptian wheat was slightly below average. Rains, cold weather and snow were said to have proved beneficial in Australia.

Corn prospects were described as fair in Jugo-Slavia and Italy, good in Rumania and below average in Spain. Wet weather has delayed corn in Argentina.

Europe's sugar beet crop prospects were reported to be good, Germany showing improvement in June and France promising a larger yield than last year. Brazilian sugar cane was said to be in good condition.

The estimated wheat production of Poland was placed at 44,300,000 bushels, 25 per cent more than last year's harvest, in a recent cablegram from the international institute of agriculture at Rome, the department added, but in Algeria, Morocco and Tunis the crop showed a reduction of 52 per cent to 29,800,000 bushels.

Poland's barley crop was estimated at 201,500,000 bushels, 21 per cent more than last year, while that of the other countries was placed at 43,200,000, or 49 per cent of last year's yield.

Receipts at primary markets have trebled in three weeks and, with the possible exception of last year, are the largest for this season in at least 12 years in spite of interference by the rail strike and the coal shortage which is retarding the movement of cars and checking threshing in certain sections. A shortage of empty cars is reported in the southwest and in parts of the middle west.

The spring wheat crop is practically safe. Black rust will continue to do a little damage and under suitable conditions might do considerable harm, but it is doubtful if the reduction in the crop will be more than the average deterioration at this season which has already been discounted in the government's July 1 estimate. This will mean a final yield of 250,000,000 bushels or more.

Corn, Oats and Rye

Corn is encountering a broad demand. Exporters have bought freely in the last few days and domestic shippers to the deficiency states have been active. But receipts at primary markets last week were the largest for the corresponding week in the last dozen years and prices were practically unchanged.

The crop has improved since July 1 and, barring frost or other damage, can easily reach 3,000,000,000 bushels again.

New oats are already arrinving at middle western markets, most of them being light in weight like the old crop. Some improvement in the new crop has taken place in the northern states so that the final yield may be up to the average. Stocks of old oats remain heavy and, with the movement of new oats starting, prices dropped to the lowest level in years. An upward trend is improbable even with rail troubles looming up.

Rye is selling at a discount of about 30 cents below wheat at Chicago and 60 cents at Minneapolis. The carryover of old rye is larger than usual and one of the biggest crops ever harvested is coming on. Prices are apt to be low compared with wheat all season.

CASH GRAIN MARKETS.

The cash grain prices for the week ending July 26 follow:

CHICAGO—Wheat—No. 2 red, $1.09 1-4@1.12 1-4; No. 3 red, $1.06 1-2@1.10 1-2; No. 2 hard, $1.11@1.15. Corn—No. 2 mixed, 64 1-4@64 1-2c; No. 3 mixed, 63 1-2@64c; No. 2 yellow, 64@65c; No. 3 yellow, 63 3-4@64 1-4c; No. 2 white, 64@64 3-4c; No. 3 white, 63 3-4@64c. Oats—No. 2 white, 33 1-4@37c; No. 3 white, 32 1-2@34 3-4c. Rye—No. 3, 78@83 1-2c. Barley—50@66c.

Deferred Shipment Feeds at Discount

Although feed markets are quiet, the heaviest movement of wheat feeds for months is reported from Minneapolis. The rail strike is sustaining the market for prompt shipment, but prices for deferred shipment are at a discount of $1 to $2 below prevailing prices. Cottonseed meal for shipment by December is $4 to $6 cheaper than old crop meal.

Prices per ton (100 pound bags) in carlots—Chicago: Bran, $19.50; standard middlings, $20.50; flour middlings, $26.50; cottonseed meal, 36 per cent, $45.50; 43 per cent, $50; hominy feed, $26; gluten feed, $29.85; old process oil meal, $47.50; tankage, $55.00.

Hay Prices Stable

Hay markets are quiet with good quality hay readily absorbed and prices inclined to harden slightly. Receipts of new hay are increasing. Old hay commands a premium although most of the new hay is of good quality.

Prices per ton in carlots—Chicago: No. 1 timothy, $22@25; No. 2, $21@24; No. 3, $12@17; No. 1 light clover mixed, $21@24; No. 1 clover, $14@17; No. 1 clover mixed, $16@19; upland prairie, $14@18; midland prairie, $12@16; rye straw, $12.50@13.50; oat and wheat straw, $9@11.

New Low in Egg Market

Egg prices dropped to a new low figure for the season in the last few days. Receipts are falling off, but weather has favored production and arrivals remain heavy enough to provide a small surplus for storage. In the preceding years storage holdings have generally ceased to increase in the last half of July, but they do not decrease much as a rule before the middle of September. The decline is believed to have about run its course.

Cheaper Butter Stimulates Buying

Butter prices declined last week reaching a new low point for the season. Receipts are gradually declining, but remain considerably heavier than the average for this period of the year. Although storage holdings are above the average, operators were willing to accumulate the lower priced goods to bring down the average price on butter put away when the market was four or five cents higher. The net increase in cold storage holdings at the four leading cities each day of the last week ranged from 600,000 to 1,000,000 pounds. At the lower level of prices consuming demand also has been estimated so that the market is gaining stability and values are believed to be at or very near bottom.

Prices on 92 score fresh butter on July 26 were:

Chicago, 32 1-2c; New York, 34 1-2c; Boston, 35 1-2c; Philadelphia, 35c; San Francisco exchange quotation, 41c.

With good weather for heavy production of high quality cheese and with distributing markets well supplied, cheese prices declined further last week. Lower quotations failed to stimulate buying to a noticeable degree, most of it being on a hand-to-mouth basis. City markets are only slightly higher than prices quoted in the country. Cheese distributors are looking for lower prices and they are waiting as long as possible to take advantage of the decline.

Prices on No. 1 American cheese on July 26 were:

Chicago—Twins, 18 1-2@19c; S. Daisies, 18 1-2@19c; D. Daisies, 18 1-2@19c; Young Americans, 19@19 1-2c; Longhorns, 19@19 1-2c; square prints, 20@20 1-2c.

Potato Shipments Heavy

Potato shipments from the producing sections continue to run substantially above the average for this season of the year. Supplies are coming from as far north as Minnesota, although the intermediate states including Virginia, Kansas, Maryland and New Jersey are the leading shippers. Prices are down nearly 50 per cent compared with six weeks ago and the trend is slightly lower. Sacked early Ohios are quoted at $1 to $1.35 per 100 pounds at Chicago, those from Nebraska selling at the top.

(Continued on page sixteen.)

Club Boys Are Showing Their Fathers a Thing or Two in Better Hogs

By NORA GARVIN.

Joel Yelton of Spangle, Spokane county, has an advantage over most other club members. His father, W. A. Yelton, is the local club leader in the Spangle community. Nevertheless, it took Joel to prove that some club boys can show their fathers a thing or two.

When Joel first entered the club work two years ago he went right into the purebred hog business. His father thought this rather unnecessary, but let the boy raise what he desired while he continued with scrubs. Joel fed and cared for his purebreds while his father cared for his scrubs. When asked why he didn't go into the purebred business as his son had done the father said: "Oh, my hogs are just as good as his." But they weren't! For when it came time to butcher them Joel's father, to his great surprise, found that his son's animals outweighed his in every instance.

Since that time the father has been a great booster for purebred stock, but it took his own son to point the way.

But that was not all. Last year when W. J. Green, Spokane county club leader, visited the Yelton home he told Joel the value of raising pasture in connection with his purebred hogs. Joel was so impressed that he decided to put in a small plot of ground on their dry-land farm to sweet clover.

He planted one-sixth acre to sweet clover during the last 10 days of May in 1921. He sowed it with a hand drill and planted the seed 18 inches apart, then innoculated it with alfalfa soil. He cultivated it twice during the summer months. For three months two hogs fed on it that year, and the clover grew so high that it wasn't much good. Two calves were turned into it and later a sow and her litter.

This year the clover came up again and Joel had to "borrow" some of his father's stock to help use it up. He let his eight 150-pound shoats feed to their hearts' content in the field with three young calves and then for an hour each day turned in nine of his father's milking cows.

Asked if he had noticed any particular effect the pasture had had upon his cows, Mr. Yelton said: "I should say I have. Why, those cows have been increasing their production steadily since going into pasture, although I haven't kept a record of it. I can notice the difference every day."

Mr. Yelton has been so convinced as to the value of this pasture that this year he himself planted seven acres to Grimm alfalfa, sweet clover and dry land alfalfa and will study the crops to see which does the best. Other farmers in the community are watching with interest the results of the experiments made by father and son.

Last year at Spangle there was scarcely any interest shown in purebred stock by farmers. Since the pig club was formed and registered Durocs secured for the club members there is altogether a different feeling on the part of the farmers toward the hog industry.

"The other day I met the banker on the street," said W. J. Green, county club leader, speaking of a visit to Spangle, "and he said to me: 'Where can we get some registered sows? I could place 40 right now with the farmers if I could get them.' Of course the high price of pork this year has added a tax upon the pork production, but the interesting feature is that all the farmers are trying to get the kind of hogs the boys are raising."

The effect of club work upon certain communities is seen in other parts of Spokane county. A year ago a pig club was started at Latah by Mr. Green, with five boys purchasing registered Duroc Jerseys. The boys made a fine showing with their animals and farmers, noticing this, are anxious to get some of the same stock. As a result there has been a big demand for good hogs in their vicinity.

"The important thing about that, as I see it," said the local leader at Latah, "is the fact that before the boys took hold our community was not a hog community at all, but now every one is anxious to get the best stock possible. Sixty registered gilts have been placed in Latah alone, following the advent of club work."

At Elk, where very little dairying was carried on, a dairy club has been formed this year and good grade cows secured for the 10 club members signing up for the work. After the farmers had seen what their children were doing—how they were weighing and testing the milk and keeping accounts of feed and other costs—they decided to buy some good breeding stock. Immediately after, two registered bulls were purchased and are now in use in the community.

Death Stares Travelers in the Face

Encumbered with luggage and live stock, their tongues parched and the terror of impending death from thirst in their bleary eyes, a group of 10 men hold a council under the scorching rays of the desert sun. It is two days since the last waterhole was passed. Heaven only knows how far ahead the next one is. They have already been 50 hours without a swallow. To delay in deciding the next step means certain death in the wilderness.

What shall they do? Forge ahead into the unknown waste? Return, with the utmost speed of famished beast and famished man? Turn to page 12 and read the decision in Lewis Miller's gripping story, "Pike's Peak or Bust."

This is one of Miller's greatest stories, and our readers who followed "Trappers of the Ozarks," "A Crooked Trail" and "Big Smoke Mountain" know what that means. Do not make the mistake of waiting a few weeks to begin reading "Pike's Peak or Bust," but get it now before you lose a copy of the paper. If you once start it we know you will continue it to the last sentence of the last chapter.

Planning for Community Fairs

Mrs. Winnie Braden of Portland, Oregon state exhibit agent, who since March 15 has visited nearly every county in Washington promoting community fairs, held her last public gathering in Spokane county.

Some of the counties in which Mrs. Braden conducted meetings included Cowlitz, Lewis, Thurston, Pacific, Clallam, King, Pierce, Whatcom, Skagit, Snohomish, Chelan, Douglas, Walla Walla, Adams, Stevens, Spokane, Kittitas, Yakima, Benton and Franklin. In many instances, when a meeting was announced, the county agent from an adjoining county would come with a delegation—that is, whenever a schedule could not be arranged for his county. Attendance at these meetings varied from a small committee of the fair board and department heads, to meetings of as many as 65 or more farmers.

"The most important part of the community fair and the thing upon which the success of the fair depends, it seems to me," Mrs. Braden said, "is the adoption of the standard score card. This card has been worked out by the department heads at Washington State college and covers every product to be exhibited. It may be secured from the college direct or from the county agent."

Mrs. Braden in her meetings throughout Washington outlined for those present a schedule of work. "The first thing to do," she said, "is to get the organization work taken care of. Appoint a large committee to be in general charge of the fair. To get the interest of every one behind it, choose a representative from every line of work carried on in your locality—a merchant, a banker, a live stock breeder, a farmer, a fruit grower, or whatever else there may be. Later an executive committee of three should be chosen who would be responsible for the actual work of conducting the fair.

"Then select the place and decide on the time. As soon as the committee knows the time, start in work at once. Appoint superintendents for the various departments in order that they may be on the job during the season."

State Farm Bloc

By W. H. Paulhamus

To the Editor of The Washington Farmer: I am delighted with the sentiment expressed in your editorial, suggesting the advisability of the "state farm bloc."

As a former member of the Washington state senate, it did not take me long to ascertain that every other industry in the state is looking after its own particular interests better than the farmers.

Of late years there has been a farmers' lobby that undoubtedly has been helpful, but the average party organization man is too often convinced that his first duty is to follow the lead of the senate or the house organization, and my experience is that the average house or senate organization is usually developed for selfish purposes.

The farming industry is deeply concerned in many problems that can best be regulated by legislative action.

Of the many items, one of extreme importance is the elimination of "oiled milk." this oiled milk industry is extremely dangerous from many standpoints and I am hopeful that the next session of the Washington state legislature will prohibit the manufacture or sale of it.

I appeared before the committee on agriculture several years ago, urging that at that time they pass a law precluding the manufacture of filled milk, but did not succeed in having it eliminated.

If the Washington state farm bloc should prove of as much value to our state as has the farm bloc in the United States senate we should all be very thankful.

In my judgment the senators from every western state should line up with the farm bloc, so as to defend the interests of the west against the unsatisfactory domination of the large interests controlled in a few states of the east.

W. H. PAULHAMUS.

Puyallup, Wash.

The Guernsey Breed Is Rapidly Becoming Popular With the Club Members of Washington

Here is a picture of some of the members of the Yakima Guernsey club and the young animals that they received at a public picnic and drawing early in the summer. The animals came largely from Wisconsin, and were sold to the club members at cost, being selected by the members by lot. There are 21 members of the club, but only a part of them are in the picture. From left to right they are: Virgil Lajambe, Francis Bohlke, Carlyn Winger, Fred Keith, Cecil Wilkins, Herbert Short, Delos Clement, Walter Scott, Herschel May, Kenneth Cochrane.

Others who received heifers are Jesse Heers, William Heers, Esther Bohlke, Charles Bohlke, Chester Schlien, Roscoe Angel, W. F. Saar, Charles Bell, McClellan Brown, Cecil Lightburn and Mark Myers.

Taxpayers Should Organize

Unity of Action Is Essential to the Reduction of Taxes

By LESTER M. LIVENGOOD,

Attorney and Manager Spokane County Taxpayers' Economy League.

The census of 1910 caused Washington citizens to swell with pride. All over the United States this state was pointed out as one of the fastest growing states in the Union. No such feeling was engendered when the results of the 1920 census were made known. A drop in population increase from 120.4 per cent to 18.8 per cent, and in valuation from 281.45 per cent to 30 per cent, is enough to cause even the most easy-going citizen to stop and consider what is wrong, for these things do not happen without causes.

The sad part of it is that the very people elsewhere in the country whom we are trying to bring here with their capital and industry know what is wrong and are staying away, although it seems that a great part of our citizens have not yet learned what is wrong with us. Prospective capital and citizens who alone can provide the means for our future development are aware of the fact that in the face of the conditions above described the people of this state have added over $41,000,000 to their tax burden since 1910, an increase of 152 per cent, in addition to over $40,000,000 federal income and profits taxes added mostly since that time. They know that increases in public expenditures must be kept proportionate to increased production and wealth if any community is to prosper and grow and that Washington is long past the margin of safety in this respect.

A Question of Prosperity.

The taxpayers of Washington are at last awakening to the seriousness of the situation. It is no longer a question of stinginess or looseness in public expenditures, but a question of the prosperity and growth of this state. Once a taxpayer realizes the situation the battle for tax reduction is half won, because it is due to the taxpayer himself and his apathy toward the situation that these increases have been allowed year after year. The next question that arises is, how can the taxpayer act to accomplish this tax reduction which is so necessary and urgent? If he will look about him he will see that every class of citizen actuated by selfish motives has an organization to accomplish its purposes, usually at the expense of the taxpayer. Only by united action and intelligent consideration of the question can the taxpayer protect himself.

Every county in the state of Washington should have a tax league and every league should be a member of the State Federation of Taxpayers' Associations, which coordinate the efforts of all county leagues in matters of state concern. The state league will have a representative of the taxpayers at the legislative session this winter, and the taxpayer will for once have an inning and know what is going on. Tax leagues have been organized in the following 14 counties, to the writer's knowledge, and probably in a number of others of which he has not been informed:

King, Pierce, Lewis, Grays Harbor, Clarke, Thurston, Snohomish, Yakima, Walla Walla, Okanogan, Whitman, Lincoln, Grant, Spokane.

The tax league in Seattle, known as the Voters' Information league, has made a wonderful record within a year and has over 10,000 members. Last year it secured a reduction of 14 per cent in the Seattle tax levy and has accomplished many items of tax reduction. This is used merely as an illustration of what can be done when the taxpayer makes up his mind to act. Rural residents, if organized, could do much to influence taxation in a similar way.

Any county desiring assistance in organizing a tax league will be assisted gladly by the state league officers. An inquiry addressed to the writer, 1305 Old National Bank building, Spokane, will put the nearest officer of the league in touch with that county.

The time for the taxpayer to act is now. The budgets will be made up in August and September, and that is when the law provides hearings for the taxpayer to make his objections. Tax leagues should be organized and study these budgets at the earliest possible moment and be prepared to demand tax reduction intelligently at the final budget hearing in October.

One of the Old Ones

The Cashmere Fruit Growers' union is among the oldest organizations of its kind in the locality, having been operating since February, 1907. It now has a membership of 40 growers. It is purely a cooperative organization which grades, packs and markets its own fruit.

A large warehouse at Cashmere which measures 72x560 feet contains six large grading machines, and can use 135 workers at full capacity. This part of the building is housed on the second floor while the storage space is in the basment, which has a capacity of 233 cars of apples. Last year 312 cars of apples were graded, packed and sold from the warehouse.

"Our apples are all pooled and sold on a government valuation," said J. E. McClimans, manager of the organization. "We handle only pears and apples; the pears making only a small percentage of the shipment. We are beginning, however, to handle spray material and box shooks for our members.

"Our plan of handling the crop is to let the grower put all his attention on the growing and picking of his apples while all grading and packing is done at the central plant. This allows for a more uniform pack, and slightly cheaper overhead."

This organization is now affiliated with the Wenatchee Cooperative Growers' association.

Officers of the Cashmere Frut Growers' union are F. H. Moses, president; Charles Joy, vice president; M. L. Simond, secretary. The board of nine directors are Moses Joy, F. S. Burges, E. W. Burges, W. E. Hinman, Charles Ott, D. L. McCory, C. M. Erickson and E. Gould.

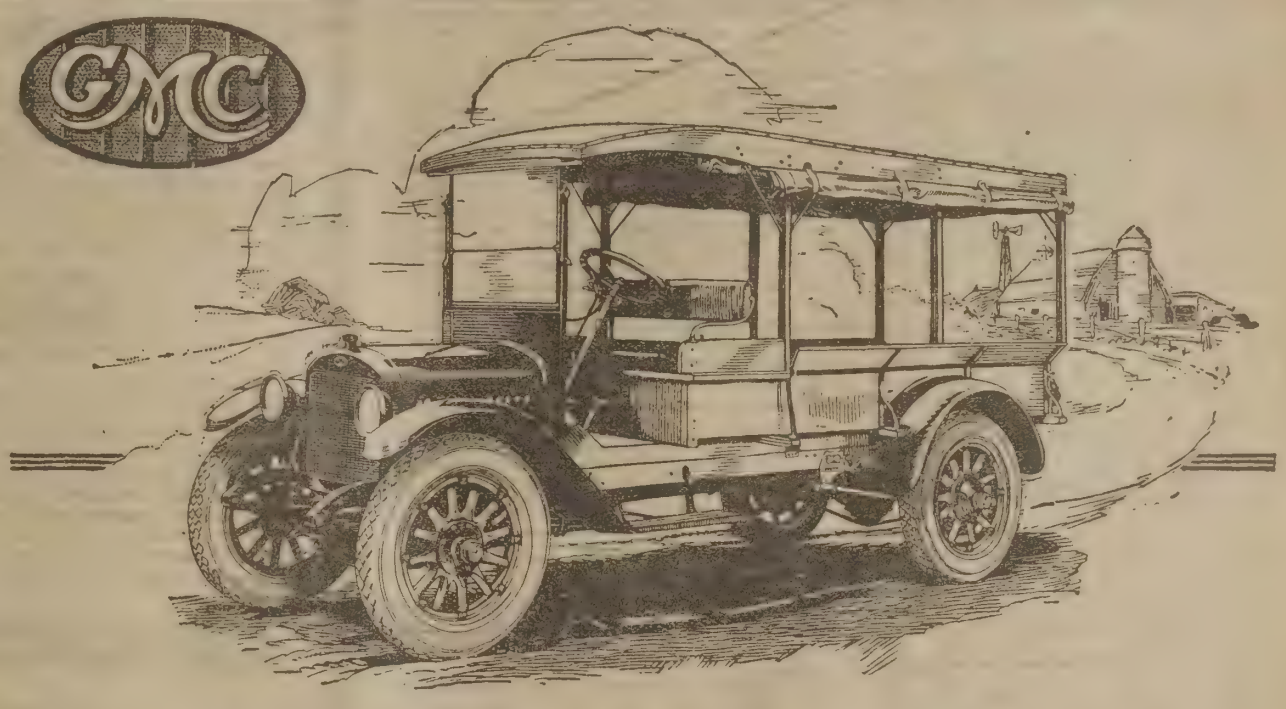
Clover Experiments

Using Commercial Fertilizer in Addition to Barnyard Manure

In the spring of 1921 the county agent recommended to T. A. Garrett of Auburn, Wash., that he try some commercial fertilizer in addition to his barnyarn manure to help him get a stand of clover. Accordingly some plots were laid out in 1-10 acre sizes, trying out superphosphate, muriate of potash and a mixture of the two. One plot was left untreated between the phosphate and the potash plots.

The whole field of two acres was seeded to red clover and timothy, using oats as a nurse crop. During the growing season of 1921 there was only a slight noticeable difference on the oats in the different plots, except on the manured portion. One-half of all the plots were manured at the rate of 15 tons per acre and the oats on the manured plot was much heavier and darker green than on the other half not manured.

After the oats were taken off, however, the clover began to show up and the different plots were distinctly visible. Those plots that had received an application of phosphate had a much better stand and the young clover plants grew much faster than on any of the other plots.



The differences were noticeable all during the winter and spring of 1922, and when haying came the phosphate and check plots were cut and weighed separately. The potash plot was no better than the check plot. The mixture of potash and phosphate plot was just about as good as the phosphate plot. The check plot yielded 4060 pounds of cured hay of poor quality to the acre. The phosphate plot yielded 8240 pounds of cured hay to the acre.

Here was a difference of over two tons of hay from the use of 300 pounds of acid phosphate. The cost of the material was $8.75 and allowing $1.25 for getting it to the farm and putting it on the land, the total cost is only $10 an acre. The value of the increased hay yield for one year only at the rate of $10 per ton for hay is $20. This makes a net return of $10 per acre by the use of acid phosphate.

A. B. N.

CANNERIES CONTRACT FOR PEARS.

According to N. H. Massie, secretary of the Washington county farm bureau, 75 per cent of the Bartlett pear crop has been contracted to cannery interests.

A "Jim-Dandy" Truck

Model K-16 One Ton

It's a Jim-Dandy! That's the universal opinion of the GMC one ton truck.

Fast on the road, powerful in the hard going and economical all the time, this sturdy honest-to-goodness truck is just a "Jim-Dandy" for the farm.

It will haul produce, stock, milk and any other kind of load better and cheaper than a motor truck has ever done before.

For this GMC has improvements which are away in advance of ordinary motor truck construction and which make possible more continuous haulage, lower operating and lower maintenance costs. Such features as Removable Cylinder Walls, Pressure Lubrication, Removable Valve Lifter Assemblies and Instantaneous Governor, are all designed to produce the kind of performance that is vital to the success of a motor truck on the farm.

Model K-16 is a real motor truck, built entirely of truck units—no passenger car parts used.

In addition it is built in the most approved designs of motor truck construction. For instance, this one ton truck has Magneto Ignition, admittedly the most reliable type.

The Ignition is simple, just four wires leading from the Magneto to the spark plugs and all in the open where it can be readily inspected.

The Model K-16 also has Electric Lights, Starter and Generator with a Storage Battery built especially for motor truck use and of extra capacity. The wiring is all carried in metal conduits and is entirely separate from the Ignition System.

Demountable Rims, Cord Tires, Pressure Gun lubrication of the chassis. Extra Switch for spot light and Interchangeable Brake Rods are other GMC refinements.

No truck of like quality has ever been offered at as low a price as this chassis—$1295 at the factory.

Write for an illustrated booklet "Motor Trucks on the Farm."

LIVESTOCK AND DAIRY

Watering the Hogs

By W. H. UNDERWOOD.

On every farm where hogs are raised there should be some economical way provided to furnish pure, clean water for the animals at all times. Sloppy food does not answer for both food and drink. Where slop is fed like a thick mush, as it should be, the hogs will seek drinking water between feeds, and if the slop is too watery the animals will in their endeavor to pick out the solids swallow more of the liquid than is good for their digestion.

The old idea that hogs do not require much water is an erroneous one. If they are placed where they can obtain a plentiful supply of fresh, clean water they will drink a great quantity of it during the day and especially in the evening. If the hogs are watched when they are eating it will be noticed that they eat a while and then run and take a few swallows of water, after which they go back to the feed. They will go back and forth to a hog waterer many times a day. It is astonishing to find how much water they will drink when they can get all the good, clean water they desire, and there is a great deal of satisfaction with their improved health and the way they grow and put on flesh.

When a lad I remember I had to carry the wash water to the hogs every wash day. Why the poor animals had to drink the soapy mess I was at a loss to know. I didn't think the soap was very agreeable or beneficial to them. Now I know it is not. Yet many farmers seem to think that anything is good enough for a hog, but the best breeders have learned that the filthy habits of the hog are the result of the improper care of man and that swine are not naturally as unclean as they have been accused of being. If he is given the right kind of a chance the hog will easily prove to any one that he is just about as clean in his eating and drinking and sleeping as any other animal on the farm.

There is too much dependence on surface water for hogs and other stock too. Ponds, unless they are fed by good springs, become stagnant and especially is this true in the summer time. Such water is bad. The water obtained in ditches and other small streams is little better. All such water sources are prolific breeding places for the germs that bring on some of our most troublesome swine diseases. To permit the hogs to use such water the year around is simply playing with death.

Good wells furnish the cleanest water for stock of all kinds. The farm that does not have a plentiful supply of well water or live spring water for the animals maintained thereon can not expect the best results. To be sure a little money is saved for a while, but it is certain to be wiped out by losses from diseases that follow the use of bad water. To try to get along without a good supply of pure, clean water is poor economy.

Some way should be arranged to get the water to the animals with the least labor and loss of time. Many an hour I've spent carrying water to hogs in pails. It's a mean, nasty job. I was small then and I'm pretty sure that the hogs didn't get any more water than was good for them. I poured the water right into the trough. At least I aimed to. The hogs climbed over each other and into the troughs. Sometimes I got a whole pailful of water into the trough but usually it was poured over the heads of the hogs and wasted.

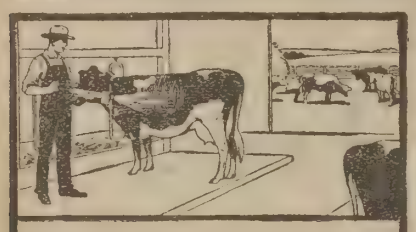
The farm of today should have up-to-date waterworks. A gasoline engine is a fine thing to use to pump the water into the tanks, from which it can flow into automatic waterers, where the animals can secure good, clean water at any time. And the saving of a few hogs that may be lost through disease from using unclean water will more than pay for the whole arrangement. There are several makes of automatic hog waterers on the market and those who neglect such means of insuring the health of their hogs are practicing poor economy.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

DIGESTIVE TROUBLES, ARTICLE IV.

Choking.



This is the first difficulty that is encountered by the digestive tract if we exclude tooth and mouth troubles. This is a very common cause of anxiety for the owner and is many times more troublesome than dangerous. The amount of danger that results depends upon the cause. If it is due to a paralysis of the gullet the danger is great and the chances of recovery are very small, though some cases do respond to treatment. Other times the cause is an injury to the gullet or oesophagus which has left an inflamed area, which in healing has caused the opening through the tube to be smaller in size than normal. This causes difficulty in getting the food past this point and such animals are frequent chokers. It may also lead to more difficult conditions, such as an enlargement just above the narrow portion in which food materials are prone to lodge. Conditions such as the above are very hard to cure and many can not be treated successfully even by operation; this is particularly true when the diseased portion is within the chest cavity.

More commonly chokes are of two kinds. The most common results from the animal trying to swallow something that is too large to go through the oesophagus (such as apples, potatoes, pieces of carrots and other roots). Again, we see grain chokes where the gullet is filled with some of the common grains, such as oats, wheat, barley, etc. In these cases the tube is usually filled for a considerable distance and at times the obstructing mass can be felt from the outside of the neck. Particularly in the small animals we find chokes that result from the animal trying to swallow some object that has sharp points upon it, such as pieces of bone or in cases of puppies anything that they are playing with.

Animals that are choked are usually considerably concerned about it, as they refuse to notice the customary commands and prefer to stand quietly with the head lowered and extended, and while not in pain they are noticeably bothered. They can not swallow, and foam and saliva drools from the mouth as fast as it accumulates. They may make swallowing movements but produce no results; they may wrench as if they were attempting to vomit, but this produces no effect, either, and the animal stands in a helpless condition anxiously awaiting relief from some other source. Cattle may bloat very quickly because they can not belch up the gas that accumulates in the paunch, and this in some cases causes death before they are relieved.

When potatoes and such objects are

SPRAY Before They Go Out to Pasture

Cows in the pasture fighting flies lose money where they should make it. Spray your stock with

SO-BOS-SO
KILFLY

It keeps flies off and keeps cows contented. It saves and makes money when used on horses, mules and cows.

So-Bos-So is the old reliable. Known for over 22 years to thousands of farmers. *Harmless, Effective, Guaranteed.*

A Profitable Worker in Hot Weather

Hot weather makes no impression on this sturdy, oil-burning, oil-cooled OILPULL Tractor.

Triple Heat Control prevents overheating. The powerful, twin-cylinder, oil-burning motor actually runs cooler under heavy loads than under light loads. There is no evaporation, hence no refilling. Your work, whether it is plowing, road work or belt jobs, goes along steadily 10, 12, 18 hours and even longer on hottest days. That is profitable service.

OILPULL
"The Cheapest Farm Power"

The OILPULL saves money in any weather. It saves 39% in fuel. It saves 50% on upkeep. These figures are proved by authoritative tests and comparisons. And it is such savings that make the OILPULL so economical to operate and so very cheap in the end. OILPULL life averages more than 10 years. This means a big saving in depreciation.

All in all, the OILPULL, because it is a quality machine and because it is the only tractor with Triple Heat Control, is the cheapest tractor to own, summer or winter.

If you want further proof, see the local Advance-Rumely dealer. In the meantime, please write in for a copy of our widely read booklet, "Triple Heat Control."

WRITING ADVERTISERS PAYS

The majority of our advertisers will send you, upon application, attractive catalogs, booklets and folders containing ideas and information of value to you. Why not act upon such offers in the issue which you are now reading? When you write, please say, "I saw your ad in THE IDAHO FARMER."—Adv. THE OREGON FARMER."—Adv. THE WASHINGTON FARMER."—Adv.

In writing advertisers, be sure to say you saw their advertisement in The Washington Farmer.

within the gullet they may be felt when they are in the region of the neck, but lower down of course this is impossible. When such objects are near the throat they may be reached by inserting the hand down into the mouth and through into the gullet; they are difficult to grasp even then and to succeed at all the object must be pressed forward from the outside and into the hand that is within. Failing this, the object may be pushed down if there is suitable instrument for that purpose. This should be smooth, flexible, but moderately stiff, so that it will follow the gullet, but not injure it. The use of broom handles and garden hose is positively dangerous, as they are liable to injure the wall of the oesophagus, and when this is done there is grave danger of causing the animal's death.

Fluids to soften the mass or lubricate the gullet must be used very sparingly or they will fill the gullet and pass into the windpipe and to the lungs, where they may cause pneumonia. Grain chokes sometimes are relieved without treatment by massage of the filled portion through the side of the neck, but if this fails the stomach tube may be passed and many times succeeds in getting the mass broken up so that it will pass on.

Never try to break a solid object by striking it through the wall of the neck, as the danger of seriously injuring the surrounding tissues is too great. Operations on the oesophagus are the last resort. We hesitate to open this tube, as it is very hard to get it to heal, though in some cases it must be done. The rumen, or paunch, of cattle sometimes have to be punctured to relieve the bloat that accompanies the choking.

The difficulty with home treatment is that there are no suitable instruments about for use in such an emergency. The ones mentioned above have been used, but they are attended with serious danger. Better try to massage the grain away and break it up from the outside or pass the hand down into the mouth through the throat and grasp the object if possible.

VETERINARY

By DR. S. B. NELSON.

Cystic Ovaries—I have a 6-year-old cow that came fresh last June and she has never come in heat since. C. H.
Clarkston, Wash.

I would rather judge that your cow needs an examination of the ovaries to find cysts, that is probably the cause of the trouble. If they are, it can be remedied by breaking the cysts about every 10 days.

For Heaves—I have a horse that has the heaves. Have tried several kinds of hay to stop his coughing without success. He is fed oats, home grown hay and alfalfa. He started coughing about five months ago. J. D.
South Prairie, Wash.

If possible, cut out feeding alfalfa to your horse. Cut down the amount of hay that you feed him one-half, at least, then give him two ounces of Fowler's solution of arsenic on his feed morning and evening, every week or 10 days. Give him a rest, then repeat.

Cow Pox—My cow has hard lumps coming on her udder near the base of the teats mostly between the hind ones. The lumps first form with a red surface, very firm and hard, later forming a scab over the surface with no discharge and seemingly not sore. C. C.
Mica, Wash.

I think that your cow has cow pox, and I would suggest that you wash the udder with a two per cent solution of lysol before and after every milking and then apply a little zinc oxide ointment to the sores after every milking.

Horse Coughs—I have a horse that coughs badly at times. Will cough sometimes for three or four minutes at a time. Sometimes has a gurgling sound in his throat. He acts as though there might be something in his throat, but I can detect nothing wrong. He is running on new pasture of clover, orchard grass and timothy; is in good flesh and a hearty eater. J. S.
Portage, Wash.

Try giving your horse a rounding teaspoonful of mustard mixed with his feed once daily for a few days. This has been recommended quite highly by certain people in chronic trouble.

Pigs Have Scabs—I have about two dozen pigs two months old that have something like a scab or mange and they stop growing right away. After they had that for a week they began to cough. I am feeding wheat chop and they run on green wheat and barley pasture. A. L. P.
Dot, Wash.

It is possible that your pigs have one of two diseases. The scab disease may be due to the bacillus necro-phorus, and the scabs that they make may be treated by painting with iodine once daily. The other disease may be parasitic and be due to the intestinal worm ascaris lumbricoides, which is one of the intestinal parasites in pigs and which, in one of its stages, passes through the lungs and may cause the cough and even the thumpy condition of the sides. There is hardly any satisfactory medical treatment for this, but the preventive treatment should be kept in mind, which is to keep the very young pigs pretty well confined to clean and sanitary farrowing pens and to keep them away from the dirt pen or hogyard with wallows in it until they reached a good size, as in these places they are likely to come in contact with the ascaris eggs. When the pigs are ready to be moved, take them to fields or pastures that are as free from this as possible. They should be kept away from these possibly infected yards until they are three months old. Another thing to keep in mind is to clean the sides and udder of the sow from dirt before she is placed in the farrowing pen.

Caked Udder—What can be done for a cow that has a caked udder? L. S.
Locke, Wash.

The symptoms and extent of the trouble of your cow are not very definitely given, but the general treatment for caked udder is to allay the inflammation by hot applications. One of the best hot applications is hop leaves which have been picked to pieces and put in a bandage covering the udder, keeping it hot with hot water. The bandage would be tied up over the back, and there should be four holes for the teats to come through so that milking could be done without disturbing the poultice. You will find it to advantage to decrease the amount of feed you are giving the animal, see that the bowels are normal and then give her a tablespoonful of extract of phytolacca in a little water morning and evening for several days.

Warts—I have two cows that have warts on their teats. T. A. B.
Spangle, Wash.

Use the following treatment for the warts: Chloral hydrate, 1 1-2 dram; acetic acid absolute, 1 1-2 dram; salicylic acid, 1 dram; spirits of ether, 1 dram; collodion, 4 drams. Make this into a mixture and apply to the warts night and morning after milking.

Lump on Neck—We have a mule that has a big lump on his neck the size of a cabbage. We have treated it with liniment, but it does no good.
Snake River, Wash.

If the swelling is hard it might be a tumor, if it is soft or doughy, it may be an abscess. I think it will be safe to make an incision at the very lowest edge of the lump, pretty deep, and see what you find. If it is an abscess, it should be cut so as to give it a large, free opening. It had better be filled with cotton which has been dipped in tincture of iron, and the packing left in for 24 hours, after which it should be painted with tincture of iodine. If it is a tumor it will have to be removed and treated very much the same as the inside of an abscess.

Warbles—Please tell me what to do for a cow that has some sores on her back. When they started they were little lumps. After a while they broke out and some pus came out and they got as wide as a nickel. C. H. H.
Hartford, Wash.

It is quite possible that your cow is suffering from warbles. Squeeze the pus out of the abscess and if the larva is present, destroy it so that it can not bury in the ground and pupate and later grow into the gad fly. Prevention is the best remedy for overcoming this. The eggs are laid during the last part of June, July and August. During this time it is well to keep the parts where the cow can reach with the tongue covered with an oily substance such as fish oil mixed with a little tar.

Goodrich
announces
new tire prices
—lowest cost mileage ever known

Effective July 20th, Goodrich established a revised price list that is a base line of tire value. It gives the motorist the buying advantage of knowing that whatever size tire he selects is of the same quality—*the Goodrich one-quality standard.*

It gives him the longest mileage, the most satisfactory service and the highest quality his money can buy. Results will prove that it is impossible to buy tire mileage at lower cost.

Think of being able to buy

Silvertown Cords

at such prices as these:

SIZE	BASE LINE PRICE	SIZE	BASE LINE PRICE
30 x 3½ Cl.	$13.50	34 x 4 S.B.	$30.85
31 x 3.85 "	15.95	32 x 4½ "	37.70
30 x 3½ S.B.	15.95	33 x 4½ "	38.55
32 x 3½ "	22.95	34 x 4½ "	39.50
31 x 4 "	26.45	35 x 4½ "	40.70
32 x 4 "	29.15	33 x 5 "	46.95
33 x 4 "	30.05	35 x 5 "	49.30

New base line prices are also effective on Goodrich Fabric Tires:

SIZE	BASE LINE PRICE	SIZE	BASE LINE PRICE
30 x 3 "55"	$ 9.65	32 x 4 S.B. (Safety)	$21.20
30 x 3½ "	10.65	33 x 4 "	22.35
32 x 3½ S.B. (Safety)	16.30	34 x 4 "	22.85

No extra charge for excise tax. This tax is paid by Goodrich

This revised price list affords the motorist as definite a guide to tire prices as Goodrich Tires are the definite standard of tire quality.

THE B. F. GOODRICH RUBBER COMPANY, *Akron, Ohio*

POULTRY AND RABBITS

The Color Test

In Determining Laying Qualities

The yellow pigment or color observed in the skin, beak, shank and other parts of the body of the hen of the yellow-skinned varieties is the same as that which causes the yellow color found in the yolk of the egg. When a hen is not laying this color is stored up in the body tissues and is readily seen, says a bulletin discussing experiments in poultry culling. When however, the hen begins to lay all the pigment of the feed is required for the eggs, and hence it is diverted from the exterior body tissues to the fat globules of the egg yolk. If this visible pigment is not continually renewed it fades, leaving the various parts white or bleached.

When a yellow-skinned pullet begins to lay the color first fades from the vent, disappearing in a few days. The eyering or the edges of the eyelids bleach a little slower than the vent. The earlobes of the white lobed varieties are next to lose their creamy color, followed by the lower and upper halves of the beak. The color leaves the corners of the mouth or base of the beak first, gradually fading toward the tips, disappearing from the arch of the upper mandible last. From four to six weeks' production will usually eliminate all color from the beak, says Loyal F. Payne, author of the Kansas bulletin reporting the investigations. The shanks are the last to lose their color, fading first in front and retaining longest the color just below the feather line at the rear of the hock joint. Normally four to five months' laying will completely bleach the shanks.

When a hen stops laying the yellow color reappears in each of the above regions in the same order in which it disappeared; that is, in the vent, eyelids, lobes (if white), beak and shanks, returning, however, much faster than it disappeared.

Color observations should always be made in daylight, artificial light being unsatisfactory. The order of the most common breeds according to the rapidity with which the color fades is as follows: Leghorns, Wyandottes, Plymouth Rocks and Rhode Island Reds.

Color changes are perhaps affected by more conditions than any other set of characteristics. For example, the feed, range, size and age of the birds, thickness of skin, management, vitality and amount of color normally carried in different strains, influence fading and should be considered in culling. Many of the white varieties that have been bred for exhibition purposes show very little yellow pigment whether laying or not. The amount of pigment originally carried in a strain of hens can be determined in a measure after they have been laying some time, by observing the amount of pigment carried in the shanks of related males, preferably brothers.

When culling white-skinned birds such as the Orpingtons, Sussex and Dorkings, or the dark-shanked breeds, such as the Langshans or Andalusians, no attention can be given to color changes. Birds of these breeds are judged by the molt and other factors, all of which factors are applied to the yellow-skinned varieties as well in a complete culling system.

Willapa Poultrymen Organize

Forty poultrymen representing ownership of 7000 hens recently perfected the organization of the Willapa Valley Poultry association, voted to incorporate and made tentative arrangements for part-time employment of a man to handle collection and candling of members' eggs. V. L. Swartz, perhaps the most intensive poultryman and "little lander" in the county, is president of the association; C. E. Lambert is vice president; Z. B. Shay, secretary-treasurer, and Frank Griffin and Anton Christen, trustees. Its territory includes Frances, Leban, Menlo, Raymond, Willapa and South Bend, and its purpose is not only to handle eggs for members, but also to assist them in cooperative purchases of feed.

In spite of the fact that hens in commercial flocks have increased remarkably in the last two years, the local demand for eggs is still not satisfied by the local supply, and no difficulty whatever is anticipated in marketing more than 300 dozen daily, which association members will produce. In fact, it is stated on the authority of County Agent J. R. Beck that the number of laying hens in Pacific county could be doubled without overburdening the local market.

PULLET LAYS 159 EGGS.

Barred Rock pullet No. 88 is leading all the White Leghorn pullets in the third western Washington experiment station egg-laying contest. At the end of the first six months this pullet had laid 159 eggs, equalling the record of last year's winner for the first six months.

Build on the Strain

There are limitations to the general principle that like begets like. It is, however, a fairly safe generalization to follow. If a flock of poultry is the result of systematic, pure breeding for a considerable number of generations back, the offspring of that flock, in a given season, will be very much like its parents.

It is hardly practical for the average farmer with his multitudinous duties of many natures to carry out a systematic and persistent upbuilding process in his flock. But great improvement may be made by only a moderate application of the principle above stated. If there is a hen in the flock that is known to be a good producer, a little careful breeding may work wonders in the future flock of the farm. This hen is perhaps the first one off the roost in the morning, and the last one on at night. She is perhaps the greatest rustler in the entire flock. Hers is perhaps the brightest eye. She perhaps lays an egg of good size as well as more frequently than the other hens of the flock. If so, she is a good foundation on which to begin to build up the flock.

The introduction of a cock bird or a cockerel of the same breed and of a known high-producing strain is the first step. Until the next breeding season do not crowd this extra good hen into heavy laying, but keep her in the most vigorous physical condition possible. Set her eggs in the spring and watch her offspring carefully. Her daughters will undoubtedly be comparatively high producers. But in her sons will perhaps lie the greatest power of transmitting to the next generation her known excellent qualities. Save from among them the most perfect in form and vigor and mate him the following season with unrelated hens of known high-producing quality.

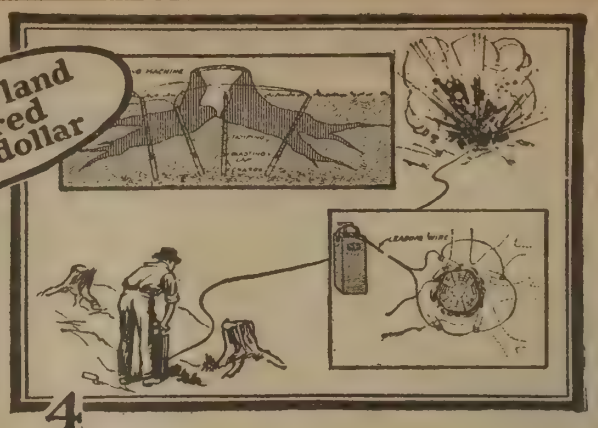
There are many fine points in the breeding of poultry for high production, but for the average farmer the foregoing should insure sufficient improvement to make its practice worth while.

Urges Simple Equipment

"You can head into my place any time you get ready to start such a demonstration," said O. H. Belknap of Chinook when W. D. Buchanan, state poultry extension specialist, told a group of 25 or 30 egg producers of the Peninsula of his plans for establishing cooperative farms where, with the assistance of the extension service, considerable attention will be paid to trap-nesting. Mr. Belknap already has done considerable trap-nesting, and this Mr. Buchanan commended, saying that it will be valuable to the community as a basis for future operations.

The Belknap plant was one of several on the Peninsula which the group visited on an excursion late in May, and except for the fact that they found the owner working as hard, caring for 600 layers, Mr. Buchanan said, as he did when he was caring for 1800, the general plan of the establishment was given the company's "okeh." Too many "furbelows" on the floor and around the yard—a matter in which even experienced poultrymen often err—was given as the expert's diagnosis of the difficulty, and members of the group were warned to keep their equipment and their methods of operation just as simple as possible and still have them efficient. The Belknap flock is a vigorous one, and the songs of its busy workers punctuated the lecture on feeding which was given, appropriately enough, in the feed room itself.

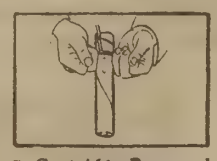
WHEN PROTEIN IS NOT NEEDED.



The average poultryman finds it a real problem to keep pullets from laying before they are five months old, but it can be done by keeping protein in animal form away from them in ever decreasing quantities, as the egg-producing period approaches. They grow much more slowly as they reach maturity than they did as young chicks, hence protein is unnecessary.

FISH IN POULTRY RATION.

Fish make very fine poultry feed, but always remember that it's very rich. W. D. Buchanan, state poultry specialist, says that he would want his hens to run about a mile to catch the fish, and that they had plenty of green feed to go with them



LARGE LOSS FROM RUST.

It has been estimated that during the last three years black-stem rust has caused a loss of 150,000,000 bushels of grain valued at $200,000,000 in seven of the middle western grain-producing states.

Firing the Charge

THERE are two methods of firing a dynamite charge: (1) by means of cap and fuse, or, (2) by means of electric blasting caps and blasting machine.

When the cap and fuse method is used, the blaster must remember that the fuse burns at the rate of 32 to 40 seconds per foot, and must allow ample length of fuse to enable him to retire to a safe point before the explosion. Six inches of fuse out of the bore hole should be sufficient.

When blasting hollow stumps, better results will be obtained if separate charges are placed under the stump and its main lateral roots. These are fired at one time through the use of electric blasting caps and an electric blasting machine. This method can also be used, of course, to fire a single charge.

Pacific Stumping Powder, the new du Pont Farm Dynamite, has greatly reduced the cost of clearing land. 130 1¼x8 inch sticks cost but 50 cents more than 85 1⅜x8 inch sticks of standard stumping powders. As they do the same work, stick for stick, the farmer will blast ½ more stumps per dollar.

Order Pacific Stumping Powder from your local dealer and write us for free 125-page book "The Development of Logged-Off Lands," giving full instructions covering the use of dynamite for land clearing, ditching and tree planting.

Comb Honey

How to Prepare for the Markets

By GEORGE W. YORK.

As it will soon be time to put the new honey crop on the market, it may be well to suggest a few directions that might be followed with profit to the producers of comb honey. Another article will give instruction about extracted honey.

As soon as removed from the hive supers, the wood frames surrounding the honey should be carefully scraped of any bits of wax or propolis that may have been left on by the bees. The beautiful comb of honey in a clean, white frame of wood makes a very attractive picture, and is also tempting to any one who sees it in a grocery store.

There are on the market several styles of folding cartons, in which to put each comb of honey. One side of the carton has a circular piece cut out, perhaps two inches in diameter. This permits the honey to be seen, and when these cartons are neatly printed with the producer's name, and possibly a little information on the use of honey as a daily food, they make a very desirable way in which to offer comb honey to the public.

Where considerable of this kind of honey is to be sold, it should be put in new wooden cases holding either 12 or 24 of the small squares of honey. Sometimes one edge of the case has a glass front so the honey can be seen without opening the case. This can be used on the grocer's or other retailer's counter until all the honey is sold out of it.

If it is desired to ship these cases of comb honey, it is well to put say, six or eight of them in a crate, having a solid box bottom into which put about six inches of straw or hay, which will serve as a sort of cushion for the bottom two cases to rest upon. If this crate is then supplied with a handle near each top corner, by nailing a narrow board on each side about 12 inches longer than the crate so they will extend six inches at each end, you will have an ideal way of shipping comb honey safely.

Such crate will not be rolled around, and if marked "Fragile—Handle With Care" it will always be carried nicely between two freight handlers. Almost every other way of shipping comb honey has resulted in broken combs, a sticky mess and much loss. It pays to use every precaution so that when transporting comb honey it shall "go through" in good condition.

Why Thin Fruit?

Because It Increases Crop Value

By ELWIN G. WOOD.

No one will question that thinning increases materially the size of the fruit, but too many people have the erroneous yield. Relieved of the burden of producing such a large number of fruits, the tree has a surplus of food material. This nourishes the remaining fruits so well that they increase in size enough to bring the bulk of marketable fruit up to, and in many cases beyond, what it would have been had the tree not been thinned at all, or even poorly thinned. When the influence on annual bearing is considered, there is no doubt left but that for a period of years, other things being equal, a thinned tree will produce more extra fancy and fancy fruit than an unthinned tree of the same age and size growing beside it will produce of extra fancy, fancy, C grade, jumbles and culls.

It is also true that when only parts of a tree are heavily loaded the fruit will be small if not thinned. Each large limb of a tree is more or less an individual unit in that respect.

The percentage of extra fancy grade is materially increased when the fruit is thinned to only one in a place. It prevents a great many blemishes caused by limb rubs, leaf scratching, and the rubbing or pressing of the fruit together. This is especially true of pears. Last summer a high percentage of the low grade pears was due to this cause. In almost every place where the cheek of a pear pressed against another in the cluster there was a black spot sufficient in many cases to keep it from going into the fancy grade.

Fruit thinned to one in a place has a better chance to color up. The sunshine and air has a chance to reach the entire surface, giving higher and more uniform colors, and avoiding the uncolored spots resulting from one specimen shading another. Advantage in color is also secured by thinning the fruit heavier in the more densely shaded portions of the tree, and by thinning from the underside of the limbs, giving preference to the fruit that is more advantageously placed with reference to receiving the sunshine. The same factors which increase the percentage of extra fancy reduce the percentage of C grade.

Thinning decreases materially the percentage of culls and jumbles. This must necessarily follow from the fact that it increases the size, reduces the blemishes resulting from limb rubs, and increases the color. Another important factor in reducing the culls is the assistance that thinning affords in the control of pests and disease.

With the fruits thinned to one in a place they are more easily and completely covered with spray, giving a considerable advantage in the control of pests and disease, especially the codling moth. A second way in which thinning may be made a help in the control of codling moth is by picking and destroying all wormy

ESSEX COACH $ 1295

All-Year Comfort and Dependable Service

With all the noted qualities of the Essex chassis, the Coach combines closed car utility, comfort and distinction, at an unrivalled price.

Note how little more it costs than the open car. That is made possible by great production. More Essex Coaches are now built than any other fine closed car.

You must see, examine and drive it to realize what is offered at this price.

Built to Endure Hard Service

The type of body construction is the newest. It gives a durable, comfortable type, of appealing distinction. But, perhaps more important, is the far quieter car that results. The Essex Coach construction absorbs and annuls practically all "drumming" noises of the closed compartment.

And the Coach is a product that will endure in good, useful service for years. Come see, and drive it before you buy any car.

What Owners Say the Real Proof

There is a simple way to get the real truth about any car. Why buy blindly?
You have the all-important advantage of being able to ask owners. Make use of it. Find out how any car you think of buying has served others. What mileage does it give on gasoline and tires? What are upkeep costs? Is the second or third 10,000 miles just as satisfactory as the first? What is the future expectancy of good service after twenty or thirty thousand miles?
Just ask owners of the Coach how solid and quiet and free from rattles the body stays. How comfortable and easy it rides and handles. The satisfaction of owners is the best proof of all. We want you to know what Coach owners think because we believe their enthusiasm will win you, too.

PIKE'S PEAK OR BUST

By LEWIS B. MILLER

Copyright 1921

PMS

SYNOPSIS.

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. For three days they have been trudging slowly southwestward carrying out the determination crudely lettered on the side of the wheelbarrow, "Pike's Peak or Bust." Rain and snow impeded their progress, and Orlando falls sick and requires a couple of days to rest before proceeding. Then, with the village that is now Kansas City passed, they follow the Santa Fe trail westward, being but one of scores of outfits of various kinds headed for the fields of golden riches. Once again they stop for a good rest before plunging into the real wilderness, 700 miles of which is still ahead of them to be conquered by foot, cow and wheelbarrow. After several days' tramping, they pitch their tent across a little stream from the camp of a family by the name of Cooper, also headed for the gold diggings. In the party is the daughter of the Cooper family, Hazel, whom Orlando by chance met when both went to the stream for water and in whom he became at once greatly interested. He reluctantly joined Esau next morning for the day's travel, leaving the Coopers to follow later, but with the expressed hope that they would all meet again at the gold fields. It was several days later that Esau and Orlando met up with another strange party on the trail, several men with a push cart to haul their belongings to the diggings. The two parties agree to travel together the rest of the journey. To save time they leave the Santa Fe trail and take a short cut that will save them more than 100 miles. But to their great distress they find themselves many miles out in a waterless, sun-scorched desert, with death from thirst staring them in the face.

CHAPTER V.

Starving on the Smoky Hill Route.

For perhaps half an hour they rested, almost in silence. By that time they had not only regained part of their strength, but most of them had begun to shiver in the raw night air. So, of one accord, they rose up and moved on.

Mile after mile the seven men left behind them. Once warmed up and under way, they rattled along at a good speed. When at last the dim moonlight brightened into daylight, all were of the opinion that they had traveled 18 or 20 miles since that midnight start.

Now the sun, a red coal of fire, popped up out of the desert; and its rays fell upon the little party still pushing along, wearily but doggedly. As soon as there was light enough, they gazed ahead and all around. But not a sign could they discover of any stream that would afford them water. Even that river of sand was nowhere in sight.

Still the worn-out wayfarers drove themselves forward. Not till the sun was nearly two hours high did they halt to rest. Brindle stood with drooping head. So exhausted did she appear that Orlando relieved her of the two parts of her pack. And not long after that she dropped down to rest. Like the men, Frisk stretched himself at full length on the grass.

Not till they had been resting for a good while did any of the party begin to talk.

"Well, boys, the country still looks a little drouthy hereabouts," Sanders remarked, in what was intended to be a cheerful, jovial tone.

One or two grunted something in reply. And at least one man groaned. Esau raised himself to his elbow to say: "Now bobs up that same question ag'in: What're we goin' to do next?"

"I don't know what the rest of you boys have in mind. But I vote to push on a few miles further," Sanders answered. "We can rest a while here, and then make several miles before the sun grows very warm."

"To my way of thinkin', we'd better take the back track while we can, and as quick as we can," spoke out one of the handcart's crew. "If we don't, my word for it we'll leave our poor bones to bleach in this desert."

Esau objected: It's a long, long tramp back to water. Ten chances to one we'll fall by the wayside if we start back."

"Abe, about how fur would you say we've tramped since we left that water hole yisterday mornin'?" demanded a handcarter.

Sanders weighed the matter. "Jake, here's my guess. We traveled about 25 miles between daylight and dark yesterday. And we must have put some 30 miles behind us since moon-up."

"Which amounts to 55 miles," said Orlando. "And, if we turned back, that would be 110 miles without water. I don't believe we can make it back."

"I know we cain't make it back; or as good as know it," declared Esau. "So we'd better push right on, I say."

"And so say I," Sanders agreed. "Just bound to be water somewhere ahead. This desert we're in can't last forever."

"But it may be a hundred miles yet to the fur edge," objected one of his party.

"Yes, or 200—or 500," another man put in. "The fu'ther we go, the worse the country seems to dry up. Don't look to me like it's rained here in a coon's age. This desert may hold out all the way to the mountains."

"But those wagons are ahead of us," Orlando reminded them. "They can't travel without water any better than we can. They must have found water by this time."

For a good while the discussion continued. Should they turn back and try to reach the water they knew was behind, but far behind? Or would it be better to keep tramping toward the water they hoped was not far ahead? Sanders told of a man he had heard of who, lost somewhere on these western plains, had taken the back track, only to die of thirst. But his partner, more resolute, had kept right on and found water within a few miles.

This, together with the fact that those wagons were still ahead, caused the party to decide to push on westward. And as soon as they had rested they were up and tramping again.

The day proved warm, but the thirst-tortured foot travelers kept going as fast as their strength would permit. A few were discouraged, but others were hopeful that they would soon find themselves in sight of some stream. For perhaps two hours they tramped on without a halt.

At last, when the sun was high in the heavens, they looked from the top of a rise and discovered some conspicuous object ahead. At first they were uncertain as to what it was, but, on coming nearer, they made out a covered wagon.

"That must be one of the wagons that passed on only a day or two before us," a handcarter surmised.

As they approached the wagon, they could see that it had been abandoned. Very lonely and deserted it appeared, as the party marched up to it. The wagon stood by the side of the road, with some ox yokes lying close by; but no sign of a camp was visible.

"Now what—what does this mean?" exclaimed Orlando.

It was Sanders that answered: "To me there's only one thing it can mean. Fellows with this outfit lost hope of getting to water with it. Maybe their team got too weak to pull the wagon. So they took their steers loose and traveled on without it.

"They must ha' saw starvation on their trail, and was tryin' to outrun it," was Esau's comment. "And we may have to—have to do likewise; leave everything, turn ourselves foot-loose and travel for our very lives."

The whole party halted by the wagon. On examining its contents, they found the usual miner's outfit of provisions, tools and bedclothes.

"They don't seem to have taken anything with them," observed Orlando.

"Guess they was so hard put to it for water they 'lowed they'd better save their lives first and their other things after'ds," somebody else remarked.

"The wagon itself is a big, heavy thing, but they didn't have much of a load," a handcarter said. "I'm wonderin' did they foller the road from here on, or did they just strike off across the country? And did they drive their work cattle as they went? Or did they turn 'em loose to save theirselves if they could?"

"Nobody knows about that," Sanders answered. And one of his party said: "No more reason for them fellers to be skeered, whoever they was, than the' is for us to be skeered, as I can see. We'd better be hustlin' from here before it's everlastin'ly too late."

But Orlando spoke up: "The men with this wagon didn't know any more about this trail than we know, I'm safe to say. There may be worlds of water less than five miles ahead."

"Wish to the good Lord I thought so! It's more likely to be 50 miles ahead—or a 150," grumbled a handcarter.

"Fur or nigh, we'd better be makin' tracks in some direction," declared Esau.

"One thing we can be sure of, boys," Sanders told them. "Desperate as these fellows were, they didn't turn back. They thought they had a better chance to find water ahead than behind. Of course they might have been mistaken. But we started to travel west till noon; and I say let's keep right on till then."

One or two of the handcart's crew grumbled, but nobody offered any serious objection. So the whole party were soon following the road again.

For another hour they pushed on doggedly, traveling as fast as their failing strength would let them. From every high point they gazed ahead eagerly in quest of watersigns, but only to be disappointed. And the further they went the more silent and gloomy the whole seven became.

At last, from the top of a rise, they discovered another object in the dim distance.

"Must be another deserted wagon," a handcarter called out.

"Looks to me like I can see the thing in motion!" Esau presently exclaimed.

"It is in motion," Sanders declared.

"Yes, I can make out that it's moving—moving this way," Orlando called to those behind. "And I'm pretty sure that it's a covered wagon—another covered wagon."

"No doubt about it now! It is a covered wagon!" somebody shouted, a few minutes later.

Not a little excited, the whole party quickened their pace. And all eyes were fixed on that approaching wagon and team.

"Men, I've thought of something."

It was the usual canvas-covered wagon, and in time they could see that it was drawn by three yoke of oxen. Later three drivers could be made out, one on the off side and two on the near side. All the drivers were on foot, tramping along by the team.

As the two parties came near together, it was easy to discover that something was seriously wrong with both the drivers and their oxen.

All the men were bareheaded, with bloodshot eyes and tangled hair. One had a whip, and the others were using their hats to urge the team forward. The oxen themselves—the lead yoke were really cows—had a wild-eyed, frightened look. All of them, both men and animals, seemed to have caught a glimpse of death somewhere in the desert beyond, and they were fleeing from it in terror.

When the two parties were not many yards from each other, one of the three drivers called out, almost shouted:

"For the Lord's sake, fellers, what're you makin' this a way fur? Air you huntin' a place to leave your bones?"

"No water ahead, then?" demanded Sanders, though it was a useless question.

"Water! Water in this God-forsaken country?" exclaimed another of the wild-eyed men, with a hollow laugh. "It's—it's a thousand miles to a puddle hole! Nothing but starvation and death the way this cursed trail leads!"

"How long have you men been driving?" questioned Sanders, after the two parties had come to a standstill.

"How long have we been drivin'? How long hain't we been drivin'?" exclaimed the wagoner who had first spoken. "We've been goin' study for a year or two, seems to me like! We've druv most of the night! Only stopped now and then to let our work cattle rest a minute. Oh, we've had a terrible time of it, I can tell you!"

"You fellers certainly look like you've seen a ghost, or looked old grim death in the face!" declared a handcarter.

Now Sanders was asking: "How did you ever manage to travel so far into this dried-up region? How could you go without water so long?"

"Why, we carry a little water barrel in our wagon; and we'd filled that at the last watering place," one of the strangers explained. "We drunk out of that and watered our oxen out of it till yesterday noon. By that time there wasn't a drop left. We pushed on several miles further. But the longer we traveled in that direction the drier things looked. So we just had to turn back. We rested till about sundown, and then struck back this way. And this way we've been traveling ever since. Have you fellows got any water with you? Even one good swallow would go down mighty nice just now."

Sanders answered: "Boys, wish to my soul I didn't have to tell you. But not a drop of water can we rustle up. We travel as light as we can, of course. Have to. For that reason we left the last water with our water kegs empty. We haven't had a drink since yesterday morning. You three men have drank since we did. We've been pushing ahead hard, too, in the hope of reaching some stream—some stream with water in it."

"Men, you're on the wrong scent! You'll never find it—never find water in this direction!" declared one of the strangers, a young fellow named Holloway. "We've followed this road all of 30 miles beyond here, and every inch of it is as dry as dust. You'd better strike straight back, and be mighty quick about it!"

"We'll have to turn back now! Not a doubt of that!" Esau was speaking to his partners. "All the time I've been for pushin' ahead. 'Lowed we's jest bound to find water before long. But if it's 30 miles ahead yit——"

"Not 30 miles to water!" broke in one of the ox drivers. "Thirty miles ahead and then not a drop! You'd be crazy as bedbugs to keep on the way your noses are p'inted!"

"But it's—it's 60 or 70 miles back to water. Every inch of 65 miles, I'd say," Sanders reminded them. "And I'm wondering—I'm wondering if we can hold out to reach it. I doub't if any of us have got the strength. I doubt it very much."

"But we're bound to reach it! We've jest got to, I tell you! Only chance for us and our oxens!"

"Those oxen will never be able to travel 60 miles further and drag that big wagon. I'd turn 'em foot-loose and give the poor fellows a chance for their lives," Orlando advised.

"That may be what we'd better do," admitted one of the drivers.

And young Holloway answered: "I'm pretty sure that's what we'll have to do. If we don't, they're likely to drop down under their yokes before many miles."

"Yes, and some of us human critters is likely to wilt down in the road before many miles. Me for one," a handcarter declared.

It was Sanders that answered: "You never said a truer word, Jake. I'm as big and husky as any of you; and I count myself as good a man as anybody in this outfit. But I doubt mightily if I've got strength enough left in me to drag myself back over the long sixty-five miles without water and food. Of course we have plenty to eat. But who can eat when thirst is gnawing the very insides out of 'im?"

"But we've got to make it back, Abe! No other hope for us!" a handcarter exclaimed, excitedly, in shrill tones. "It's do or die with us! Yessirree! It's make it back or leave our pore bones out here for the turkey buzzards to pick and the coyotes to gnaw! It's—it's death to lose a minute! We'd better leave everything right here, and git back the best way we can and the quickest way we can! Start this minute, I say, and——" He turned as if about to act upon his own advice.

"Hold on! Hold on there, Mark!" called out Sanders. "Let's not lose our heads at the outset. If we do, that will be the end of us. I'll tell you. Let's all sit down here in the shade of this wagon and look the situation straight in the face. If we ever wriggle out of this tight scrape, we've got to do it by—by using our thinking machines."

"That's not a bad idea," Holloway answered. "Though I don't see a thing we can do but run for our lives—run like scared rabbits."

Finally the whole party of 10 consented to seat themselves in a circle; though more than one grumbled at losing time that ought to have been spent traveling.

"If we only had a little water, we could give it all to one man, and let him hurry back and come to meet us with a water supply," somebody remarked. "He'd be lots stronger——"

"But we haven't any water, little or much, so it's time wasted to talk about that," Sanders broke in. "But it may be a good idea to let one man go on ahead of the others. That is, if anybody feels pretty vigorous—able to take a 60 or 70 mile tramp, let 'im speak out."

Silence followed this appeal. Now that they were down, all realized how nearly exhausted they were.

At last Orlando spoke: "Worst trouble is, if any of us could make it back to water, he'd be too nearly dead when he

got there to turn and come this way to meet the rest of our party."

"That's right," said a handcarter nodding. "And yet if he didn't come nobody would come. Be nobody else there to send."
